THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, EIGHTH MONTH 27, 1870.

NO. 1.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Advance, when paid quarterly in advance, five cents.

Alaska.

For "The Friend."

The following notices of the climate and agricultural resources of this little-known region, are derived from Wm. H. Dall's late work on Alaska and its resources. The author was director of the scientific corps of the Western Union Telegraph Expedition, and while engaged in his professional duties had the opportunity of acquiring much valuable information in regard to the native inhabitants, history and resources of the country.

Alaska, he says, may be divided agriculturally into three districts, each differing from the others in its climate, vegetation and physical characteristics. The first and more northern district, which I have termed the Yukon territory, is bounded on the south by the Alaskan Mountains, on the east by the British boundary line, and on the north and west by the Arctic Ocean and Bering Sea.

The second or middle district, which may be called the Aleutian District, includes that part of the peninsula of Alaska, and all the lands west of the one hundred and fifty-fifth degree of longitude.

The third or southernmost, which will be designated as the Sitkan District, includes all its possessions on the mainland and islands north and east of the peninsula of Alaska.

The Yukon Territory. The character of the country in the vicinity of the Yukon river, varies from low, rolling, and somewhat rocky hills, usually easy of ascent, to broad and fertile marshy plains, extending for miles on either side of the river, especially near the mouth. There are of course no roads, excepting an occasional trail, hardly noticeable except by a voyager. The Yukon and its tributaries form the great highways of the country.

The rocks vary, the greater proportion being conglomerate, sienite, quartzite, and gneiss. Trachyte and lava abound in particular districts. The superincumbent soil so differs, in some localities being sandy, and in others clayey. In the latter case it is frequently covered with sphagnum (a mossy growth) which causes a deterioration of the soil below it. Over a large extent of country is a rich alluvial, composed of very fine sand, silt, and vegetable matter, brought down by

the river, and forming deposits of indefinite depth; and in some such localities fresh water marl is found in abundance.

The soil is usually frozen at a depth of three or four feet in ordinary situations. In colder ones it remains icy to within eighteen inches of the surface. This layer of frozen soil is six or eight feet thick; below that depth the soil is destitute of ice except in very unusual situations.

This phenomenon appears to be directly traceable to want of drainage, combined with a non-conductive covering of moss, which prevents the scorching sun of the boreal midsummer from thawing and warming the soil.

In places where the soil is well drained, and is not covered with moss, as in the large alluvial deposits near the mouth of the Yukon, I have noticed that the frozen layer is much farther below the surface, and in many places appears even to be entirely wanting. I have no doubt that, in favorable situations, by draining and deep ploughing, the ice could in the course of time, be wholly removed from the soil. * * * * *

The climate of the Yukon Territory in the interior (as is the case throughout Alaska) differs from that of the sea coast, even in localities comparatively adjacent. That of the coast is tempered by the vast body of water contained in Bering Sea, and many southern currents bringing warmer water from the Pacific, making the winter climate of the coast much milder than that of the country; even thirty miles into the interior; this, too, without any high range of mountains acting as a bar to the progress of warm winds. The summers on the other hand, from the quantity of rain and cloudy weather, are cooler and less pleasant than those of the interior. The months of May and June, however, and part of July, are delightful—sunny, warm and clear. To quote Seaman, "the growth of plants is rapid in the extreme. The snow has hardly disappeared before a mass of herbage has sprung up, and the spots which a few days before presented nothing but a white sheet, are teeming with an active vegetation, producing leaves, flowers, and fruit in rapid succession." Even during the long Arctic day the plants have their period of sleep—short, though plainly marked, as in the tropics, and indicated by the same drooping of the leaves and other signs which we observe in milder climates. The following table shows the mean temperature of the seasons: At St. Michael's, on the coast of Norton Sound, in latitude 63° 25'; at the Mission, on the Yukon river, one hundred and fifty miles from its mouth, in latitude 61° 47'; at Nulato, four hundred and fifty miles further up the river, in latitude 64° 40' (approximate); and at Fort Yukon, 1200 miles from the mouth of the river, and in latitude 66° 24'.

At St. Michael's.—Spring mean, 29° 3'; summer, 52°; autumn, 26° 3'; winter, 8° 6'; average of the year, 29° 3'.

Mission.—Spring, 19° 62'; summer, 56° 32'; autumn, 36° 05'; winter, 0° 95'; average of the year, 26° 48'.

Nulato.—Spring, 29° 3'; summer, 60°; autumn, 36°; winter, —14°; average, 27° 8'.

Fort Yukon.—Spring, 14° 22'; summer, 59° 67'; autumn, 17° 37'; winter, —23° 80'; average, 16° 92'.

The mean annual temperature of the Yukon Territory as a whole, may be roughly estimated at about 25°. The greatest degree of cold ever known in the territory was seventy below zero of Fahrenheit; but such cold as this is very rare, and has little effect on the vegetation, covered with six or eight feet of snow. Open water may be found on all the rivers in the coldest weather, and many springs are not frozen up throughout the year.

The real opportunity for agricultural enterprise in a country cannot be deduced from annual mean temperatures alone, but is dependent on the heat of the summer months, and the duration of the summer.

At Fort Yukon I have seen the thermometer at noon, not in the direct rays of the sun, standing at 112°, and I was informed by the commander of the post, that several spirit thermometers, graduated up to 120°, had burst under the scorching sun of the Arctic midsummer; which can only be thoroughly appreciated by one who has endured it. In midsummer, on the Upper Yukon, the only relief from the intense heat, under which the vegetation attains an almost tropical luxuriance, is the brief space during which the sun hovers over the northern horizon, and the voyager in his canoe blesses the transient coolness of the midnight air.

The annual rainfall cannot be accurately estimated from want of data. At Nulato the fall of snow from November to the end of April, will average eight feet, but often reaches twelve. It is much less on the sea-board. Partly on this account, and also because it is driven seaward by the wind, there is usually in spring very little snow on the coasts near Norton Sound. In the interior there is less wind, and the snow lies as it falls among the trees. Toward spring the ravines, gullies, and brushwood are well filled or covered up, and transportation with dogs and sleds is easy and pleasant. The warm sun at noon melts the surface of the snow, which soon freezes, forming a hard crust, rendering snow shoes almost unnecessary.

The rainfall, as has been remarked, is much greater in summer on the coast than in the interior, the months of May, June and part of July, being sunny, delightful weather; but the remainder of the season, four days in a week at least, will be rainy at St. Michael's. October brings a change. The winds, usually from the south-west from July to the latter part of September, in October are mostly from the north, and, though cold, bring fine weather. They are intercepted occasionally by gales,

the most violent of the season, from the south-west; piling the drift-wood upon the shores, where it lies until the succeeding fall, unless carried off by the natives for fuel.

The valley of the Lower Yukon is foggy in the latter part of the summer; but as we ascend the river the climate improves, and the short summer at Fort Yukon is dry, hot, and pleasant, only varied by an occasional shower. The climatic law which governs the distribution of trees, also seems to limit the wanderings of the aborigines. The Eskimo extend all along the coast and up the principal rivers with the tundra. The Indians populate the interior, but seldom pass the boundary of the woods. Neither perform any agricultural labor whatever, unless we so designate the work of picking wild berries, which form their only vegetable food, excepting the half digested food of the reindeer; the roots of the "lichnorice root" of the trappers, a species of *Achillea* or wild parsnip; and the leaf stalks of the wild rhubarb.

(To be continued.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister decessed.

(Continued from page 41, vol. XIII.)

"8th mo. 27th, 1843. In our meeting (Darby) my mind became exercised in fear that some were slighting the day of merciful visitation, and the call seemed renewed to proclaim among us, that the 'foundation of God standeth sure.' I had also to supplicate on behalf of those who were standing at a distance; that they may through redeeming love and mercy, be brought near, and finally be prepared to sing the song of praise to Him who is worthy forever.

"In the latter end of the 8th month or early in the 9th, I attended the funeral of Martha Thomas. After it, had an opportunity with her husband, which was relieving to my mind. In the afternoon I went to see Hannah Rudolph and family, and was comforted in being with them, and witnessing the resigned humble state of mind, dear Mary the afflicted daughter, is in. I said, surely it is the Lord's doings, and marvellous in my eyes. May our Heavenly Father keep them, both mother and children, near unto himself.

"9th mo. 12th. I attended the funeral of my dear aged friend, Rebecca Lobb, whose pious example speaks to us, her survivors. Follow me, as I endeavored to follow Christ. In the afternoon of the same day I attended the funeral of Elizabeth Jones, a young woman in the prime of life, and only daughter of aged parents. My mind was dipped into near sympathy with them; but who can say, What doest Thou? and I trust they do not mourn as those who have no hope. It was a day of serious thoughtfulness to me, and desires were raised that I might be increasingly concerned to know my day's work going on with the day.

"10th mo. After passing through close exercise in the prospect of attending Baltimore Yearly Meeting, and some others on the way, it seemed best to mention it in our Monthly Meeting. Having obtained the approbation of it, and my dear friends, Isaac and Jane Garrett, being willing to accompany me, we accordingly set out on the 23d, and attended Little Britain and Nottingham meetings, and reached Baltimore Sixth-day evening. The Select Meeting for Ministers and

Elders, held on Seventh-day morning, was to me a comfortable, confirming season. I thought afterwards, if, in the meetings for discipline, a little more deliberation had been attended to in the weighty concerns of the Society, it would have been more consistent with the dignity of the occasion; yet through the condescending goodness of Israel's Shepherd, His solemnizing presence was at seasons felt among us; and O how did my heart crave an increase of it! On our return we attended Deer Creek Meeting on First-day, and dined at Cassandra Stumps, an aged widow, to whom I felt my mind drawn in a particular manner. The language of encouragement flowed towards her, and after expressing what arose, and a few words to her son, we came to Samuel Worthington's. Here I had an opportunity of writing to my cousin, I. Husband, for whom I felt an earnest solicitude, that he might be turned from the broad into the narrow way, which leads to life and peace. My mind then feeling relieved and peaceful, we, on Second-day, turned our faces homeward, and came to my brother Samuel Pusey's. He being in a declining state of health from a paralytic affection, I concluded to remain with him a few days. After which I reached home safely 10th of Eleventh month; with a thankful heart to Him who had enabled me to perform what I believed He required of me. I may add, that on my way to Baltimore, when a few miles from my brother's, we heard of his illness; and on seeing him my mind was brought under close trial in the prospect of leaving him; when, in all human probability, I should not see him again. But the pointing seemed to be to go forward, and I had peace in it. Oh! it is good to confide in Him who knoweth what is best for us. I was favored to see my dear brother again, and feel grateful for the privilege of being with him a little while in his afflicted situation, and more especially as it appeared as though it might be the last opportunity we should have of being together while in this state of mortality.

"My dear brother, Samuel Pusey, departed this life Eleventh month 25th, 1843, in the 71st year of his age. The solemn tidings were conveyed to me a few days afterwards, and though not unexpected, it was very affecting, feeling renewedly that the ties of natural affection are very strong. But my mind was comforted with a little hope, that his soul had found a resting place in Heaven. I bring now the only remaining one of my father's first children—nine in number—I often feel lonely and stripped: but my desires are frequently raised to the Father of mercies, that He may be pleased to enable me to walk more acceptably in His sight, so that my life may be more consistent with the gospel of His dear Son, Jesus Christ our Lord.

"12th mo. 2d. I left home in order to visit my son's family, where we met with our dear friends I. Casson and R. Priestman. They being on a family visit within the compass of London Grove Monthly Meeting, called a second time at my son's, where we again fell into silence, and they each had a little to communicate, which to me was as a brook by the way. How do such seasons strengthen the weary traveller! May I live under an abiding sense that they are not at our command. From Coatesville we went to see my dear friend Lydia Brinton, who is in declining health. We both being widows, can feel for

each other. Having long been acquainted, and I trust sweetly united in best things, I was glad in being permitted once more to be with her. We also visited some of our relations and friends at Lampeter. Oh! how is my mind exercised when in that neighborhood, where I resided so long, on account of very tender feelings for the welfare of its inhabitants being entertained. I was renewedly impressed with a concern while there, on behalf of two individuals, who I feared were living careless of their best interests; and whose desire to visit them was felt, which was humiliating. Oh, it is a great thing to be willing to be a fool for Christ's sake. My brother-in-law, A. Gibbons, being willing to accompany me, we went to the house of one of them, and found him at home. Way soon opened for me to relieve my mind to him, which appeared to be well taken; all of which was cause of thankfulness. The other person had no settled home. This, in connexion with our time being limited, discouraged me, and I did not urge as much inquiry after him, as I thought afterwards would have been best. O Father of mercies! Thou knowest my frailties. Be pleased to pass by and forgive all my omissions and commissions. 'If thou shouldst mark iniquity, who shall stand.'

"1st mo. 11th, 1844. On our way to meeting, we called to see sister Sarah Rhoads, who has been a considerable time in declining health. When sitting in her chamber we were unexpectedly refreshed with a feeling of sweet solemnity; in which the language of encouragement arose toward the dear afflicted, and I ventured to express it. It seemed to me a time of renewed favor, and cause of gratitude to the Father of mercies. In our meeting, my mind was humbled, and clothed with the spirit of supplication, which it seemed right to utter. Yielding thereto, it seemed to me a solemn time, and an acceptable sacrifice. Oh! what a favor to such a poor thing as I am, who often feel indeed as a 'worn and no man.'

"On the evening of the 23d sister Rhoads departed this life. Having been a woman of a meek and quiet spirit, I trust her end was peace. Her remains were interred in Friend burying ground at Darby on the 25th.

"24th. To-day I became seriously indisposed with dizziness in my head, and numbness and weakness in my right limb from the knee downward, attended with general debility of body. This impressed my mind with seriousness, and seemed a renewed call to look over the leaves of my life, and endeavor to have my accounts in readiness. Though have been preserved from gross evils, yet find many steps have been taken out of the right way; and a fear often possesses my mind, lest some of my exercises, professed religious, have been too much in the mixer. Oh! Thou who knowest the intent of the heart, be pleased to pass by all that is offensive unto Thee, and in Thy redeeming love and mercy, blot out all my sins and iniquities and remember them no more; and if consistent with thy holy will, grant that my name may be written in the Lamb's book of life. O, I have nothing to trust to but Thy mercy.

"2d mo. Attended our Quarterly Meeting under considerable bodily infirmity.

"Our dear friends Dougan and Asena Clarke, from Carolina, were there on the way to Philadelphia, in order to embark to Ireland, &c., on a religious visit, hoping

each there in time to attend the Yearly Meeting in Dublin. Our dear friend Sarah Anlen opened a prospect which had long impressed her mind, and at times solemnly, to visit Friends in the love of the gospel in England and Ireland: which after a time of solid elaboration was feelingly united with, and she encouraged in the important service, the nity of her Monthly Meeting having been freely obtained.

"In the Fifth month, accompanied by my kind cousins, Isaac and Phebe Garrett, Ann Arrett, and daughter J., I attended the Quarterly Meeting at Caln. It was comfortable to me to be once more permitted to sit with my dear friends there, with whom I was long united in exercise. I thought it was a time of renewed favor. Our friend T. Kite was also there. I went from Caln to Concord, and attended the Quarterly Meeting to a good degree of satisfaction."

(To be continued.)

For "The Friend."

The Greatest Sea-Wave Ever Known.

(Concluded from page 414, vol. XLIII.)

It was not until about half-past two on the evening of the 14th, that the Samoa Isles (sometimes called the Navigator Islands) were visited by the great wave. The watchmen started the inhabitants from their sleep by the cry that the sea was about to overwhelm them; and already when the terrified people rushed from their houses the sea was found to have risen far above the highest landmark. But it presently began to sink again, and then commenced a series of oscillations which lasted for several days, and were of a very remarkable nature. Once in every quarter of an hour the sea rose and fell, but was noticed that it rose twice as rapidly as sank. This peculiarity is well worth remarking. The eminent physicist Mallet speaks us (we follow Lyell's quotation) about the waves which traverse an open sea: "The great sea-wave, advancing at the rate of several miles in a minute, consists, in the deep part, of a long low swell of enormous volume,aving an equal slope before and behind, and not so gentle that it might pass under a ship without being noticed. But when it reaches the edge of soundings, its front slope becomes hort and steep, while its rear slope is long and gentle." On the shores visited by such a wave, the sea would appear to rise more rapidly than it sank. We have seen that this happened on the shores of the Samoa group, and therefore the way in which the sea rose and fell on the days following the great earthquake, gave significant evidence of the nature of the sea-bottom in the neighborhood of these lands. As the change of the great wave's gure could not have been quickly communicated, we may conclude with certainty that the Samoan Islands are the summits of lofty mountains, whose sloping sides extend far towards the east.

This conclusion affords interesting evidence of the necessity of observing even the seemingly trifling details of important phenomena.

The wave which visited the New Zealand Isles was altogether different in character, affording a noteworthy illustration of another mark of Mallet's. He says that where the sea-bottom slopes in such a way that there is a water of some depth close in shore, the great wave may roll in and do little damage; and we have seen that it so happened in the case

of the Samoan Islands. But he adds, that "where the shore is shelving, there will be first a retreat of the water, and then the wave will break upon the beach and roll far upon the land." This is precisely what happened when the great wave reached the eastern shores of New Zealand, which are known to shelve down to very shallow water continuing far away to sea towards the east.

At about half-past three on the morning of the 14th, the water began to retreat in a singular manner from the Port of Littleton, on the eastern shores of the southernmost of the New Zealand Islands. At length the whole port was left entirely dry, and so remained for about twenty minutes. Then the water was seen returning like a wall of foam ten or twelve feet in height, which rushed with a tremendous noise upon the port and town. Towards five o'clock the water again retired, very slowly as before, not reaching its lowest ebb until six. An hour later, a second huge wave inundated the port. Four times the sea retired and returned with great power at intervals of about two hours. Afterwards the oscillation of the water was less considerable, but it had not wholly ceased until August 17th, and only on the 18th did the regular ebb and flow of the tide recommence.

Around the Samoa group the water rose and fell once in every fifteen minutes, while on the shores of New Zealand each oscillation lasted no less than two hours. Doubtless the different depths of water, the irregular conformation of the island groups, and other like circumstances, were principally concerned, in producing these singular variations. Yet they do not seem fully sufficient to account for so wide a range of difference. Possibly a cause yet unnoticed may have had something to do with the peculiarity. In waves of such enormous extent, it would be quite impossible to determine whether the course of the wave-motion was directed full upon a line of shore or more or less obliquely. It is clear that in the former case the waves would seem to follow each other more swiftly than in the latter, even though there were no difference in their velocity.

Far on beyond the shores of New Zealand the great wave coursed, reaching at length the coast of Australia. At dawn of the 14th, Moreton Bay was visited by five well-marked waves. At Newcastle on the Hunter River, the sea rose and fell several times in a remarkable manner, the oscillatory motion commencing at half-past six in the morning. But the most significant evidence of the extent to which the sea-wave travelled in this direction was afforded at Port Fairy, Belfast, South Victoria. Here the oscillation of the water was distinctly perceived at midday on the 14th of August; and yet, to reach this point the sea-wave must not only have travelled on a circuitous course nearly equal in length to half the circumference of the earth, but must have passed through Bass Straits, between Australia and Van Diemen's Land, and so have lost a considerable portion of its force and dimensions. When we remember that had not the effects of the earth-shock on the water been limited by the shores of South America a wave of disturbance equal in extent to that which travelled westward would have swept towards the east, we see that the force of the shock was sufficient to have disturbed the waters of an ocean covering the whole surface of the earth. For the sea-waves which

reached Yokohama in one direction and Port Fairy in another had each traversed a distance nearly equal to half the earth's circumference; so that if the surface of the earth were all sea, waves setting out in opposite directions from the centre of disturbance would have met each other at the antipodes of their starting-point.

The Philadelphia Epistle.

To the Editor of "The Monthly Record."

Dear Friend:—When the consideration of the American correspondence has been before our Yearly Meeting we have been from time to time assured that, between our friends in Philadelphia and ourselves, there exists no difference in doctrine. This may be perfectly true as regards individual members of the two Yearly Meetings. We could select from our own body some who would thoroughly harmonize with the views of doctrine prevalent in Philadelphia; and probably, at least as many might be found there who would cordially sympathize with the general feeling of London Yearly Meeting. If proof were needed, it is afforded by the cordial welcome lately extended in Philadelphia to the two Friends who have just returned from their gospel labors in America; and we trust, the Friends from Philadelphia, who attended our own Yearly Meeting, were received with an equally brotherly feeling.

But, in all fairness, the test of unity in doctrine between two Yearly Meetings must be their official documents. And, if we apply this test, can we refuse to acknowledge that Friends in England and Friends in Philadelphia do not, in their corporate capacity, hold the same doctrines?

An epistle, addressed by the last Yearly Meeting of Philadelphia to its members, has been reprinted in England, and largely circulated amongst Friends by some of them who sympathize with the views it advocates. By one of these Friends it was commended to our notice in the Yearly Meeting as a sound and very valuable document, and it was suggested that we should do well to read it in the meeting at large. It is not too much to say that the epistle is intended to be repressive of earnest Christian effort for the good of others, and, in particular, of the endeavors now being made in Philadelphia to promote the work of First-day school instruction by Friends, a work which (as our Yearly Meeting has repeatedly declared) has proved very helpful to the religious life of our Society.

And, in reference to doctrines, the diversity is not less apparent. It is clear that Philadelphia Friends, in their corporate capacity, cling to that idea of justification which makes it "all one with sanctification," a justification received not through simple faith in Jesus of Nazareth, crucified for us, but by co-operation with that "heavenly spiritual principle," which they believe to be "in all men as a seed," "in which God, as Father, Son, and Holy Spirit dwells"—a birth of Christ in man, not Christ's death on the cross for man, being his ground of acceptance. It is clear that those who sanctioned the issuing of the epistle in question still think of the gospel, not as the glad tidings of redeeming love manifested in the incarnation, life, sufferings, death, and resurrection of the Son of God, and left on record for us by His commissioned apostles and evangelists, but as identical with this "inward light" or "Divine principle," the pos-

session of which they assert to be independent of the outward revelation contained in the Bible.

But, if we turn to the epistles and other documents issued by our own Yearly Meeting during the last thirty years, it is equally clear that the Society of Friends in England, as a body, has ceased to hold these views. This is admitted, though with regret and expostulation, by the few Friends who still continue to maintain them.

I rejoice in knowing that there are more than a very few of the serious-minded members of Philadelphia Yearly Meeting who have escaped from the trammels of, what I must venture to call, a man-made system of Divinity, and have been permitted to see the simplicity of the truth as it is in Jesus, as set forth in the inspired writings of the New Testament, and brought home to their souls with power by the Holy Spirit. I earnestly desire the encouragement of these, that in simple dependence upon Him who has loved them, and drawn them to Himself, they may be enabled to go forward, seeking to build up one another in our most holy faith; exhorting one another, and edifying one another, as the Lord may be pleased to qualify them; and seeking, both in secret and in united prayer, for those blessings which He is so ready to bestow. As they thus bear testimony, not in word only, but in life and conduct, to the reality of their devotedness to Christ, the distrust with which some, even of their fellow members, at present regard them may be gradually removed. The joyful will permeate the whole lump, and the heaven time will come when it may once more be said, without reserve or qualification, that there is no difference in doctrine between the two Yearly Meetings of London and Philadelphia.

I remain, thy friend sincerely,

FIELDEN THORP.

London, 29, 6th month, 1870.

China.

For "The Friend."

Doorways.—In the Temple of Longevity, all the priests were sitting at dinner; tables were arranged in rows the length of a large hall. Their food was rice and vegetables. Behind the temple is a sort of grotto, made of rock work, with bridges and arbors. Here, too, we saw some doors and windows of a very peculiar and fanciful construction. A plaster bas-relief on the wall represented the branch of some tree, as if spreading downwards over the wall; one leaf, however, instead of being solid and raised from the surface, was pierced through the wall, forming a window. The fruit was only traced in outline, and left open to form a door. We sketched one of a pear branch, but there were many others made in the same way, melons, gourds, and lotuses, the latter extremely graceful and pretty.

A Visit.—We then went to see the abode of a very rich Chinese gentleman. It could not be called a house, for it more nearly resembled a village, with several families living together in patriarchal style; sons, and sons' wives, and children, and dependents. The gentleman and several members of his family were away worshipping their ancestors, but some of the ladies were at home; and Mr. — made inquiries whether I might be allowed to visit them; he and my father were, of course, not to be admitted. Accordingly, a little, old woman, apparently one of the ser-

vants, toddled into the room on her stumpy little feet, and leading me by the hand, conducted me to another room in which several ladies were assembled. They then sent for the interpreter, who was with us, to come and communicate our respective ideas. As soon as they had had one good stare, they began to examine me minutely, my dress; the few ornaments I had on, my watch, a small pair of opera-glasses, and everything else about me, asking innumerable questions all the time; which, as the interpreter only spoke "pigeon English," was for me nearly as difficult of comprehension as Chinese. "They make thee talker, if you catechee one piecee husband?" I replied in the negative, upon which they inquired how old I was, and expressed great astonishment that any one should have arrived at the mature age of four-and-twenty without being provided with that desirable appendage. While this discussion was going on, one woman came forward, took off my gloves, and seeing I had no rings on explained to the others, that if they had looked at my hands, they might have seen I had "not catechee one piecee husband," which caused her to be looked upon as a marvel of wisdom, and to be referred to on all after occasions. Having taken off my gloves, they went into raptures over my hands. Comparing them with their own, which were, without exception, very brown, hard, and bony. Each lady (and by this time they had become a multitude,) coming in turn, putting one of my hands beside her own, and then laughing merrily, and making some remark, which the interpreter translated, "she talker—number one, very beautiful hands." My hair was the next object of attention; which excited great admiration, being much lighter in color than their own; free from gum which renders theirs as stiff as card-board, and all growing on my own head. I fear my feet did not receive their commendation, though they were too polite to make any disparaging remarks, or the interpreter to repeat them. Only, as a kind of silent censure, a pair of boots belonging to the lady who I was told was the favorite wife, were almost immediately after brought in, to show me their idea of what feet *should* be. These boots were the length of the two first joints of my forefinger, beautifully embroidered in gold, on rose-colored satin, and with very thick soles, covered with white kid. We had been drinking tea and eating fruit and cakes all this time; the old ladies cramming me with the latter, for which I had no great affection, till I was in despair, but was afraid of hurting their feelings by refusing. I wished to see some of the very handsome dresses which Chinese ladies wear on high-days and holidays, so told the interpreter to ask if they would show me some of their "number one" (*best*) very fine dresses; which they appeared only too delighted at the thought of doing. Several of them went at once to fetch some, and most magnificent they were,—silk and satin, beautifully embroidered in different colors, mixed with gold and silver. They insisted upon dressing me in one of these gorgeous robes, shrieking with delight, like children, when they saw the effect of putting this dazzling garment, which was certainly never intended for any one exceeding four foot and a half in height, over my plain, black and white check dress, which appeared below it in startling contrast. It was difficult to get away from these merry, good-natured people; who,

I suppose, found great amusement in such a visit. The lady, whose dress I had been wearing, presented me, on parting, with two little embroidered bags; in which every Chinese lady carries the keys of her own particular box or chest. Several of the others loaded me with cakes and oranges, and all begged I would come again the next day; giving it as their opinion that I was "number one, very fine lady." Nearly all of them were much painted and rouged, none of them particularly pretty I thought, but with pleasant, gentle manners, and very merry withal.

I found the gentlemen being entertained at tea, by some of the sons of the house, fine, intelligent, gentlemanly-looking men, who had come in since our arrival, so more tea and cakes had to be consumed before we were free to continue our examination of the building.

The ancestral hall here was a very fine room; but the banners from this, as well as the hangings from other parts of the house, and cloth, and fur cloaks, and rugs, were all being spread out in the sun on the pavement of one of the court-yards, the servants evidently taking the opportunity of the master's absence to dismantle the rooms, and have a "regular turn-out," as house-maids call it.

We then went to some enclosures in which animals live in the blissful certainty of never being eaten. They are called "freed beasts," and are the birds, beasts, or fishes which have been purchased and set free, as votive offerings to the god in whose temple-grounds they are turned loose. They are tended by the priests belonging to the temple, who regard them as sacred.

For "The Friend."

We received the following communication from a highly esteemed Friend, one who takes a deep interest in the proper education of the children of Friends, and in the welfare of Westtown Boarding School. The plan proposed would require serious consideration, but we commend the whole subject to the intelligent examination of Friends throughout our Yearly Meeting.—Eos.

A Proposition.

Westtown having long felt the need of permanent teachers, and never having heard more than the one suggestion of "increased pay" whereby to secure that desired permanency, I will venture to touch upon another chord of the human heart, to secure the same object. It is well known to those whose experience in the affairs of men entitles them to a judgment, that most of our best men of a scientific and literary turn of mind, and such as would be likely unselfishly to engage in teaching really care less for the largest salary, than they do for the comforts, the quiet, the settlement and the refinements of a true home where they and their partners and their little ones may rest at all times *conscious of a home*, where the comforts and the beauties of nature and of art may be so nicely blended, that the place shall be more attractive than the money. Show me a man destitute of all local attachments, and I will show you one "on the wing," and ready for any thing that turns up. Show me one careless and indifferent to home's attractiveness, and I will show you one careless and indifferent to many other good things, neither of these are wanted for teachers.

ceedingly doubt if money alone, in any amount, would secure the object, unless it be the sacrifice of much that is far more valuable than permanency: raise a fund sufficiently large to pay the teachers the Boston rates of \$6,000 per annum, and I apprehend that the annoyances already experienced, could be found to be but a tithe of those which would ensue. None are wanted as teachers at Westtown but such as shall be as beacon-lights to the pupils, and know the spirit of greed to have no power over them: when the religious element at Westtown passes to be paramount, I hope to see its doors closed. The aspirations after a true home are inherent with the best minds and hearts; and feel assured that the practical acknowledgment at Westtown of this excellent trait of character, will secure the much needed permanency quicker, and with less outlay than any other course. A comfortable and attractive residence and surroundings are essential to a true home, and these are more needed by the teachers than very large salaries.

The old Infirmary is large, uncomfortable, lumpy, and exceedingly inconvenient—the main house beyond, although an improvement on the Infirmary as a dwelling, has no attractiveness either in or around it—while one at the end of the lane is still less desirable than either—the teachers cannot settle in them, and we should think them very unwise if they could.

Proposition:—I will contribute \$1000 towards the sum of \$25,000 to be used in selling the two houses on the lane, and erecting four good, commodious cottages, which shall be well supplied with conveniences, comfortable to the inmates, and pleasant to the eye; located, two on each side of the lane, rather more than half way down to terminus, and to be surrounded with sufficient yard room to admit of suitable adornment. The plans, elevation and locality of all cottages to be approved by the contributors to the fund, in conjunction with the school Committee.

There are four times twenty-five Friends attending to Philadelphia Yearly Meeting, use \$1000 subscriptions to this object, but scarcely be missed from their ample homes. Will the fourth of these signify their willingness at once, to the Westtown Treasurer, Charles J. Allen, No. 304 Arch St., that the work may be commenced early next year. Let there be no subscription papers, or self-appointed committees to solicit; but all be free, and done from pure love for our old Westtown. How little have we of present middle generation, done for this e-honored, heaven-blessed legacy, as comended with our fathers, who purchased, paid and bequeathed it to us.

California is largely cultivating, besides the apple; oranges, limes, citrons, figs and walnuts. In Lower California there are now 70 orange trees in bearing. About seventy stand on an acre, which commence producing in eight years from the seed. For good oranges the price is \$20 per 1,000. Lemons, peaches, and citrus yield crops averaged to be worth \$1,000 per acre. It takes eight years to get the trees in condition to bear, however, English walnuts are raised in plenty, and sell 25 cents per pound. A large tree will give 50 pounds of nuts. The figs are plentiful and of good quality.

COUNT THY MERCIES.

Al! grieve not so, nor so lament,
My soul! nor trouble thy sigh,
Because some joys to others seem;
Thy Father may deny.
Take all as love that seems severe;
There is no want if God is near.

There is no right thou canst demand,
No title thou canst claim;
For all are strangers in the land
Who bear the human name:
Earth and its treasures are the Lord's,
And He the lot of each accord.

How thankless art thou, child of man!
For favors that abound;
Thy God hath given thee eyes to scan
The glory all around:
Yet seldom for this priceless sight
Hast thou been heard to praise aright.

He knows who lives on Zion's hill
What we in truth require,
Knows too, how many blessings still
This flesh and blood desire;
And could He safely all bestow,
He would not let thee sorrowing go.

Thou wast not born that earth should be
A portion fondly sought;
Look up to heaven, and fondly see
Thy shining golden lot.
Honors and joys which thou shalt share,
Unending and unenvied there.

Then journey on to life and bliss;
God will protect to heaven;
And every good that meets thee is
A blessing wisely given.
If losses come—so let it be;
The God of heaven remains with thee.

SLEEP.

Sleep! to the homeless, thou art home;
The friendless find in thee a friend;
And well it is, wherever he roam,
Who meets thee at his journey's end.
Thy stillness is the planet's speed;
Thy weakness is unmeasured night;
Sparks from the hoof of death's pale steed—
Worlds flash and perish in thy sight.
The dawning will to thee alone—
The will and power are given to thee—
To lift the veil of the unknown,
The curtain of eternity—
To look unmeasured, though unbidden,
On marvels from the seraph hidden!
Alone to see—where none have seen!
Alone to see—what none have seen!
And to astonish, resent tell
The secrets of the Unsearchable.

Selected.

Elliott.

For "The Friend."

"Behold, I lay in Zion for a foundation a stone, a tried stone, a precious corner-stone, a sure foundation, he that believeth shall not make haste." He that believeth in this Stone, he that buildeth thereon, shall not make haste. And why? Because he must dig deep, in order to know his spiritual building placed upon this Rock. His is not a superstructure quickly raised upon the sand; which the rain and the wind may lay low, but it rests upon "a sure foundation," which will prove to be "a tried stone," against which all storms will beat in vain. If the members of our beloved Society were individually engaged to dig deep that they might be built upon Christ Jesus, the Rock of ages, precious fruits would be manifest; fruits which would leave no doubt of their source, and which would bring praise to the great Husbandman. There would then be neither creaturely activity nor spiritual sloth; but there would be a deep indwelling of spirit with Christ, our holy Head, in which state we would be enabled to discern the voice

of the stranger from that of the Good Shepherd, and closely following the one, and steadily rejecting the other, we would be preserved from all errors. Shall we not strive for this? and seek to "dwell in the Living Spirit," and be alike obedient to His puttings forth and to His restraints; then the day's work will keep pace with the day, and with our mouths in the dust, we will be prepared and enabled to exalt the Name of Him, our "precious Corner-stone," in whom none ever believed and were confounded or ashamed.

8th month 13th, 1870.

Communicated for "The Friend."

War Department, Bureau of Refugees, Freedmen and Abandoned Lands, Office General Supt. Education, Washington, Aug. 15, 1870. To Friends' Freedmen's Association, Philadelphia:

The rental arrangement by which this Bureau has been aiding benevolent organizations in sustaining schools, expired on the 1st of July last. As Congress failed to make an appropriation for the continuance of the work, this arrangement, I regret to say, cannot be renewed the coming term.

It is hoped the Societies will make all possible appeal to their patrons, and put forth the most vigorous efforts, at least to prevent the schools in the South from decreasing.

Very respectfully,

J. W. ALVORD,
Gen. Supt. Education.

The Philadelphia Water Works.—Since last summer a number of improvements have been made in the Philadelphia water works, which will increase the supply of water to certain portions of the city. The new Cornish engine, at the Schuylkill works, which was put in operation early this year, is now pumping about 8,000,000 gallons per day. This engine, with the others in use at these works, pump about 18,000,000 gallons per day, an increase of 7,000,000 per day, as compared with the period of drouth last summer. A larger engine, of the same pattern, which will be capable of pumping about 10,000,000 gallons per day, is now under way, and will be completed next March.

At the Fairmount works, the second large turbine wheel built in the place of the old breast wheels is completed, and now pumping about 8,000,000 gallons per day. A contract was made some time since for the third turbine wheel, and the work has been commenced, but will not be completed until next year. When this work is finished but two of the old breast wheels will remain.

One section of the new reservoir at Belmont, to supply West Philadelphia, has been completed, and in a few days will be filled with water, the new engine at the works, near Belmont cottage, having been finished. The capacity of this engine and pump is 5,000,000 gallons per day. As soon as the second engine for these works is built and put in place the old engine house near Girard avenue will be abandoned.

In about six weeks it is expected the repairs to the reservoir at Roxborough will be completed, and also the bridge over the Wissahickon, which is to convey the water for the supply of Germantown. This bridge, which is formed of two lines of 20 inch water main, will be 684 feet long, divided into four spans, the highest pier 94 feet high, and made of

wrought iron pipes eight inches in diameter, and braced with wrought iron ties. The water pipe on each side of the creek has already been laid, and as soon as the bridge is completed water will be supplied to the reservoir at Mount Airy from the Roxborough reservoir. There are two engines, with a pumping capacity of six million gallons per day, at the Delaware works. A new engine, with the capacity equal to the two old ones, is now being constructed, and a new reservoir built at Sixth street and Lehigh avenue. The engine and reservoir will be completed next summer.

—American Engineer.

For "The Friend."

Letter from William Grover.

1803, 6th mo. 3d. It was not pleasant that I did not either see or write to thee before I left London, which was not until the 28th. I have repeatedly had in view the expectation I gave thee of a little explanation of my views concerning the investigation of certain points which have often been considered as mysterious, and which I should gladly express in such a manner as would tend to thy satisfaction.

I am inclined to believe, that it is not the design of Unerring Wisdom, that the mind should be satisfied about these things by the exertion of its own powers; but that He has wisely reserved to Himself the communication of this satisfaction, dispensing it to the minds of His creatures, when, how, and in what degree He sees meet, from time to time. It seems that a real progress in Divine knowledge is very differently to be attained and experienced, from what may generally be expected and desired by mankind. If any man will do His will, he shall know of the doctrine. See John vii. 17.

It is very gratifying to the natural mind, to have a very full and comprehensive view of the subject of religion at the beginning of the work; but the religion of our Lord and Saviour Jesus Christ, appears to be very differently intended to be opened to the mind; beginning, frequently, with a little light or manifestation of the Divine will, as to some point or part of duty. And as obedience is yielded to this small manifestation, let it be respecting whatsoever it may, greater and greater degrees of light and of strength are afforded to follow on to know more and more of the Divine will, and of Divine things. This is very humbling to the natural mind; which would willingly be getting on faster; but the real, Divine manifestations of Light and of Life, must be humbly waited for, and the mind clothed with reverence and fear, lest it get on in its own wisdom, and mix something of its own with the communications of Divine Light and Life; for it is well to remember, that "in Christ, the (Word) was Light, and that Light was the Life of men." Now as the mind is really favored to believe that all good comes from God; and that its own conceptions and searchings, in its own wisdom and strength, will end in disappointment, and short of that clearness and evidence which truly satisfies, it is brought into a humble, waiting state; and in this reduced, dependent, humble state, as anything is made known from the Source of all true good, I believe a sweet, substantial satisfying something will attend it, which all the exertions of the mind, in its own wisdom and activity, cannot afford. And as this comes to be really known and believed, a fear pos-

sesses the mind of entering into abstract speculation concerning Divine things; preferring rather to wait in humility and reverence upon God; not doubting, but He will be pleased, if we yield obedience, day by day, to the manifestations of His Light in our minds, to make to us such discoveries as He judges best and most suitable for us.

Now, as the Holy Scriptures are read in this disposition of mind, depending on God, through the Spirit of Christ in the soul, for the opening of them to our understandings, we may, I believe, often be sweetly refreshed, comforted, and edified, even in reading a very few verses. And if we meet with anything which is not quite clear to us, we may rather feel disposed to leave it, than to reason, search, and contrive concerning it. Thus thou wilt perceive that I believe the religion of Christ to be a religion of faith in Him; and that as in Him are hid all the treasures of wisdom and knowledge, so, as we are brought into a state of true waiting and dependence upon Him, and upon the manifestations of His spirit on the soul, we are in the way to be rightly introduced, from time to time, into such degrees of knowledge in Divine things, as is truly best for us, and best adapted to the state of our minds; and that it is not consistent with Divine Wisdom to communicate the treasures of heavenly mysteries, but as the mind becomes, through true obedience, refined and prepared for the reception of them.

THE FRIEND.

EIGHTH MONTH 27, 1870.

Our readers will find in another part of this day's issue of our Journal, an article taken from "The Monthly Record" of Birmingham, England, and published over the signature of Fielden Thorp. We ask particular attention to it; for though in some respects it misrepresents Philadelphia Yearly Meeting, it nevertheless adds to the cumulative evidence, of the real character of the obstruction to the restoration of unity and harmony within our religious Society, as now constituted; we allude to his statement "That Friends in England and Friends in Philadelphia, do not, in their corporate capacity, hold the same doctrines," which, we believe, is also true as regards many Friends in most of the Yearly Meetings on this continent.

The epistle addressed to its members by our late Yearly Meeting, has called forth much comment, both here and in Great Britain; and had there been any just ground for doubting them before, ample evidence has been afforded since its publication, to its timely production, and the verity of the religious feelings from which it is stated to have originated.

In no one instance, we believe, has there been any attempt made by those attacking that document, to cast a doubt on the identity of the doctrines advocated in it, with those ever held by the Society of Friends, as set forth in the various official or approved writings published to the world by the Society. It is manifest that the cause of those attacks, and of the harsh, and in some cases even vituperative language used respecting it, and its authors and approvers, may be found in the following remarks of F. Thorp.

"It is clear that Philadelphia Friends, in their corporate capacity, cling to that idea of justification which makes it "all one with sanctification," a justification received not through simple faith in Jesus of Nazareth crucified for us, but by coöperation with the "heavenly spiritual principle," which they believe to be "in all men as a seed," "in white God as Father, Son and Holy Spirit dwells; birth of Christ in man, not Christ's death or the cross for man, being his ground of acceptance. It is clear that those who sanction the issuing of the epistle in question still think of the gospel, not as glad tidings of redeeming love manifested in the incarnation, His sufferings, death and resurrection of the Son of God, and left on record for us by His commissioned apostles and evangelists; but identical with this "inward light," or "Divine principle," the possession of which they assume to be independent of the outward revelation contained in the bible." But if we turn to the epistles and other documents issued by our own Yearly Meeting during the last thirty years, it is equally clear, that the Society of Friends in England, as a body, has ceased to hold these views. This is admitted, though with regret and expostulation, by the Friends who still continue to maintain them.

Those acquainted with the contents of the epistle calling forth the above remarks, &c. with other addresses or declarations reciting the christian faith maintained by Philadelphia Yearly Meeting, will, we apprehend readily see the incorrectness in this author's statement of what "Philadelphia Friends" "think of the gospel," and what they do not believe. The words marked as quotations, his statement, are taken from Barclay's Aology, and in their proper connections, impute truths not doubted by any true Friend. It is true that Philadelphia Yearly Meeting in its corporate capacity, "still clings" to the faith of Friends, as set forth by the humble founders of the Society, and it is no recent discovered fact to it, or to most of its members, that there is ground for the assertion "that the Society of Friends in England as a body, has ceased to hold several of the views." For many years it strove, in vain, to induce London Yearly Meeting to take a stand against those same departures from the faith of Friends, which have been manifested in many of those official acts, which F. Thorp now calls attention, as showing that the "views" held by the two meetings are not the same.

This writer characterizes the original belief of the Society on the important doctrines of justification, and universal saving light, as "a man-made system of Divinity;" claiming, opposition to that belief; that the faith is held by himself and his fellow believers, "the simplicity of the truth as it is in Jesus as set forth in the inspired writings of the New Testament."

It is not an uncommon thing for those, who have changed from the faith held by the Society to which they belonged, and being desirous to defend or promulgate that which they have adopted, to assume that they have arrived at a better understanding of the Scriptures than their fellow members, who can unite with them in the changes they have made; and it is easy to charge the latter with "clinging" to a system not drawn immediately from the Scriptures, but man-made. We apprehend the same idea, though con-

different language, is intended to be conveyed by the paragraph in an editorial of the last number of the *London Friend*, where the writer says, when speaking of "that section of Philadelphia Yearly Meeting" with whose title originated, "Neither would we question in their soundness in the essential truths of christianity, though we cannot but think that our reception of those, through the medium of theological system, rather than directly from the inspired Scriptures, has materially impaired the clearness of perception and expression, which is so indispensable for those who would instruct others." An expression of J. J. Gury's has lately been revived, which is intended to convey a similar sentiment; where he says: "Were I required to define Quakerism, I should not describe it as the system so laborately wrought out by a Barclay, or as the doctrines and maxims of a Penn, or as the deep and refined views of a Pennington; for these authors have their defects as well as their excellencies. I should call it the religion of the New Testament of our Lord and Saviour Jesus Christ, without diminution, without addition and without compromise." So far as the language of either the writers here alluded to, conveys any distinct idea of the faith referred to, it amounts to this; that Quakerism is not the religion of the New Testament as understood and accepted by the founders of the Society, and maintained by it from their day to the present, but it is the religion drawn directly from the New Testament, according to those writers' understanding and acceptance of it, and taking for granted that they must be right, they make such changes in the ancient text of the Society, as accord with their views of what is scriptural, and yet claim to be Friends; charging those who feel conscientiously bound to adhere to the primitive faith, because they believe it to be the truth as it is in Jesus, with clinging to "a man-made system," as receiving their belief through the medium of a theological system, rather than directly from the inspired Scriptures. Why is not a "system" which these professed Friends hold in common with many other religious societies, as much man-made, or derived from theological influences, as that which they denounce? The human element must enter into an expression of any system or article of faith, make it intelligible, and as soon as it is put into words, it is so far man-made. This reception of what are believed to constitute the truths of the gospel, to definite terms, is essential to the existence of distinct organizations among professing christians, so long as there is diversity of faith; for every christian nomination believes, or professes to believe, that their faith is "the religion of the New Testament without diminution, without addition, and without compromise," and yet they differ widely in their definition and reception of it. If then, the question now in dispute, which system is in accord with the word of the Spirit and the teachings of Holy Scripture? it might be necessary to enter into an argument to show the scriptural soundness of the doctrines contained in the epistle of our last Yearly Meeting, and to point out the inconsistency and fallacy of the objections made to it; and the unsoundness of some of the sentiments advocated by its opponents. But that is not now the question. The points at issue are whether that epistle sets forth the doctrines of Friends inculcated by Fox, Bar-

clay, Penn, Pennington, and by the whole body of the Society until recently; and if so, whether that system of religion is to be repudiated, and the modified Quakerism of Cressdon, Gurney, Ash, and those who have adopted their views, is to be now adopted by the whole body of the Society.

Upon the question, whether the doctrine contained in the epistle corresponds with that heretofore held by the Society, we will quote from the editorial in the last number of *The British Friend*: "We believe not one of her critics assails Philadelphia Yearly Meeting on the ground of departure from such belief; but each attempts to show, that what she puts forth in the epistle in question, is unscriptural and at variance with what is entertained by all evangelical christian professors. This, however, we consider is not the question at issue—either the Philadelphia epistle is in harmony with our accredited positions, or it is not. We have not now to inquire if those positions are scripturally sound; it has been a settled point that they are so, ever since the rise of the Society, and it is this which has formed its outward basis of union. Such as consider the Society unevangelical or unscriptural, place themselves in an antagonistic position to the body, and in proportion as they differ from Friends, or from the Society's recognized standards, they have ceased to have a right to the name; such standards, be it observed, being so held, not because they are of Fox, Penn and Barclay, but of Christ and his apostles in the Scriptures." With this we can entirely agree.

As there has not been, so we believe there cannot be, any dispute that the doctrines set forth in the epistle, have always been held by Friends. In the year 1829 a conference, composed of delegates from all the Yearly Meetings of Friends in America, met in Philadelphia, and prepared "The Testimony of the Society of Friends on the Continent of America;" in which "Testimony," when declaring the belief of Friends respecting justification, they gave the clear exposition of the subject found in Barclay's Apology. That "Testimony" was laid before, and received the sanction of every Yearly Meeting in this country; as is shown by the minutes made in them respectively, and published with the "Testimony." The views on justification in the epistle, issued by Philadelphia Yearly Meeting, which has been so assailed, are the same as those thus endorsed by the whole Society here, and we feel confident that no officially approved declaration of the faith of the Society, and no writer among Friends whose works have received their sanction, inculcate any other doctrine on this important subject.

The difference between this doctrine and that now advocated by so many within the pale of our religious Society, is not merely as to the application of a word to define one step in the progress of transformation, from a state of nature to a state of grace. It is far deeper. It is inseparably connected with principles, lying at the base of Quakerism, and involving the whole work of regeneration and preparation for, and engaging in the work of the Lord. The views upon this subject of conversion and justification now held by so many among us, were common with very many religious professors, when Friends separated themselves from them. The early Friends saw their incompleteness, and the defective system of christianity that attended

them; and they were enabled, in the light of Christ Jesus, their Lord, to embrace primitive christianity in its spirituality and completeness. As the doctrines and testimonies of the gospel they lived in, and inculcated, are frittered away, and the modified Quakerism prevailing so largely, takes their place, we believe, the members or meetings embracing it, will, unless mercifully restrained by the Head of the Church, go back, step by step, to the faith and practices of the other religious societies around them. This retrograde movement, the copying after and uniting with other denominations—now in one and now in another point of doctrine or ostensible religious performance, will, if those views continue to receive the sanction of bodies like London Yearly Meeting, lead to other and wider deviations from the uniformly acknowledged faith and practice of our Society, and we shall in the end, be amalgamated with other professions. It is thus that the truth of the text, as applied in the epistle, has been, and we fear will, continue to be exemplified "Strangers have devoured his strength and he knew it not."

We pen these remarks in no party spirit; no feeling but christian solicitude for those who differ from us. We fully accord them the right to adopt their own views of Scriptural truth; and we by no means impugn their sincerity. But many of those views never have been, and are not now the views of Friends; and we confess our inability to reconcile with fairness and christian truthfulness, the avowal by those in membership of important religious principles, which they know were never sanctioned by the Society; and yet, by making no clear and official statement of their repudiation of several of the doctrines always owned by Friends, deceive many in the Society, and allow the world to suppose they are representing their original faith. Can they marvel that those who still "cling" to the ancient faith, feel that they are aggrieved, and unjustly treated, by this course; especially as they are blamed for the production of disunity and disorder, by not going with the prevailing current. While we commend the honesty of F. Thorp and others in openly acknowledging that there are these differences in the doctrines, maintained by Philadelphia and London Yearly Meetings, we greatly mourn that it is so; not only because it seems to almost preclude the hope of restoration of harmony between them; but still more, because we believe that the differences are the result of a sad defection from the spiritual religion which Friends are called to hold up before, and commend to the world.

The "Contributors to The Friend," desirous of bringing their Journal more extensively to the notice of their fellow members, have directed the printer to strike off extra copies of the present number, the first of the Forty-fourth Volume, with the intention of distributing them among those to whom *The Friend* is not now regularly sent, in the hope that its circulation may thus be increased. Copies for distribution will be mailed to some of our agents and friends, and any who desire to obtain them will be gratuitously supplied at the office; or if they will kindly furnish names and post-office address of persons to whom they think it desirable that they should be

sent, care will be taken to have them duly forwarded.

Persons desiring to subscribe will please address our agent, John S. Stokes, No. 116 North Fourth Street, Philadelphia, enclosing \$2.00 and giving post-office address.

SUMMARY OF EVENTS.

FOREIGN.—The sanguinary and indecisive battle near Metz on the 14th inst., was succeeded by similar conflicts between the hostile forces almost throughout the following week. In most if not all of these engagements, the Prussians were the assailants, their object being to prevent the French army from leaving Metz and forming a junction with the French forces at Chalons. The encounters took place within a short distance of Metz, both south and west of that city. The Prussian commanders succeeded in arresting the westward movement of the French forces, but seem to have gained this advantage at a very heavy cost. The number killed and wounded on both sides is reported to be frightfully great, and so far as can be discovered from the contradictory statements of the two parties, the French have inflicted losses as great as those they have received. In reference to the most severe of these engagements, the king of Prussia sent the following dispatch to Berlin on Aug. 18, 1870: "The French army was attacked to-day west of Metz. Its position was very strong. My command, after a combat of nine hours duration, totally routed the French forces, intercepted their communications with Paris, and threw them back on Metz." On the other hand the French Emperor, Count Palikao, makes the following statement to the Corps Legislatif: "The Prussians assert that they were victorious on the 18th, I affirm the contrary. I have communicated my dispatches to several of the deputies showing that three Prussian army corps united and attacked Bazaine. They were repulsed and driven into the quarters of numerous villages. On the 19th, the 8th York *Infantry* was killed. The battle was without decisive result, the French falling back in good order, without pursuit, to Metz, their ammunition having given out. The losses of the Prussians greatly exceeded those of the French, the former losing 40,000 men on Thursday alone."

The Paris dispatches show that whatever may have been the relative loss of life, the general result has not been favorable to the French. The War Office forbids the publication of any war dispatches, unless signed by Marshal Bazaine. This prohibition extends even to the Emperor's dispatches. Very little has been said of the Emperor Napoleon, who has been reported that he was at Chalons and seriously indisposed. Another account locates him at Rheims. He has lost his popularity, and it is supposed will not much longer be the ruler of France.

The defence of Paris has been confided to General Trochu, who has been invested by the government with almost unlimited powers. Letters from Paris to London declare that the Emperor is virtually deposed, and is ignored in all arrangements. Trochu is said to be acting effectively and has already organized a large force for the defence of the capital. The environs of Paris have been laid waste, and an inhibition of the army reported that he was at Chalons and seriously indisposed. Another account locates him at Rheims. He has lost his popularity, and it is supposed will not much longer be the ruler of France.

Disturbances have broken out in the Department of the Yonne in France, growing out of a belief of the bigoted peasantry, encouraged by their teachers, that the present war is one of Lutheranism against the Catholic Church. The Protestants are violently assailed.

Pfalzburg, in the Vosges, capitulated on the 20th, to the Württemberg army.

Strasbourg, being invested by an army of 30,000 of the Baden and Prussian troops. The besiegers had changed the course of the little river Ill, in order to stop the supply of water for the city. The general in command of Strasbourg had driven out of the defenses all who consume army stores without affording aid.

Paris dispatches indicate that the convoys with provisions have gone forward to supply both armies. About 150,000 men had passed through Paris to the front in the last four days. It is said that there are now

nearly 300,000 good troops at and near Paris. The destruction of the Bois de Boulogne had been commenced. A large part of it, however, will not be touched. Only those portions near the wall of the city will be cleared away. The ramparts are strongly fortified with large cannon. The forts are fully prepared, and the entrances to the city may be closed at any moment by drawing the forts.

The *Journal Officiel* contradicts the report of the illness of the emperor, and says that he will command the imperial guard in the next great battle for the defence of Paris. The Journal also says the Minister of the Interior has made public a note from the Minister of War, to the effect that the government having received no dispatches from the army of the Rhine for two days, on account of the interruption of telegraphic communication, he thinks the plans of Marshal Bazaine have not yet succeeded. Communication between Bazaine and McMahon is kept up by couriers.

A dispatch from Brussels says, the request of Prussia that her wounded may be sent home by way of Brussels and Luxembourg, has been refused, on the ground that its purpose was to clear the way for reinforcements coming to the Prussian army.

A London dispatch of the 22d says, the Crown Prince, with an army of 100,000 strong, is apparently intending to march from Paris by the valley of the Aisne.

A Florence dispatch of the 22d says, Prince Napoleon is there. His mission is to demand the mediation of Italy.

The cable of 1866, which was broken some months ago, has been repaired, and messages now pass freely between London and Paris.

Another dreadful colliery explosion has occurred at Wigan, in Lancashire. Thirty persons were killed and many others wounded.

The king of Prussia has appointed General Bouin Governor General of Lorraine, and General Boblen, governor of the province of Alsace. The responsibility of the cabinet in regard to possession of the former German provinces of the Rhine, Prussia means to reimburse her plundered subjects expelled from France.

General Sheridan, of the U. S. army, has received permission from the Prussian authorities to follow the campaign with the head-quarters of the king. He was present at the battle of the Sadowa.

The cabinet of Berlin, in reply to a communication from the pope, declines to guarantee the inviolability of the pontifical states.

London, 8th mo. 22d. Consols, 91 $\frac{1}{2}$. U. S. 5-20s, 1862, 88 $\frac{1}{2}$; 1865, 88 $\frac{1}{2}$; 5 per cents, 83.

Liverpool. Cplands cotton, 9 $\frac{1}{2}$ a 9 $\frac{1}{2}$; Orleans, 91 a 91 $\frac{1}{2}$.

UNITED STATES.—*Philadelphia*.—Mortality last week 376. Cholera infantum, 89; consumption, 42; marasmus, 29; old age, 13.

Miscellaneous.—The customs receipts for the week ending 8th mo. 13th, amounted to \$4,270,322.

During the fiscal year ending 6th mo. 30th last, the net receipts from our customs were \$194,538,374. Internal Revenue, \$184,899,756; Sales of Public Lands, \$3,350,382; miscellaneous sources, \$28,466,865—total \$411,255,477. During the same period the expenditures for the War Department were \$87,655,073; Navy, \$21,780,229; Indian Affairs, \$1,000,000; Civil and miscellaneous, \$53,237,969; Interest on public debt, \$127,702,338—total \$292,124,052. The amount expended in the purchase of U. S. bonds for the sinking fund was \$126,578,508. The balance in the Treasury 6th mo. 30th, 1870, was \$149,502,471.

The President has issued a proclamation enjoining a strict observance of the neutrality laws upon all citizens of the United States, and others within their jurisdiction, pending the present war between France and the North German Confederation.

The Markets, &c.—The following were the quotations on the 22d inst.: New York—American gold, 113; 10-40s, 108 $\frac{1}{2}$. Superior State flour, 85 a 85 $\frac{1}{2}$; 56-20 superfine, \$5.65 a 56; Genesee, 26 a 29; southern, 26.20 a 26.90. No. 2 Chicago spring wheat, \$1.15; amber western, \$1.28 a \$1.40; amber Tennessee, \$1.40 a \$1.43; white Michigan, \$1.70. Yellow corn, \$1.05 a \$1.05; western mixed, 85 a 88 cts. Cula sugar, 9 $\frac{1}{2}$ a 10 cts.; refined, 13 $\frac{1}{2}$ cts. Middling cotton, 19 $\frac{1}{2}$ cts. *Philadelphia*. Superfine flour, 55.40; finer brands, 55.50 a 58.50. Pennsylvania red wheat, \$1.45; new Indiana, \$1.40 a \$1.43; rye, 95 a 98 cts. Yellow corn, 81 a 81.05; western mixed, 90 a 93 cts. New castles, 47 a 50 cts. Timothy seed, \$4.50 a \$4.75. The arrivals and sales of beef cattle reached about 2000 head. Extra sold at 9 cts.; fair to good, 6 $\frac{1}{2}$ a 8 cts., and common, 5 a 6 cts. per lb. gross. Sales of 13,000 sheep at 4 $\frac{1}{2}$ a 6 cts. per lb. gross, and

1883 hogs at \$13 a \$13.50 per 100 lbs. net, for corn fed.

RECEIPTS.

Received from Sarah Green, R. 1, \$2.44; from Wm. B. Oliver, Mass., for Nathan Breed, \$2.44; for and for Pelatiah Purinton, \$2.50, Vol. 43; from Dillo Gibbons, O., \$2.44; from Elwood Dean, O., \$2.44; from E. W. Stratton, for Geo. H. Blodgett, \$2.44; from J. H. Bland, Ill., \$2.44; from J. H. Caldwell, Issue S. Caldwell, an Israel Cove, \$2.44 each; for Philip Carter, O. \$2.44; from Geo. Sharpless, Pa., per Charles I Warner, \$2.44; from E. S. Haines, Pa., \$2.44; from Wm. R. Smith, O., \$2.44; from H. W. Gibbons, O., \$2.44; from J. M. T. \$2.44; from J. M. T., \$2.44; from Chas. L. Willits, N. J., \$2.44; from Lydia A. Hendrickson, N. J., \$2.44; from Sarah L. Passmore, Pa., \$2.44; from Amos Batey, Agent, Io., for James Harkness, Nathaniel McDonald, and Russel Taylor, \$2.44 each; for D. C. Barber, \$2.44; from Benj. I. Stratton, Agent, O., \$2.44, and for Sarah S. Lupton and Christiana Kirk, \$2.44 each; from Isaac Chalk, Io., \$2.44; from Sam'l Shaw, O., \$2.44; from Mark Haines, N. J., \$2.44; from Jane B. Davi, Pa., \$2.44; from Ann Scott, Pa., \$2.44; from D. J. Sells, Pa., \$2.44; from Jos. Scattergood, Pa., \$2.44; from Jeremiah Foster, R. 1, \$2.44; from John D. Harrison, Pa., \$2.44; from Amos Lee, Pa., per Jesse Hall, P. M., \$2.44; from Parker Hall, Agent, O., \$2.44, and for Nathaniel Hall, Wm. Hall, Wm. Hall, Jr., Jas. McCall, and Lewis Tabor, \$2.44 each; from Chas. W. Robert, Pa., per M. C. Roberts, \$2.44; from Gilbert Cooper, \$2.44, and for Lucy Cove, \$2.44; for Joel Willson, Agent, N. J., \$2.44, and for Max Thorn, \$2.44; from Isaac Cowgill, O., \$2.44, and for Joseph Cowgill, \$2.44; from Benj. Bowe, Ann, Mich., \$2.44; from Amos Evans, N. J., \$2.44.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

WESTWTON BOARDING SCHOOL.

THE WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next.

Parents and others intending to send children to School, are requested to make early application to AARON SHARPLESS, Superintendent, whose address "Street Road P. O., Chester Co., Pa." When no convenient application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 Arch St., Philadelphia.

Parents and Guardians of pupils now at School are reminded that the second payment for the coming session is now due; and it will be an accommodation if all who can conveniently do so, will pay it remit it to the Superintendent or Treasurer.

WANTED.

A female Teacher to take charge of Friends' School at West Chester. Apply to Rebecca Conrad, Rebecca Conrad, Jr., West Chester P. O., I.

A new edition of Clarkson's Portrait of Quaker has been issued by an Association of Friends in India. The book is bound in leather, and contains upwards of 500 pages. It will be sent, on receipt of price, at the following rates: By mail, prepaid, per copy \$2.13; express, post of carriage and receipt of book, per copy \$1.60. Address WILLIAM T. FAWCETT, Plainfield, Hendricks county, Indiana.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward), Philadelphia Physician and Superintendent—JOSHUA H. WORTHINGTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, Clerk of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

DIED, at Stamford, New York, on the 23d of Severn month, 1870, SAMUEL C. HULL, son of the late Her and Sarah HULL, who in his 53d year, a member of 8d

WILLIAM H. PALE, PRINTER.
No. 422 WALNUT STREET.

THE FRIEND.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

China.

For "The Friend."

Our author's sketches are too imperfect to give us as full an insight into Chinese doings as we could desire, but as they are from the pen of one whose sex and position gave her access where most observers are excluded, we obtain a few extracts further.

Manufactories.—On leaving, we returned to the manufactories; and first, to see the preparation of wood for lacquering. A layer of disintegrated granite, made into a paste with oil, is laid upon the panel. When dry it presents a smooth, firm surface, upon which successive coatings of lacquer are afterwards laid. The lacquer looks like very thick treacle, or tch.

We then visited a china manufactory. The most interesting process here was the painting. Each man had a picture, or pattern before him, and a tray of brushes and colors ready mixed. Holding the plate or cup in one hand, he laid on the requisite amount of color with the greatest precision and rapidity, apparently never making a false stroke, nor touching his work twice.

The proverb, "God is with the patient," noted from the koran so provokingly by the rats, to excuse themselves for procrastination and unmitigated laziness, ought to be familiar to Chinamen, though not for a similar reason. The industry and patience of this race are wonderful.

The Chinese loom for weaving silk is exactly like that used in olden days by English weavers; and found even now in cottages in the north of Ireland. The Chinaman weaver whom we visited was making a rich silk, masked with gold-like 'kinkob,' for man-rin's dresses, and at the same place they were making very heavy, thick, corded silk ribbons, exactly like markers for church books. These are ladies stockings, or what answer to stockings among Chinese ladies. They bind them round their withered, shrunken little legs, on high-days and holidays, letting the fringes at the ends hang down. Everything silk is sold by weight; the scales are beautifully delicate and exact. Close by they were making windows of oyster-shells, which are much used. The shell is split off in very thin flakes, which are then cut into small

squares and arranged between light bars of wood, like slates on a roof.

We went thence to see the manufactory of ornaments of kingsfishers' feathers, which are extremely pretty, and much worn on fetedays by women of the lower orders, who cannot afford expensive jewels, or ornaments of jade and coral. They look like the most beautiful light and dark blue enamel. From the precision displayed in cutting the feathers, it is a more curious process, even, than the painting on china. The feather is stripped unbroken from each side of the pen, and laid on a board beside the workman, who has also a small saucer of very strong glue, and two or three sharp knives of different forms. The framework of the ornament is of some thin brass looking metal, with a slight tracing of the outline of the pattern raised in the same metal. Most of the patterns we saw were of birds, fish, insects, dragons, crabs, lobsters, and such-like; or else flowers, with stamens made of seed-pears or very small bits of coral. The man took one look at the framework, and then, without the slightest hesitation, cut off the piece of feather of the exact size and shape required. He fixed it in its place by taking it up with a brush dipped in glue, and reversing it on the framework.

We then went to see the carving of those concentric ivory balls, which are looked upon as such marvels, but which, like many other extraordinary things, seem very simple when you see how they are done. A solid ivory ball is ruled into quarters, and in the centre of each quarter a circle is drawn, the size of the holes as they are to appear on the outside of the ball when completed. The ball is then fixed into a socket and put upon a turning-lathe. Each circle is then pierced till within a certain distance of the centre of the ball, when a 'bent chisel' (as wood carvers call it) is introduced, which cuts away all round the spots where the boring ceases; thus leaving, when the same process has been gone through at the termination of every bore, the innermost ball detached from the solid block. The same process is repeated two or three times, by which means more balls are made; or rather, a series of shells is formed round the innermost ball. The bent chisels are shorter in the shaft and longer in the bend of the blade as each successive ball requires. After this, the outside quartering is subdivided, and more (but of course, considerably shorter) bores are made. The same process is repeated throughout; the outermost ball remaining firmly fixed in the socket, and being the last worked upon. Some children were practising upon wooden balls. The exact markings in the first instance appeared the greatest difficulty.

Gardens.—We now visited some gardens belonging to the Temple of Longevity, but which are let to a gardener. In these were numerous trained plants and trees, in quaint and various forms; such as lions, dogs, dragons,

dolphins, serpents, pagodas, or baskets. Some of the animals had painted wooden eyes, which aided us considerably in recognizing their species, and added much to their fierceness of aspect. In this garden were also many large tanks for breeding gold and silver fish. The former were very beautiful, quite different from those commonly seen in England: the color is burnished gold, glistening and gleaming like metal at every movement. Their tails are double, and the motion of them such as one fancies must have suggested to an intelligent and mechanical mind, the first idea of a propelling screw.

After this we went in a boat some distance up the river to see the house and gardens of a celebrated Chinese merchant, Mr. Pottinger, one of the wealthiest of that class. The house resembled Chinese houses in general, with a number of small rooms, fitting into each other like a Chinese puzzle, with very handsome furniture and China in some rooms, but the same uninhabitable look which we remarked in every other large house. The garden can only be so called by courtesy, for it is in fact nothing but a raised, narrow causeway, running in and out, and winding round and about an artificial lake. It exactly resembles the bridge on the china plates, except that it has a roof supported on red, laquered-wood pillars, with black, laquered rafters. There are bridges, and drawbridges, and grottoes, and bowers, and pagodas, and every kind of ornamental gardening that one can imagine. At that portion which forms the boundary to the garden, the outer side of the colonnade is walled in, and here are stone tea-tables at short intervals, and innumerable little square bamboo stools arranged along the wall. The walls themselves are covered with moral sayings, and sentences from sage authors, with which the friends of the family are supposed to improve their minds when they come to a tea-party.

We went to the top of one of the pagodas, three stories high, whence the view of the river and distant town was very pretty, and the bird's-eye view of the garden and its colonnade extremely quaint and strange to English eyes.

The City of the Dead.—We then went a long way out of the city, passing one of the paradises, a leper village, the burial-place of criminals, and various other cheerful places, till we arrived at the "City of the Dead." This is certainly one of the most curious things to be seen in China. It is a regularly built, walled, and fortified city, with a guard at the gates, and streets of houses, just as for a city of the living. The only difference is, that here the houses are never more than one story high, and that an oppressive and almost awful silence prevails everywhere, which could only belong to a city of the dead. Here are deposited the coffins of those whose friends have not found the fortunate time and place for their interment, should they belong to

Canton, or for removing them to their native place, should they belong to another part of the country. Rent is paid for these houses by the week, month, or year; or else they are purchased, not as a family vault, but as a temporary resting-place for the dead, until their interment. Before every door hung a colored Chinese lantern, waving backward and forward in mournful cadence to the sighing of the wind, which seemed to haunt the silent streets, and to wait out its surprise and grief on finding naught but solitude and stillness. Each house consists of two rooms. On a table in the outer room is placed the monumental tablet, with lights and incense burning before it, and very often fruits and tea. In the back room the coffin or coffins are placed, resting on two thick blocks of stone; though in some of the streets we saw houses containing several coffins, evidently belonging to poor people, for they were piled one above another, as if many families united to rent a house. Some of the coffins belonging to the rich are very handsome, being made of solid, thick wood, sometimes beautifully lacquered. The coffin, in the case of a mandarin, requires to be of a considerable size, for he is buried in his state robes of rich broadcated silk or satin, and with the usual appendages belonging to the full dress of a mandarin. The city is fortified, to guard against raids which might be made upon it to carry off a body for the sake of the ransom. One can hardly imagine this to be more than a remote contingency, for, beside the superstitious reverence with which Chinamen regard the dead, even their ingenuity would find it a difficult matter to remove one of those very heavy, solid coffins, without creating a disturbance which must soon lead to betrayal.

Our author adds in a note: It would be a terrible thing for a Chinaman to die without the hope that, as soon as the lucky day should be known, his body would be taken to his birth-place, and equally so for his son to feel that he had left his father's body for so long a time in a strange land, unless he had this supposition to give him authority for so doing; when, instead of being a piece of neglect, it becomes for him an act of piety.

An Asylum.—On our way home we stopped to see the Asylum for Aged Men. Filial piety forms so striking an element in the Chinese character that though there are asylums for the aged of both sexes here, it is only those who have no relations, or whose relations are really so poor as to be incapable of maintaining them, who seek admittance. It would otherwise appear strange, that in a country where benevolent institutions are so well supported, provision should only be made in such an asylum for 500 inmates. We saw several of the old men, who all looked comfortable and happy. In some of the rooms two or three old friends, almost in their dotage, would be cowering over the fire, spinning long yarns to one another. In others, one or two had brought their dimers to cook at the same fire, which operation they watched with intense satisfaction as they sat round it. All looked bright and smiling, and mumbled out some words of welcome as we passed by.

As regards family prayer, I desire that the restraining influence of the Spirit of Truth may keep away from us the strange fire, which, whenever it is offered, occasions death.—*S. L. Grubb.*

For "The Friend,"
Selections from the Diary of Hannah Gibbons; a
Minister deceased.

(Continued from page 8.)

"5th mo. 1844. Having for some time felt an engagement of mind to go and see some colored families who live in and about the village of Haddington, and give them some religious tracts, on First-day afternoon, 12th of 5th month, Samuel Rhoads accompanying me, we accordingly went to see these poor neglected fellow-creatures. Most of them appeared grateful for the little attention paid them, and it affords a peaceful retrospect to my mind.

"Some days afterwards, I went, accompanied by my worthy friend E. Garrett, to see a young man, who it was feared was walking in the way that leadeth to destruction. He appeared willing to hear what I had to communicate, and after giving him some religious tracts, we left him: my mind being relieved and peaceful, for which I was thankful, having felt something stirring within me towards him for some time. These comparatively small acts of apprehended duty are humiliating; and I have earnestly desired to be preserved from kindling a fire in my own wisdom, and warming myself by the sparks thereof; lest I should have to lie down in sorrow."

The watchful, christian care exercised by our dear friend, in respect to all her religious acts and movements, is very observable and instructing. The natural man can do nothing to the glory of God; that body, all-wise Being, who also is sufficient for His own work; and who, requiring all our sacrifices to be the fruits of the new creation, will not accept either the lame or the blind, or any other product of the unrenewed mind. We are poor, weak, and blind creatures; having nothing but what is in mercy dispensed to us from the Treasury on high. How wise then is it, like this well instructed scribe, to wait diligently, though patiently, for the anointing and alone qualifying power of our holy Redeemer, who in merciful condescension, when He putteth forth His sheep, goeth before them; prepares the way; accepts the sacrifice; gives them their penny of peace.

"In the 6th month, accompanied by my daughter J., I paid a visit to my children at Coatesville. O Lord! be pleased to follow them with the touches of Thy love, till they are willing to follow Thee in the path of regeneration and newness of life. I also went to see my dear sister Edith Edge and family, which was a satisfactory visit. It felt to me a time of strengthening in the bonds of near fellowship.

"7th mo. 20th. Having felt my mind exercised for some time past in the prospect of attending the half Yearly Meeting in Virginia, and if way opens to visit the meetings constituting it, the subject feels weighty and renewedly so this morning. The language which frequently arises is, 'Send out thy light and thy truth: let them lead me.' And make me willing, by the baptismal influence of Thy Holy Spirit, to obey all Thy requirements. Preserve me, I pray Thee, from every false appearance that would draw away from Thy pure life into the mixture of fleshly wisdom; being renewedly made sensible that my standing is as on a sea of glass; and that our son's enemy would, if possible, deceive the very elect. Oh, gracious God! preserve me, I pray

Thee, on the sure foundation, the rock of ages, which Thou alone art; that so none of the fiery darts of the wicked one may be suffered to prevail against me.

"9th mo. 29th. My mind has also been exercised on account of visiting the prisoners in Chester prison; a service which appeared too weighty for me, and very humiliating; so that I should gladly have been excused. But the subject pressing heavily upon me, and remembering we are not our own, but are bought with a price, I mentioned it to a few friends; who, not discouraging me, on the 26th, accompanied by my kind friends Isaac and Jane Garrett, I went to Chester. And after the needful care being taken, and no objection being made by the sheriff, next morning we visited the prisoners, eight in number, accompanied by our worthy friend Eos Sharpless. Oh! how my mind craved that they might be redeemed from all iniquity, and brought into a state of acceptance in the Divine sight; remembering that the mercysent of the Most High covers His judgment-seat. The prisoners behaved well; and some of them were solid and attentive. My mind was much relieved after the opportunity, and a sweet reward afforded, as also for visiting an individual not in prison, who appears to be careless of his best interests; for both which I hope I feel thankful."

The next religious service which engaged our friend Hannah Gibbons, was the visit to the half-yearly meeting of Virginia, and the meetings constituting it. She had for companions her friends Jane and Edward Garrett, and left home 10th mo. 1st. She speaks of kind friends throughout the visit, and of some favored seasons; but generally the meetings were small, and for the most part low times. They were absent nearly three weeks, and reached their homes in health and safety, which she acknowledges as "cause for humble thankfulness to the Author of all our sure mercies."

"11th mo. 16th. For the last few weeks a deep concern has been felt on account of a man in Moyamensing prison under sentence of death; but from a feeling of my own unfitness, and a fear of being mistaken, my mind became closely exercised. After due consideration, and apprehending it was a duty required, I yielded to the prospect; and felt easy to mention it to my valued friend T. Kite, who had been to see him; and was willing to accompany me, having for companions also my son-in-law S. Rhoads, and daughter J. Thomas and I communicated what arose by way of testimony, and he was favored in supplication to the Father of mercies, for the poor man. It was a time of much feeling, and there was cause to hope, that he was in some degree sensible of the sinfulness of sin, and the necessity of seeking a place of repentance. My mind was relieved and thankful in believing the good Hand was with us. Next day I went towards Concord with Jane and Edward Garrett, to attend the Quarterly Meeting. We called at Wm. Smedley's whose wife appears to be drawing towards a close of life. She is in a sweet frame of mind. It was a privilege to sit by her, and be permitted to feel, as I thought we did, a precious covering.

"12th mo. 13th. Since my return from our late visit to Virginia, I have had seasons of sweet consolation in the retrospect of it; and cause to bless the Holy Name who enabled

ne to perform it, in the seventy-fifth year of my age. But the dispensation being changed, and this having been a day of conflict, the anguish has often arisen, Lord, look down upon me in mercy, and enable me to see in Thy precious light, what thou art requiring of me. Suffer me not, I pray Thee, to be deceived by the enemy of my soul's happiness. Neither let heights nor depths, things present or things to come, separate me from Thy grace which is in Christ Jesus our Lord and saviour.

"1st mo. 11th, 1845. The past few weeks has been a time of exercise and proving; but my morning a little of that bread that nourisheth, hath been mercifully afforded, for which I desire to be thankful. May I be kept humble, and may my faith in the all-sufficiency of Divine power fail not.

"22d. The 16th of this month was thirteen years since I was left a widow. Many exercises and trials have been experienced by me during that time, as well as before; and the language hath often arisen, if the Lord had not been my support, where would my dwelling have been at the present day. My mind is now earnest in desire for safe guidance and protection through the remaining steps of my life; and the language hath arisen: 'Cast me out off in the time of old age; forsake me not when my strength faileth.' But be pleased. O Father of all our sure mercies, to be with me, unworthy as I am, and uphold me with Thy right hand of Thy righteousness; and give strength to praise Thy ever-excellent fame, who hath done much for me.

"21 mo. 13th. The 8th day of this month was seventy-five years of age; and looking over my past life, I feel renewedly that I have been permitted to pass through many seasons of deep probation and trial, known only to Him who knoweth the secret baptisms of every soul; and an evidence seems granted that He hath been with me when I knew it not. Gracious Father! be pleased, if I am found worthy in Thy sight, to continue to be with me; be a light to my feet, and a lamp to my path, the few remaining days of my life, that I err not. And Oh! Holy Father, be pleased to afford Thy sustaining staff even to the end.

"4th mo. 19th. I attended our Select Yearly Meeting; also the several sittings of the Yearly Meeting the following week. It was a time of close exercise and proving to many, owing to a spirit being abroad that is striving to draw the minds of many away from the simplicity of the Truth as we profess, and also from the spirituality of our high and holy profession, into an easier way and superficial religion. Of these restless people, I believe it may be said as it was of the Jews and Greeks formerly, the cross of Christ has become a stumbling-block, and foolishness. But through the condescending goodness of our heavenly Helper, he solid part of the meeting was enabled to go forward with the business, in much union of feeling, and I trust to the praise of Him whose work it is, and who does not forsake His humble depending children.

The Real Substance.—There is nothing that thy soul longs after with so much earnestness as the real substance of the religion of Jesus, be the soul-satisfying bread of life, daily ministered to nourish and keep alive the immortal spirit.—*Mary Capper.*

Alaska.

For "The Friend."

(Continued from page 2.)

The few Russian settlements in the Yukon territory, pursuant with the charter of the Russian American Company, enjoining them to "promote agriculture," were formerly provided with small gardens; but little interest being taken by the officers of the Company in such matters, especially during the last governorship, none of them during the time of my residence were cultivated, with the exception of those at St. Michaels and the Mission. These were due to the procuring of seed, through private hands, and not to any assistance from the company. The employes of the company had too little energy and knowledge of agriculture to attempt anything of the kind.

The first requisite for habitation, or even exploration in any country, is timber. With it almost all parts of the Yukon territory are well supplied. The treeless coasts even of the Arctic Ocean can hardly be said to be an exception, as they are bountifully supplied with driftwood from the immense supplies brought down by the Yukon, Kuskoquim, and other rivers, and distributed by the waves and ocean currents.

The largest and most valuable tree found in this district is the white spruce (*Abies alba*). This beautiful conifer is found over the whole country a short distance inland, but largest and most vigorous in the vicinity of running water. It attains not unfrequently the height of fifty to one hundred feet, with a diameter of over three feet near the butt; but the most common size is thirty or forty feet, and twelve to eighteen inches at the butt. The wood is white, close and straight grained, easily worked, light, and yet very tough; much more so than the wood of the Oregon pine. For spars it has no superior, but is usually too slender for large masts. It is quite durable. * * * It is abundant at Fort Yukon in lat. 66° 34' (approximate). The unexplored waters of the Tananah river bring down the largest logs in the spring freshets. The number of these discharged annually at the mouth of the Yukon is truly incalculable. The freshet does not last more than three weeks, yet sufficient wood is brought down to supply the shores of the Arctic coast, Bering Sea, and the numerous islands. Logs of all sizes are cast up in winnows by the October south-westers.

The tree of next importance in the economy of the inhabitants is the birch. This tree rarely grows over eighteen inches in diameter, and forty feet high. On one occasion, however, I saw a water worn log about fifteen feet long, quite decorticated, lying on the river-bank on the Upper Yukon; this log was twenty-four inches in diameter at one end, and twenty-eight at the other. This is the only hard wood tree in the Yukon territory, and every thing needing a hard and tough wood is constructed of birch. The black birch is also found there, but does not grow so large. Several species of poplar abound. The timber, however, is of little value, but the extreme softness of the wood is often taken advantage of by the natives with their rude iron or stone axes, to make small boards and other articles for use in their lodges. They also rub up with charcoal the down from the seed-vessels, for tinder.

Willows and alders are the most abundant

of trees. All sizes of the former may be found, from the slender variety on the Lower Yukon, which grows seventy or eighty feet high, while only six inches in diameter at the butt, and with a mere wisp of straggling branches at the extreme tip, to the dwarf willows of the Arctic coast, crawling under the moss, with a stem no bigger than a lead pencil, and throwing up shoots only a few inches high. * * * A willow measured by the botanists of the Herald was found to be but twenty feet high and five inches in diameter; yet the annual rings showed that the tree had reached the age of eighty years. The Arctic coast is reported by Dr. Seaman to be a vast moorland, whose level is only interrupted by a few promontories and isolated mountains. Willows are almost invariably rotten at the heart, and are only good for fuel. The inner bark is much used for making twine for nets and seines by the Indian women, and the Eskimo of Bering Strait use willow and alder bark to tan or color their dressed deer-skins. It produces a beautiful red brown, somewhat like Russia leather. * * *

The treeless coasts of the territory, as well as the lowlands of the Yukon, are covered in spring with a most luxuriant growth of grass and flowers. Among the more valuable of these grasses is the well-known Kentucky blue-grass, which grows luxuriantly as far north as Kotzebue Sound, and perhaps even to Point Barrow. The wood meadow grass is also abundant, and furnishes an excellent pasturage for cattle. The blue joint-grass also reaches the latitude of Kotzebue Sound, and grows on the coast of Norton Sound with a truly surprising luxuriance. It reaches, in very favorable situations, four or even five feet in height, and averages at least three feet. Many other grasses enumerated in the list of useful plants grow abundantly, and contribute largely to the whole amount of herbage. Two species of *Elygms* almost deceive the traveller with the aspect of grain fields, maturing a perceptible kernel, which the field-mice lay up in store.

Grain has never been sown to any extent in the Yukon territory. Barley, I was informed, had been tried at Fort Yukon in small patches, and had succeeded in maturing the grain, though the straw was very short. The experiment was never carried any farther, the traders being obliged to devote all their energies to the collection of furs. No grain had ever been sown by the Russians at any of the posts.

Tarupis and radishes always grew well at St. Michaels, and the same is said of Nulato and Fort Yukon. Potatoes succeeded at the latter place, though the tubers were small. They were regularly planted for several years until the seed was lost by freezing during the winter. At St. Michaels they did not do well. Salad was successful, but cabbages would not head. The white round tarupis grown at St. Michaels from European seed, were the best I ever saw any where, and very large, some weighing five or six pounds. They were crisp and sweet, though occasionally a very large one would be hollow-hearted. The Russians preserved the tops also in vinegar for winter use.

There appears to be no reason why cattle, with proper winter protection, might not be successfully kept in most parts of the Yukon territory. Fodder, as previously shown, is abundant. * * *

There are, as might be supposed, no free fruits in the Yukon territory suitable for food. Small fruit abounds in the greatest profusion. Among the various kinds may be noted red and black currants, gooseberries, cranberries, raspberries, thimbleberries, salmonberries, kili-kickberries, blueberries, bearberries, twin-berries, dewberries, serviceberries, mossberries and roseberries. The latter, the fruit of *Rosa cinnamomea*, when touched by the frost, form a pleasant addition to the table, not being dry and woolly as in our climate, but sweet and juicy. All these berries, but especially the salmonberry or *morosky* of the Russians, are excellent anti-scorbutics. From many of them the most piquant and delicious preserves are prepared by the Russians, and they form a very acceptable addition to the unvarying diet of fish, bread and tea, usual in the country.

(To be continued.)

For "The Friend."

"A Theoretical Faith in Christ."

The last issue of "The British Friend" contains some selections from a "Memoir of James Backhouse." The following, from a letter of his written while at Sidney, and embraced in said selections, we extract for "The Friend."

"I continue," says J. B., "to feel a lively interest in what occurs in my native land, and especially in regard to the things that pertain to life and salvation. The deviation from sound principle among some professing with Friends, is cause for lamentation. I conclude that such cannot have ever clearly understood their own principles, or that from a want of a simple and faithful obedience to the discoveries of Divine Light, they have relapsed into a measure of darkness, so as not to know whither they go; and to be setting up a *theoretical* faith in Christ, in the place of a *practical* faith in Him; substituting an apprehension of the intellect in regard to His atoning sacrifice and mediation, in the place of submission to the Holy Spirit given through Him, which renders these efficacious, to the sanctification of the soul through obedience, and the blood of Christ."

An interesting experiment is recorded in the *North American* relative to the influence of different colored lights on animal or insect life. A brood of caterpillars of the tortoiseshell butterfly of Europe was divided into three lots. One-third were placed in a photographic room lighted through orange-colored glass, one-third in a room lighted through blue glass, and the remainder kept in an ordinary cage in natural light. All were fed with their proper food, and the third lot developed into butterflies in the usual time. Those in the blue light were not healthy, a large number dying before changing; those raised in the orange light, however, were nearly as healthy as those first mentioned. The perfect insect reared in the blue light differed from the average form in being much smaller, the orange-brown colors lighter, and the yellow and orange running into each other instead of remaining distinct. Those raised in the yellow light were also smaller, but the orange-brown was replaced by salmon color; and the blue edges of the wings seen in the ordinary form were of a dull slate. If changes so great as these can be produced in the course of a single experiment, it is probable that a

continuance of the same upon a succession of individuals will develop some striking results. Experiments such as this and others similar are being made by the savants of Europe, to ascertain what effects changes of temperature, moisture, heat, light, &c., have upon animal and vegetable life. The results become important as tending to confirm or disprove the theory of Darwin.

FAITH IN GOD.

FROM THE FRENCH OF JOHN FEDERICK OEBELIN.

Why art thou cast down, O my soul?

Uplift thee and be strong,

Thy care upon thy Maker roll;

Thy sadness doth Him wrong.

Beneath his eye

Thy goings are hid;

The God who rules above

His child doth know and love.

Come gaze on yonder vaulted sky:

See can thy glance embrace

The worlds wherewith the Lord most high

Hath sown the fields of space?

Though skill of thine

And strength combine,

Yet never shall thy hand

Create one grain of sand.

Thy Helper is the Lord of all,

He marks thy lightest sigh;

A thousand means, at His high call,

For thy defence are nigh:

Safe in his care

No storm shall break

One hair from off thy head

Though nature quail in dread.

Thou formed'st man of earthly mould,

Almighty! by Thy power;

Not Solomon in gems and gold,

Could match thy simplest flower:

Thy single word

Suffices, O Lord,

To fill heaven's boundless sphere;

And lo! I faint and fear!

The words without thee run their course on high,

The blossom withereth and falls;

The stars in voiceless harmony,

Yon leaflet falling there,—

Shall these obey

One law, one sway,

And I aside be thrown?

The sport of chance alone?

Then with thy cares my soul have done:

Thy grief beclouds this view;

How shall not He who gave His Son

(Give food and raiment too?)

The life is more.

Than roof or store;

No fear lest thou His child

Be from his care excited!

Long as I live, my hand in Thine,

I to thy side will cling,

For life is gain, O Guide divine!

While safe beneath Thy wing;

Lo! all is well:

Each ill shall fall fair,

For blessing, moulded still

By Thy controlling will.

—*Sunday Magazine.*

The Pyramids.—Colonel Sir Henry James, in a recent lecture on the pyramids of Egypt, stated that in the king's chamber, inside the pyramid, some of the stones were thirty feet long. These stones weighing some ninety tons, were not found in Egypt at all, but were brought down the Nile a distance of five hundred miles, and then placed in their present position, one hundred feet above the level of the ground. With regard to their finish, these Syenite stones are of the very hardest known, and yet they are so exquisitely polished, and built in (to form a casing for the king's cham-

ber) with such superior skill, that the finest sheet of tissue paper could not be inserted between two of the stones, and this, after a lapse of four thousand years. Such workmanship would excite the wonder and admiration of the world, even in this age of science and improvement.

For "The Friend."

The language expressive of the christian travail and exercise in Sophia Hume's letter, [on page 414 of the volume of "The Friend" just completed,] was relieving to many minds in this day of departure from the simplicity and moderation taught in the school of Christ, and the query arises, why are these things so? For the truth always leads through the strait gate into the narrow way; and the apostle writes, "Nevertheless whereto we have already attained, let us walk by the same rule, let us mind the same thing." Ah! if we only lived to work out our soul's salvation, how soon would the pictures consume away into smoke, as one did formerly, when the owner was awakened to the importance of spending her time and money, *only*, to her furtherance in the highway of holiness, "and of laying up treasure where moth did not corrupt, neither did thieves break through nor steal." Ah! if among us now, would not her language of surprise be: "O foolish Galatians, who hath bewitched you, that ye should not obey the truth?" How different is the employment of the precious hour of time now from formerly; usefulness was the object, and industry marked the domestic path of those whose delight it was to render home attractive, and the inmates content; it was not a constant round of attending lectures, public readings, company, or trifling needlework, but gathering with the elder members of the family, listening to the experience, counsel or advice, of those who could drop the sweet and encouraging language, "I have never seen the righteous forsaken, or their seed begging bread," or "if thou seek the Lord, and serve Him in the day of prosperity, He will not forsake thee in the day of adversity." When dear young people are aroused to a sense of the responsibility of spending their time and talents, so as to hear at last the welcome language, "Come ye blessed of my Father," they understand the expressions of the apostle when he said, "Ye are not your own, ye are bought with a price, for He died for all, that they which live, should not henceforth live unto themselves, but unto Him which died for them and rose again."

Habits of the Striped Squirrel.—I lately noticed in my garden a bright-eyed chipmunk, *Sciurus striatus*, advancing along a line directly towards me. He came briskly forward, without deviating a hair's breadth to the right or the left, till within two feet of me; then turned square towards my left—his right—and went about three feet or less. Here he paused a moment and gave a sharp look all around him, as if to detect any lurking spy on his movements. (His distended cheeks revealed his business: he had been out foraging.) He now put his nose to the ground, and, aiding this member with both forepaws, thrust his head and shoulders down through the dry leaves and soft muck, half burying himself in an instant.

At first, I thought him after the bulb of an *erythronium*, that grew directly in front of his

and about three inches from it. I was more confirmed in this supposition, by the king of the plant.

Presently, however, he became comparably quiet. In this state he remained, possibly, half a minute. He then commenced a furious action, as if digging deeper; but I noted that he did not get deeper; on the contrary, he was gradually backing out. I was surprised that, in all his apparent hard work, he did not work like a man on a wager) he threw no dirt. But this vigorous labor could not last long. He was very soon completely weary ground; and then became manifest the effect of his earnest work: he was refilling the hole he had made, and re-packing the soil, and leaves he had disturbed. Nor was content with simply re-filling and re-packing the hole. With his two little, hand-like legs he patted the surface, and so exactly re-dressed the leaves that, when he had completed his task, my eye could detect not the slightest difference between the surface he had so cunningly manipulated, and that surrounding it. Having completed his task, he raised himself to a sitting posture, looked with a very fixed air, and then silently dodged off into his heap, some ten feet distant. Here, he turned to stop, and set up a triumphant chirp! chirp!

It was now my turn to dig, in order to discover the little miser's treasures. I gently moved enough of the leaves and fine mud to expose his hoard—half a pint of buttercup seeds, *Ranunculus acris*. I took out a dozen or so, re-covered the treasure as well as my bungling hands could, and withdrew filled with astonishment at the exhibition of cunning, skill and instinct of this little abused citizen of our field-borders.—*Ira Titus* in *American Naturalist*.

Selected.

A Testimony for the Lord and His Truth:

Given forth by the women Friends at their early Meeting at York; being a tender exhortation of love to their Friends and sisters in their several Monthly Meetings, in this county and elsewhere.

Dear Friends and sisters, We being met together in the fear of the Lord, to wait upon him for his ancient power to order us, and in wisdom and counsel to guide us in our exercises relating to church affairs; I thank pleased to break in amongst us in a glorious manner, to our great satisfaction, and to fill our hearts with his living presence, and crown our assembly with his heavenly power, and open a fountain of life unto us; and the streams of his love have been felt freely to flow amongst us, and run from vessel to vessel, to the gladdening of our hearts, which causeth living joys, and hearty thanksgiving, to be rendered unto him who alone is worthy.

And, Friends, we hereby signify to you, that there have been many living testimonies given amongst us, from the divine opening of the Spirit of Life in many brethren and sisters, whereby we are fully satisfied that the Lord is well pleased with this our service, and doth accept our sacrifices and free-will offerings, and returns an answer of peace into our bosoms, which is greatly our reward; there hath also been brought several testimonies in writing from divers of our Monthly Meetings, to our great satisfaction, touching the care of Friends, for the honor of God, and the prosperity of truth in one another. And,

dear Friends, in that unchangeable love and precious truth of our God, we dearly salute you, wherein our relation and acquaintance with him, and one with another in spirit, is daily renewed, and our care and concern for his honor, and one another's good, is still continued: And therein we see there is as great need as ever, to watch over one another for good, though it hath pleased God, in his infinite mercy and love, to give us a day of ease and liberty as to the outward, and hath broken the bonds of many captives, and hath set the oppressed free, and opened the prison doors in a good measure; living praises be given to him for ever. And now, Friends, it is our desire that we all may make a right use of it, and answer the end of the Lord in it, and neither take nor give liberty to that part in any, which may give the Lord occasion to suffer our bonds to be renewed, but in his fear and holy awe walk humbly before him in a holy and self-denying life, under the cross of Christ Jesus, which daily crucifies us to the world, and the world to us, and teacheth us to deny ungodliness and worldly lusts, and to live righteously and soberly in this present world; that by our holy lives and righteous conversations, others seeing our good works, may glorify our heavenly Father; and that by our truth-like and christian behaviour, and down-right dealing in all our affairs amongst the children of men, we may walk as becomes the truth. And, dear Friends, join not with any sort of people further than will stand with truth's honor, and reach God's witness in every conscience, but as much as in you lieth live peaceably with all men, and do good unto all, especially unto the household of faith; and so daily fulfil the royal law of love, in showing to all men that you are Christ's disciples, by loving him and one another.

And, Friends, we cannot but warn you of the separating spirit which leads unto strife, contention, and jangling, and would thereby lay waste your concern for God's honor and one another's good; this is that old adversary and enemy of mankind, who in all ages went about like a roaring lion, seeking whom he might devour; and, as a ravenous wolf, sometimes gets the sheep's clothing, and never wants specious pretences to accomplish his design, and bring about his end, which is to divide, rend, tear, destroy, and separate from God and one from another, and would lay waste the heritage of God, and make spoil of his plantation, and leave his tender plants without care, in the briars and thorns, and every hurtful weed to wrap about them to hinder their growth, and draw them out of their order; by reason of which, as in the days of old, the way of truth might be evil spoken of: The Lord disappoint him of his purpose, and frustrate him of his end, is our prayer; and keep us livingly sensible, that the end of the Lord, in all his fatherly corrections, gentle chastisements, and kind reproofs, hath been to preserve us from the snares of the enemy: Therefore, dear Friends, be concerned for the preservation of one another in every of your respective Monthly Meetings, and be faithful in performing your service and duty to God and one to another (as he opens it in you, and lays it upon you) in exhortation, admonition and reproof, in tender love, for so it will be as the balm of Gilead unto those who are wounded by the wiles of the enemy. For, dear Friends, it is the very end of our travail

and labor of love, that the hungry may be fed, the naked clothed, the weak strengthened, the feeble comforted, and the wounded healed; so that the very weakest and hindmost of the flock may be gathered into the fold of rest and safety, where no destroyer can come, where the ransomed and redeemed by the Lord have the songs of deliverance and high praises in their mouths, giving Him the honor who alone is worthy for ever.

And, Friends, let us ever remember the tender dealings and mercies of the Lord to us, and that it was not for our deserts, nor any worthiness in us, but his own good will, and for his seed's sake, in which he heard our many cries, and had regard to our tears, and helped us through many exercises and trials inwardly and outwardly, and hath been our rock and refuge, and our sure hiding-place, in many storms and exercises, and yet preserves in perfect peace all those that trust in him, who keeps his new creation full of joy; and the voice of thanksgiving and melody is heard in our land, and the Lord becomes unto us the place of broad rivers, and makes us before him as well-watered gardens, and affects our hearts with his divine love to praise his Name.

And now to young women, whom our souls love, and whom the Lord delighteth to do good unto, and hath visited with tastes of his love; be you ordered by him in all things, that in your modest and chaste behavior, your comely and decent dresses in your apparel, and in all other things, you may be good examples to others, not only those that are without, but to some professing the faith; that in the line of life, and language of truth, we may speak one to another and say, Arise ye daughters of Zion, shake yourselves from the dust of the earth, put on the beautiful garments, even the robes of righteousness, the saints' clothing, the ornament of a meek and quiet spirit. And be not too careful for preferment or riches in this world, but be careful to know the Lord to be your portion, and the lot of your inheritance: Then testimonies will arise as in the days of old, Our lot is fallen in a good ground, we have large possessions.

And, Friends, be not concerned in reference to marriage out of God's fear, but first wait to know your Maker to become your husband and the bridegroom of your souls, then you will come to know that you are not your own, but that he must have the ordering and disposing of you in soul, body and spirit, which are all his; for he being the only One unto you, and the chiefest of ten thousand amongst you, he will be your beloved and your friend; O Friends! this state is happy, and blessed are they that attain it, and live in it; the Lord is not unmindful of them, but in his own time, if he see it good for them, can provide meet-helps for them; then will your marriage be honorable, being orderly accomplished with the assent of parents, and the unity of Friends, and an honor to God, and comfort to your own souls; then husbands and children, all a blessing in the hand of the Lord; and you will arise in your day, age and generation, as mothers in Israel, as those holy ancients whose living testimonies reach to us, and blessed memories live with us, according to our measures; as Lydia, open-hearted to God and one to another; as Dorcas, careful to do one another good; as Deborah, concerned in the commonwealth of Israel; and as Jael,

zealous for the truth, who was praised above women.

And you Friends, who are under the present concern, and in your day's work, do it not negligently, nor with careless minds, but be you diligent in every of your Women's Meetings, and order two faithful women, in every meeting, to take the care upon them, and so far as may answer truth, do your endeavors that nothing be practised amongst you, but what tends to God's honor and another's comfort; let nothing be indulged or connived at in any, whereby Truth is dishonored; and let that be cherished and encouraged in all, wherewith Truth is honored. And these our testimonies cast not carelessly into a corner, but sometimes peruse them, and mark well the wholesome advice therein, that our travail may be answered, the Lord honored, and you reap the benefit; and let a right record be kept from month to month, and from year to year, of the Lord's dealing with us, and mercy to us, to future ages, that from age to age, and one generation to another, his own works may praise him: To whom all praises belong, and be they ascribed, both now and for ever.

From our Yearly Meeting at York, the 28th of the Fourth month, 1668.

From the "American Naturalist."

The Lyre Bird.

The Lyre Bird finds in the south-eastern portion of Australia a region peculiarly adapted to its nature. At a variable distance from the sea rises a range of mountains, the swell of which is undulating rather than precipitous, while the summits expand into immense open downs and grassy plains. These are studded with belts and forests of trees, and appear like a succession of vast parks. As the hills and plateaus sink into the cup-like depression of the interior, marshy grounds, alternate with parched and sterile barrens; but seaward, the soil is of almost incalculable richness. Here, a tropical luxuriance prevails. Forests of immense, ever verdant, blooming trees, are broken by rich meadow-like districts admirably suited to grazing purposes. Indeed, the country as described, is so charming, that it might be considered almost a Paradise were it not for the intense heat of summer, increased, as it is, by the hot dry winds which blow southward from more northerly regions. Parching droughts are succeeded by torrents of rain, which, collecting on the hills and plains, and advancing through their streamlets, pour in swollen floods down the mountain sides to the sea, carrying destruction on every hand. Thus are the seaward slopes washed into gullies and ravines, which are left obstructed by fallen trees and branches. Over these active nature soon spreads a mantle of greenness and bloom, by means of rapidly growing creeping vines, forming almost inaccessible fastnesses. In these secluded haunts the Lyre Bird hides itself from the gaze of man. It is found over a large extent of country, but is peculiar to the mountain districts of Australia, and especially to those on the south-eastern face of the continent. Two species are known; one, *Menura superba*, the well-known Lyre Bird, the other a closely allied species, *Menura Alberti*.

Australia is a country of wonders, where even the leaves of the trees are so disposed that they present but little surface to the

scorching sun, and, consequently, are almost valueless for shade; and where, both in the vegetable and animal world, are curious forms existing nowhere else on the globe. Here is a rich display of birds with gorgeous plumage, and here also are found many remarkable only for their unlikeness to all others. Among the latter is a family, the members of which, with their peculiarly large feet, scratch up grass, herbage, and soil, and throwing these backward, in concentric circles, finally raise a mound which forms a veritable hot-bed. In this they deposit their eggs, and the heat engendered by the decaying vegetable matter quickens the life-germ, as in ordinary hatching does the warm body of the brooding mother.

What is especially curious is that the Lyre Bird, while incubating its eggs in the method common to birds, has a similar habit of raising mounds which it devotes to a wholly different purpose. These elevations seem to be intended as orchestras for the display of musical powers, and both morning and evening they betake themselves thither, frequently while they whistle, sing, or imitate the notes of other birds, raising and spreading their tails with all the pride of the peacock.

The Lyre Bird has been known for more than a half a century, but possibly, our fullest information is derived from the English naturalist, Gould, who, with his wife, travelled in Australia for the purpose of ornithological investigation more than twenty years ago, and who since has, from time to time by his correspondence, obtained facts of much importance to ornithological science. To his pen, and to her almost magic pencil, we are largely indebted for our knowledge of Australian birds. The pictures of both artists are so life-like that we might well be pardoned for forgetting that we had never heard the music of their songsters, nor beheld the flowering vine where it grew.

The whole collection of birds, forming the originals of Gould's "Birds of Australia," was purchased by Dr. Thomas B. Wilson and presented to the Academy of Natural Sciences in Philadelphia,—a gift to a noble institution of his native city, in which America has reason to rejoice. In this collection, along with other specimens of the Lyre Bird, may be seen that which furnished the half size illustration of Gould. It is somewhat faded by time, but otherwise is in a good state of preservation.

The bird is about the size of the common fowl. Its general plumage is of a dull leaden, or chocolate brown color, brightened on the wings, chin and front part of the throat with a reddish tinge, which is much richer during the mating season. The peculiar beauty of the bird, however, lies in its tail, which is in perfection only four or five months of the year. This appendage consists of sixteen feathers, twelve of which, are furnished with loose, slender and flowing barbs, which are so distant from each other that their effect is that of a background of light and elegant tracery.

But that which gives character to the whole is the arrangement of the external feathers. These curve in such a manner that the two together form the outline of an ancient lyre, an appearance so striking as to confer on these birds their popular name. In running the tail is lowered and held horizontally, and when of full size it is nearly two feet in length.

Gould describes the Lyre Bird (*Menura su-*

berpa) as solitary, never more than one pair and frequently only one bird being found the same covert. It is extremely shy, and all birds is the most difficult to capture, it being ascribed in part to its extraordinary powers of running and in part to the nature of the ground it inhabits, traversed as that by immense, obstructed gullies and ravine. It seldom or never attempts to escape a flight, but frequently ascends trees to a considerable height, by leaping from branch to branch.

One mode of procuring specimens is by wearing the tail of a full plumaged male in the hat. The poor bird is deceived, and, a proaching to greet a companion, easily falls victim to the gunner. Any unusual sound such as a shrill whistle, generally induces to show itself for an instant; if this favorable moment is not seized instantly, the net may be half way down a gully. None is so successful in the capture of these birds; are the native blacks of Australia. Restless and active, the *Menura* is constantly engaged in traversing the brush from one end to the other, and the mountain sides from the top bottom of the gullies, whose steep and rugged acclivities present no obstacle to its long and powerful and muscular thighs. It is also said to be capable of performing the most extraordinary leaps, frequently using this method of escape from its enemies.

Through a letter written from Sydney Australia, by Dr. George Bennett, and published in the "Proceedings of the Zoological Society," London, we learn something of the Lyre Bird in a state of captivity.

The bird, described in the letter of Dr. Bennett, had been captured when so young that it was only just able to feed itself. It was in the possession of a gentleman when he first obtained it, fed it with great care and regularity on worms, grubs, German paste and beef chopped very fine, but as he grew older he added hemp seed, bread, &c. in short, treating it as he would any member of the Thrush family. Of many specimens of all ages, which he purchased as companions, this was the only one which survive the others, brought from the Illawarra district, lived but a short time. Apparently healthy and well when they whistled at dusk in the evening, the morning would present only a lifeless form. Others kept in an aviary in Sydney, survived their captivity but a few months.

On the fourth of January, no indication of sex could be ascertained from the plumage the individual described. Twenty days afterwards, when the bird was two years and four months old two of the peculiar feathers of the male were developing.

This bird was in a constant state of restless activity, running rapidly about the spacious aviary in which it was confined, at leaping upon and over the stones and branches placed in the enclosure, yet with all its restlessness it would follow the call of its own and take food from the hands of those whom it was accustomed. It mocked with great accuracy the piping crow, wonga pigeon parrots and various other birds in the aviary and in the vicinity, and about dusk the evening was often heard to utter its own peculiar whistle.

Even in Australia this bird was so highly prized that a liberal offer could not induce the possessor to part with it to send to England

For "The Friend."

Prophecy, and its Fulfillment.

the following, short memorial of Thomas ter, is remarkable for containing two profic declarations. The first was soon actualized in the great fire in London in year 1666. The fulfillment of the latter doubt belongs to any and every period, rein the blessed and holy conditions, say in the faith." "Abide in God's pure, Truth all the day long," are observed lived up to. Then will "the time of denance assuredly come, and such shall see arising of His glory." May we, of this oration, through faithfulness herein, even he-hearted obedience to the law of God, power of the Spirit of the Lord Jesus inlly revealed, experience, in our mea-ure, opening of the seal, wherein not only e meek shall increase their joy in the l, and the poor among men shall rejoice e Holy One of Israel?" but that promise e verified: "The Lord shall bless thee of Zion; and thou shalt see the good of salem all the days of thy life."

Thomas Foster, of London, was convicted t the year 1658, and thereupon forsook a of this world's gain and preferment for sake of Christ, (he then belonging to the law,) and was in his lifetime freely given s-erve the Lord with body, soul and whole ance, that he might run the race and e Truth; which made him willing to himself, and take up the daily cross for t's sake, that he might be truly wise, presaw, several years before it happened, e city of London should be destroyed; his wife and family, at his admonition, ved into the out parts, and by that means e judgment which afterwards came ss upon the city, when it was burned by a 1666.* He also foretold the sufferings h God's people have since been tried saying, "The holy city will be besieged; lished are they who keep in the faith, e time of deliverance will assuredly " &c. And a little before his departure f this world, he said, "Ah! friends, abide d's pure, holy truth all the day long, and shall see the rising of His glory." e finished his course, and fell asleep, in r 1660.—Pietly Promoted, vol. 1, pp. 9.

the Camphor Tree of Sumatra.—Among the luxuriant and valuable trees of the is- of Sumatra, the first place belongs to the balanops camphora. The tree is straight, ordinarly tall, and has a gigantic crown, a often overtops the other woody giants e hundred feet or so. The stem is some- twenty feet thick. According to the s- there are three kinds of camphor tree, a they name "mailangan," "marbin n" and "marbin torgan," from the out- color of the bark, which is sometimes y, sometimes black, and often red. The s- rough and grooved, and is overgrow- with moss. The leaves are of a dark green, g oval in shape and pointed. The out- form of the fruit is very like that of the lily, but it has five round petals. These are lily somewhat apart from each other, and hole form much resembles a lily. The

mpire Smith also foresaw this destruction of ol London by fire for its classification, six years t took place, and three years prior to his death, ty Promoted, vol. 1st, pp. 53, 55.

fruit is also impregnated with camphor, and is eaten by the natives when it is well ripened and fresh.

The amazing height of the tree hinders the regular gathering, but when the tree yields its fruit, which takes place in March, April and May, the population go out to collect it, which they speedily effect, as, if the fruit be allowed to remain four days on the ground, it sends forth a root of about the length of a finger, and becomes unfit to be eaten. Among other things, this fruit, prepared with sugar, furnishes a tasty comit or article of confectionery. It is said that it is very unhealthy to remain near the camphor tree during the flowering season, because of the extraordinary hot exhalations from it during that period. The greater the age of the tree the more camphor it contains. Usually the order of the rajah is given for a number of men, say thirty, to gather camphor in the bush belonging to territory which he claims.

The men appointed then seek for a place where many trees grow together; there they construct rude huts. The tree is cut down just above the roots, after which it is divided into small pieces, and these are afterward split, upon which the camphor, which is found in hollows or crevices in the body of the tree, and, above all, in the knots and swellings of branches from the trunk, becomes visible in the form of granules or grains. The quantity of camphor yielded by a single tree seldom amounts to more than half a pound, and if we take into account the great and long-continued labor requisite in gathering it, we have the natural reply to the question why it fetches so high a price. At the same time that the camphor is gathered—that is, during the cutting down of the tree—the oil, which then drips from the cuttings, is caught in considerable quantity. It is seldom brought to market, because probably the price and the trouble of carriage are not sufficiently remunerative.

Whenever the oil is offered for sale at Baros the usual price is one guilder for an ordinary quart wine-bottleful. The production of Baros camphor lessens yearly, and the profitable operation of former times—say in the year 1753, when fully 1,250 pounds were sent from Padang to Batavia—will never return. Since time out of mind the beautiful clumps and clusters of camphor trees have been destroyed in a ruthless manner. Young and old have been felled, and as no planting or means of renewal has taken place, but the growth of the trees has been left to nature, it is not im- probable that this noble species will ere long wholly disappear from Sumatra.—*Journal of Applied Science.*

Selected.

The great departure from plainness which is evident among many of our young people, is rather a proof of their folly and ignorance, than of wisdom; since it is beneath the dignity and nobility of a christian mind to be so much employed about, and pleased with, the covering of the body. In some it may be more the effect of the parent's pride, than that of the children; but this testimony of our Society to a simple, useful, and not expensive manner of dressing and living, is grounded in the Truth, and innovations will never be able to sap the foundation or overthrow it. I would recommend to my dear young friends, to endeavor to see from whence those desires

arise which lead them to follow and copy after the fantastical dresses and habits which are so continually changing. Neatness and cleanliness are certainly commendable, and if rusticity is offensive, simplicity is not; and surely simplicity and self-denial become a people called, as we are, to bear a testimony to the purity of the religion of Jesus Christ. I grant that there is no religion in the cut or color of a garment, but the exterior appearance is often an index of the mind; and if the inside of the eup and platter be made clean, the outside will be clean also. Men do not gather grapes of thorns, nor figs of thistles; and conformity to the world in any of its corrupt ways and fashions, is not a being transformed as the Scriptures of Truth express.—*H. Hall.*

For "The Friend."

The editorial in the last issue of "The Friend" was not only opportune and pertinent, but lively, clear, and forcible. Though this is a day wherein a strife of words, and many voices prevail, yet it is believed there are yet remaining not a few in our Society, who in humility and contrition of soul before the Lord, often go mourning on their way; being ready at times to adopt the plaintive language of the Prophet, "O! that my head were waters," &c. To these the pure, unsophisticated principles of ancient Quakerism are, and will ever be held dear.

The testimony alluded to as put forth in 1829, we have not been able to find; though some reference to it was traced in a notice of the Yearly Meeting of that year. Will the editors please give information through the columns of their journal where it may be met with, and thus perhaps oblige more than

A CONSTANT READER.

Many are busy about shaking the tree of knowledge, and scrambling for the fruit, but neglect the tree of Life.

THE FRIEND.

NINTH MONTH 3, 1870.

SUMMARY OF EVENTS.

FOREIGN.—No collisions of moment appear to have occurred between the hostile armies in France during the week ending on the 27th ult. It was still the belief in Paris that the army of the Crown Prince was moving on that city, and might be expected before its walls very soon. The movements thus far do not however positively affirm a Prussian design to move on Paris. Gen. McMahon is understood to have a large force under his command, perhaps 150,000 troops, and this formidable army, after evacuating Chalons, took up a position on the frontier of Belgium not far from Montmedy, so as to be able to render assistance to Bazaine who remains at Metz with 90,000 men, or if the Crown Prince took the road to Paris, McMahon might move to the south and cut off his communications.

There are yet no reliable accounts of the losses sustained by the French and Prussians in the several battles near Metz. The official report of Bazaine states the French loss in one of them, that of Rezonville, was 23,000 men. Metz is filled with wounded men, and according to French reports 15,000 French soldiers are disabled by hospital and typhus fevers. A special dispatch from Paris to the *New York Herald* says, that 170,000 of the Prussian army have been killed and wounded during the war, but this is doubtless an exaggeration. Twenty thousand French prisoners have been received in Germany. On the 25th the garrison of Vitry le Francois surrendered to the Prussians, who captured 16 guns and 850 prisoners. The siege of Strasbourg continues. The garrison of Toul are reported to have made a sortie inflicting severe losses on the besiegers.

Great efforts have been made to put Paris in a state of defence. Gen. Trochu, at his capacity of Military Governor, has ordered all Germans to quit Paris within three days. He has also ordered the arrest of all suspected persons, vagrants, and every one without visible means of support. Great quantities of live stock and provisions have been brought into the city in anticipation of a siege. It is said Paris is provisioned for six months, and that 1,500 cannon have been mounted on its defences. The grain mills in the valley of the Seine and the Marne and all their contents which could not be removed, have been burned to prevent their falling into the hands of the invaders. All the animals in the Zoological garden of the Bois de Boulogne have been removed, part of them taken within the city walls, and part sent to Belgium. Engineers have marked the bridges over the Marne which are to be destroyed on the approach of the Germans. The finest paintings and most valuable books have been removed from the Louvre and the Imperial Library. All trials on the Eastern railroad have ceased beyond Chateau Thierry, 55 miles from Paris. Thiers has been added to the committee of defence.

The French Chambers have adopted a law providing that all able-bodied men between twenty and thirty-five years of age are to be called to military duty, with authority to procure substitutes. The departments of the lower and upper Rhine, Moselle, Meurthe, Meuse, Vosges, Marne, and Haute-Marne are now in possession of the Prussians. These departments contain 3,361,000 inhabitants, and great suffering exists in consequence of the Prussian requisitions.

A little mention is also made of the French emperor, but it is supposed that he is with McMahon's army.

The London Times contains a dispatch from Florence stating that Prince Napoleon's mission to Italy has been a failure. He was there to see assistance from the king, but it was declined. The Times is authorized to say that Queen Victoria has had a conference with any one on the subject of mediation.

A Munich dispatch says that the government has forbidden the promulgation of the bill of Papal infallibility in Bavaria.

Prussians have declined to send any more flags of truce to the French on any account, the bearers of such flags having in repeated instances been fired upon. The siege of Toul has been abandoned.

Austria has concurred in the declaration of neutrality by England and already has been joined by Italy as prepared by England and Austria. England and Prussia have signed the treaty guaranteeing the neutrality and independence of Belgium.

On the 29th dispatches were received in London and Berlin, reporting a great battle between the armies of the Crown Prince and General Bismarck on the 19th of various days; but the dispatches probably refer to some partial engagement, such as might readily occur between portions of the extended lines of the two hostile armies. On the 29th McMahon was understood to be at Stenay, a few miles west of Montmedy, and not far from the Belgian frontier, while the Prussians, after having moved to the eastward, were in position to the west of the French. Under these circumstances another great struggle appeared imminent, and it was believed in Paris on the 29th, that it had already commenced. The Paris Official Journal states that a number of minor engagements had taken place recently, where the losses on both sides were not very unequal, indelicate. McMahon's army, it is stated, has been strengthened by a reinforcement of 50,000 troops from Paris.

A Berlin dispatch says: Prisoners taken in the late battles are now arriving here. They are already so numerous that the fortresses are full to overflowing. Camps are formed at Wittenburg and elsewhere to receive them.

The correspondent of the New York Tribune, who is with the army of the Crown Prince, asserts that the peasants do not suffer what is technically called the horrors of war. Young girls stand at their cottage doors in villages, or on the road corners, see the Prussians pass, and are not molested by them. Shops open in towns are not plundered, and peaceful citizens go about their business without fear. But fruit and vegetables are taken along the way side; horses are pressed into the service; soldiers are quartered on the people, and large supplies of food are demanded from the local authorities.

The Brazilian government has made extensive preparations for the importation of coolies for ten years.

Emile Ollivier and family have taken refuge in Florence.

London, Consols, 91 $\frac{1}{2}$. U. S. 5-20's, 1862, 88 $\frac{1}{2}$; ten forties, 82 $\frac{1}{2}$.

Liverpool. Middling uplands cotton, 8 $\frac{1}{2}$ d.; Orleans, 9d. Breadstuffs quiet.

UNITED STATES.—The mortality in Philadelphia last week was 317. Of cholera infantum, 52; consumption, 36; marasmus, 30. The city debt now amounts to \$12,400,955, having more than doubled in the past ten years. The population of the city in 1800 were 84,700; in 1802, 90,000; in 1809, 138,139,500.

400 tons of tea from China continue to come east by the Pacific railroad. Twelve car loads reached Omaha in one day last week. A quantity of wheat has been sent by the same route from San Francisco as an experiment.

The U. S. Secretary of the Treasury gives notice that he will purchase \$7,000,000 of U. S. bonds for the sinking fund in the course of the next month.

The average monthly shipments of petroleum from the Pennsylvania oil district are now upwards of 17,000,000 gallons, or 37,000,000 barrels, and the total millions gallons annually. The production appears to be steadily increasing.

The Markets, &c.—The following were the quotations on the 29th ult. New York.—American gold, 116 $\frac{1}{2}$. U. S. sixes, 188 $\frac{1}{2}$, 114 $\frac{1}{2}$; ditto, 5-20's 1868, 110; ditto, 10-40's, 108 $\frac{1}{2}$. Superior State flour, 85 a 85 $\frac{1}{2}$; fine qualities, 85 $\frac{1}{2}$ to 90. Remittances received after Fourth-day morning will not appear in the Receipts until the following week.

WESTON BOARDING SCHOOL.

The WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next.

Parents and others intending to send children to School, are requested to make early application to AARON SHARPLES, Superintendent, whose address is "Street Road P. O., Chester Co., Pa." When no convenient application may be made to CHARLES ALLEN, Treasurer, or to Jacob Suedley, No. 304 A St., Philadelphia.

Parents and Guardians of pupils now at School are reminded that the second payment for present session is now due; and it will be an accommodation if all who can conveniently do so, will pay remit it to the Superintendent or Treasurer.

WANTED.

A female Teacher to take charge of Friends' Sch. at West Chester. Apply to Rebecca Conard, Jos. Scattergood, Jr., West Chester P. O.

A new edition of Clarkson's Portrait of Quaker has been issued by an Association of Friends in India. The book is bound in leather, and contains upward of 500 pages. It will be sent, on receipt of price, at following rates: By mail, prepaid, per copy \$2. Express, cost of carriage paid on receipt of book, copy \$1.60. Address WILLIAM T. FAWCETT, Philadelphia, Henricks county, Indiana.

FRIENDS' SCHOOLS.

These schools, under the care of the four Mont Meetings of Philadelphia, will be re-opened after summer vacation, on the 1st of the Ninth month. Boys' School on Cherry street above Eighth St. is under the care of Zebedee Haines, as Principal. The G School on Seventh street below Race St. is under care of Margaret Lightfoot.

There are also Primary Schools in one of the rooms of Friends' Meeting-house at the corner of Sixth and Noble streets, and in the Boys' school building, Cherry street, in which provision is made for the elementary instruction of children who are too young to attend the primary schools.

The attention of Friends residing in this city and neighborhood, is particularly invited, to these schools. It is desirable that their children enjoy the advantages of a liberal education, embrace a considerable variety of the more useful branches study at a very moderate cost, while in the primary schools the pupils are well grounded in those of a elementary character.

It is desirable that applications for the admission of children should be made early in the session, and parents returning children to the schools should send them at the beginning of the term.

FRIENDS' SCHOOL FOR BOYS AND GIRLS.

Hobbsfield, Pa., opens on the 5th inst. A few can be accommodated as boarders. Application may be made to Chas. Rhoads, 36 S. Seventh street, or to the Teacher, John Boadle, at School.

The Trustees of the above School, from frequent application for vacancies, would recommend Boadle to patronage, he having had long experience in teaching, and given general satisfaction, during three years he has had the school in charge.

Trustees: Zebedee Nicholson, Charles Rhoads, Chas. L. Wilkins, John E. Redman, John H. Ballinger.

EVENING SCHOOLS FOR ADULT COLORED PERSONS.

Teachers are wanted for the Men's and Women Schools, to open about the 1st of Tenth month.

Application may be made to—No. 422 North Third St. Thomas Elkinton, No. 118 Pine St. Ephraim Smith, No. 1013 Pine St. George J. Scattergood, No. 413 Spruce St.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-fourth Ward,) Philadelphia Physician and Superintendent—JOSHUA H. WORTSCOTT, M. D.

Applications for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, C. of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, NINTH MONTH 10, 1870.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

T. NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

Extracts from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 11.)

6th mo. 3d, 1845. Since my last memorandum was penned, I have paid a visit to my children at Coatesville, also to my sister Edge and family, and some other relatives in my neighborhood, and to my dear friends at Empeter. In each of these places I felt desirous of being preserved in the fear of the Lord, and attentive to any little service that might open in a religious way, as well as to my social duties. After passing through much exercise while in the neighborhood of Coatesville on account of an impression of duty to make a visit to a person who had a public house, I mentioned it to a Friend at the station of elder, who was willing to accompany me. An opportunity of seeing him being obtained, I communicated what impressed my mind; and afterward the reward of sweet peace was afforded. The man and his family appeared to take the visit kindly, while at Empeter my mind became much drawn to a family who were entire strangers to me; which also occasioned much exercise. As I endeavored to know the mind of the Lord, and yield to it, way opened for my mind to see them, and to convey what impressed my mind towards them, which appeared kindly received, and afforded the reward of that peace which the world can never give nor take away. At London my mind became attracted towards an individual, some of whose ancestors I had been acquainted with in younger life; but way opening for me to get to see him, perhaps I was partly also from a fear, lest in this day of settlement and many voices, I should be drawn away with a strange voice. But He who knoweth the integrity of my heart, and with I desire to serve Him; and if way opens in future for the relief of my mind, it will be a mercy. If on the contrary, an omission of duty has been irrevocably made, O Lord, to let not Thine hand spare, O Thine eye pity, till all that is within me be moved that opposes Thy blessed will, and the willingness experienced to follow Thee in the like simplicity, whithersoever Thou art

pleased to lead: that I may know Thy rod and Thy staff to comfort me. Afterwards, when on a family visit to Friends in the neighborhood of the before-mentioned individual, way opened to have a religious opportunity with him and his family, much to the relief of my mind."

When the eye is kept single to the Great Counsellor in the heart, as well as the Great Controller of events, and the government of all placed upon His shoulders, how He prepares the way for, and opens the door unto His obedient, humble, patient followers. These have no lack of either wisdom or strength to fulfil His will, which is their sanctification. To these, the how, the what, and the when are all opened, through the power of his Holy Spirit, to their quickened understanding. So that though weakness and fear may seem at times to bring into bondage, yet will the Lord of life and of glory, re-anooint for His work; out of weakness make strong; renew His covenant as in the case of Levi, because of the filial fear of His obedient children; and enable again to take fresh courage, and to run the race set before them. Thus, well has it been said that He will not allow His faithful, dedicated ones very far to contravene His blessed will and purposes concerning them.

Through oversight of the compiler, the following letter to her brother, Lea Pusey, was neglected in its proper place. Though not in regular course of date, it is too valuable to be omitted, as showing the character somewhat of those exercises which she felt for, and conveyed to others. To wit:—

"9th mo. 22d, 1835.

"My Dear Brother,—My feelings became much interested in thy best welfare the last time I was in thy company; which interest has often since revived, attended with earnest desires that thou might come to experience the day's work going on with the day,—even the very important work of thy soul's salvation. Time is short, and very uncertain; and to improve it, to our everlasting advantage, ought to be our primary concern. We may promise ourselves length of days, and still go on in the gratification of our natural inclinations. But oh! how presumptuous it is for poor frail man, who knoweth not that he may be permitted to see the light of another day, to conclude that at some future period he will become more religious. Delays are ever dangerous. We may endeavor to amuse and to satisfy ourselves with the fascinating things of this life, and time after time, and opportunity after opportunity, yet go on neglecting the still small voice, which is heard as in the cool of the day, saying, This is the way, walk thou in it. This blessed Monitor though long afforded, may yet be withdrawn. For it is recorded in the Scriptures of Truth, as the language of the Saviour, that 'The night cometh' and, 'My spirit shall not always strive with man.' It is therefore very important to us that we accept the offers of re-

deeming love while they are extended, for most assuredly times and seasons are not at our command. Moreover we have an unwearied enemy, who will, if possible, frustrate every good desire, and bring to the experience of that which is written, 'When I would do good, evil is present with me.' But how encouraging is the language, 'Greater is he that is in you, than he that is in the world. Therefore I beseech thee, my dear brother, in the feelings of tender love, to put not off the work till a more convenient season; but look unto Him, who is touched with a feeling of our infirmities, and who knows how to succor those who are tempted, and will, when temptations present, if sought unto in sincerity and faith, make a way for our escape. Blessed be His Holy Name, I think I know what I write from a degree of experience; and therefore feel an earnest solicitude for thy encouragement, that thou mayst trust in the Lord with all thy heart, and lean not to thy own understanding. Thus submitting to the cleansing, purifying operations of Divine love, even the baptism of the Holy Ghost and fire, which is of Him whose fan is in His hand, He will, if there is a yielding thereunto, 'thoroughly purge his floor, and gather the wheat into the garner;' and cause us to experience the floor of our hearts washed, and a willingness wrought to obey the dictations of the Holy Spirit: by which we shall know from time to time the armies of the aliens to be put to flight, even our souls' enemies, and our faith and hope increased in Him, whose we are, and in whom we live, move, and have our being; and who has an undoubted right to the dedication of our whole hearts. I write not as one that hath attained unto much, but as one who is desirous of pressing onward in the christian warfare; whose primary concern I trust it is at seasons to have the day's work done in the daytime. That this may be thine also, my dear brother, is the present breathing solicitude of my mind.

"Although it has not been usual for me to write to thee, yet it seemed to remain with me to express a little of the desire I feel for thee, which I hope will be received in a portion of that love in which it has been written.

Thy truly affectionate sister,

HANNAH GIBBONS."

Her memoranda are resumed under date, "7th mo. 31st. I often feel the present," she writes, "to be a day of trial, way of much shaking in our Society. Be pleased, O Father of mercies, to continue to shake us, until that which is offensive to thee, may be removed; and that which cannot be shaken only may remain, and through the power of Thy love grow brighter and brighter; that so the ever blessed Truth may shine more conspicuously among us as a people, even as in ancient purity. Thou knowest, O Lord, the breathing of my spirit is often unto Thee, in desire to be preserved from the mixture of self in every performance professedly

for the promotion of Thy righteous cause, that the enemy of my soul's peace may not be suffered, through any of his wily insinuations, to draw my mind away from Thy precious light and truth." Wilt thou be pleased to increase my spiritual vision; give me to see with an eye of faith, unto holy certainty, the things that belong to Thy honor and my peace, vouchsafing to me strength to perform them; suffer me not to go before the pointings of Thy blessed finger, I pray Thee, neither to lag behind, that so I may be preserved from becoming a castaway.

"8th mo. 17th. I left home to attend our Quarterly Meeting at Concord. In it my dear friend and relative Sarah Emlen, gave a satisfactory account of her recent visit to England and Ireland, which, with her safe return, is cause of gratitude to the Author of all our sure mercies. She was enabled to perform the service under considerable bodily infirmity, and now having returned relieved and peaceful, is cause for other humble travellers to thank God and take courage.

"My mind was exercised before I left home on account of a poor young man in West Chester prison, under sentence of death for the commission of murder. The exercise so increased that I was induced to mention it to the elders of our meeting; who not discouraging me, and feeling an impression of mind to communicate it to my friends Nathan Sharpless and Sarah Emlen, I found the latter was under a similar exercise. This was also very cordial to my poor mind; and confirming also was the willingness of the former to accompany us. The necessary arrangements being made, on the 21st of the month, in company with Abram Gibbons and Martha Jeffries, we visited the poor convict. Our feelings were sorrowful; yet we were a little comforted in seeing the poor youth brought somewhat into a state of contrition. May the Lord Almighty grant him the gift of true repentance. The foregoing act of dedication hath been crowned with sweet peace.

"On the evening of the same day, feeling a lively intimation to step in and see an old man who was in bodily affliction, having a wife and son living with him, who all appear to be thoughtful people, I yielded to it. My feelings were comfortable in sitting with them, and the language arose, 'As the mountains are round about Jerusalem, so the Lord is round about his people, even henceforth and forever.' It felt to me that the Good Hand was round about them, though strangers to me. They appeared grateful for the visit, and I was thankful in having performed it. After which I was favored to retire to rest with a portion of that peace the world can neither give nor take away."

(To be continued.)

For "The Friend."

Stone Avalanches.

The high projecting peaks of mountains, exposed to the action of the weather and to the crumbling effect of frost, are gradually disintegrated, and the fragments are tumbled down the precipitous slopes into the vallies beneath. Travellers among the Alps speak of the great quantities of such rocks and stones which fall on to the glaciers, and are gradually carried forward by them, forming large moraines, which is the name given to the accumulations of such material at their termina-

tions. One of these tourists thus describes two falls of stone which he witnessed.

"While we stood pondering here, a deep and confused roar attracted our attention. From a point near the summit of the Weisshorn, a rock had been discharged; it plunged down a deep couloir, raising a cloud of dust at each bump against the mountain. A hundred similar ones were immediately in motion, while the spaces between the larger masses were filled by an innumerable flight of smaller stones. Each of them shakes its quantum of dust in the air, until finally the avalanche is enveloped in a vast cloud. Black masses of rock emerged here and there from the cloud, and sped through the air like flying fiends. Their motion was not one of translation merely, but they whizzed and vibrated in their flight as if urged by wings. The clang of echoes resounded from side to side, from the Schallenberg to the Weisshorn and back, until finally the whole troop came to rest, after many a deep-sounding thud in the snow, at the bottom of the mountain. This stone avalanche was one of the most extraordinary things I had ever witnessed, and in connection with it, I would draw the attention of future climbers to the danger which would infallibly beset any attempt to ascend the Weisshorn from this side, except by one of its arêtes. At any moment the mountain side may be raked by a fire as deadly as that of cannon."

The adventure which follows was experienced while endeavoring to cross the Weiss-thor.

"The ancient moraines of the Macugnaga glacier rank among the finest that I have ever seen; long, high ridges tapering from base to apex, hoary with age, but beautified by the shrubs and blossoms of to-day. We crossed the ice and them. At the foot of the old Weiss-thor lay coched a small glacier, which had landed a multitude of boulders on the slope below it; and amid these we were soon threading our way. We crossed the little glacier which at one place strove to be disagreeable, and here I learned from the department of his axe the kind of work to which my porter had been previously accustomed. The head of the implement quitted its handle before half-a-dozen strokes had sounded on the ice. We reached the rocks to the right of our couloir and climbed them for some distance. The ice, in fact, at the base of the couloir was cut by profound fissures, which extended quite across, and rendered a direct advance up the gully impossible. At a proper place we dropped down upon the snow. Close along the rocks it was scurred by a furrow six or eight feet deep, and about twelve in width, evidently the track of avalanches, or of rocks let loose from the heights. Into this we descended. The bottom of the channel was firm and roughened by the stones which found a lodgment there. I thought that we had here a suitable roadway up the couloir, but I had not time to convert the thought into a suggestion, before a crash occurred in the upper regions. I looked aloft, and right over the snow-brow which here closed the view, I perceived a large brown boulder in the air, while a roar of unseen stones showed that the visible projectile was merely the first shot of a general cannonade. They appeared,—pouring straight down upon us,—the sides of the couloir preventing them from squandering their force in any other di-

rection. 'Schnell!' shouted the man behind me, and there is a ring in the word, where sharply uttered in the Alps, that almost lifts a man off his feet. I sprang forward, but urged by a sterner impulse, the man behind sprang right on to me. We cleared the furrow exactly as the first stone flew by, and once in safety we could calmly admire the wild energy with which the rattling boulder sped along.

"Our way now lay up the couloir; the snow was steep but knobby, and hence but few steps were required to give the boots a hold. We crossed and recrossed obliquely, like a laden horse drawing up hill. At times we paused and examined the heights; our couloir ended in the snow-fields above, but near the summit it suddenly rose in a high ice-wall. If we persisted in the couloir, this barrier would have to be surmounted, and the possibility of scaling it was very questionable. Our attention was therefore turned to the rocks a our right, and the thought of assailing them was several times mooted and discussed. They at length seduced us, and we resolved to abandon the couloir. To reach the rocks however, we had to recross the avalanche channel, which was here very deep. Beneath a gap at the top of its flanking wall and stooping over, scooped steps out of the vertical face of indurated snow. Here the made a deep hole in which he anchored his left arm, let himself thus partly down, and with his right pushed the steps to the bottom. While this was going on, small stones were continually flying down the gully. Beneath reached the floor and I followed. Our companion was still clinging to the snow wall when a horrible clatter was heard overhead. It was another stone avalanche, which there was hardly a hope of escaping. Happily rock was here firmly stuck in the bed of the gully, and I chanced to be beside it when this first huge missile appeared. This was the delinquent which had set the others loose. I was directly in the line of fire, but ducking behind the boulder I let the projectile shoot over my head. Behind it came a shoal, smaller fry, each of them, however, quite competent to crack a human life. Benen shouted 'quick!' and never before had I seen his axe so promptly wielded. You must remember that while this cannonade was being executed we hung upon a slope of snow which had been pressed and polished to ice by the descending stones; and so steep that a single slip would have converted us into an avalanche also. Without steps of some kind we dared not set foot on the slope, and these had to be cut while the stone shower was in the act of flying on us. Mere scratches in the ice, however, were all the axe could accomplish, as on these we steadied ourselves with the energy of desperate men. Benen was first, and I followed him, while the stones few thick beside and between us. Once an ugly lump came right at me; I might perhaps have dodged back, but Benen saw it coming, turned, caught on the handle of his axe as a cricketer catches a ball, and thus deflected it from me. The labor of his axe was here for a time diverted from the projectiles and the ice, while every pause in the volley, 'he cut a step a sprang forward.' Had the peril been less, it would have been amusing to see our contending axes as we fenced with our swarming fire. A final jump landed us on an embankment out of the direct line of fire which raked

ally, and we thus escaped a danger new in his form, and extremely exciting to us all."

For "The Friend."

"He that Believeth."

After visiting many different classes of persons recently, in different and distant places, & miners in coal regions, iron-mongers, factory operatives, fishermen, seamen, and visitors in summer resorts, I have come to the conclusion that there are a great many good people in our daily paths, who, and whose children claim our fostering care. Yet this need of lull us into apathy over the fact, that anti-christ, in countless tempting presentations, is all through society, seeking to deceive, and to draw away from the holy preserving ark of the Lord.

"Truth is not local; God alike pervades

The world of traffic and the shades;

And may be feared, and the busiest scenes,

Or scorned where business never intervenes."

Men with sooty brows and lusty arms, in the hum and clatter of woollen mills, are often teachers of righteousness. Women bent at the loom, toiling to feed hungry children, are teachers of good things. Boys and girls stray from early morn to sunset, in their otiose tasks, sometimes utter experiences, in language deep and eloquent, that amaze the long labored speech of a set and "anted" ministers. "Illiterate fishermen," and fishermen's wives and daughters, freckled and ar with alternate exposure to the bleak rays and burning sunshine, incident to their wily lot, have been taught to gather souls (and even churches) to the throng of witnesses for the Truth.

There are "the poor and the despised of," in every rank of life, who find "that pearl of rich men cannot buy, which learning too proud to gather up," they "often find unsought," because the open door of their arts admits the Heavenly Visitor on his first morn.

The incident which suggested the heading of this article came under notice to-day, in the last visit of this kind in these parts. "He that believeth on the Son of God hath the witness in himself," said a journeyman, looking seriously; and added a few words to emphasize, that spoke a soul "baptized in the fountain of eternal Truth." How ready is each to receive the witness. "If we receive the witness of men, the witness of God greater. He that hath the Son hath not life; he that hath not the Son of God hath not life." Y. W.

Fernantown, 8th mo. 23d, 1870.

Alaska.

For "The Friend."

(Continued from page 12.)

The Aleutian District.—This comprises the Aleutian Islands and part of the peninsula of Alaska. From the presence of trees, the land of Kadiak and those adjacent to it, being rather to the Sitkan District. These lands contain many high mountains, part of them volcanic, and some still evincing activity in smoking or emitting steam. Between them and the sea are rolling and moderately lined hills and meadows. The soil is much of it rich, consisting of vegetable mould and black colored clay, with here and there light colored loam formed of decomposed rocks, and in tertiary fossils. In many places the growth of spagnum indicating insufficient

drainage, prevails over the perennial grasses natural to the soil, but the remedy is self-evident. In some places the soil is composed of decayed volcanic products such as ash and pumice; this is much of it rich and productive.

The climate of the district is moist and warm. The snow line, according to Chamisso, is 3,510 feet above the sea. The greatest cold recorded (on the island of Unalaska) by Father Veniaminoff was zero of Fahrenheit. The highest point reached by the mercury during his long residence was 77°. * * *

The greatest number of clear and pleasant days occur in January, February, and June, and usually follow a northerly wind. The barometer ranges from 27.415 to 29.437 inches, and on the whole is highest in December and lowest in July, rising with a north and falling with a south wind.

[The author makes a comparison between this portion of Alaska, and the Highlands of Scotland and the adjacent islands, with which it corresponds well in regard to temperature, humidity and climate generally. Yet as is well known, human industry, skilfully directed, draws from this small region no mean return in agricultural produce. In 1855 there were kept in the highlands and islands 1,973,028 sheep, 131,318 horned cattle, and 22,930 horses, beside swine and other animals. The product of oats in 1854 was 2,993,733 bushels, of barley 483,193, of rye 308,959, of turnips 551,231.]

"The native inhabitants of the Aleutian District are faithful and docile, but indolent and improvident. They make good sailors but poor farmers; and their attempts at farming have been principally under the direction of Russian masters.

There is no timber of any kind larger than a shrub, on these islands, but there is no *prima facie* reason why some trees, if properly planted and drained, should not flourish. A few spruce were transplanted from Sitka to Unalaska in 1805; most of them lived, but were not cared for, and the situation was unfavorable, so that they did not thrive.

The grasses in this climate, warmer than that of the Yukon Territory, and drier than the Sitkan District, attain an unwonted luxuriance. For example Unalaska in the vicinity of Captain's Harbor, abounds in grasses, with a climate better adapted for haying than the coast of Oregon. The cattle are remarkably fat and the beef very tender and delicate, rarely surpassed by any well-fed stock. Milk was abundant. The good and available arable land lies chiefly near the coast, formed by the meeting and mingling of the detritus from mountain and valley with the sea sand, which forms a rich and genial soil, well suited for garden and root-crop culture. Where grain-like grasses grow and mature well, it seems fair to infer that oats and barley would thrive, provided they were fall sown, like the native grasses. This is verified by reference to the collections. Several of these grasses had already (September) matured and cast their seed before we arrived, showing sufficient length of season. Indeed no grain will yield more than half a crop of poor quality on the Pacific slope when spring sown.

The Russians affirm, with confirmation by later visitors, that potatoes are cultivated in almost every Aleutian village, and Veniaminoff states that (up to 1837) at the village in False Pass they have raised them, and pre-

served the seed for planting, since the beginning of the century, without interruption; the inhabitants of this village by so doing, having escaped the effects of several severe famines which visited their less provident and industrious neighbors.

The productions of all the islands to the westward resemble those of Unalaska. In September, says Dr. Kellogg, the turnips here were large and of excellent quality; carrots, parsnips, and cabbages lacked careful attention, but were good. Wild parsnips are abundant and edible through all these islands. At the height of 2450 feet above the level of the sea, according to Chamisso, most vegetation ceases. From the reports of Dr. Kellogg and others there appears to be no doubt that cattle may be advantageously kept in the Aleutian District, provided competent farmers will take the matter in hand. The winter climate is as mild as that of the Highlands of Scotland, or the Orkneys, where stock has been successfully kept from time immemorial.

Indeed, even in Iceland, where the temperature in winter sometimes gets as low as thirty-five below zero, we learn from Sir George Mackenzie that four-fifths of their entire population of 70,000, derive their maintenance from agriculture. Grain does not mature, but the grass-lands (with their fisheries) are their greatest wealth, as they pasture their flocks of sheep and cattle, which form their chief means of subsistence and most important articles of commerce. The number of sheep in Iceland is estimated at 600,000; there are about 25,000 cattle and 30,000 horses. The export of wool in 1864 was 2,229,504 pounds, beside the amount consumed in the country. After this in the Aleutian District, where the cold is never greater than zero, we may look for results at least as favorable. * *

The Sitkan District.—This district extends from the southern boundary, including the mainland and islands, to the peninsula of Alaska, and also Kadiak and the adjacent islands.

The surface of this part of the territory is rugged and mountainous in the extreme. The northern part alone furnishes any appreciable amount of arable land, level and suitable for cultivation. Small patches occur in the southern part here and there, where small farms might be located; but as a rule the mountains descend precipitously into the sea with their flanks covered with dense and almost impenetrable forests. These rise to an altitude of about fifteen hundred feet above the sea. Here and there a white streak shows where an avalanche has cut its way from the mountain top through the forest, to the water side, and occasionally the shining front of a glacier occupies some deep ravine, contrasting curiously with the dense foliage on either side.

The canals and channels of the Alexander Archipelago form the highways of the country, and so intricate and tortuous are they, that they afford access to almost every part of it without the necessity for setting foot on shore.

The soil is principally vegetable mould with substrata of granite or dark-colored clay. The soil of Cook's Inlet and Kadiak is of a similar character; but from an admixture of volcanic sand thrown up by the waves, and abundant sandstone strata, it is lighter, drier, and better adapted for cultivation.

The climate of the southern portion of the district is very mild, but intolerably rainy.

The annual rain fall at Sitka varies from sixty to ninety-five inches (which is however about the same as the mouth of the Columbia) and the annual number of more or less rainy days varies from one hundred and ninety to two hundred and eighty-five. In Uaalaska, the annual number of rainy days is about one hundred and fifty, and the annual fall of rain and melted snow is nearly forty inches. This last estimate is probably not too low for the island of Kadiak and the eastern part of Cook's Inlet.

(To be continued.)

For "The Friend."

Faith in the Gift of God, an Invisibile and Spiritual Thing.

There is perhaps no way in which Satan more readily deceives those who at all listen to his suggestions, being off the watch, than upon the subject of religion. Knowing that nothing is more wholly antagonistic to his rule and reign in the hearts of men and in the kingdoms of the earth, than the growth and establishment of true vital christianity; it is against this he plants his most determined hostility and resistance. In order the more effectually to beguile and decoy those who give any place to his sophistry, he gets up his resemblances, his signs and countersigns, so as, in the language of Scripture, to "deceive (if it were possible) the very elect." But the "foundation of God standeth sure;" and here, in child-like trust, and in humble reliance upon His unfailling mercy towards the penitent, the lowly and contrite, is the christian's only safe refuge and sure resting place. To these still, "Sharon (the place of beauty and fruitfulness) shall be a fold of flocks, and the valley of Achor (the door of hope) a place for the herds to lie down in, for my people that have sought me."

We believe that which the great transformer has gotten up now, with which to deceive and to mislead, is, an outward and literal faith in the Redeemer, instead of that which is inward, vital, and heart-changing; and which calls for the costly sacrifices of humility and obedience to the grace of the Lord Jesus: calls for all, body, soul, and spirit, to be given up unto Him who died for us, and rose again. But Oh! may none be guilty of presumptuous sins; assuming that they have attained to a stature in the Truth, when they have not! Oh! may none slide insensibly into the religion of the day: a religion which is at ease in the gratifications of the things of this life, and which pleads for that it loves, and which it tries, though vainly, to reconcile with the requisitions of the cross of Christ Jesus. May we ever bear in mind that the candlesticks under the law—a less perfect dispensation—were to be of beaten gold: implying that the preparation and cleansing were to be thorough. Again, it is declared, that "gold is tried in the fire, and acceptable men in the furnace of adversity." May there be that patient learning in the school of self-reduction and the cross of Christ; that ranciance in the stripping furnace or chamber; and that repentance unto life, which prepare the way of the Lord, and make His paths straight. That thus we may be brought—all of mercy—to the footstool of the Saviour; and to such an experimental, though humiliating knowledge of Christ, the wisdom of God and the power of God, as to say with the Patriarch near the close of his life, "I have heard of Thee, by the hearing of the ear;

but now mine eye seeth Thee. *Wherefore,*" he continues, "I *abhor myself and repent in dust and ashes.*"

The following, perhaps not irrelevant to the subject in hand, taken from an address to the Society of Friends in 1840, will conclude these remarks.

"Dear Friends, suffer the word of exhortation, upon a point wherein it seems to me you are in some danger; which is that of mixing up the pure, distinct, interior principle of faith in the gift of God, as an invisible and spiritual thing, only to be known, apprehended, believed in, felt and obeyed, by the inward senses of the new-born creature—I say, it is to be feared, that you occasionally mix and confound this precious, living thing, with the notional, historical knowledge, which is to be picked up from the letter that describes it. If such be the case, you can never hope, whilst it continues, to meet with full acceptance at your Master's hands. He will have no clipping and paring down of his message. No trimming to suit the religious taste of the times. Remember that it was the marked distinction of the mystery from the history, and the vast difference between the birth of Christ in the heart, to mere words and doctrines about it, which formed the whole of the christianity preached by the primitive Friends; as, in point of fact, it forms the whole truth of the matter; just as the living man, and not his picture, forms the reality of his existence.

"You must not suffer yourselves to be deluded with an idea that you are living in better times, as to religion, than your forefathers; and that the apostasy of which they spoke so frequently, and so forcibly, exists no longer; for assuredly, it exists in far greater strength of life than ever. In their times it was not the fashion to be religious; knowledge was more circumscribed; whilst the want of toleration in those who were at the helm of affairs, subjecting conscientious persons to the fiery ordeal of severe persecution, dissent to the authorized and national mode of worship, was then generally the result of deep conviction. But it is not so now. 'Many run to and fro, and knowledge is increased;' but with respect to that religion which your ancestors preached and lived, and by the strength of which they were more than conquerors over all their foes both inward and outward—where is it to be found? With most other religious professors beside yourselves, it has always been, as truth commonly is, a despised and rejected thing. So clearly does all experience confirm the disaffection of mankind for truth, that we might well doubt the value of those religious principles, that met with no opposers.

Take heed then, dear friends, that you slide not insensibly into the religion of the day. Beware of outwardness in your ministrations. All the world are now worshipping in the outward court; but your profession calls upon you to measure the temple of God, and the altar, and them that worship within."

Jeremiah Horrox.

The recent announcement of Queen Victoria to her Parliament, that arrangements had been made for the scientific observation of the transit of the planet Venus across the sun's disk, in 1874, calls the attention of lovers of science to a very rare and important astronomical event. No person living ever saw Venus crossing the sun, and yet the ob-

servations of this transit furnishes the most essential elements of astronomical knowledge.

Venus, as viewed by the inhabitants of the earth, is the most beautiful and interesting of the planetary stars. Being the second planet from the sun, and the most conspicuous of the two inferior planets having their orbits within the orbit of the earth, and approaching the earth at the time of her inferior conjunction within twenty-six million miles, she has ever had a friendly lunary to the lovers and observers of celestial scenery.

Her maximum brilliancy has been estimated to equal the light of twenty fixed stars. Her most beautiful appearance is presented to the equatorial regions, at the period of her greatest elongation, when she is seen high above the horizon, shining with a pure, steady light, like a twilight sun. She is so brilliant at certain periods as to be visible at noonday and her great light is so intense in the evenings of her greatest splendor as to cast a shadow upon the earth.

The body of the planet has been seen by astronomers through her luminous atmosphere; and her atmosphere itself has been observed like a pale, penumbral halo of light during her transits.

Transits of Venus across the sun's disk occur alternately at intervals of eight, one hundred five and a half, and one hundred twenty-one and a half years. The last transit but one took place in 1761, after an interval of one hundred twenty-one and a half years the last transit took place in 1769, after an interval of eight years; and the next transit will take place in 1874 (December 8), after an interval of one hundred five and a half years. The transit of 1874 will not be visible in this country.

As the observation of the transit of Venus enables us to ascertain the sun's horizontal parallax—an element of knowledge of the greatest importance, since by it we determine, as accurately as we are able, the distance of the sun from the earth, and the distance of the planets from each other—the transit of 1874 will awaken a general interest in the following transit, which will take place in 1882, and which will be visible in the most enlightened parts of the world. No one who enlightens the event in 1882 will ever see the transit of Venus again.

This event, which furnishes the basis for the most wonderful problems ever mastered by the human mind, was first correctly calculated, and first observed, by a young entusiast of science named Jeremiah Horrox.

He was born at Tuxtoth, near Liverpool, England, about the year 1620. He was dreamy, poetical youth, admired and beloved for his amiable disposition and for the rectitude of his intentions. He loved the night and the sublimities of its celestial scenery and, while others were idling or sleeping, was his delight—a delight amounting at times to rapture—to follow the stars in the courses, and to roam in fancy among the golden zones on high.

Ere he reached the age of eighteen he had mastered the most profound reasonings and calculations of the German and the Danish astronomers.

When Kepler published his "Rudolphic Tables," he discovered that the planets Mercury and Venus must sometimes pass over the disk of the sun; and he predicted a tra-

it of Venus in the year 1631, and published the prediction in a tract entitled "Admonitio Astronomorum" (Leipzig, 1629.) Kepler died before the date of the predicted transit. Gasendi looked for the event in Paris; but the prediction was not fulfilled.

When Horrox began the study of astronomy, he used the tables of Lansbergius. These tables indicated a transit of the planet Venus in 1639. But the tables of Lansbergius were imperfect, and the young astronomer procured the Rudolphine, and applied himself to a close examination of the tables. In the very hours that his companions devoted to recreation and repose, he studied and ciphered until he had recalculated the problems of Kepler, and demonstrated that the transit predicted for 1631 would take place on the 4th of November (old stile), 1639.

From the age of thirteen Horrox gazed upon the evening-star, dreaming that the day would come when he, perhaps first among all the inhabitants that ever peopled the earth, could see that planet making her way across the disk of the sun.

The slow-paced years of his boyhood roll on. The expected autumn comes, with its dying pomps and dropping leaves. The November day that he has long seen in his dreams brightens the earth, and finds him watching.

It is the Sabbath—the last of the fall. His hands in a darkened room, beside an open book of paper, on which lies the sun's image. At the very hour that he expects the disclosure, the church bells ring. Shall he wait for the planet to write its message, or shall he go to the worshippers? The question agitates his soul. He thinks of the consequence of missing the sight for which he has waited for many anxious years. He reasons that the blessing of the Creator ought not to be neglected, even to witness the sublimest works that the Creator has made. Jeremiah Horrox thought what few men that the world ever saw could have done; he left the room, and retired to the sanctuary.

It was a cloudy day. When he returned, the clouds had broken, and the luminous sky one above him. He went to the darkened room. There, on that white sheet of paper, on the sun's image, and on the sun's image appeared the planet Venus, disclosing the secrets of the far abyss of space, like the touch of the very finger of the Invisible.

Horrox made the following apology to men science for suspending his observations:—"I observed it [the reflection of the sun's image] from sunrise to nine o'clock; again, on the 6th before ten; and, lastly, at noon, and from one to two o'clock—the rest of the day being devoted to higher duties, which might be neglected for these pastimes."

He died January 3, 1641, shortly after writing an account of his important discovery. He had just put his last hand to his treatise when he himself was called to take his flight to the luminous worlds.—*Appleton's Jour.*

London Women's Yearly Meeting, 1805.—Perhaps there has rarely been a time when our solicitude has been manifested for the support and preservation of our youth; that they may believe in Jesus, and bow to his cross, in the subjection of their own will, and in a life of self-denial; contrary to the false liberty which seeks to lay waste all christian discipline.—*Mary Capper.*

Peace.

Address from the Committees of the London and American Peace Societies to the Friends of Peace.

Dear Friends: That which we have long feared has come upon the nations. The system of armed peace which the governments of Europe have insisted on maintaining has issued, as such a system could not fail, sooner or later, to do, in open war between the two powers which had most distinguished themselves by the excess of their warlike preparations. The conflict which has now commenced will, beyond doubt, prove to be one of the most awful in the history of the world. It will involve an incalculable destruction of human life and property, will fill myriads of hitherto happy homes with horror and anguish, will derange those beneficent ties of commerce by which mankind are bound to each other, will arrest the progress of liberty and civilization, will evenment men's spirits by evil passions, and will make the very name of Christianity—the religion of mercy and brotherly love—for the time a mockery in the earth.

But while overwhelmed with sorrow at this terrible event, we at least can look upon it with a conscience free from remorse. For many years we have not ceased, to the extent of our abilities and opportunities, in our endeavors to impress upon governments and peoples the duty of using the lucid intervals of peace in adopting means which would give some guarantee to the nations against so dire a calamity as that which has now overtaken them. Far from having proclaimed, as we are sometimes mistakenly accused of doing, an approaching millennium of universal peace, our voice, on the contrary, has been one of constant deprecation and warning, on the ground that there was no security for peace while Europe was incessantly preparing for war, and while the nations were content to leave the continuance of peace at the mercy of the excited passions and hazardous accidents of the moment. Therefore it is that we have been strenuously contending, first, for a mutual and simultaneous reduction of those enormous armaments, which kept up professedly in the interests of peace, are the most dangerous incentives to war; and, secondly, for the establishment of a court of arbitration, or some form of international jurisdiction, by which the differences of nations could be referred to the decision of reason and justice, instead of prejudice and passion. If there be any who doubt the efficacy of these means, will they suggest some means more efficacious, or are we to abandon mankind in despair to the eternal rule of barbarism and brute force!

What now, dear friends, remains for us to do? Unhappily, in those countries, which are the actual seat of war, the voice of justice, reason, and religion is stifled, for that is the only condition on which war can be prosecuted. Our excellent fellow-laborers in the cause of peace on the Continent have not been wanting to their principles and convictions in this awful crisis. Consistently and courageously, even on the very arena of warlike agitation, have they, in every way that was open to them, uttered bold and eloquent protests against the war. But while it may be difficult for them to persevere in that course—for war is the most oppressive of tyrants—we must continue to denounce this

great crime against humanity, and, undazzled by the glare of victory which may attend one side or the other, turn upon it steadily the light of sober reason and christian morality. We must guard ourselves and use whatever influence we possess in guarding others, against the contagion of the war spirit which is apt to spread even to those who are only spectators of the conflict. We must do all that lies in our power to prevent the area of the war being enlarged, and especially we must strenuously resist all attempts to involve our own country in this dreadful imbroglio. We must watch every opening for the restoration of peace, so as to encourage our own and other neutral governments to offer their mediation at the earliest possible opportunity with a view to bring the war to an end. And above all we must stand prepared, whenever this deplorable conflict is closed, to invoke the public opinion of all Christendom in favor of such measures being taken as will for the future, place the peace of the world beyond the reach of the personal ambition of individuals, or the capricious impulses of popular passion. And may we not hope that the horror and indignation which this war cannot fail ultimately to inspire, will convince all men of the supreme folly and wickedness of referring the disputes of nations to the blind and brutal arbitrament of the sword—will awaken a stern demand among the millions of the oppressed populations of Europe as can no longer be resisted, for those measures of disarmament and arbitration for which we have been so long contending, and which seem the only means of escape from the vicious circle in which the nations have been so long revolving?

For "The Friend."

Selections and Sentiments.

God is light and life, and unchangeable. And man must be changed from darkness and death before he can be reconciled to God. And nothing can produce this change, but the spirit and power of Christ; or the grace and truth which comes by him.

The gospel is a ministrant in substance of all that was shadowed out under the law.

The inward and true Jew, has the law written on the heart; and is to read and meditate on it there, as the outward Jew was to read and meditate on the outward law. The law is letter, but gospel is spirit and power.

A minister of the gospel is not a minister of words, or of the letter, but of the power.

A man may be a minister of the letter without the spirit, but he cannot be a minister of the gospel without the spirit.

It is better to feel Christ's life, spirit and power in our own hearts, than to be disputing with others about them.

The main thing in religion is not to be found acting and doing, but to be found doing right, and from the true teachings and right spirit.

The inward seed, if the earthly part in the heart is prepared for it, grows and brings forth fruit inwardly, as truly as any outward seed does outwardly. But it requires an inward care and cultivation in order to keep

in the Chinese inns. Having to carry every single thing with us, it was very desirable to be content with as little as possible; and we therefore trusted as much as we dared of the food of the country, and were sometimes placed on very short commons in consequence.

An extract, showing the change from Chinese neatness—outside the wall—must close our notice of China, as we wish to add somewhat of our author's impressions of Japan. "Eight miles that evening brought us to Nan-shan-tu, where we took up our abode in a place that would have amused most of our kind at home, if they could have taken a peep at us through Fortunatus's glass. Our curtains banqueting hall, which was also my her's room, was a cow-house! out of which had turned two unfortunate little calves, to do not at all understand our dislike to pig society. In one corner was a pile of baked bricks, and on top of the pile various oil-jars, of which the odor was by no means agreeable, and some blocks of wood, with iron spikes, which formed the candle-stand of the establishment. In another corner were six spare cart-wheels, and a pile of rotten pitchforks. The wall, against which was suspended a hanging shelf, was adorned with old clothes, hats, boots, baskets, vegetables, dried herbs, grass, hemp, and bunches of onions. We had seats, but to make use of them put one's powers of balancing to the test. I consisted simply of a piece of branch, lashed a little, and fixed on four legs, to a wood-cutter's block, the legs by no means necessarily of the same length, nor fully fastened. My room opened into this, and seemed to be a sort of store-room, principally filled with the fuel of the establishment,—skins, oil-jars, green hide, sieves, rolls and bundles of very greasy, dirty, water clothing. B. and M. had a small room in the vicinity of the kitchen. The people these out-of-the-way regions are much more liberal and pleasant than in the large Chinese towns. There sometimes they annoyed us, as they were crowding into the inn-yard to stare, which was very disagreeable to more sensible ones. But here we met with no annoyance whatever. The cattle-yard was just outside our rooms, and when we requested the animals might be moved further off, the man who was driving them, rather questioned whether there was another place in which to bestow them conveniently. When, after a little demur on his part, that the demon thought it would keep him awake might if he had so much noise close by, he wended quite civilly. 'Oh, well, if the gentleman can't sleep, that's another matter, and he ped them out at once, though with an expression of great astonishment on his countenance.

It was most amusing to see Lucian's face as he arrived at the various degrees of rough, rougher, and roughest inns on our road. A half-wonder why people, who might sleep quietly at home if they chose, should wander about in such discomfort, and put themselves into the holes and corners of the old; and at the same time a half-condemning, half-pitying determination that, were we so foolish, he would do his best, under all adverse circumstances, to improve them. Right well he worked on all occasions, only now and then giving way to a quiet sarcasm. In such a climate, how-

ever, everything is bearable, and most things are enjoyable. In the plain, where one is almost suffocated in the small, close inns, the scenery must be very interesting or beautiful to compensate for so much discomfort; but on the plateau it is as different as possible."

THE FRIEND.

NINTH MONTH 10, 1850.

The intelligent mind, which is awake to what is transpiring in the world, must feel a deep, though sad, interest in the solemn events which are now taking place on the continent of Europe. We refer to the fearful contest between France and Prussia. It is natural that transactions of such magnitude, and involving possible consequences of such great importance to the future welfare of the nations, should arouse an eager curiosity to know what is being done at the seat of war. That wonderful invention, the ocean telegraph, enables us to gratify this desire for the most recent news, and our afternoon newspapers often contain notices of battles fought in the interior of Europe on the morning of the same day. Thus the excitement attending the war becomes rapidly spread, and unless we carefully watch over the workings of our hearts, we may gradually become imbued with a warlike spirit, feeling a degree of exultation at the success of one party or the other, and lose that christian covering of the spirit, in which we recognize all men as brethren, and seek the welfare of all.

In another part of this paper will be found a timely and well-written address from the Committees of the London and American Peace Societies. It is pleasant to notice the advocacy of correct views on this subject, as indicated thereby.

Nothing however, we believe, which rests only upon the reason and will of man, will suffice to preserve the nations in the hour of temptation, from joining with that disposition so natural to the unregenerate mind, of revenging supposed injuries, or resisting expected assaults. That reliance upon Divine Providence, which comes only through the operation of living faith in the soul, must be more and more known in the hearts of individuals composing the nations, before their rulers can be expected so to put their trust in Him who ruleth among the kingdoms of men, as to lay aside all outward defences. The dispositions to war must be overcome in the hearts of men more generally—those dispositions from whence wars and fightings proceed—before the time can come when nations shall not learn war any more. Can any one doubt that if the inhabitants of France and Prussia had been generally true followers of the Prince of Peace, the lamentable war now raging between them would not have broken out? How does it behove all, therefore, who profess the christian name, so to watch over their own hearts, as to know Christ's government really set up there, and a willingness produced in them even to endure suffering and persecution, rather than to swerve from a faithful maintenance of Christ's precepts, until a righteous testimony against war prevails in the earth. Thus would the day be hastened when "nation shall not lift up the sword against nation," and "the earth shall

be full of the knowledge of the Lord as the waters cover the sea."

In reply to the inquiry made by "A Constant Reader," in our last number, respecting "The Testimony of the Society of Friends on the Continent of America," issued in 1829, we have ascertained that a few copies still remain on hand at Friends' Bookstore, 304 Arch St.

The following names of Friends, who have long acted as Agents for "The Friend," were unintentionally omitted in the list published in the 52d No. of the last volume.

SUMMARY OF EVENTS.

FOREIGN.—When the French army commanded by Marshal MacMahon left Chalons last week by way of Rheims to Bethel, there was the opportunity of transferring the entire force to Paris by the northerly railway route, and this movement might probably have been made before the arrival of any large Prussian force. It was however concluded to press eastward and relieve Bazaine, who had been prevented from leaving Metz by the army of General Steinmetz. In carrying out this plan MacMahon was advanced and interposed between those under Bazaine and himself. Severe engagements followed on the 30th and 31st ult. and first instant, at Beaumont, Morozon and Cavignon, both Prussians and French suffering heavy losses. The final result of the fiercely contested struggle was, that the French army was utterly defeated and took refuge in Sedan. It was soon seen that this position was untenable, as the Prussians had taken possession of the heights which commanded the town, and nothing was left but to surrender to the conquerors. The following dispatch was sent by the King of Prussia to Berlin:—"Before Sedan, France, Friday, Sept. 2, 12, P. M. A capitulation, whereby the whole army at Sedan are prisoners of war, has just been concluded with General Wimpfen, commanding, instead of Marshal MacMahon who is wounded. The Emperor surrendered himself to me. As he has no command, and left everything to the Regent at Paris; his residence I shall appoint after an interview with him."

After MacMahon's army had received the last reinforcement of 50,000 troops, it was estimated at Paris to number 200,000 men. It was greatly reduced in the final battles, and as some of them took place near the Belgian frontier, many were stranded across the line where they were dispersed and taken prisoners by the Belgian troops stationed there to watch the issue of the conflict. The *Independence Belpre* of the 5th says, when Sedan surrendered it contained 70,000 soldiers. Last night 15,000 more surrendered to the Prussians and 30,000 took refuge in Belgium. From these figures it infers that MacMahon's army, when driven into Sedan, was reduced to 115,000 men.

While MacMahon was unavailingly contending with superior numbers, Bazaine made another determined effort to join him, but like all previous ones it was frustrated and attended with serious losses.

The *Full Mall Gazette* says: "The news will be regarded as final. If the Emperor hopes by a hastily finished up peace, to find means to transfer the throne to his son, it is the last desperate delusion of a life of delusions. He may find it easier to begin than to end a war. Peace is but a means to an end. There is no government to make peace. Imperialism is dead, and

an Orleans government or a republic can hardly begin by a surrender. France has, for the first time, to act. Her eyes are for the first time opened.

French soldiers within Belgian territory on Friday was about 10,000. All laid down their arms, and were conveyed to Namur. They brought along 400 artillery wagons, two guns and 1000 horses.

The strange infatuation of the Parisians continued until the 3d of the Corps Legislatif of that day represents every event of the campaign as a success of the Emperor. A majority of the Paris papers considered an attack upon Paris impossible. The Prussians could not move upon the capital with MacMahon and Bazaine and their immense forces in the rear. The Emperor issued the proclamation announcing that a great misfortune had come upon the country, that MacMahon and his army had surrendered to the Prussians, and that the Emperor was among the prisoners. "This cruel reverse," they say, "will not shake our courage. Paris is to-day in a complete state of defence. The military forces of the country will be organized in a few days. A new army will be under the walls of Paris. Another army is forming on the banks of the Loire."

As soon as the proclamation of the Ministers announcing the capture of Metz and the capitulation of the army, spread through Paris, the excitement among the people became indescribable. On the 5th the Corps Legislatif, by a unanimous vote, declared the forfeiture of the throne by the Bonaparte family. All the streets leading to the building in which the Corps Legislatif met, were thronged with thousands of shouts of "Vive la Republique!" were heard on all sides. The Imperial arms in front of shops, and signs or medals bearing the Imperial effigy were torn down by the infuriated mob. Minister Washburne telegraphed to the Department of State at Washington that the empire is crumbling, and that the government of the Tuilleries was invaded by them, the throne torn down, and every thing marked with the Napoleonic insignia destroyed, and the busts, statues and pictures of the Bonaparte family were carried away and cast into the river Seine.

Consentance to the popular will most tumultuously expressed, the opposition members of the Corps Legislatif met and declared the establishment of a Republic, with a provisional government of national defence, composed of eleven members, all deputies of Paris; viz: Arago, Cremieux, Delesclap, Jules Ferry, Landry, Laroche, Pages, Glorieux, Besson, Pelletan, Picard, Rochefort and Jules Simon. General Trochu is ordered to continue in the exercise of the powers of governor of Paris, and is appointed Minister of War in place of General Palikao. It is understood the new government will convolve the Constituent Assembly. Seals have been placed on the doors of the Corps Legislatif.

The Paris journals, without exception, urge the nation to make an unyielding defence, and declare the dismemberment of France to be impossible.

The Prussian armies are moving towards Paris, and within 48 hours will be within 20 miles of the city.

The King of Prussia, after an interview with Napoleon, assigned Williamsfort, near Cassel, as the place of his detention for the present. His son, the Prince Imperial, who was also taken at Sedan, will accompany him, and the Emperor's baggage has been obtained. The Prussian government to be with us, without being considered a prisoner here.

An Amsterdam dispatch of the 5th, at 7 P. M., says, it is reported that Metz has capitulated, and 123,000 French troops have there surrendered to the Prussians. The bombardment of Metz is stated to have continued. The inhabitants there suffered dreadfully from the siege, the fine public library has been destroyed, and the famous Cathedral greatly injured.

It is arranged that the Italian government will garri- son Rome, virtually ending the Pope's temporal power.

London, 9th mo. 5th. Consols. 91½. U. S. 5-20's, 182, 88½; ten forty's, 83½.

Liverpool. Middling uplands cotton, 9½; Orleans 9½. California wheat, 10. 3d. per cental; red winter, 9. 8d.; red spring, 8. 5d.; 8s. 6d.

UNITED STATES.—The amount of gold received was furthered de- creased to \$2,555,921,190. This is \$83,407,327 less than it was six months ago. The Treasury holds \$129,640,655, of which 102,504,705 is in coin. Bonds issued to the Pacific Railroads, and included in the debt, amount to \$2,645,832.

The customs receipts for the week ending 8th mo.

23d, amounted to \$4,988,798, of which \$3,392,599 were received in New York.

The mortality in Philadelphia last week was 335. Of this number, 36 died of consumption of the lungs; 6 of disease of the heart; 22 of marasmus; 11 of old age; 11 of typhoid fever; 15 of convulsions; 10 of scarlet fever; 4 of inflammation of the lungs; 7 of congestion of the brain; 21 of debility; 4 of apoplexy; 4 of cramp; 1 of diphtheria; 1 of cholera; 1 of typhus; 1 of cholera; 1 of diphtheria; and 9 of diarrhoea.

The mean temperature of the Eighth month, according to the record kept at the Pennsylvania Hospital, was 78.82 deg., the highest during the month 95 deg., and the lowest 61 deg. The rain fall of the month was 5.11 inch. The mean temperature of the three summer months of 1870 has been 78.88 deg., which is the highest during 81 years. The lowest summer mean occurred in 1816, and was only 66 degs.

The Markets, &c.—The following were the quotations on the 5th inst. *Wool*.—American gold, 114; U. S. sixes, 188½; 114; ditto, 5-20's 1808, 110; ditto, 10-40's, 106. Superfine flour, \$4.50 a 5; finer brands, \$5.25 a \$9. No. 3 Chicago spring wheat, \$1 a \$1.05; No. 2 do. \$1.08 a \$1.10; No. 1 Milwaukee, \$1.18; red western, \$1.25; amber State, \$1.31; white southern, \$1.35 a 1.40. Mixed corn, \$1 a 84 cts.; sound yellow, 89 a 90 cts. Middling cotton, 20 cts. *Philadelphia*.—Superfine flour, \$5.25 a \$5.50; finer brands, \$6.75 a \$8.50. Red wheat, -1.35 a \$1.41. Yellow corn, 95 a 97 cts.; western mixed, 86 a 88 cts. Oats, 52 cts. Timothy seed, \$8.50. *Wheat*.—Amber Maryland, \$1.50 a \$1.56; No. 1 Avenue Drove-yard were large reaching 3200 bush. Extra sold at 8½ a 9 cts., a few choice 9½ cts.; fair to good, 7 a 8 cts., and common, 4½ a 6 cts. per lb. gross. About 13,000 sheep sold at 4½ a 6½ cts. per lb. gross, and 3000 hogs at \$13.75 and \$14.25 per 100 lbs. net. *Baltimore*.—Amber Maryland, \$1.50 a \$1.56; No. 1 red, 1.25 a 1.40; winter red western, \$1.30 a \$1.33. Yellow corn, 88 a 95 cts. Oats, 48 a 50 cts.

RECEIPTS.

Received from Joshua Jeffrey, Pa., \$2, vol. 44; from Royal Woodard, N. Y., \$2, vol. 44; from Jehu L. Kite, Agent, O., \$2, vol. 44; and for Rebecca Woolman, Achsah Hall, Lindsey Cobb, Jos. Lynch, Jos. Painter, Eliza Ann Fogg, Isaac Carr, John H. Stanley, James H. Crew, Mary Warrington, Thos. B. Woolman, Bolt, John J. Grey, and Edin J. H. S. Sars, \$2, vol. 44; from Edin Warrington, \$2, No. 1, vol. 45; and for Benj. Ellyson and Webster Ellyson, Io., \$2 each, vol. 44; from Mary E. Pim, Pa., \$2, vol. 44; from Charles Burton, Pa., \$2, vol. 44; from Isaac Henock, Pa., \$2, vol. 44; and for Hannah Henric, \$2, vol. 44; from John J. Potter, Agent, N. Garrett, Pa., \$2 each, vol. 44; from Charles Cooper, Pa., \$2, vol. 44; from Wm. F. Townsend, Agent, Pa., for Sarah Yarnall and Rebecca Conard, Elizabeth S. Thomas, Phineas Pratt, Benjamin Hoopes, Sarah C. Passmore, Joshua T. Ballinger, E. Malin Hoopes, Jacob Parker, Samuel R. Kirk, John W. Fawcett, Mary Ann Fawcett, John H. Kirk, and Antra Thos. Thorp, \$2 each, vol. 44; for J. Preston Thomas, 2, to No. 25, vol. 45; and for Dr. Geo. Thomas, \$2, No. 24, vol. 45; from M. M. Morlan, Agent, O., \$2, Wm. Darlington, Ruth Stanley, Stacy Cook, Sr., Dan Boulton, Amos Fawcett, Samuel Steer, Richard J. Fawcett, Mary Ann Fawcett, John H. Kirk, and Antra Josiah Fawcett, Theoph. Morlan, Jane Head, Hanna Bond, Mary J. French, Geo. Blackburn, Elizabeth Reeve, Aaron Stratton, Frederick Maerck, Elizabeth Fawcett, and Abigail Ware, \$2 each, vol. 44; and 4 Charles W. Satterthwaite, \$2, to No. 19, vol. 45; from Jacob Edgus, Pa., \$2, vol. 44; and from Geo. A. Boots, and Townsend Hoops, \$2 each, vol. 44; from Job Hueso, O., \$2, vol. 44; from Benj. D. Stratton, Agent, O., \$2, vol. 44; from Josiah Cameron and Barclay Stratton, \$2 each, vol. 44; from Wm. C. Ivins, N. J., \$2, vol. 44; from Lew Passmore, Pa., \$2, vol. 44; from Murray Shipley, C. E., \$2, vol. 44; from John Brantingham, O., \$2, vol. 44; and from Samuel Carr and Isaac Cope, \$2 each, vol. 44; from Benj. Hayes, Pa., \$2, vol. 44; from Joseph Y. Hibbs, Pa., \$2, vol. 44; from Geo. D. Smith, O., \$2, vol. 44; and for Jimena Edwards, \$2, vol. 44.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

WESTWON BOARDING SCHOOL.

THE WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next. The Parents and others interested to send children to t School, are requested to make early application to AARON SHARPLESS, Superintendent, whose address "Street Road P. O., Chester Co., Pa." When no convenient application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 St. Philadelphia.

Parents and Guardians of pupils now at t School are reminded that the second payment for t present session is now due; and it will be an accommodation if all who can conveniently do so, will pay t remit it to the Superintendent or Treasurer.

EVENING SCHOOLS FOR ADULT COLORED PERSONS.

Teachers are wanted for the Men's and Women's Schools, to open about the 1st of Tenth month.

Application may be made to Elton B. Gifford, No. 28 North Third St. Thomas Elkinton, No. 118 Pine St. Ephraim Smith, No. 1013 Pine St. George J. Scattergood, No. 413 Spruce St.

FRIENDS' ASYLUM FOR THE INFANTEE.

New Franklin, (Twenty-third Ward), Philadelphia Physician and Superintendent—JOSHUA H. WOODING, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, Ch. of Managers, No. 1213 Pine Street, Philadelphia, or to any other Member of the Board.

DIED, in this City, Eighth month 14th, 1870, THOS BRANSON, Jr., in the 25th year of his age. A member of Western District Monthly Meeting.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

PHILADELPHIA.

stage, when paid quarterly in advance, five cents.

Ascent of the Weisshorn Alp.

BY PROF. J. TYNDALL.

During his summer vacation in 1861, Prof. Tyndall succeeded in climbing to the top of the mountain, for the first time on record. The following narrative is abridged from his description:

"At 1 P. M., on the 18th of August, we, that Benen, [my guide] Wenger, and myself, rented the hotel, and were soon zigzagging along the pines of the opposite mountain. Benen had been the guide of my friend F. I had shown myself so active and handy that the Strahleck, that I commissioned Benen to take him. During the previous night I had been very unwell, but I hoped that the night left me, if properly applied, and I trusted to the uttermost, would still enable me to keep up with my companions. As I began the slope I suffered from intense dizziness, and we once halted beside a fillet of spring water to have a draught. I tried powerless to quench the drought which beset me. We reached a chalet; milk-time was at hand, at our request a smart young Senner [cheese-maker] caught up a bucket, and soon returned with it full of delicious milk. It was poured into a small tub. With my two hands I seized the two ends of a dither of this vessel, gave it the necessary vibration, and stooping down, with a contraction of purpose which I had rarely before exerted, I drew the milk into me. Thrice I turned to the attack before that insatiable thirst gave way. The effect was astonishing. A liquid appeared to lubricate every atom of my body, and its fragrance to permeate my veins. I felt a growth of strength at once commence within me; all anxiety as to my power with reference to the work in hand vanished, and before retiring to rest I was able to say to Benen, 'Go where thou wilt tomorrow, and I will follow thee.'

"Two hours' additional climbing brought us to our bivouac. A ledge of rock jutted from the mountain side, and formed an overhanging roof. On removing the stones from beneath it, a space of comparatively dry clay lay bare. This was to be my bed, and when I saw that Wenger considerably stirred it with his axe. The position was excellent,

for lying upon my left side I commanded the whole range of Monte Rosa, from the Mischabel to the Breithorn. We were on the edge of an amphitheatre. Beyond the Schallenberg was the stately Mettelhorn. A row of eminent peaks swept round to the right, linked by lofty ridges of cliffs, thus forming the circus in which the Schallenberg glacier originated. They were, however, only a spur cast out from the vaster Weisshorn, the cone of which was not visible from our dormitory. I wished to examine it, and in company with Benen skirted the mountain for half an hour, until the whole colossal pyramid stood facing us. When I first looked at it my hopes sank, but both of us gathered confidence from a more lengthened gaze. The mountain is a pyramid with three faces, the intersections of which form three sharp edges or arêtes. The end of the eastern arête was nearest to us, and on it our attention was principally fixed. A couloir led up to it filled with snow, which Benen, after having examined it with the telescope, pronounced 'furchtbar steil.' This slope was cut across by a bergschrund, which we also carefully examined, and finally, Benen decided on the route to be pursued next morning. A chastened hope was predominant in both our breasts as we returned to our shelter.

"I lay with my face turned towards the moon until it became so chilled that I was forced to protect it by a light handkerchief. The power of blinding the eyes is ascribed to the moonbeams, but the real mischief is that produced by radiation from the eyes into clear space, and the inflammation consequent upon the chill.

"I looked at my watch at 12 o'clock; and a second time at 2 A. M. The moon was then just touching the crest of the Schallenberg, and we were threatened with the withdrawal of her light. This soon occurred. We rose at 2½ A. M., consumed our coffee, and had to wait idly for the dawn. A faint illumination at length overspread the vast, and with this promise of the coming day we quitted our bivouac at 3 A. M. No cloud was to be seen; as far as the weather was concerned we were sure to have fair play. We rounded the shingly shoulder of the mountain to the edge of a snow-field, but before entering upon it I disburthened myself of my strong shooting jacket, and left it on the mountain side. The sunbeams and my own exertion would, I knew, keep me only too warm during the day. We crossed the snow, cut our way through a piece of entangled glacier, reached the bergschrund, and passed it without a rope. We ascended the frozen snow of the couloir by steps, but soon diverged from it to the rocks at our right, and sealed them to the end of the eastern arête of the mountain.

"Here a saddle of snow separates us from the next higher rocks. With our staff-spikes on one side of the saddle, we pass by steps cut upon the other. The snow is firmly congealed. We reach the rocks, which we find hewn into

fantastic turrets and obelisks, while the loose chips of this colossal sculpture are strewn confusedly upon the ridge. Amid the chips we cautiously pick our way, winding round the towers or scaling them again. From the very first the work is heavy, the bending, twisting, reaching, and drawing up, calling upon all the muscles of the frame.

"The rocky staircase led us to the flat summit of a tower, where we found the summit off from a similar tower by a deep gap bitten into the mountain. Retreat appeared inevitable, but it is wonderful how many ways out of difficulty open to a man who diligently seeks them. The rope is here our refuge. Benen coils it round his waist, scrapes along the surface of the rock, fixes himself on a ledge, where he can lend me a helping hand. I follow him, Wenger follows me, and in a few minutes all three of us stand in the middle of the gap. By a kind of screw motion we twist ourselves round the opposite tower, and reach the arête behind it. Work of this kind, however, is not to be performed by the day, and with a view of sparing our strength, we quit the arête and endeavour to get along the southern slope of the pyramid. The mountain is here scarred by longitudinal depressions which stretch a long way down it. These are now filled with clear hard ice, produced by the melting and freezing of the snow. The cutting of steps across these couloirs proves to be so tedious and fatiguing, that I urge Benen to abandon it and try the arête once more. By a stout tug we regain the ridge and work along it as before. Here and there from the northern side the snow has folded itself over the crags, and along it we sometimes work upward. The arête for a time has become gradually narrower, and the precipices on each side more sheer. We reach the end of one of the subdivisions of the ridge, and find ourselves separated from the next rocks by a gap about twenty yards across. The arête here has narrowed to a mere wall, which, however, as rock would present no serious difficulty. But upon the wall of rock is placed a second wall of snow, which dwindles to a knife edge at the top. It is white and pure, of very fine grain, and a little moist. How to pass this snow catenary I knew not, for I had no idea of a human foot trusting itself upon so frail a support. Benen's practical sagacity was, however, greater than mine. He tried the snow by squeezing it with his foot, and to my astonishment commenced to cross. Even after the pressure of his feet the space he had to stand on did not exceed a handbreadth. I followed him, exactly as a boy walking along a horizontal pole, with toes turned outwards. Right and left the precipices were appalling; but the sense of power on such occasions is exceedingly sweet. We reached the opposite rock, and here a smile rippled over Benen's countenance as he turned towards me. He knew that he had done a daring thing, though not a pre-

gard to clothing themselves decently, and in their manners and customs generally.

Sensory.—In the course of our walks and rides we found some lovely ferns and flowers, and beautiful insects. Butterflies and beetles abound in great variety, and also tiny scarlet ants. The only things which seemed to me out of proportion in the place were the spiders, which are monstrous. They also are very cautious in their way: some of them with great bodies, looking as if cut out of the richest black velvet, with stripes of bright gold across. The lizards, too, are exquisite. The cicadas are a nuisance; one can hardly hear oneself, any one else, speak for them. They call them "scissor-grinders," and really, when they begin slowly "yes-yes-yes," and gradually quicken their note till it becomes nothing but a harsh, grating hiss, the likeness to the hiss of a machine is great, and the relief when it stops indescribable.

We rode one morning to the top of "Battery hill," which overlooks the town and settlement, and gives a magnificent panoramic view of the whole harbor and surrounding country. At this time of year there is curiously little color in the landscape: it is nearly all a soft greyish tint, of different shades. In the autumn they said the color of the woods was gorgeous, and even now, when the trees are in the prime of their season, they are in the strike on a paddry-field or bit of copse on the mountain side, it brings out a brilliant tinge, but otherwise the color is very similar everywhere. In some places the method which is carried out here of cutting the woods, gives a stiff appearance to the hill-sides. They are cut in regular rows, and only once in three years. Many of the governmental arrangements of that kind seem very good. Every man who cuts one tree has to plant two instead: no fish is supplied to foreigners until the natives have taken all they require: every barge is obliged to have in store so many bags of rice, and so much dried fish, according to the number of its crew, and in case of famine; and an officer goes round to every house so many times a year, to see that they have the proper amount. As an instance of the readiness of the Japanese to adopt European improvements is shown in the use they were making of a machine for husking rice, which had been lately sent them from England. We saw it in operation at the foundry; being worked by one of our engines there. It exactly resembled the stamper-crushing-machines used at the gold-mines, only with wooden instead of wrought-iron crushers. By means of this one man can husk as much rice, and more quickly and effectually, than it formerly required twenty-five men to accomplish.

The native Japanese towns are a grand improvement upon the Chinese. At Nagasaki there were no unpleasant sights and smells, the streets were much wider, with a paved way in the middle, picturesque houses, bamboo mats and great neatness of arrangement in their wares. But there is little in the shape of curiosities. Egg-shell china and straw-work are the only specialties. The latter is very beautiful, and extraordinarily cheap.

Commonly we have more in our account of the natives than the *gracians* man; whereas he that cannot speak good sense, or six right words to purpose, may yet have more grace and sincerity in the heart, than he who can talk like a parrot and pray like an angel.

A. J. Jeffrey.

For "The Friend,"

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 15.)

"9th mo. 1845. My mind became exercised in desire for the welfare of some men who were at work on the highway, with an intimation to hand them some tracts on religious subjects. This so increased as they drew near my present dwelling that I feared being in the neglect of duty if I omitted attending to my feelings. Accordingly I spoke to the Supervisor in respect to it, much in the cross to my natural inclinations. Though a stranger he encouraged me; and when a suitable opportunity offered, I handed him the tracts to distribute among the men, while I communicated to them what arose in my mind. They all behaved civilly, and some were attentive. This took place in the evening: but not feeling my mind quite relieved, when they collected next morning, I stepped near to most of them, and inquired if they were all well; expressing my desire that the Almighty might be with them and bless them; and then bid them farewell. After which I felt relieved; and a portion of that joy was experienced, with which the stranger cannot intermeddle; and which is at times given to those who are made willing to follow the blessed Master in the way of the cross.

"In the 10th and 11th months, feeling a renewal of exercise on account of Jabez Boyd, the before-mentioned young man in prison at West Chester, attended with an apprehension of duty again to visit him, it was very humiliating and yielded to much in the cross. But finding my dear friend S. Emlen was also exercised on his account, and willing to accompany me, it somewhat lightened the burden. We accordingly visited him several times; and were a little comforted in the hope, that through the condescending goodness and mercy of our merciful Creator, his sins, though of a deep dye, would be permitted to go before him to judgment.

"This poor youth was executed the 21st of Eleventh month. We also visited his parents, and the parents of the poor innocent youth who was murdered; they all living in the neighborhood of West Chester. The latter family, whose name is Patton, appeared to be an orderly pious one, who knew where to look for support in times of deep affliction. I believe they are of the Methodist Society. It was a satisfactory visit; and they expressed much gratitude for being remembered in that time of close trial. The parents of poor Jabez were of a different character.

"In the course of our being in and about West Chester, my mind was brought into close exercise in the prospect of having a religious opportunity with all the prisoners in the prison where poor Boyd had been confined; and also to have a meeting, more especially for the laboring class of people in and about West Chester. Finding that dear S. Emlen was similarly bound, and not only so, but prepared for an early procedure, it felt very weighty to me indeed, attended with much fear, lest I should be meddling in things too mighty for me. But as a little light seemed to shine upon it, I ventured to mention the subject to the elders of my own meeting; who not discouraging me, and an opportunity likewise offering of expressing my prospect, in company with S. Emlen, to the elders and ministers of Chester Monthly Meet-

ing, they, after solid consideration, encouraging us to pursue the prospect, arrangements were made therefor. The service as respects both, was attended to on First-day, the 30th of Eleventh month. The meeting with the prisoners was held in the forepart of the day; wherein we thought it right to step into each of the cells, and speak to them one after another before meeting. They were not allowed to come out, but the cell doors being left open during the meeting, it was believed they could hear what was communicated. It was a solemn, favored time; and I hope will not soon be forgotten by some of them, there being more than thirty in number. The meeting in the afternoon, held in Friend's Meeting-house, was larger than was expected; and I think was a favored one. May all the praise be given to Him to whom alone it belongs. Next morning I felt as if I should not come home easy without attempting to see the parents of Jabez Boyd again. We accordingly went, and found the mother and one son at home; to whom I communicated what arose in my mind. They appeared much more thoughtful and brought down in their minds than when we visited them before, particularly the mother. It seemed to me, she had seen better days, and that a renewed visitation in mercy was extended to her, even at the eleventh hour. All that was capable of feeling within me, craved that she might be made willing to accept it. Her son also now appeared to be thoughtful. It was altogether a time of much feeling; they having recently had the corpse of the executed son buried from their home.

"12th mo. 1st. We reached home, feeling my mind relieved and comforted in the belief of having been engaged, according to the ability received, in my good Master's service, if I may so speak. Soon after my return, I visited my children at Coatesville. While with them the desire was felt, that the world, and the uncertain things of it, might not have too much place in their minds. Holy Father, be pleased to quench their desire for uncertain riches, and give them to see and feel increasingly the excellence of having a possession in Thy ever blessed Truth. While there I distributed some religious tracts as way opened. On the 16th returned from Coatesville pretty well in health; but since then have been poorly several days; though my mind is favored with peaceful quiet—an unmerited favor.

"1st mo. 4th, 1846. Having often observed that the close of one year, with the beginning of another, is a time spent by some in feasting, and in forgetfulness of the gracious Gift of our all blessings, the language of my heart hath been for them, Lord forget them not, nor cast them away from Thee. But be pleased to follow them with the convictions of Thy grace, until they are made sensible that Thou art God, and changeth not,—the same yesterday, to-day, and forever.

"I went to meeting to-day under considerable exercise of mind. After sitting some time, there seemed, I thought, a little handed to communicate, which in fear was yielded to: after which the spirit of supplication was felt, and I believe vocal expression of it required. But the fear and care of being too hasty so impressed my mind, as to prevent a yielding to it till the meeting closed; when my mind was closely tried. Notwithstanding this I could appeal to the Searcher

of hearts, that it was not through wilful disobedience; and desires were renewedly raised to be helped to be faithful in future, and more instant in season. Oh! may all my shortcomings tend to increased watchfulness to keep near to the paintings of the Spirit of Truth.

"3d mo. 8th. I did not get to the Quarterly Meeting at Concord last month, feeling as I thought, excused from the infirmities of increasing age pressing upon me. But have often through the winter which has just closed, felt my mind exercised for those around about us, who appear to be living without God in the world, or too much in forgetfulness of Him. From the pressure of apprehended duty, I have stepped in to see some of this class, have given them some religious tracts, and, as way opened, have expressed my earnest desire for their increase in that knowledge, while time and opportunity are afforded, which appertains to the salvation of the poor, never-yielding soul. They all behaved with civility, and some of them received the visit and tracts with expressions of gratitude. Oh! it is a great thing, I often think, to be willing to become a fool for Christ's sake, and to acknowledge Him before men, as well as to be preserved from casting a stumbling block in the way of any; which was my great desire in the foregoing opportunities. Gracious Father, be pleased to keep me near unto Thyself in all my future steps; and in the remembrance that we are not our own, but are bought with a price. My desire also is to be preserved from indulging too much in ease to the flesh, which I often feel inclined to; but rather to be diligent in business, serving the Lord. That while He is pleased to favor me with health and strength, I may more willingly yield to the manifestations of His blessed will, which only affords solid comfort. And Oh! that I may be preserved from every false appearance, though it may be as in the guise of an angel of light."

"4th mo. 1846." Under this date, Hannah Gibbons' diary states that she attended our Yearly Meeting of this year; and after some allusion to its business, which she records as "painful," thus concludes the memorandum: "Oh! it was, I believe, a time of deep searching of heart to very many among us. Yet blessed be the name of Israel's Shepherd, He manifested Himself to be a spirit of judgment to those who sit in judgment; enabling them to set up a banner in His name, and to transact the important business of the meeting in a good degree of that dignity which the blessed Truth gives. The praise belongs to the Lord alone.

"5th mo. 3d. For a considerable time past, my mind has been exercised in the prospect of visiting, I trust in gospel love, the families of London Grove Monthly Meeting, and a part, or all of those composing New Garden Monthly Meeting. Believing the time had come, I mentioned the concern to Friends at our last Monthly Meeting, which was united with. Jane and Edward Garrett being willing to bear me company, they were also united with, and we were set at liberty to proceed as Truth might open the way. The feeble aspirations of my heart hath often been, and so continues to the Father of mercies, that He would be pleased to be with me, and strengthen me, a poor worm of the dust, for His work and service, enabling me to do His blessed will and nothing more.

"5th. I left home, accompanied by my beloved friends, Jane and Isaac Garrett, (Edward being too much indisposed to go;) and after attending the Monthly Meetings of New Garden and London Grove, where the concern was united with in each meeting, we entered on the arduous service. As the visit progressed I felt that I should not be excused without our going through the families of both the meetings; and was favored to do so; a little of best help being mercifully afforded, which I thought I was never more sensible of than on the present occasion. The service was indeed weighty in prospect, and performed under considerable bodily infirmity: yet blessed be the name of Him whom I desire to serve, He hath permitted me to return, unworthy as I am, (being sensible I am but an unprofitable servant,) with a relieved and peaceful mind. 'Praise waiteth for thee, O God, in Zion.'

"Jane Garrett and myself were absent nearly five weeks; attended the Quarterly Meetings of Concord and Western as they came in course, and visited about 108 families within the compass of the two Monthly Meetings."

(To be continued.)

A CHILD WITH A SHELL.

I have seen
A curious child, who dwelt upon a tract
Of inland ground, applying to his ear
The convolutions of a smooth-hipp'd shell;
To which, in silence hush'd, his very soul
Listened intensely! and his countenance soon
Brightened with joy; for narrations from within
Were heard, sonorous cadences! whereby,
To his belief, the monitor expressed
Mysterious union with its native sea.
Even such a shell the universe itself
Is to the ear of faith.

STRENGTH OF THE WEAK.

I cannot boast the glowing faith
Of those perchance than I more blest;
Yet I am sinking and would fain
Upon Thy strength, Lord Jesus, rest.

I cannot rise to Paul's rapt height,
When dreaming of Thy love unknown;
But thou despest not small things,
Nor wilt my feeble love disown.

I cannot say I wander not;
Often Thy face I cannot see.
I have no strength; then put forth Thine,
And draw me closer, Lord, to Thee.

I have not got the tongue of fire,
I cannot pray nor praise aright;
Not mine the rush of burning words,
Nor mine the saint's far-reaching sight.

I feel I have no claim to ask
In heaven anywhere to be;
But yet I know that Thou thyself
Mad'st there a home for such as me.

Some of Thy sheep may follow Thee,
And some Thou leadest by the hand;
But Thou must carry me, O Lord,
That I may reach the promised land.

Down here my voice is low and weak;
But when before Thy throne I kneel,
My very weakness shall Thee praise,
And all the more Thy strength reveal.

The victor's crown Thou hast for me
Is only Thine—for me unmeet;
And I will only take it Lord,
To lay it at my Saviour's feet.

It is easier to die the death of a martyr than to live the life of a saint.

A pamphlet lately published by John E. Boyd contains many interesting facts respecting the Isthmus of Nicaragua as a route for an inter-oceanic ship canal. The following facts are important:

The level of Nicaragua lake at high water is 103 feet above high water on the Pacific, and 112½ feet above the lowest tide level. The fall to the Atlantic is 107½ feet to the level of high water, and 108½ to the level of low water in San Juan del Norte, or Greytown harbor. The distance over which this fall is distributed is 119 miles of good navigable water, when the river is only half full. The pre-eminent advantage of the Nicaragua route for an inter-oceanic canal is the inexhaustible supply of water at the summit level. The great lake of Nicaragua has an average length of about 110 miles by an average breadth of about 25 miles, and receives the rainfall of more than 200 by 50. It is the great reservoir of water of Central America, which unquestionable fact marks it as the natural line for an inter-oceanic canal. The line across Nicaragua, as surveyed and laid down by Childs, is free from the objection of tunnels, great or small, and has at its summit a level of navigable water (from Castillo, on the San Juan river, to the first lock descending to the river) of 103 miles without an impediment of any kind. This is a sea of fresh water at the summit, twelve feet lower than the reservoir in Central Park, city of New York, inexhaustible in quantity, and the rim which confines it on the Pacific side is only forty-eight feet high.

In regard to the comparative cost of the construction of an inter-oceanic canal, the distance from ocean to ocean is reduced nearly one-half by the use of the San Juan river for 90-100 miles, and costs only \$12,528 a mile, according to the computation of Childs, to make it complete for service. The summit elevation between Lake Nicaragua and the Pacific ocean is 47 feet, and it extends one and a half miles. The entire cost of the work twenty years ago was estimated at thirty-one and a half millions. The same amount of canal work could be done in the State of New York for about one third of that sum. Very little is said about the harbors on either side of the isthmus, where very large sums must be expended, especially at Greytown. It is certain that French and English companies have, within a few years, made several attempts to obtain an exclusive franchise for a ship-canal by the Nicaragua route. The present promoters of the ship-canal enterprise relying upon data old and new, claim that the only practicable route for a ship-canal uniting the Atlantic and Pacific oceans, is by way of the San Juan river and Lake Nicaragua, and that this route was so feasible that the work must be undertaken at an early day.

Ministers.

1817. Sixth mo. Whether we be ministers, elders, overseers, or of whatever class, I believe we should mind where we are; and rather bear a burden, perhaps rightly brought upon us, from sympathy, or the operation and influence of the Spirit, than venture to relieve ourselves, when circumstances, and the law of opportunity forbid. I believe, in a large meeting, a diversity of exercise may be excited in lively-spirited Friends, which it would be very inexpedient to bring forth in words. But I suppose that the weighty, deeply-attentive, patient mind, is permitted to discover

right time for moving; and then, the bap-
tizing influence being dwelt under in the
exercise of the gift, the meeting feels the precious
et. But I rather think, that some who
are a gift in the ministry, miss it at times,
the exercise of it, for want of understand-
at the time, the state of the meeting;
haps, partly, from being involved in their
exercise. When a meeting is baptized
er a living ministry, and the minister sits
n, it is a nice thing indeed to make an
tion; at least before a suitable space has
a allowed. As the end of all true ministry
bring the hearers to an abiding under
influence of the Spirit of Christ, we should
see when this is in any considerable de-
duced by the ministry of any Friend;
be very careful not to step in, in a way
lissipate the solemnity, or remove the
e which has thus profitably been begotten.
he same time, it is very desirable that no
dly appointed offering should be prevent-
ed and the diversity of states and conditions
e remembered. So that it is indeed a
ery; and a very weighty thing is living,
izing ministry.

remember, whilst on this subject, a rec-
t of dear Henry Tuke, in our Quarterly
ting a pretty many years ago, that he
ght hardly a greater evil could befall us,
religions Society, than an unbaptized
stry. As to offerings in the ministry,
ered unseasonable from the circumstance
meeting being in a measure baptized by
ious ministry; I believe solid, judicious
s might be greatly helpful to our dear
stering friends of less experience: they
much to be felt for, and so are meetings.

William Grover.

Alaska.

For "The Friend."

(Continued from page 20.)

the annual means of the temperature about
a year, by no means low, in spite of the
y summers. From the report of the United
es Coast Survey observers, it is shown
the mean spring temperature (of the
ending October 31st, 1868) was 42° 6';
mer, 55° 7'; autumn, 45° 9'; winter, 31° 9'.
e average of the entire year being 44° 7'.
rainfall for that year was 68.07 inches;
e were 26 snowy days and 134 rainy
e, only 106 were classed as fair, while 260
cloudy.

the lowest temperature at any time during
year 11°, the highest 71°, giving the ther-
ometer a range of sixty degrees. The aver-
age of many years' observation places the
winter temperature about thirty-three
degrees Fahrenheit, which is nearly that of Man-
na on the Rhine, and warmer than Munich,
na or Berlin. It is about the same as
of Washington (1095 miles farther south)
warmer than New York, Philadelphia or
more. The cloudiness and rain of the
winter season, however, prevent it from
being nearly as warm as at any of the places
e mentioned. Very little ice is made at
e; the snow, or rather slush, lies only for
e days in the streets, and a small species
of swimming bird breeds there in abundance.

the southern part of this district there
e beside the timber, from an agricultural
e view. Near Fort Simpson and at
e, Dr. Kellogg describes timothy, white
e, and medick or burr clover, as flourish-

ing in great luxuriance. Dr. Rothrock says
the same of the native grasses in the interior;
but south of Prince William Sound there is so
little lowland or prairie, that there is no good
opportunity for raising fodder, and the climate
would render its preservation extremely pre-
carious. The character of the country is so
rugged that it would hardly be advisable to
keep many cattle, and cereals on account of
the moisture, are not to be thought of.

At Sitka some vegetables do very well.
Turnips, beans, pease, carrots, beets, lettuce,
and radishes are successful. Potatoes, small
and watery, from want of sun and excess
of moisture. Cabbages are thrifty but
will not head. Cereals fail. Some few cattle
are kept. The milk and cream are very good.
Poultry has not succeeded well. Lutek says
that the crows, who are extremely rapacious,
devour all the young chickens.

To the northern part of this district the
above remarks do not apply. Kadiak and
Cook's Inlet, north-east of Fort Alexander,
have comparatively colder winters, and drier
and warmer summers than the islands and
coast to the west or south of them. Haying
can be successfully carried on, the native
grasses being suitable for fodder, green or dry.
Barley and oats have been successfully raised
near the settlement of St. Nicholas or Cook's
Inlet.

There is no want of wood, while it does not
encroach on the lowlands, which is clear of
underbrush and trees. Among the annual
productions of the colony in 1863, are enu-
merated 108,000 pounds of salted meat, 170
casks of potatoes, 150 of turnips, and 180
casks of berries. Dr. Kellogg says of Kadiak:
"Various herbs and grasses clothe the moun-
tains to their summits. The summer climate
here, unlike that of Sitka, is sufficiently fine
for haying. We saw many mown valleys
from which a good supply of hay from the
native grasses had been secured. The cattle
were fat, and milk was abundant. The butter
was yellow and appeared remarkably rich,
though of a disagreeable flavor, which might
be owing to the manner of making." The
potatoes were better than at Sitka, but did
not attain a very large size. The great agri-
cultural staple of the southern Sitka district
is timber. I enumerate the forest trees in the
order of their value.

Yellow Cedar.—This is the most valuable
wood on the Pacific coast. It combines a fine
close texture with considerable hardness, ex-
treme durability and pleasant fragrance. "For
boat-building it is unsurpassed, from its light-
ness, toughness, ease of workmanship, and
great durability." (Kellogg.)

The forests of Puget Sound, which have
been mentioned as more accessible than the
Alaskan timber, are rapidly falling under the
axe of the woodsman. Most of the more ad-
jacent timber is already cut, and logs have
now to be hauled some distance to the mills.
The Puget Sound timber, as ship-building
material, is far inferior to the yellow cedar.
The latter is peculiar to Alaska, and the only
good ship timber on the Pacific coast. The
high rates and short terms of insurance on
vessels built of Oregon pine, show its inferi-
ority better than any amount of argument.
The cedar somewhat resembles boxwood in
texture and color, and has an agreeable odor.
It is familiar to many, under the name of
"campbor wood," in the shape of Chinese
boxes. This is the wood formerly exported

to China and returned to us famous for ex-
cluding moths, &c. A wreck on the beach at
Sitka, originally constructed of this timber,
thirty-two years after, is as sound as the day
it was built. This cedar sometimes reaches
a diameter of eight feet, but a common size is
three to five feet.

Sitka Spruce or White Pine.—This tree is well
known in the lumber trade of the coast, at-
tains a large size, and is noteworthy from its
straight and tapering trunk. The wood is
not so durable as the last named, but is avail-
able for many purposes. It is found near the
water's edge in great profusion throughout
the Alexander Archipelago.

Hemlock.—The timber of this species is
often confounded with that of the preceding
and more durable species, by lumber dealers,
who style them both "Sitka pine." It is much
larger in its growth than the next species, but
has been considered a variety by some
botanists.

Balsam Fir, (*Abies canadensis.*)—The tim-
ber of this tree is almost valueless, but the
bark, with that of the last named, is used in
tanning, and the balsam in medicine and the
arts.

Scrub Pine.—This pine seldom grows more
than forty feet clear trunk, and eighteen
inches in diameter. It passes north in the
interior only to the junction of the Lewis or
Tahoe and the Pelly rivers.

Other trees, such as the juniper, wild pear,
and the like, may be of some use, but from
their small size or scarcity are of little eco-
nomical value.

While in the Yukon Territory we cannot
look for self-supporting agricultural districts,
nor reasonably expect any one to obtain a
subsistence by farming alone; still, the settler
called there to develop the resources of the
country, be they lumber, fish or furs, may
have milk in his tea, and fresh vegetables on
his table if he possess the energy and knowl-
edge to make the most of his opportunities.
It will not be necessary for him to rely on the
products of the chase alone, if he will but
take the necessary care to provide shelter for
his cattle, and to cut and gather for their
winter fodder the perennial grasses which
cover the prairies and lowlands.

In the Aleutian District is situated the
larger proportion of the arable land of the
territory of Alaska. In this and in the north-
ern part of the Sitkan District, the climatic
conditions are the most favorable for agricul-
ture in the territory. Their resemblance to
the conditions which prevail in north-western
Scotland and its islands has been already de-
monstrated; and the capability of this district
for agriculture may therefore be reasonably
inferred. Oats and barley, possibly wheat
and rye, may succeed on these islands. Their
abundant capacity for producing root crops of
good quality, except perhaps potatoes, may
be considered as settled. That cattle will do
well there, there is no doubt; and the Pacific
slope may yet derive its best butter and cheese
from the Aleutian and northern Sitkan dis-
tricts. Sheep, goats and swine, have not been
thoroughly tried as yet, but the inference is
that they would also succeed. Most of the
berries found in the Yukon Territory are also
common to the Aleutian District, and the
climate, unless from its moisture, presents no
obstacles to the success of some kinds of fruit-
trees. It is to be hoped at least, that some
one will try the experiment. These islands,

Kadiak and Cook's Inlet, are unquestionably the best agricultural country in our new possessions.

The resources of the southern Sitkan District lie apparently entirely in its timber. This is unquestionably needed on the Pacific coast, and a most valuable acquisition. No better lumbering district can be imagined, with water transportation every where, and mountain sides so steep that a slide—easily made of the least valuable timber—will conduct the logs directly to the water side. Some vegetables in the future as in the past, will be raised, and some stock kept in this part of Alaska, but probably never to any great extent.

The entire population of Alaska, aboriginal as well as European, was estimated by the writer in 1867, at only about 29,000. Of these 483 were Russians.

The Fountain of Living Virtue.—John Churchman relates that when with some other Friends travelling in Talbot county, an elderly man asked us if we saw some posts to which he pointed, and added, the first meeting George Fox had on this side of Chesapeake Bay, was held in a tobacco house there, which was then new, and those posts were part of it. John Browning rode to them, and sat on his horse very quiet; and returning to us again with more speed than he went, I asked him what he saw amongst those old posts? he answered, "I would not have missed what I saw for five pounds, for I saw the root and ground of idolatry. Before I went, I thought perhaps I might have felt some secret virtue in the place where George Fox had stood and preached, whom I believe to have been a good man: but whilst I stood there, I was secretly informed, that if George was a good man, he was in heaven, and not there; and virtue is not to be communicated by dead things, whether by posts, earth, or curious pictures, but by the power of God, who is the fountain of living virtue."

From the "American Naturalist."

Mussel Climbing.

Can any one see a snail travel, and not ask mentally, "how it does it?" The method certainly is curious. A fleshy disk is protruded, and caused to project in the direction of locomotion; it is then spread out flatly, and while slightly adhering to the object over which it is passing, a contractile energy is exerted, and the little animal bearing its house is drawn onward. Thus by the repeated protrusion, expansion, and contraction of this soft organ, in due time its journey is accomplished. Because of this method of progression on a ventral disk, all those shell-fish, or properly speaking, molluscan animals, so constituted, are called by the systematists, gastropods, a term which means ventral-footed.

The mussel's foot presents in its class, the least developed condition of this organ, for it is a spinner, rather than a walker; or, as Owen says, "it is subservient to the function of a gland, which secretes a glutinous material analogous to silk, the filaments of which are termed the byssus," which often serves for attachment to rocks.

We once saw a young brown mussel, of the species *Modiola plicatula*, about five-eighths of an inch in length, turn his foot to most excellent account. We had pulled the youngster's beard off, and then had deposited him

at the bottom of a deep aquarium. The water was probably but poorly aerated, hence he was evidently ill at ease, and to our astonishment he at once began travelling over the pebbly bottom, then up the glass side with the utmost facility and grace. The foot moved precisely as any univalve gastropod would do, and with the same easy gliding motion. The movement was continued without interruption until it had reached the surface of the water, a distance of not less than ten inches, which added to the distance traveled over the bottom, was probably equal to fourteen inches. At the surface it lost no time in spinning its byssus, which it fixed to the side for a permanent abode.

For its lively colors, perhaps rather ruthlessly, we had picked this little fellow out of a large family cluster, snugly packed in a hole in one of the piles of the dock. It was a large group of all sizes, literally bound together by the silken cords of—attachment shall we say?

A fellow captive was a full grown, black, edible mussel, torn from its anchorage, a stone near by, at low tide. We afterwards found encased in this black shell, an amount of intelligence, which filled us with astonishment. If his youthful fellow prisoner could beat him at walking, he was about to accomplish the feat of climbing to the same position by means of a species of engineering of a very high order.

In order the better to understand this singular feat, let us introduce it by the narration of some spider tactics we once witnessed. The insect had captured a large beetle, but could not get it to its web, and seemed disposed to prey upon it away from its den. It had dragged the prey under the web, which was about two feet above. It ran up to a point close by its web; there it attached a thread, by which it speedily descended, and then attached the other end to its body. Again it ascended, affixed another thread, then descended and affixed to the prey as before. Each thread, in sailor phrase, was made taut. After a good many threads had been in this manner attached, each being stretched tightly, and each pulling a little, the weight was seen to ascend a small fraction of an inch. Again the threads were increased, and again the weight ascended a little more, until at last, after incredible labor, perseverance and skill, the little engineer had the satisfaction of success; for its well-earned booty, with one final, tony jerk "brought up" at the desired spot. The explanation of all this is simple. Suppose we take a cord of the material known by the ladies under the name of elastic, and attach it to an ounce weight. If but very moderately stretched it would certainly pull at least a grain. Supposing it to do that, a second one would pull with equal force, and it would be but a simple estimate to determine how many threads would be required to raise the entire weight. But enough of this. Now for the mussel.

Placed at the bottom of the aquarium, where it had been for a couple of days, it had succeeded in wiggling itself up to one of the glass sides of the tank. This accomplished it protruded its large foot, stretching it up as high on the glass as it could reach, this organ seemingly adhering very tightly. A little hole opened near the extreme forward end of the foot. This tiny hole was really the extremity of a folded or closed groove. Out of this a drop of white gluten, or mucus, not larger

than the head of a pin, was exuded, and pressed against the glass. There was then slight withdrawing of the foot, simultaneous with an unfolding, or opening of the groove which contained, as if moulded there, the ready completed delicate thread. This done the partly contracted foot (not drawn into its shell at all, be it understood) was again extended, this time a little higher than before. The groove, or spinneret, was again close except the little opening on the surface of foot, whence another little drop of mucus appeared, which also was pressed against the glass. Again the foot was withdrawn a little the lips of the groove unfolded, and the moulded thread set free. This gave three number two. Each was evidently set at considerable tension. And in this wise, three after thread was formed and set. I regret that I did not record the exact number, but am sure that it was about twelve or sixteen and the time occupied was between two and three hours, when lo! up went the mussel about three-eighths of an inch high.

There was next a period of rest. What it was due to exhaustion of material, and we meant to allow the secreting gland time to evolve a fresh supply or not, I cannot affirm; but must say that such was my belief, after an hour or so it set to work again, precisely as before, attaching a new cluster of threads. This cluster was set about five-eighths of an inch higher than the previous one. When this new group of filaments was finished, the same result followed, another of a fraction of an inch, but not quite so high as the first. I now suspected its motive—an animal was actually in this singular manner attempting to reach the surface. It wanted to take an airing, and was really in a fair way to bring it about.

While setting its third cluster of threads foresaw a serious difficulty in the way, a one against which the spider never has contented. It was this: after the third had been achieved the threads which had accomplished the first lift had changed direction; that is, the ends of the threads, which had pointed downward when pulling up the mussel, were now pointing upward, and we actually pulling it down. Of course the lowermost thread, or threads, would ex the most retrograde traction. The difficulty was overcome in this way—as each low thread became taut in an adverse direction was snapped off at the end attached to animal. This, as I think, was done by the processes; the one by softening that end thread by the animal's own juices, purpore applied, as the pupa in the cocoon moist its silk envelope, when wishing to soften fibres, so that it can break a hole through which the imago may emerge; the other a moderate upward pulling, thus breaking filament at its weakest point.

The next day our little engineer had accomplished the wonderful feat of climbing the surface by ropes, fabricated during ascent. Without delay it moored itself curule by a cluster of silken lines at boundary where sky and water met, and then allowed to enjoy the airing it had so severely won.

It is some three years since the writer noted the facts here recorded, and to day, the sight of a mussel inspires him to profound reflection on the ways of Him who made these creeping things of the sea.

For "The Friend."

"Let Patience Have Her Perfect Work."

There are perhaps few readers of "The Friend," but who at times, desire to know of the saving life of Christ Jesus, and be filled with that heavenly courage which Him; whose fruits are gentleness, meekness, and unfeigned love of the brethren, under these ever to be cherished evidences of the anointing, no doubt are, when at the state of things in our Society; to exclaim, O for more indications of hardness and introversion; and that position at the feet of Jesus, and self-negation before Him, which we as a people peculiarly profess. These know that the Lord's grace is sufficient for His own work. And, see, where this subjection of spirit unto Him is inward enough, and thorough enough, we are assured, that He will work in and through such souls unto the growth and establishment of His adorable Name and Kingdom, as well as the furtherance of His ever glorious ends in the earth.

Thus, it is believed, is what is so much wanting at the present day; and which, in so far as a degree, makes what otherwise would have been Eden as a desert, or the garden of Eden as a wilderness. And which must come to pass until there is more thorough turning in the heart unto that God, from whom we, as a people, have gone astray; with a more diligent keeping of those testimonies as well as precepts, which He gave to our forefathers, be displayed as a banner because of the truth. Does not herein lie our deficiency? Turn ye to the life of Christ inwardly reformed, have devoured our strength! While we do not go to great an extent, it may be said, we are not it.

Perhaps there is no way in which this cause of our weakness can be removed, and the truth strengthened, like to an earnest application of soul and lively appeal by those who are grieved at the signs of the times, unto Him, who seek in secret, and who ruleth over all, that He would take the work into His own hands; that he would turn again our captives, and restore that which is turned out of the truth; and enlarge the places of those who are left; and who cry for the desolations that attend.

It is enough for the servant to be as His Master. And if such are called to endure shamefully, reproach, or shame for His name's sake in a day of darkness and gloominess, of mourning and distress, may they remember that it is nothing new for those who are earnestly engaged to fill up their measure of glory for Christ's body's sake, which is the privilege, to have to partake of sufferings, as well as "deaths oft." May these be supported in their hearts, however heated the furnace of trial may seem to be, and enabled to bear all that is permitted in a proper spirit, when it is assuredly be sanctified to them; and be counted a part of those "tribulations" which are bare for being led, in the great end, unto the fountains of water in the heavenly Jerusalem, where God shall wipe away all tears from the eyes. Then, "Is it not our instant," writes Sarah (Lynes) Grubb, "to leave to the Lord, simply pursuing that path on which the light shines with clearness; for in the while this will prove of the greatest consequence to us all? I endeavor to keep in step, that to the obedient followers of the glorified Immanuel, tribulations will cease

and difficulties come to an end, being succeeded by that consummate felicity which shall never end. May we, therefore, press after this pure and perfect obedience unto life. Oh! may not only we who are seniors be so engaged, but the dear children, Moses-like, choose rather to 'suffer affliction with the people of God,' than to enjoy 'the pleasures of sin' for a moment; having an eye to the glorious recompense of reward."

The Stature of Man in the British Islands.

The *Pall Mall Gazette* informs us that Dr. Beddors, of London, has published a memoir on the subject. He commenced his investigations in the Scottish Highlands, and proceeded thence regularly southwards, carefully measuring and weighing as many men between the ages of twenty-three and fifty, as he could collect in each several locality; or, where this could not be accomplished, availing himself of the assistance of friends.

He found the Highlanders generally a tall and bulky race, but they vary very greatly in different districts. In some of the western islands they are rather short, in others more than usually tall. The people of the western lowlands (Ayrshire and Galloway) exceed all others in height, and indeed rank first among the inhabitants of the British Islands. The men of the Eastern Border and the Merse, very nearly equal them in stature, and exceed them in weight, being, on the whole, the great men among Queen Victoria's British subjects. The average Berwickshire farmer or peasant, out of the number examined, was found to measure five feet eleven inches and nearly a third, and to weigh nearly 200 pounds. The people of Aberdeenshire are equally large. These are the stalwart natives, who justify the Scottish lady's retort on Dr. Johnson's definition of oats as "the food of horses in England and of men in Scotland." "Yes, and where will you find such horses and such men." The average height of man throughout Scotland is estimated, somewhat conjecturally, at five feet seven inches and a half.

The Borderers on the English side, and generally speaking the agricultural inhabitants of the northern counties of England, are a tall race, like their neighbors. The people of Lancashire, however, are an exception, being as low or lower than those of England generally. Good stature prevails generally as far south as the Trent, but that once passed, tallness becomes exceptional. The southern counties generally fall not only far below the north, but below the general national standard. The men of Wales are, on the whole, short, averaging a little over five feet six inches. In the south-west of England, stature is low, until Cornwall is reached. Then, all at once, we seem to strike on a new type of men; a tall and big-boned race. The people of Seilly are also large.

The average height of Englishmen, Dr. Beddors fixes, not very confidently, at five feet six and a half inches. That of Irishmen is nearly the same. As regards weight, he allots the Scotchman 155 pounds, the Englishman 145, the Irishman 138; but owns that he is not quite satisfied with these conclusions. He is often difficult to induce a sufficient number of men to undergo the process of measuring and weighing by a doctor. In Scotland the least amount of difficulty was found, but even there the fishermen of some villages on the east coast proved extremely

stubbard and suspicious. In Wales there was unusual difficulty in disabusing the natives of the idea that the inquiry had been set on foot by Government, and therefore must mean mischief. In England there was less of superstitious or suspicious opposition, but more of downright "stupidity."

Dr. Beddors's observations fully confirm the received and well founded opinion that people which follow agricultural and other out of door employments, are the tallest and strongest. As regards thews and sinews, man degenerates in towns, degenerates in crowded centres of industry, degenerates in sedentary occupations. "The physical difference between country folk and towns folk are," says our author, "the most important ones developed in my tables. It may be taken as proved, that the stature of man in the large towns of Britain is lowered considerably below the standard of the nation, and as probable that such degradation is hereditary and progressive."

1803. "Is not this a day wherein the true ministers have rather to mourn in silence than to proclaim glad tidings?"—*Mary Capper.*

THE FRIEND.

NINTH MONTH 17, 1870.

SUMMARY OF EVENTS.

FOREIGN.—Immediately after the capitulation of the French forces at Sedan, a large part of the Prussian army, report says upwards of 250,000 men, began to move toward Paris. No opposition was anticipated on the route. Accounts from Paris state that the Prussians were advancing by steady but not hurried marches towards the capital, which, it is supposed, they would reach about the 15th inst. They maintain strict discipline and commit no depredations. Prussian scouts had, on the 11th inst., been seen within a few miles of Paris. The French are unable to offer any resistance outside of the defenses, but within great preparations have been made for a desperate struggle. The army declares that the Prussians take the city, the cost to them will be immense. Barricades had been prepared in the streets, the great sewer is said to be mined, and if the forts are taken and the ramparts carried by assault, the contest will be continued in the streets. The moats around Paris have been filled with water, and the prefect of police has advised all who desire to leave the city to do so immediately. A corps of sappers and miners, assisted by the inhabitants, are felling the forests in the Departments of the Seine and Seine et Oise. The trees will afterwards be fired as the Prussians approach. The gas works being located outside the defenses and liable to fall into the hands of the Prussians, have been de-stroked; Paris, therefore, be without other light than that afforded by lamps and candles.

The siege of Strasburg continues, and Metz has not capitulated. Bazaine recently made a sally, attacked the Saxon troops at Pont-a-Mousson, and inflicted a heavy loss upon them.

The following despatch from the Prussian headquarters has been received at Berlin: "More than 25,000 French prisoners were captured in front of Sedan before the capitulation on the 21st instant. By the capitulation 83,000 prisoners fell into our hands. Of these 14,000 were wounded. Besides the prisoners, 400 field pieces, including 70 artillery pieces, 150 siege guns, 10,000 horses, and an immense amount of war material, was surrendered." Guns were captured at Sedan marked 1813 and 1814, which were doubtless used in the former wars against Germany. The town of Sedan is not greatly damaged. The prisoners are not sent to Germany, but their liberty on parole, which a part of them accepted, while others preferred remaining with the troops as prisoners of war.

King William has given orders that Napoleon shall be treated as the sovereign of France. The Prince Imperial was not captured at Sedan. He was at that time

in Belgium, and has since been sent to England. His mother, the Empress, is also in England, but intends soon to proceed to Germany and visit the Emperor at his place of confinement.

The British Minister, Lord Lyons, has left Paris, and the U. S. Minister was about taking his departure. The railway offices in London stop Paris hours behind time, passenger tickets to Paris on the 11th inst. It is said the Prussians hold the northern railway station at Creil, where several lines of railway meet. The French mail had become very irregular. At Havre the crowd of strangers is so great that the hotels are overwhelmed. Trains arrive at Havre every Paris hours behind time, so heavily are they loaded. The Bank of France has been removed to Toulouse. The Theatres of Paris have all been closed. Most of the workshops have also been closed, and business is almost at an end. The city is filled with troops drilling under command of army officers.

The Provisional government has been recognized by Spain, Italy, Switzerland and the United States. It is understood that the Great Powers are endeavoring to bring about a cessation of hostilities, but nothing is certainly known of their proceedings. Delegation has been sent to the King's headquarters of the King of Prussia, to intercede for Strasbourg.

Advices from Rome represent that the pope is making preparations to meet the transfer of the Italian government to Rome. It is reported that he will retire to Castel Gandolfo as soon as the Italians approach the city. The King of Italy, it is said, designs to prevent his escape from Rome.

The Spanish government has decided to postpone the convention of the Cortes. No date is fixed for its assembling. Reinforcements have been sent to Cuba. A great manifestation of sympathy with the French Republic was made in Madrid on the 10th. After the procession a mass meeting was held. Senor Castellar delivered an address. He said:

"The conscience of humanity breathes again, witnessing the punishment of an Empire and the triumph of a Republic. The Spanish people delivered of their shackles and ruled by universal suffrage, will soon join the great political movement to form a United States of Europe. [Immense applause.] To-day give France your sympathy, awaiting the moment when you may aid her with arms."

The London Times has several bitter articles on the absolute equality of the Queen and Princes, who are degrading while Europe is shaken to its foundation. The Times says, if France refuses to treat, the republic will perish, because Frenchmen are more jealous of military glory than of the right and justice of others. Formidable popular demonstrations took place in London on the 11th inst. in London against the Queen and against monarchy at home and abroad. At the meeting in Hyde Park, the name of the Queen was received with a tempest of hisses, and when they subsided, a voice in the crowd called out (with groans for the Prince of Wales.) The response was universal and passionate. It was said that the meeting in London against the Queen and royal family is extremely bitter, not only in the democratic classes, but throughout all ranks of society. The English government has instructed Lord Lyons to recognize the actual authorities in France under peculiar circumstances, but to refrain, as far as possible, from making any formal recognition of the government in official proceedings.

The St. Petersburg Journal says, the Czar shows every effort to localize and abridge the war, but ineffectually, as Prussia repels any intervention at all restraining its freedom of action.

The British iron-clad *Captain*, with a crew of 500 men, foundered off Cape Finisterre on the 7th inst. Eighteen of the crew were saved in a boat.

A London dispatch of the 12th states, that the Prussian army has halted twenty-five miles from Paris, at the special request of Bismarck, to consider a proposition for an armistice. The Prussian army were requested by Paris dispatches of the 12th state, that the departure of certain members of the French government for Tours has been indefinitely postponed. The diplomatic body have also postponed their departure.

The French Ministry announce another unsuccessful attack on Tonl, in which the Prussians were repulsed, but with severe loss. Verdun and Montmedy are still held by the French.

A dispatch from the King of Prussia to Berlin says: "The citadel of Laon exploded after its surrender, just as the Prussians were preparing to enter. Three hundred and fifty men were killed, and 2000 were wounded. There were many who were shockingly mutilated. These guards have been treacherous."

The official report of the capitulation of Sedan shows

that the total number of prisoners taken was 122,000. All the dead in the fields around the city have been buried, and a large part of the wounded removed.

The Strasbourg besieging army has been reinforced, and now numbers nearly 70,000 men.

Advices from Cassel say that nothing in the treaty between Prussia and the United States is a prisoner. He seems rather the honored guest of Prussia.

Advices from Florence are to the effect that the Italian troops enter the Roman territory on the 12th. Italy's ultimatum substantially strips the pope of his temporal power. The local authority of the Italian territory, however, remains established by the Italians, and the government announces its wish to concur with any power in guaranteeing the integrity of the pontiff.

The French government has dispatched the veteran seaman, Thiers, on a secret mission to London, Vienna and St. Petersburg.

The right of printing and publishing in France has been declared free.

Some of the British journals argue English intervention in the war between France and Prussia as a duty and a right, the neglect of which will involve dishonor.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

WEST-TOWN SCHOOL.

The WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next.

Parents and others intending to send children to School, are requested to make early application. AARON SHARPLESS, Superintendent, whose address "Street Road P. O., Chester Co., Pa." When convenient, application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 Rt. 3, Philadelphia.

Parents and Guardians of pupils now at School are reminded that the second payment for the present session is now due; and it will be an accommodation if who can conveniently do so, will pay it in full to the Superintendent or Treasurer.

EVENING SCHOOLS FOR ADULT COLORED PERSONS.

Teachers are wanted for the Men's and Women Schools, to open about the 1st of Tenth month.

Application may be made to Elton B. Gifford, No. 218 North Third St. or to J. W. C. Gifford, No. 120 S. 12th St. Ephraim Smith, No. 1013 Pine St. George J. Scattered, No. 418 Spruce St.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward,) Philadelphia Physician and Superintendent—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARSON, Clerk of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting, Hopewell, Iowa, the 22d of Sixth mo. 1870, THOMAS E. BUNDY, late Hickory Grove, Cedar Co., Io., to REBECCA MILLIGAN of the former place.

DIED, on the 28th of Fifth month last, JOHN LIPPY, colored, aged nearly 79 years, a beloved member of 1 North Street Baptist Meeting, 18th mo.

—, Eighth month 20th, 1870, ISAAC NICHOLS, in the 81st year of his age, a beloved member of Ho donfield Monthly and Particular Meeting.

—, on the morning of the 24th of Eighth month 1870, at his residence in Greentech, New Jersey FRANCIS BAIRD, a member of Greenwich Monthly Meeting, in the 58th year of his age. In the remembrance of this dear friend, we have sustained a loss, but the consoling belief that it is his eternal gain, humbly trusting that through the mercy and merits of his Father, he has entered into that rest which remains for the children of men.

—, Ninth mo. 3d, 1870, JAMES R. GREEVES, in the 76th year of his age, a member and elder of Germantown Preparative Meeting. Long a useful citizen, a consistent member of our religious Society, his heart and soul were ever fixed upon the Kingdom of heaven and its righteousness. Though for many years an invalid, he retained a lively interest in the best welfare of his friends and the church, and was that the nature of his disease made him liable to. In the latter part of his life, he was afflicted with a brain disease, which he was found with his mind and faculties gradually awaiting the coming of the Bridegroom. His end was peace.

WILLIAM H. PILE, PRINTER No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, NINTH MONTH 24, 1870.

NO. 5.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Stage, when paid quarterly in advance, five cents.

For "The Friend."

Sections from the Journal of George Fox; with a few remarks.

Of George Fox's journal and life, Sir James Ackintosh says, "It is one of the most extraordinary and instructive documents in the world; which no reader of competent judgment can peruse without revering the virtue of the writer."

"I saw there was none * * that could talk to my condition. And when all my eyes in them and in all men were gone, so that I had nothing outwardly to help me, nor did I tell what to do; then, O then, I heard a voice which said, 'There is one, even Christ Jesus, that can speak to thy condition.' When I heard it, my heart did leap for joy. Then the Lord let me see why there was none upon earth that could speak to my condition, namely, that I might give him all the glory. For all are concluded under sin, and shut up in unbelief, as I had been, that Jesus Christ might have the pre-eminence, who enlightens, and gives grace, faith, and power. Thus when I did both work, who shall let it? This I knew experimentally. My desires after the Lord were stronger, and zeal in the pure knowledge of God, and of Christ alone, without the help of any man, book, or writing. For though I had the Scriptures that spake of Christ and of God, yet I knew him not but by revelation, who he hath the key did open, and as the Lord the Lord drew me to his Son by his Spirit, and the Lord gently led me along, and let me see his love, which was endless and eternal, the natural state, or can beget by history or books. That love let me see myself, as I was about him; and I was afraid of all company: I saw them perfectly, where they were, though the love of God which let me see myself, I had not fellowship with any people, priests, nor professors, nor any sort of separated people, but with Christ who hath the key, and opened the door of light and life to me. I was afraid of all carnal talk and to me. I was afraid I could see nothing but corruptions; and the life lay under the burden of sin. When I was in the deep, under sin, I could not believe that I should overcome; my troubles, my sorrows, and

my temptations were so great, that I often thought I should have despaired, I was so tempted. But when Christ opened to me how he was tempted by the same devil, and had overcome him, and had bruised his head; and that through him and his power, light, grace, and Spirit, I should overcome also, I had confidence in him. So he it was that opened to me when I was shut up, and had neither hope nor faith. Christ who had enlightened me, gave me his light to believe in, and gave me hope, which is himself revealed in me, and gave me his spirit and grace, which I found sufficient in the deeps and in weakness. Thus in the deepest miseries, in the greatest sorrows and temptations that beset me, the Lord in his mercy did keep me. I found two thirsts in me; the one after the creature, to have got help and strength there; and the other after the Lord the Creator, and his son Jesus Christ; and I saw all the world could do me no good. If I had had a king's diet, palace and attendance, all would have been as nothing; for nothing gave me comfort but the Lord by his power. I saw professors, priests, and people, were whole and at ease in that condition, which was my misery, and they loved that which I would have been rid of. But the Lord did stay my desires upon himself, from whom my help came, and my care was cast upon him alone. Therefore, all I wait patiently upon the Lord, whatsoever condition you be in; wait in the grace and truth that comes by Jesus; for if ye so do, there is a promise to you, and the Lord God will fulfil it in you. Blessed are all they indeed that do indeed hunger and thirst after righteousness; they shall be satisfied with it. I have found it so, praised be the Lord who filleth with it, and satisfieth the desires of the hungry soul. O let the house of the spiritual Israel say, His mercy endureth for ever! It is the great love of God, to make a wilderness of that which is pleasant to the outward eye and fleshly mind; and to make a fruitful field of a barren wilderness. This is the great work of God. But while people's minds run in the earthly, after the creatures and changeable things, changeable ways and religions, and changeable uncertain teachers, their minds are in bondage, and they are brittle and changeable, tossed up and down with windy doctrines, thoughts, notions, and things; their minds being out of the unchangeable truth in the inward parts, the light of Jesus Christ, which would keep them to the unchangeable. It is the way to the Father; who in all my troubles preserved me by his Spirit and power, praised be his holy name for ever!

"Then did I see my troubles, trials, and temptations more clearly than ever I had done. As the light appeared, all appeared that is out of the light; darkness, death, temptations, the unrighteous, the ungodly; all was manifest and seen in the light. After this, a pure fire appeared in me; then I saw how he sat as a refiner's fire, and as the fuller's soap.

Then the spiritual discerning came into me; by which I discerned my own thoughts, groans, and sighs; and what it was that veiled me, and what it was that opened me. That which could not abide in the patience, nor endure the fire, in the light I found to be the groans of the flesh, that could not give up to the will of God; which had so veiled me, that I could not be patient in all trials, troubles, anguishes, and perplexities; could not give up self to die by the cross, the power of God, that the living and quickened might follow him, and that that which would cloud and veil from the presence of Christ, that which the sword of the Spirit cuts down, and which must die, might not be kept alive. I discerned the groans of the Spirit, which opened me, and made intercession to God: in which Spirit is the true waiting upon God, for the redemption of the body, and of the whole creation. By this true Spirit, in which the true sighing is, I saw over the false sighings and groanings. By this invisible Spirit I discerned all the false hearing, the false seeing, and the false smelling, which was above the Spirit, quenching and grieving it; and that all that were there were in confusion, and deceit, where the false asking and praying is, in deceit and atop, in that nature and tongue that takes God's holy name in vain, wallows in the Egyptian sea, and asketh but hath not."

The true christian views which this wise Elder was anointed of God to see clearly into, and qualified to maintain before the world, have lost nothing either in their vitality or their application; but are as binding upon us, the descendants of such sons of the morning, as they were in that day; because Truth, like its eternal Author, changeth not, but is the same yesterday, to-day, and forever.

Would that this Society had kept intact, without either diminution or compromise, the doctrines and testimonies as upheld and promulgated by the early Friends. Then would that living power from an oigh, which made them what they were—a spiritually minded, wholly devoted, and an aggressive people—not have so departed, like the dew of the morning, as to drive some among us back to the beggarly elements, neither to the ever vain expedients of getting up something of our own manufacture or device by which such hope to bridge over an impassable chasm, to retain our decaying members, and even to infuse new life into our wasted energies. But forever futile will be all such expedients. What we want is life—a reality, instead of the mere semblance or profession of it. We want that without which none can be saved, Christ the power of God, and the wisdom of God. We want to realize each for ourselves, after the power of an endless life, of that hidden mystery, which, according to the apostle "hath been hid from ages and generations," "which," he continues, "is Christ in you the hope of glory." We want to know more of the fellowship of this mystery, and the un-

searchable riches of Christ; that thus through the obedience which is of faith in Him and His power revealed in us, we may be strengthened with might by His Spirit in the inner man. That thus, after the same apostle, we "may be able to comprehend with all saints, what is the breadth and length, and depth, and height; and to know the love of Christ which passeth knowledge, that ye (we) might be filled with all the fullness of God."

This living power is that which made our forefathers in religious profession what they were; and it is this alone which can make us to take root downward, and bear fruit upward, to the praise of the glory of the Redeemer's grace. Christ Jesus, who hath all power in heaven and in earth, is sufficient for His own work. Ever true will be the aphorism: "For of him, and through him, and to him, are all things; to whom be glory forever." And most assured is the writer of this, that if there were but that submission and obedience of soul to Him, which He calls for as sovereign Lord of all; that bowing of our necks in true affection to His mild yoke, which is the only way to advance in spiritual stature and become men and women of Truth; that sincere wrestling prayer of heart unto Him, which is from the fresh anointing of His own quickening power; that He would again open the windows of heaven and shower down of His blessings; that He would again turn our captivity; again spare His land and pity His people; again give spiritual increase; again bless the provisions of Zion, and satisfy her poor with bread. Then "the tents of Cushan," so long "in affliction," would again be opened to gather the sorrowful exile; judges and counsellors would be restored as at the beginning; and the days of resting from our enemies would come; our sorrow would be turned into joy, our mourning into a good day.

Oh! that the all-compassionate Shepherd of Israel would thus once again turn His hand upon this people. Once more anoint with the eyesalve of His kingdom, that we may see the things which belong unto our peace. Once more "bind up the broken hearted," "proclaim liberty to the captives; and the opening of the prison to them that are bound;" and comforting all that mourn, "proclaim the acceptable year of the Lord." Thus the old wastes would be rebuilt; and He whose name is Wonderful, taking the government upon His own shoulders, the land would again yield her increase, and the doctrines and testimonies of George Fox and his co-workers, would be sought out and held in reputation for the work's sake, and for the glory and extension of Christ's kingdom's sake, which would be before and over all.

"I less admire the gifts of utterance, and the bare profession of religion than I once did; and have much more charity for many, who by the want of gifts, do make an obscurer profession. I once thought, that almost all who could pray movingly, and fluently, and talk well of religion, had been saints. But experience hath opened to me, what odious crimes may consist with high profusion. While I have met with divers obscure persons, not noted for any extraordinary profession, or forwardness in religion, but only to live a quiet, blameless life, whom I have after found to have long lived, as far as I could discern, a truly godly and sanctified life."—*R.*

Baxter.

From "The Scientific American."

Watchmaking in America.

Watches made their appearance in Europe about the close of the fifteenth century, and, although our knowledge of their origin is very indefinite, yet they are commonly supposed to have been first made by Peter Hele, of Nuremberg, twenty-five years before the discovery of America. But they were not called watches; they were first named from their appearance, and known as *Nuremberg Animated Eggs*.

In the infancy of the art, when the watch was made by hand and by one man, the idea of a time-keeper was but imperfectly differentiated; that is, it was mixed up in the artisan's mind with all sorts of foreign and fantastic notions. Instead of a mechanism simply to measure time, the watchmaker was constantly striving to produce something novel, curious, and astonishing. The forms and sizes of watches were innumerable. Some were as large as saucers, and others were of the most marvelous minuteness. One is still preserved in a Swiss museum but three sixteenths of an inch in diameter, set in the top of a pen-case, which indicates the days of the month, as well as the hours, minutes, and seconds. In form they took the shape of the pear, the almond, the melon, the tulip, the shell, the bird, the cross, the skull, the coffin, &c., and they were inserted in snuff-boxes, finger rings, shirt studs, bracelets, and saddles. A bulky book has lately been published on the curiosities of watches, which is little else than a record of the whimsicalities and futile ingenuity of watchmakers in accordance with the capricious and fantastic taste of the times. The notion of a "time-keeper" at length emerged into distinctness, became gradually predominant in the maker's mind, and determined the watch to its present settled form.

But even when these external eccentricities and extravagances had been largely got rid of the inner construction remained complicated with all manner of objects besides simple time-keeping. There seems to have been a phase of the human mind when mechanical invention was subordinated to the production of wonders; and ingenious men gave their lives to the construction of the most intricate and useless machines, such as artificial automatic animals, which should simulate the actions of living creatures. This singular ambition long displayed itself in watchmaking.

When the American Watch Company entered upon the manufacture, they found that the watch had been by no means reduced to its last degree of simplicity. The English movements of the highest character, although performing well, were still exceedingly complex, and, as the risks of derangement in any machine are, other things equal, in the ratio of its complexity, it was in a high degree desirable to relieve the contrivance of every part not absolutely essential to its purpose. Determined to prune the watch of every superfluity, and bring it at once to the last term of simplicity, consistent with its design, the engineers of this company at once struck away the fuse, chain, main wheel, and the retaining power which those parts necessitated. Surprising as it may seem, by this bold stroke more than three fourths of the pieces comprising the watch were swept away. The chain alone consisted of several hundred pieces, so that, of the eight hundred parts of the first-class English watch, but one hundred

and fifty-eight remained in the movement adopted by the American Company.

For nearly three hundred years watches were made by individual labor alone. Each artisan fabricated all the diversified parts of the watch, and all the tools with which they were made. The watch was the product of a homogeneous industry in which the work, slowly done, was inaccurate and expensive. The earliest watches, it is said, took a year to construct, cost the equivalent of fifteen hundred dollars apiece, and varied in their performance from forty minutes to an hour per day.

It is not yet twenty years since the company was formed which built the first American watch factory at Roxbury. The undertaking was certainly a formidable one. The various sporadic attempts to make watches in this country by hand, commencing in 1812 had all failed, and there was no body of disciplined workmen to start with. Besides, the Swiss authorities would not permit the exportation of such machines, models, or drawings, as were already in use—so that the American managers of the project were thrown back upon first principles, and had to invent their own machinery, and train their own workmen. The first experiment was thwarted by geological causes, the lightness of the soil producing a fine dust, which, although unheeded in other vocations, was fatal to the delicate operations of watchmaking. The factory was therefore removed and located on the bank of the Charles River, a little above the village of Waltham. Embarked in a novel, expensive, and, as many thought, a Quixotic enterprise, the managers pursued a cautious but vigorous policy, and the first factory, which was even then thought to be of great dimensions, rapidly expanded into an immense establishment, filled with machinery superintended by seven hundred hands, and turning out some eighty thousand watches a year—more than are produced in all England, and three times as many as are made in any other establishment of the kind in the world—while it is the only establishment in the world which makes the entire watch, case and all.

An English watchmaker, in a recent lecture before the Horological Institute of London describing the results of two months' close observation at the various manufacturing factories in this country, remarked in reference to the Waltham establishment, "On leaving the factory, I felt that the manufacture of watches on the old plan was gone."

"The manufacture of watches on the old plan is gone," because the laws of growth have carried the industry to a higher stage of development. Let us note some of the conditions of this industrial advance. The first great point of advantage here secured is critical and decisive in watch work; it is the highest possible accuracy of construction. The delicacy of hand operations is often remarkable, but it is only attained with great effort, and is always variable. It has, besides its limit, which falls immeasurably short of the exactitude demanded in watch-machinery. When we approach the finest action of the nervous system, we pass beyond the control of the will, and errors become inevitable. Lace makers, who work along the utmost border of tactual and visual sensibility, affording striking illustrations of this fact. Even their actions upon the nervous system, which come from mere change of locality, re-appe-

the quality of the tissue. When a lace maker begins a piece of fine work in the city, and finishes it in the country, the transition can be detected in the fabric, which will present two distinct aspects. Again, what is called the personal equation of telescopic and microscopic observers, is simply that source of error, in looking sharply at a fine object, which yields different results with different persons, which depends upon temperament, and varies with the period of life, and has to be accounted in individual cases in order to arrive at the exact truth. Now watch work, the precision it requires, takes us beyond its range of nervous aberration; it is, if one may so speak, trans-visual and trans-tactile, so that the only way to get rid of errors is to get rid of personality itself. This is precisely what the American Watch Company does, it omits the whole work to machinery, and thus secures the accuracy and uniformity that machinery alone can confer. The adjustment of parts is made with mathematical precision beyond the reach of unassisted sense. It is not merely exactness of fitting that is here demanded, but, what is far more difficult, the intense nicety of permanent action. With precision there must also be freedom of movement, and each pivot must have its infinitesimal play for "side shake" and "end shake," otherwise, an atom of dust or a rise of temperature would lock the parts, and stop the motion. To get this systematic exactness, three grades of gages are used; the first and coarsest measuring to the $\frac{1}{32}$ of an inch; the second to the $\frac{1}{64}$ of an inch; and the third to the $\frac{1}{128}$ of an inch. Thus nothing is left to the eye or the touch of the workman; he commits himself to the mathematical guidance of his gages and to the precision of his machinery, and stamps an equal and certain curvacy upon the whole mechanism. The dexterity watchmaker disappears, and the whole is resolved into the construction of corrected and unified machinery on a very extended scale. Still, intelligent human agency is by no means superseded.

The most accurate machine, like all earthly things, has its imperfections, and these the skillful workman is ever on the alert to detect and rectify. By no lathe, for example, is it possible to get a pivot turned exactly round. It has to be tested by gages, and brought to a standard in which the errors are less than the ten-thousandth of an inch.

(To be continued.)

For "The Friend."

lections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 25.)

"9th mo. 23d, 1846. My mind is often in suffering and fear, lest I am not sufficiently attentive to the requisitions of the dear Master. Oly Father! be pleased to enable me to keep my eye single unto Thee, and more and more willing to fulfil all thy requirements; that so I may know the day's work going on with the day. And if I am worthy, be pleased to enable me to endure the portion of suffering allotted me for the body's sake, which is the purg, now in this 'day of close proving and trial. And oh! I cast me not off in the time of old age: forsake me not when my strength faileth."

"11th mo. Having for some time felt my mind a little drawn towards Bucks Quarterly Meeting, and of late more pressingly, and

finding my beloved friends Jane and Edward Garrett were willing to accompany me, also my daughter J., we accordingly attended it on the 25th and 26th. It is a small Quarterly Meeting, but more comfortable to me than any I have attended lately; and a hope was revived, that our poor troubled Society will not be altogether laid waste. It is a day of close searching of heart to my friend, wherein I believe the language formerly uttered is often poured forth: "Spare thy people, O Lord, and give not thine heritage to reproach."

"3d mo. 7th, 1847. Oh! may I be kept more and more in a state of watchfulness and prayer, that so I may be favored to know more clearly the mind and will of Him, whom alone, in all things, I desire to serve. This morning I went to meeting under much exercise. I had not sat long before my mind became earnestly impressed with desires for some who had seen many days, and who, I feared, had not been sufficiently concerned about the one thing needful. And being desirous to be more instant in season than at some other times, I was helped to express my exercise, much to the relief of my burdened mind. May all the praise be given to Him to whom it alone belongs, as with my mouth in the dust.

"30th. Was at our Monthly Meeting, where a part of the committee appointed by our Quarterly Meeting in the Eleventh month last, on account of the reduced and weak state of the Monthly Meeting, was present: and I thought the help of their spiritual exercise was felt early amongst us. One of them, a female, E. S., conveyed an encouraging testimony to the humble minded; at the close of which, I thought the spirit of supplication was poured forth, and vocal utterance was required through me, when near access to the footstool of the blessed Author of it, was mercifully experienced. It seemed to me, unworthy as we are, a time of renewed favor, and cause of humble gratitude. O merciful Father! be pleased to 'hold Thou me up, and I shall be safe,' arises from a feeling of the need I have of daily help; being often poor, and stripped, and exercised, no doubt designed for my furtherance on the spiritual journey.

"5th mo. 2d. Have recently attended our Yearly Meeting in Philadelphia. It was a time of much exercise, on account of views on doctrinal subjects, by members of our own Society, having been spread among us, differing from those of our early Friends, and worthy predecessors in the unchangeable Truth. This had given uneasiness to many Friends for several years. The 'Meeting for Sufferings' having taken up the subject, was favored to set forth in a clear point of view those unsound doctrines, making in their examination extracts from them, and comparing them with our early Friends' views. This was read in the men's and women's Yearly Meeting, rejoicing to the relief, and I believe I may say, rejoicing of many minds. And the desire of my heart is, that those who have been captivated, and their spiritual vision closed, by leaning, as I apprehend, to the natural part, may be willing to be searched and tried by the light of Truth, and be so humbled by it, as to be prepared to return and unite with their Friends, who are endeavoring to support our once favored Society on its ancient foundation.

"5th mo. 3d. Often feeling my mind drawn into sympathy with the afflicted, I have lately

visited several, in their retired dwellings, much to my own satisfaction; and feel newly convinced, that it is well for those who are favored with health and strength sufficient, to visit those who are confined at home under affliction. 'Iron sharpeneth iron; so a man sharpeneth the countenance of his friend.'

"7th mo. A few weeks since, I felt my mind drawn towards a young man, though a stranger as to personal acquaintance, who I feared was walking in the broad way. My exercise so increased as to induce me to be willing to send a request for him to call and see me, not knowing when I should find him at home. He accordingly came, and gave me an opportunity of expressing my concern for him; and also to give him a few tracts. He appeared friendly, and my mind was relieved; though the service was yielded to much in the cross. Oh! it is a great thing to be willing to be a fool for Christ's sake. Gracious Father! be pleased to direct me, and keep me in the way that is well pleasing unto Thee. Let me not lean to my own understanding, which Thou knowest I am prone to do.

"8th mo. Feeling my mind drawn towards two carpenters, though entire strangers to me, who were at work near Darby meeting-house, I thought best to mention it to the elders, who approved of my endeavoring to have an opportunity with them. On their being spoken to on the occasion, one of them declined sitting with us, seeming to make light of religious matters; the other sat with us in the meeting-house, and behaved in a becoming manner. After expressing what arose, as well as yielding to vocal supplication, we parted, under a comfortable hope, that some serious impressions had been made on the mind of the visited; and I was relieved and comforted. May all the praise be given to Him to whom it alone belongs.

"8th mo. Attended our Quarterly Meeting at Concord under considerable bodily infirmity; the weather being also very warm. I believe it was a time of favor to some, but my lot seemed to be strippedness and poverty; perhaps for want of more entire dedication. Our valued friend, Christopher Healy, was in attendance, in the course of his religious visit on those parts.

"10th mo. 29th. I recently, by a friend, sent some tracts on religious subjects to the two carpenters before mentioned. He saw the one who gave us the opportunity of sitting with him. There appeared quite an openness to accept the tracts; and he said he would be willing to receive any thing from me at any time. I also gave some tracts to some laborers on the highway near us, which afforded peace. My mind was favored with peaceful quiet after delivering the tracts, and the following language arose, 'It is better to be a doorkeeper in the house of the Lord, than to dwell in the tents of wickedness.'

"Same date. 'I think I may say, that I have never felt my present place of abode a settled home; and have often desired, if it was not among right things for myself and daughter J. to remain here, that way might open for us to remove elsewhere. Of later time, the prospect of having a home in West Chester has appeared with some clearness, yet considering my advanced age, and the trial of settling in a neighborhood where we are not much acquainted, is cause for much serious reflection; under the feeling of which

the language of my mind has been, and now arises, Send down thy light and thy truth, O Lord, and let them lead us and guide us according to thy blessed will, in this weighty prospect; not leaning to our own understanding.

"11th mo. 8th. My mind is still desirous of right direction in relation to our proposed change of residence. In the feeling of which the language arises, Oh Lord! thou giver of every good and perfect gift, be pleased to be with us and help us to stay our minds upon Thee.

"Our dear friend Elizabeth Evans attended our meeting yesterday, and I thought was favored to minister suitably to us, and to supplicate for us; whereby faith and hope were a little renewed in the all-sufficiency of Divine support.

"12th mo. 19th. On the 13th of this month my daughter J. and self returned from a visit to my children at Coatesville. In the course of our being from home, we went to my brother A. G.'s on a visit, and attended West Chester Meeting. Also the Monthly Meeting at Sadsbury, and visited a few of our friends in that neighborhood. While there, hearing of a person who was exceedingly afflicted with a cancer in his mouth, I felt most easy in the prospect of calling to see him. It was affecting to behold the poor sufferer; and it arose in my mind to recommend him to seek more and more for resignation to the dispensations of him, who afflicteth not willingly, nor grieves the children of men: but chastens in mercy, in order to draw them nearer to Himself, condescending at seasons to make the bed of affliction, to the humbled mind, even a bed of comfort. I was well satisfied in having called to see him. Oh! I believe it is well for those who are favored with ability to move about, to remember those who are under affliction.

"While we were at West Chester, the subject of our moving there was revived; and a dwelling near the meeting-house being offered to us unexpectedly, the prospect has appeared increasingly clear, so as to induce a belief it may be realized, if consistent with the Divine will. Oh Thou, who art a Father to the fatherless, and a Judge of the widow, be pleased not to suffer us to go unless Thy sustaining Arm go with us.

"12th mo. A man in this neighborhood being suddenly taken from time to eternity, the solemn and affecting circumstance made deep impression on my mind; attended with a desire to visit the bereaved family, though not personally acquainted with them. I had many reasonings on the occasion, and fears also, lest it might arise from sympathy and the cogitations of my own mind, and not from a Divine requiring; but, as I endeavored to weigh the matter carefully, it seemed best to mention it to a few Friends, who did not discourage me; and the widow, who was not a member of our Society, appeared quite free to receive a visit. I therefore went under much exercise, accompanied by cousin L. P. Garrett and daughter J. The family soon drew together, and I thought there was a feeling of solemnity spread over us. I endeavored to express what arose, which was principally in the way of sympathy, and an earnest desire that the awful circumstance which had recently taken place, might be a means of stirring us up to more diligence in the christian warfare; and that the bereaved family especially,

might lay these things to heart, seeing time is short and very uncertain. The visit appeared to be acceptable; and my mind was in a good measure relieved and thankful, in believing that it was in the putting forth of the good Shepherd of the sheep.

"1st mo. 14th, 1848. Desires having continued to know the mind of Truth respecting myself and daughter Jane removing to West Chester, we thought it appeared most in the clearness to do so; and have accordingly engaged the house before mentioned. Since which, my mind has been favored with a comfortable degree of quiet; for which I feel thankful."

(To be continued.)

Ascent of the Weisshorn Alp.

BY PROF. J. TYNDALL.
(Continued from page 26.)

After this we found the rocks on the ridge so shaken to pieces that it required the greatest caution to avoid bringing them down upon us. With all our care, however, we sometimes dislodged vast masses which leaped upon the slope adjacent, loosened others by their shock, these again others, until finally a whole flight of them would escape, setting the mountain in a roar as they whizzed and thundered along its side to the snow-fields 4000 feet below us. The day is hot, the work hard, and our bodies are drained of their liquids as by a Turkish bath. The perspiration trickles down our faces, and drops profusely from the projecting points. To make good our loss we halt at intervals where the melted snow forms a liquid vein, and quench our thirst. We possess, moreover, a bottle of champagne, which, poured sparingly into our goblets on a little snow, furnishes Wenger and myself with many a refreshing draught. Benen fears his eyes, and will not touch champagne. The less, however, we rest the better; for after every pause I find a certain unwillingness to renew the toil. The muscles have become set, and some minutes are necessary to render them again elastic. But the discipline is first-rate for both mind and body. There is scarcely a position possible to a human being which, at one time or another during the day, I was not forced to assume. The fingers, wrist, and forearm, were my main reliance, and as a mechanical instrument, the human hand appeared to me this day in a light which it never assumed before. It is a miracle of constructive art.

We were often during the day the victims of illusions regarding the distance which we had to climb. For the most part the summit was hidden from us, but on reaching the eminences it came frequently into view. After three hours spent on the arête, about five hours that is, subsequent to starting, the summit was clearly in view; we looked at it over a minor summit, which gave it an illusive proximity. 'You have now good hopes,' I remarked, turning to Benen. 'Not only good hopes,' he replied, 'but I do not allow myself to entertain the idea of failure.' Well, six hours passed on the arête, each of which, put in its inexorable claim to the due amount of mechanical work; the lowering and the raising of three human bodies through definite spaces, and at the end of this time we found ourselves apparently no nearer to the summit than when Benen's hopes cropped out in confidence. I looked anxiously at my guide as he fixed his weary eyes upon the distant peak.

There was no confidence in the expression of his countenance; still I do not believe that either of us entertained for a moment the thought of giving in. Wenger complained of his lungs, and Benen counselled him several times to stop and let him and me continue the ascent; but this the Oberland man refused to do. At the commencement of a day's work I often find myself anxious, if not timid; but this feeling vanishes when I become warm and interested. When the work is very hard we become callous, and sometimes stupefied by the incessant knocking about. This was my case at present, and I kept watch lest my indifference should become carelessness. I supposed repeatedly a case where a sudden effort might be required of me, and felt at through that I had a fair residue of strength to fall back upon. I tested this conclusion sometimes by a spurt; flinging myself suddenly from rock to rock, and thus proved my condition by experiment instead of relying on opinion. An eminence in the ridge which cut off the view of the summit was now the object of our exertions. We reached it; but how hopelessly distant did the summit appear! Benen laid his face upon his axe for a moment, a kind of sickly despair was in his eye as he turned to me, remarking, 'Lieber Herr, die Spitze ist noch sehr weit oben.'

I lost the desire to gratify me should urge him beyond the bounds of prudence, I said to Benen that he must not persist on my account; if he ceased to feel confidence in his own powers; that I should cheerfully return with him the moment he thought it no longer safe to proceed. He replied that though weary he felt quite sure of himself, and asked for some food. He had it, and a gulp of wine which mightily refreshed him. Looking at the mountain with a firmer eye, he exclaimed, 'Herr! wir müssen ihn haben,' and his voice as he spoke, rung like steel within my heart. Another eminence now fronted us, behind which, how far we knew not, the summit lay. We scaled this height, and above us, but clearly within reach, a silvery pyramid projected itself against the blue sky. I was assured ten times by my companions that it was the highest point, before I ventured to stake my faith upon the assertion. I feared that it also might take rank with the illusions which had so often beset our ascent, and shrunk from the consequent moral shock. Towards the point, however, we steadily worked. A large prism of granite, or granitic gneiss, terminated the arête, and from it a knife edge of pure white snow ran up to a little point. We passed along the edge, reached that point, and instantly swept with our eyes the whole range of the horizon. The crown of the Weisshorn was underneath our feet.

The long pent feelings of 'my two guides found vent in a wild and reiterated cheer. Benen shook his arms in the air and shouted as a Valaisian, while Wenger chimed in with the shriller yell of the Oberland.

Benen wished to leave some outward and visible sign of our success on the summit. He deplored having no flag; but as a substitute it was proposed that he should knock the head off his axe, use the handle as a flag-staff, and surmount it by a red pocket-handkerchief. This was done, and for some time subsequently the extempore banner was seen flapping in the wind. To his extreme delight, it was shown to Benen himself three days afterwards by my friend Mr. Galton from the

tel hotel. But you will desire to know at we saw from the summit, and this de- I am sorry to confess my total incompe- to gratify. I remember the picture, cannot analyse its parts. Every Swiss rist is acquainted with the Weisshorn. I long regarded it as the noblest of all the s, and many, if not most other travellers, e shared this opinion. The impression it uces is in some measure due to the com- ative isolation with which its cone jets e the heavens. It is not masked by other untains, and all around the Alps its final mid is in view. Conversely the Weiss- a commands a vast range of prospect, ber Benen nor myself had ever seen any- at all equal to it. The day, moreover, rfect; not a cloud was to be seen; and aazy haze of the distant air, though suffi- to soften the outline and enhance the ring of the mountains, was far too thin to ury them. Over the peaks and through alleys the sunbeams poured, unimped- y the mountains themselves, which in p cases drew their shadows in straight of darkness through the illuminated air. I never before witnessed a scene which ed me like this. Benen once volunteered p information regarding its details, but I uced to hear him. An influence seemed roceed from it direct to the soul; the de- t, and exultation experienced were not p of Reason or of Knowledge, but of g.—I was part of it and it of me, and in transcendent glory of Nature I entirely pt myself as man. Suppose the sea waves- ted to nearly a thousand times their nor- height, crest them with foam, and fancy self upon the most commanding crany, e the sunlight from a deep blue heaven inating such a scene, and you will have a idea of the form under which the Alps pt themselves from the summit of the shorn. East, west, north, and south, those 'billows of a granite sea,' back to distant heaven, which they hacked into dented shore. I opened my note-book e a few observations, but I soon relin- ed the attempt. There was something gicrous, if not profane, in allowing the tific faculty to interfere where silent ship was the 'reasonable service.'

To the Eds. of "THE FRIEND,"

Believing that among the readers of your spread, weekly and welcome journal, are not a few of the class addressed in following "Tender Counsel and Advice," he wise and good William Penn; its in- is requested in the pages of "The id."

Tender Counsel and Advice by Way of Epistle.

All those who are sensible of their day of visitation, and who have received the call of the Lord, by the Light and Spirit of his Son through their hearts, to partake of the great salvation, wherever scattered throughout the world, with hope and charity, which overcome the world, be multiplied amongst you.

O dearly beloved Friends,—Who are sen- sible of the day of your visitation, by the word of the Lord Jesus in your hearts, and joyfully received the holy testimony there- of, which you have beheld the great power that is in the world, from the life, power, Spirit of God, and the gross degeneracy of those amongst those called Christians, from

the purity, self-denial, and holy example of Christ Jesus, and his primitive followers; and how pride, lust, and vanity reign; and how Christendom has become a cage of unclean birds: who have mourned under the sense thereof, and have cried in your souls, "How long, how long, how long, O Lord God holy and true, will it be, ere thou takest to thyself thy great power and reignest?" To whom the world has become a burden, and the vanities and glories of it but " vexation of spirit;" who despise the things that are seen, which are temporal, for the sake of the things that are not seen, which are eternal: whose eyes look through and beyond time and mortality, to that eternal city, whose builder and maker is God: whose daily cries and travails are to follow Jesus in the way of regeneration; to live as pilgrims in this world, for the sake of that glory which shall hereafter be revealed, that can never fade away; that you may attain unto the eternal rest of God: to you, my dear friends, to you it is, that the God and Father of him that was dead, and is alive, and liveth forevermore, "Christ Jesus, faithful, and true witness," who hath loved and visited my soul, hath now moved upon my spirit to write, and visit you with this epistle. Receive it then, and with it the en- dored salutation of that love and life which are not of this world, but overcome the world. Great and frequent are my travails for you, that you may persevere and not faint, but endure to the end; that you may obtain that glorious salvation and redemption that is in Christ Jesus. Yea, for this are my knees bended before the God of the spirits of all flesh, that you may be entirely kept; "that you may so run, as you may obtain; and so fight, as you may overcome;" that an im- mortal crown and kingdom may be your portion, when all sins and sorrows shall be done away.

And that this you may do, hear my exhorta- tion to you in the spirit of truth. Dwell in the sense that God hath begotten in your hearts by the light and Spirit of his Son, who is now in you, reconciling you unto himself. Watch, that this blessed sense be preserved in you, and it will preserve you. For where the holy sense is lost, profusion, even of the highest truths, cannot preserve against the enemy's assaults; but the gates of hell will prevail against them, and the enemy's darts will wound them, and they will be carried again captive by the power of his temptations. Wherefore, I say again, live and abide in that light and life which hath visited you, and be- gotten a holy sense in your hearts, and which hath made sin exceeding sinful to you, and you weary and heavy laden under the burden of it; and hath raised in you a spiritual trav- ail, hunger and thirst after your Saviour, that he might deliver you; that ye might be filled with the righteousness of his kingdom that is without end.

Dear friends, God hath breathed the breath of life in you, and in measure you live; for dead men and women do not hear, or hunger, or thirst; neither do they feel weights and burdens, as you do. The day of the Lord is dawned upon you, and it burneth as an oven; you know it, and all workers of iniquity are as stubble before it: you feel it so, they can- not stand before the Lord: his judgments take hold of them, and consume them. O, love his judgments! that with those of old you may say, "In the way of thy judgments, O Lord, have we waited for thee; the desire of

our souls is to thy name, and to the remem- brance of thee. With our souls have we de- sired thee in the night, yea, with our spirits within us will we seek thee early; for when thy judgments are in the earth, the inhabi- tants of the world will learn righteousness." Part, part with all, my dear friends, that is for judgment; let Him arise in your hearts, that his and your enemies may be scattered; that you may witness him to be stronger in you, than he that is in the world. If the de- sire of your soul be to His name, and the remembrance of Him, you will love his judg- ments, and abide there the days he alloweth for your purification. Behold his blessed visitation is upon you: his angel hath saluted you; and his Holy Spirit hath overshadowed you: he hath begotten holy desires in you; I pray that they may never be extinguished, and that you may never faint. Wherefore, look to Jesus, that is the author, that he may be the finisher. I testify for God, he has ap- peared to you; yea, he hath said to you, as to Andrew, Philip, &c., "Follow me;" and I say unto you, Follow him: come and see where he dwelleth; do not lose sight of him; let him be lifted up in you, and your eye be to him: who, wherever he is lifted up, draweth all such after him. And this is the reason why people are not now drawn after Christ, because he is not lifted up in their hearts, he is not exalted in their souls; he is rejected, oppressed, crucified, and buried; yea, they have rolled a stone upon him, and set guards, that he should not rise in them to judge them.

But blessed are you, whose eyes have seen one of the days of the Son of man: blessed are you, at whose doors he hath knocked, to whose hearts he hath appeared, who hath re- ceived his holy visitation, who believe it is He, and not another; and therefore have said in your hearts, with Nathaniel of old, "Thou art the Son of God, thou art the King of Is- rael;" and with Thomas, "My Lord and my God." O, what have you, my dear friends, to do, but to keep with him forever! for whether should you go, the words of eternal life dwell with him? He is full of grace, and full of truth, and of his fullness ye have received grace for grace. And this is that grace which bringeth salvation to all that receive it, embrace it, and will be led by it. For it teacheth such, as it did the ancient Christians, "to deny all ungodliness, and the world's lusts, and to live soberly and godly in this present evil world; looking for that blessed hope, and glorious appearing of the great God, and their Saviour Jesus Christ, who hath given himself for them to deliver them from all sin, and to redeem them from all iniquity." You know that you are bought with a price; now you feel it, and in measure discern the preciousness of that price which hath bought you, namely, "the life of the dear Son of God." Grieve not his Spirit, that is ready to seal you to the day of your perfect redemption; but give up your bodies, souls, and spirits to his services, whose they are, that they may be ordered by him to his glory.

I write not to you as to the world; for you are called out of the world, by him that hath overcome the world; that as he is not of this world, so you may not be of this world. Come then out of it more and more, out of the na- ture, out of the spirit, out of the fruits, and out of the fashions of the world! they are all for the fire. Christ said, "The world loveth its own." Search, with the light of the

Lord Jesus, what there is in you that the world owneth and loveth; for that is its own. And consider what it is, that the world is offended with: not that which cometh from itself, of its own making and inventing, but that which crosseth its invention; that is of another nature, and springing from another root. O be not conformed to the fashions of this world, that please the lust, which grieveth the Spirit of God; but be ye renewed in your minds; and being so within, you will be as a new people without.

They that have been truly with Christ, are quickly discovered; they cannot be hid. So it was of old; the Jews said of the disciples, "These men have been with Jesus;" their speech and carriage betrayed them; their outsides were not like the outsides of other men; they were not current with the fashions and customs of that time: *nor can they that have been with Jesus, conform to the vain fashions and customs of this world.* Wherefore be not you, in any sort, of this world, but give diligence to make your holy high calling and election sure: for many are called, and few are chosen; and the reason is, they are "sloughful servants, they hide their talent in a napkin, neglect the day of their visitation, and work not out their salvation with fear and trembling;" and then the night overtaketh them, in which they can never work the work of repentance; and the things that belong to their peace are hid from their eyes forever.

(To be continued.)

Japan.

For "The Friend."

A Visit.—The Prussian consul took us one afternoon to visit a friend of his, a Japanese gentleman, living just beyond the hotel. He gave him no notice of our intention, so that we might see him in his every-day guise. When we arrived he was in his garden, but immediately came forward, and in a most courteous, gentlemanly manner, invited us in. The garden was very small, but made the utmost of. A little rill of water ran round it, in which were rocks, with small ferns and water-plants growing among them. In front of the house the water ended in a small pond, in which flourished some enormous lotus plants, with an extremely tasteful and pretty arrangement of rocks and flowers round it. The room into which he first took us, appeared to be the general sitting-room. It was full of all kinds of odd things; among others, a map of the world on Mercator's projection, hanging against the wall. The family altar on this day, one of the three during which the Feast of Lanterns is celebrated, was plentifully supplied with fruit and joss-sticks, and many china jars and ornaments. Into this room the sun was shining, so we went on to another, in a detached building, close to the first, where our host took down the side-wall; a simple process, when they only consist of a sliding-panel filled in with paper, and brought us into an empty room which looked out into another tiny garden. Here, apparently, the little brook rose, formed itself into a miniature fountain, and with a pleasant, refreshing tinkle, but faint as fairy bells, trickled away over a miniature rockery. This room was only partially-matted; elsewhere the wood, which was waxed, shone like satin. A pillar in the centre was formed of a tree stem, with the rough, outer bark removed, and then waxed, till it looked as bright as if varnished.

The whole place was simple, clean, cool-looking, and in perfect taste.

Tea was brought almost immediately, and a box of sweet cakes and comfits, as prettily arranged as a box of French bon-bons; also a lacquered basket containing a china jar of charcoal for lighting pipes, with a space all round for the ashes. The Japanese pipes, like the Chinese, contain only a pinch of tobacco, sufficient for two or three whiffs, after which it is emptied and re-filled. In either China or Japan, people should have nothing else to do, when smoking, but to fill and empty their pipes. The Japanese tea is delicious. Its dried in the sun, and the infusion is of the palest straw color, and very delicate in flavor. They have small wicker-work "solitaires," which they dip into the cup and generally use, even when the tea has been made in a tea-pot. Our host conversed much with Mons. L., not in the ceremonious, measured style of the Chinese, but in simple and sensible language, accompanied though by a good deal of bowing and ceremony, in gesture and manner. Indeed his manner more nearly approached my idea of perfection, in the combination of courtly politeness and stately cordiality, than any I have ever seen, except, now and then, in an old English gentleman, and once in an old American. He was genial without being *empressé*, and reserved without being cold. * * * When we were leaving, I begged a fern-leaf from his garden, whereupon he gave me a whole plant, and some beautiful pomegranate blossoms. He desired Mons. L. to tell us that he should always be happy to see us, if we were passing, even were we alone. When told that we had come from Bombay, he immediately showed how he had studied his map by exclaiming, "Ha! ha! Bombay, Hin-doo-stan, ha! ha!"

The Feast of Lanterns.—We were very fortunate in being at Nagasaki during the Feast of Lanterns, which is celebrated here more generally, and with greater feasting and holiday-making than at any other place. The feast is held in honor of departed relatives and ancestors: it lasts three days, or rather nights; for the feasting only begins at dusk, when the graves are lighted up. The effect on the hill-sides all round is very pretty, like a far-distant view of a lamp-lit city, with rows, unequal in length, and irregular in shape, of twinkling lights. The first night, only those who have died during the past year are feasted; consequently there is not much lighting required. The second night those who have died during the last two years; when there is more lighting. The third and last night, the spirits of all the ancestors that ever were, are feasted, and then sent away in straw boats, filled with food, sweet-meats, trumphy ornaments, copper cash, &c., decorated with flags and colored sails, and hung round with lanterns.

An English merchant, in partnership with one of the largest Japanese houses at Nagasaki, offered to take us to visit his friends, during their grand feast on the last night. We set off about seven o'clock in the evening, and after about half-an-hour's walking, reached the graveyards behind the city. They were most brilliantly lighted. Wooden frames, like clothes-horses, lined the walls of each family burial-place. On those were hung one, two, or three rows of paper lanterns, on which were devices, generally in black, but sometimes in red or other bright colors. The most

common was a butterfly; others had figures or letters; others a grand kaleidoscopic arrangement of various colors and devices. could not find out anything more with regard to the butterfly than what I could see myself; but it is strange how, in all countries of the world there seems to be some custom, tradition, or superstition, which forms, as there, a link between all nations and kinds, through all times of the world's history. In the open space in the middle of each plot ground, mats were spread, and there the family, as existing at the time, meets and feasts. Sometimes one saw a large, merry, family party, old and young children, and babies arms; sometimes a man and woman, or woman and two or three women; sometimes a woman with two or three children; sometimes an old and young woman; and sometimes a poor old man or woman, quite alone. All seemed cheerful and happy, and every thing was quiet and orderly. The most astonishing part of it was the absence of noise. Of course there was a great buzz where the shades were gathered together, all talking, laughing, and children occasionally shouting or crying, but there was no noise, nor were there the hideous tom-tomming and squeaking of cow-horns, which invariably attend Indian and Chinese feasts. The graveyards to which we went, was one of the largest. There was a great family gathering of old and young. They made us sit down on the mat, which was raised on a small platform and brought us tea and sweetmeats—the women, while we were drinking our tea, amusing themselves by an examination of our clothes. At the corner, where I was sitting, one old woman could pursue her investigations without my being much the wiser, and went on until she arrived at my crinoline, which caused immense astonishment, and demanded the attention of all the ladies of party, who took hold of the steel and bent backward and forward, quite unable to comprehend its use.

They lent us a guide from here to take to some of the other graves, the paths between being somewhat rough and intricate. After seeing several other festive parties, returned to the hotel to wait till mid-night when we were taken to the head of the bay near the city, to witness the departure of the spirits in their boats. We had seen the boats standing in front of almost all the houses in the streets as we passed through the city. The hull is entirely of straw, it is very well made. Sometimes, instead each house having its own boat, the clubs and produces a huge thing, in style like the sea-serpent, about fifty or sixty long.

Soon after midnight the first boats in their appearance, but not till about two o'clock did the great rush take place, and then it really very pretty, with all these boats, brilliantly lighted by their colored lanterns, decorated with flags and evergreens. Some of them had enormous sails, on which were painted figures of Buddhas or other representations, or with their prows made in a quaint device. There was one very large boat, which had a cobra's head in brass all green, with terrific tongue and eyes glaring upon the beholder! Others were like dragons, and some represented houses, or other things, and were very cleverly made. They carried down to the water, and when land

guided by men and boys, who push them round them while swimming. It is considered for the boat to catch fire before it gets far down the harbor, but some of the numbers seemed at once to guide their charge, and a burning wreck as possible, so as to get on fire immediately. In spite of which, a long string of them worked their way down toward the sea. About two o'clock the sakkibared to have taken great effect. The spectators' spirits were no longer made to deduce the steps with slow and becoming dignity, but came tumbling down; the boats dug over as soon as they touched the water, presenting the most dissipated appearance, many of them catching fire before they were well afloat. The view of the harbor above must have been very pretty at a time that the boats formed a procession; had we gone on to the hill we should have had the details, which are curious and interesting. The row back down the harbor was beautiful. It is a great pity, when in Japan, to spend the moonlight nights entirely on water. Anything more lovely than the other then appears, or more delicious than air, it would be difficult to imagine. Next morning the water was covered with the debris of the night's work, and alive with small fish swimming about among the straw mats, seeking for cash, or sweetmeats, or things which might have escaped the eyes of fingers of former "wreckers."

"If ye love me keep my commandments," saith our holy Lord and Master; to keep His commandments, we must dwell with grace in our hearts, by which the law of principle of life is known and understood, by enlightening and everlastingly sure word of prophecy, which will privately interpret, and fully show to every man his duty, and the will of God, and abillitate to abide therein; His law is light, and His commandments are to the feet of His people forever.

THE FRIEND.

NINTH MONTH 24, 1870.

has been a source of solicitude and resort to observe the great efforts made within the last two or three weeks, to interest our friends and others, in horse racing, as exhibited at a place provided for the purpose in the rural sections of our city. Large howly placards, worded and adorned so as to arrest attention and excite curiosity, posted in most places of common resort throughout the neighboring counties, for the purpose of inducing people, young and old, to attend at the race course, and witness the manoeuvres of the poor beasts, urged to the highest speed in the unnatural gait of trotting.

The newspapers in this city and country, circulated through the families of our respectable friends, during each day of the protracted manœuvres, gave high wrought descriptions of the involuntary competitors, the speed attained by cheers and lash; and the large prizes by the abused, but successful animal. Large vehicles, with flying colors and jingling bells, run regularly from the more densely settled parts of the city, to the "Trotting Place," where this vulgar and demoralizing

exhibition was going on; and we are told that many thousands of those who consider themselves respectable, crowded the ground, and participated in or encouraged the cruel and unchristian "sport."

We can have no doubt that the scene of heartless inhumanity, and betting on the painful efforts of the poor horses, had its, as we believe, inseparable concomitants, gambling, intemperance, thieving, profanity and obscenity. Such gatherings, it is well known, are always largely interspersed with gamblers, pickpockets, and other vile and debased characters, whose main object is to lure the ignorant or unsuspecting into sin, and revel on the spoils of their deluded victims.

Thus many who may think they would never commit an immoral act, but who allow themselves to deviate so far from the path of rectitude as to go to this unchristian pastime, when once in the tainted atmosphere, and under the contagious evil excitement, are often betrayed into other violations of the moral law, so as to become guilty of conduct that has afterwards covered them with disgrace and shame. We have seen it stated, that some young farmers, drawn to these race courses by curiosity, or a desire to be like others, and see the excitement of the "ring," were enticed into betting, and lured on from one stake to another, until they had involved themselves in almost inextricable indebtedness.

Yet with all the well known crime attending, and the certain demoralizing influence of the horse-racing that has just taken place in our city; though witnessing the extraordinary efforts made to draw within the meshes of its wide-spread drag, the thoughtless, the pleasure-seeking and the careless classes of our community, we have not seen a single remark in any one of the secular press of the city, in condemnation of it or its authors; nor to warn the people against countenancing it and the wickedness it was sure to promote. On the contrary whatever has been said, so far as we have seen, has been in approbation or encouragement of the enormous evil. Most of them have given large space to the advertisements, and to the recital of each day's doings. We cannot but think that in thus allowing their columns to be used to promote the interest of such a school of wickedness, the editors and writers for the daily papers, have been derelict in their duty as conservators of the morals of a professedly christian people, and subserved the depraved appetites of some of the lowest in the community.

Can any one who believes in the Divine authority of the precepts and commandments of Christ; who has a proper respect for the pure and self-denying religion which we as a community profess, believe for one moment, that such an exhibition as has just passed by, at the "Trotting Park Course," is consonant therewith, or not calculated to demoralize those who resorted to it? Can it be believed that good of any kind has or will result from such dangerous and barbarous sport? It is well known that the fignent of improving the breed of horses by the gambling of the race-course, has been long since exploded by experience. But were the assumption true, what is the value of the fastest going horse, if enhanced at the expense of an immortal soul? or even at the hazard of the ruin of an immortal soul? and there can be no doubt that many an one can defend his fall from re-

spectability, and his subsequent recklessness and wretchedness, from his attendance at these or similar sources of iniquity.

Our daily periodicals exercise a powerful influence on the community, and the responsibility of their editors is proportionately great. They ought themselves to be governed by, and to endeavour to raise the principles and conduct of the people, up to the standard of morality clearly set forth in the gospel. A standard which admits of no compromise with sin—and all unrighteousness is sin—no shrinking from maintaining the right and the true, to gain popularity; no palliation of evil, be it in high or low, in the many or the few. We are blessed with free access to the Holy Scriptures, and the protestant part of the community has made a great outcry, because of apprehended danger of their use being excluded from the public schools; and of great importance it is that they should be daily read there; but what avails a knowledge of the sacred truths contained in them, if the people are unwilling to carry into practice the religion set forth in the New Testament? If the editors of and caterers for the periodical press, really desire to impress the public mind with the value of the Bible, and of the christian religion, they must conform their own conduct, and the sentiments they disseminate among the people, to the principles and practices enjoined in holy writ, and rebuke such gross departures therefrom as the scenes enacted at a race course. In thus performing a duty which as leaders and promulgators of public opinion, cannot be escaped, or shifted on to others, they would be instrumental in extending the kingdom of the Redeemer, by inciting the people to submit to his government. The plea for the neglect of this duty,—that the tone of morals inculcated by the press must correspond with the popular sentiment and feeling, or the people will cease to patronize it,—is fallacious. The polluted "amusement" of the race-course, and its contaminating accompaniments, are below even the lax code of morals recognized by those, constituting what are called the respectable classes, though not professing to be religious. But a large portion of these classes, and some professors of religion, willingly go with the current, and participate in these acknowledged nuisances, so long as others making equal pretensions do not draw back from them, and the journals of the day sanction them, and labor to give them popularity. They might soon be banished from every christian community, did the editors and writers present them in their true colors, and warn the public that countenancing them would forfeit all claims to morality and respectability.

SUMMARY OF EVENTS.

FOREIGN.—The proposition looking to an armistice was rejected by Prussia, as it would delay the army operations in case the negotiations for peace were unsuccessful. The Prussian forces have advanced to the immediate vicinity of Paris, and occupy positions at various points on the north, east and south sides of the defenses. Some small skirmishes have been reported, but no engagement of much moment. The latest Paris dispatches assure the continued confidence of the French in their ability to defend the capital. Terrible communication with Paris has become very difficult, but is not yet wholly interrupted. Some of the wires pass under ground for fifteen miles, and have connections which the Prussians have not yet broken.

The negotiations for peace that have been carried on between Thiers and the British government, terminated without any favorable result. Earl Granville, the Eng-

lish Foreign Secretary, informed them, on behalf of the government, that all inquiries on the subject of terms of peaceful settlement between France and Prussia, must be positively declined. Various statements have been made in regard to the terms on which Prussia is willing to grant peace, but there is really nothing known with certainty on that point. It is probable there are three things which the Prussians wish that Prussia will finally make them such as the situation of the French when they sue for peace, will seem to warrant. The German feeling is strongly pronounced in favor of requiring the cession of a portion of territory along the Rhine, Alsace and Lorraine, which two centuries ago belonged to Germany. In France, on the other hand, great repugnance is shown to such a transfer, and sacrifices would be preferred that would not involve such great national humiliation. The desire for peace is understood to be very strong in Paris and throughout France, and may perhaps soon lead to steps for its attainment, as the French army intervention appear to be at an end. The British Foreign Office announces that messages have been transmitted during the last ten days by the Queen's government, from the belligerents to one another, through Lord Lyons, and through other negotiators. Jules Favre has determined to go immediately to the Prussian man head-quarters. Other advisers say that Bismarck has agreed to meet Favre, but no basis for negotiations has been agreed on.

Little is known of the internal condition of Paris, the news being meagre and contradictory. The usual lines of communication between the city and Orleans and Orléans to Paris, has been cut by the Prussians about eight miles south of the latter city, and they have placed a battery there. A correspondent of the *Globe*, writing from Paris, says that the red republicans are now really more dangerous to the safety of the city than the Prussians themselves. Some of them are already urging the erection of a guillotine. A Rouan telegraph of the 17th, states that railway communication is cut forty miles around Paris, except in Normandy and Brittany. Advice from Tours, which is now the actual seat of the French government, complain of frequent interruptions of mail and telegraphic intercourse with both Paris and London.

A Paris dispatch of the 17th says, the commander at Strasbourg, General Ulrich, telegraphs to the War Department that the situation of the city is continually growing more desperate, necessitating his early capitulation.

The French iron-clads have been recalled from the Baltic and North Seas to protect Havre, Cherbourg and other ports, from capture by the Prussians. The French blockade of the Elbe and Weser rivers was raised on the 11th inst., and steamers from England to Germany were permitted to sail.

The captive emperor Napoleon, is not subjected to close confinement at Cassel. He walks a great deal with his officers, sometimes making excursions of several miles, attended by his guard of 35 men. The Empress Eugenie and her son, the Prince Imperial, remain at Hastings, England.

The Emperor's army employ carriage or horses. She mingles freely with the people, and has made herself quite popular with all classes.

The Italian occupation of the Papal territory was accomplished with very little opposition. The Pope protested formally, but by no means vigorously, in consequence of his territory by the Italian troops; but they were welcomed enthusiastically by the great majority of the people. King Victor Emanuel has written a letter to the Pope explaining his course in taking possession of the Roman territory. Any delay on his part, he says, would have occasioned the proclamation of a republic in every Italian city, and the army would not have fought the republic, which would have been fatal to the Papacy. As it is, republicanism is so rampant that it may prove irresistible. The temporal power of the Pope dates back to the year 753, when Pepin, king of the Franks, bestowed a portion of territory upon Pope Stephen and his successors, in full and absolute sovereignty.

Cholera prevails in Persia and Southern Russia. It has also appeared in St. Petersburg, but is not yet epidemic, there were about 100 cases last week, 43 of which were fatal.

The Bank of England has reduced its rate of discount to 3 per cent.

A remarkable entaract has been discovered in British Guiana. There are two falls, one of 770 feet, and another of 50 feet; and the volume of water passing over the falls is 78 feet deep and 300 feet broad, during the dry season.

Cable dispatches of the 19th, confirm the statement

that Jules Favre had gone to the Prussian camp to confer with Count Bismarck. Paris dispatch of 9th mo. 19th, evening, says: "The city is quiet. The Prussians. The boulevards are crowded with soldiers. No symptoms of disorder are observable. Prussia explains that she will be fully prepared to treat for peace only when France presents a government sufficiently stable to enforce its engagements."

Another to the *New York Herald* says: "A fight took place yesterday, ten miles from Paris, between the advanced guard of the Prussian army and a reconnoitering party of French. The latter were driven back, and the Prussians established themselves on the heights which the French had been holding. The Prussians numbered about 30,000."

It is reported that 400 uhlans yesterday occupied Versailles. The postal service has been suspended. The Russian government has transferred 40,000,000 roubles (about \$30,000,000) lately on deposit at the Bank of France, to the Bank of Berlin, which is doing, and it is said that the besieged and besiegers suffer equally from disease and casualties. The loss of life in the hospitals of both armies from typhus fever, has been very serious. A fragment of the Sedan army has arrived at Rouen. It consisted of 600 men who had been taken from Metz. Metz is closely invested, and the recognition of the French Republic has been ratified and approved by Spain. The Swiss, American and Belgian ambassadors decline to quit Paris, and Jules Favre proposes to remain there also, notwithstanding the removal of the capital to Tours.

At Lyons, 2000 Prussians were captured, 1700 of them being advanced to within a short distance of the city. London, 9th mo. 19th. Consols, $\frac{92}{16}$. U. S. 5-20's, of 1862, 90; ten forties, 85.

Liverpool. Uplands cotton, 9½; Orleans 9½d. California wheat, 16c. Red winter, 9½d. Red western, 10½d.

UNITED STATES.—Miscellaneous.—There were 279 interments in Philadelphia last week: from casualties, 8; cramp, 8; cholera infantum, 19; consumption, 42; heart disease, 10; old age, 10.

The census gives Boston a population of 253,422. The census returns for 48 counties of Illinois, all for the southern district, show an aggregate population of 963,135, against 655,479 in 1860, an increase of about 47 per cent. Chicago has 348,709 inhabitants.

The population of Rhode Island is 218,800, a gain in five years of 30,835. Providence has 68,970 inhabitants.

Strasburg, Pa., including its environs, has 186,780 inhabitants.

After a time of earnest consultation, the Osage Indians have given their assent to the act of Congress providing for the sale of their lands in Kansas, and their removal to the Indian territory. No presents or other inducements were offered, but the liberality of the terms allowed by Congress alone inducing them to consent.

The Markets, &c.—The following were the quotations on the 19th inst. *New York*.—American gold, 115½. U. S. sixes, 118½; 1131; ditto, 5-20's 1860, 118½; ditto, 10-40's, 106½. Superior flour, \$4.90 to \$5.25; State do, \$4.60 to \$4.90; fine do, \$4.70 to \$5.00. White Kentucky wheat, \$1.50; white Michigan, \$1.53 a \$1.55; red western, \$1.35 a \$1.35; No. 2 Chicago spring, \$1.09 a \$1.12. New western oats, 52 a 54 cts. Rye, 91 a 95 cts. Yellow corn, 93 a 95 cts; western mixed, 89 a 90 cts. *Philadelphia*.—Cotton, 19¢ to 20 cts. per yard; and 35¢ New York; fine do, \$1.25 to \$1.50. No. 1 spring wheat, \$1.27; red winter, \$1.35 a \$1.45. Rye, 84 a 86 cts. Yellow corn, 96 a 97 cts. S. W. sides mixed, 90 cts. Oats, 53 a 55 cts. Timothy seed, \$5.25. The arrivals and sales of beef cattle at the Avenue Drove-yard numbered 3554 head. Extra sold at 9 a 9½ cts; fair to good, 7 a 8½ cts, and common, 6½ to 6 cts per lb. gross. Sales of about 18,000 sheep at 54 a 6 cts per lb. gross, for good. Hogs sold at \$12.50 a \$13.50 per 100 lbs. net, the latter for corn fed. *Baltimore*.—Flour, \$5.25 a \$9.50. Maryland amber wheat, \$1.50 a \$1.65; fair to good, \$1.35 a \$1.45; white wheat, \$1.40 a \$1.65; western red, \$1.32 a \$1.35. Yellow corn, 88 a 90 cts. Oats, 49 a 51 cts.

RECEIPTS.

Received from Elisha Roberts, N. J., \$2, vol. 44; from Wm. D. Stephen, O., \$8, to No. 52, vol. 45; from Geo. W. Putnam, N. Y., \$9, do. 53, do. 54; from J. M. Canada, \$2.25, to No. 23, vol. 45, and Postage, and for Joseph Pollard, \$2.25, vol. 44, and Postage; and from Rachel E. Woodward, Pa., per H. Hughes, \$2, vol. 44; from Gideon C. Smith, R. I., \$2, to No. 28, vol. 45; from Miller Chase, Mass., \$2, vol. 44; from Abner C. Smith, N. H., \$2, to No. 29, vol. 44; from A. C. Pratt, \$2, vol. 44; from M. A. Fritchman, \$2, to No. 19, vol. 45; from James Embree, Pa., \$2, vol. 44; from Dr.

Isaac Huestis, Agent, O., \$2, vol. 44, and for Jesse T. Amy, John, Ann Smith, \$2. Do. Henry D. Harty, C. W. Mudgett, Burwell Peables, Fleming Cray, Patterson and Elijah Fawcett, \$2 each, vol. 44; f. Asa Garretson, Agent, O., for Robt. Plummer, Asa Crew, Jesse Bailey, Jonathan T. Spooner, Demry Bundy, Wm. Stanton, and Esther Sears, \$2 each, 44; f. Hedges, Richard Phillips, and Griffith Barnard, \$2 each, vol. 44; f. Kenard, O., \$5, to No. 26, vol. 44; from John S. Filer and David Lupton, O., per Stephen Holson, Ag \$2 each, vol. 44; from Edmund Darnell, N. I., \$2, 44; from Ezra Engle, N. J., \$2, vol. 44; from Rich B. Bailey, Pa., \$2, vol. 44; and for Sant G. Cope, Edw. Hudson, Richard Phillips, and Geo. L. Kirtz, Wm. Smedley, and Geo. L. Smedley, \$2 each, vol. 44; f. Thos. Perry, R. I., for Elizabeth Perry and George Foster, \$2 each, vol. 44, and for Charles Perry, \$2 No. 11, vol. 45; from Mary Ann Baldwin, Pa., \$2; 44; from Mary D. Maris, Pa., \$2, vol. 44; f. James J. Moore, Richard Nichols, \$2, to No. 18, vol. 45; from Anna L. Singley, Pa., vol. 44; from Sam'l Morris, Pa., \$2, to No. 27, vol. 44; from Micajah M. Morlan, Agt, O., for Mord Morlan, Joseph Fawcett, and Mary S. Barber, \$2 each, vol. 44, and for Rachel French, \$2, to No. 47, 44; from Nicholas Hill, Jr., \$2, vol. 44; f. Daniel J. Morrell, Pa., \$2, vol. 44; from Ann Be N. J., per H. C. Wood, \$2, vol. 44; from Wm. P. To send, Agent, Pa., for S. Emlen Sharpless, Ann Shepp Geo. B. Mellor, Caleb S. Cope, Richard J. Thait, Wm. K. Wm. Smedley, Wm. Y. Griffin, and Wm. 44; from Joseph Hall, Agt, O., for Rebecca Sarah Sharpless, Sarah Ann Atkinson, Thomas H. Israel Head, John Thomas, Abraham Cowgill, Al Roberts, John Oliphant, and Nathan Satterthwaite each, vol. 44, and for Samuel Fawcett, \$2, to No. 10, vol. 44; from Wm. Smedley, Pa., \$2, vol. 44; f. W. C. Carter, Agent, N. J., \$2, vol. 44, and for C. Sheppard, Dr. A. Lippincott, and Josiah Wistart each, vol. 44; from Benj. H. Passmore, Agent, Pa. Wm. Battin and Rachel Hill, \$2 each, vol. 44.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

WESTTOWN BOARDING SCHOOL.

THE WINTER SESSION OF this Institution will open Second-day, the 10th inst. at 10 o'clock, A. M. Parents and others intending to send children to school, are requested to make early application to AARON SHARPLESS, Superintendent, whose address "Street Road P. O., Chester Co., Pa." When a convenient application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 St. Philadelphia.

Parents and Guardians of pupils now at school are reminded that the second payment for next Session is due on the 10th inst. If the accommodation if all who can conveniently do so, will pay rent in full to the Superintendent or Treasurer.

EVENING SCHOOLS FOR ADULT COLORED PERSONS.

Teachers are wanted for Men's and Women's Schools, to open about the 1st of Third month. Application may be made to Elton B. Gifford, No. 28 North Third St., Thomas Elkinton, No. 118 Pine St., Ephraim Smith, No. 1015 Pine St. George J. Scattergood, No. 413 Spruce St.

FRIENDS' ASYLUM FOR THE INSANE *New Franklin, (Twenty-third Ward), Philadelphia* Physician and Superintendent—JOSHUA H. WINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, J. of the Board of Managers, No. 1313 Pine Street, I. M. P. O., or to any other Member of the Board.

DIED, on the 5th of Sixth mo. 1870, at the rest of her son, Wm. P. Smedley, in Edgmont, Del Co., Pa. HANNAH Smedley, aged 66 years, a wife of Middletown Preparement Meeting.

WILLIAM H. PILE, PRINTER. No. 522 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TENTH MONTH 1, 1870.

NO. 6.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

T. NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

FOR "THE FRIEND."

Editorial Counsel and Advice by Way of Epistle.

(Continued from page 38.)

but the Lord forbid that it should be so
h any of you! No, no; I hope, yea, I be-
lieve, better things of you. And I am assured,
as you keep your hearts chaste to the
it and grace, that with which you have
visited of the Lord, you shall be kept to
nal salvation. For they are saved, that
k in the light: into the light the enemy
not come; for the light is Christ Jesus, and
enemy hath no part or place in him; he
triven out from the holy place by trans-
gression; and he is now a fugitive from heaven;
he goeth up and down the earth, seeking
on he may devour, whom he can catch
carry away with his baits and snares.
Therefore, "Wo to the inhabitants of the
h," that is, the earthly inhabitants, such
pre and live in the earthly nature; for all
shall be a prey to him, he shall have
er over them, and keep up his kingdom
em. But those that receive and abide in
st Jesus, the light, life, and truth, are out
is reach; they are in the "munition of
s," under the "pavilion of the Lord," in
safe ark of the Most High God. How-
ever, he is permitted to tempt and try, till
he shall come that he is not only trodden
er foot, but also bound and cast into the
"that burneth with fire and brimstone."
he is the greatest enemy to those that
their backs upon him; wherefore he
beth to surprise them; that he might
them at unawares, and triumph over
failings: and for that reason Christ
preached the "watch" earnestly, and
repetition, to his disciples.

Now, my dear friends, there be several
cesses (or, the enemy in several appearances)
attend you in this holy march you are
tending to the eternal land of rest; of which
I would caution you, that you may none of
make shipwreck of any of those holy be-
liefs you have experienced by the light
spirit of the Lord. Beware of vain
thoughts, for they oppress and extinguish the
sense. These vain thoughts arise from
the enemy's presentation of objects to the
eye, and the mind's looking upon them, till

they have made their impressions on the mind,
and influenced the mind into a love of them.
This is a false liberty, a dangerous, yea, a de-
structive liberty, to the holy sense, that God
hath begotten in any. For as this is not re-
ceived, but hindered, by such thoughts, so it
is not improved, but destroyed by them. The
divine sense in the soul is begotten by the
Lord: it is his life and spirit, his holy breath
and power, that quickeneth the soul, and
maketh it sensible of its own state, and of
God's will; and that raiseth fervent desires in
it to be eternally blessed. This is that which
Satan rageth at; he feareth his kingdom; he
findeth that He is come that will cast him out
of his possessions. He crieth out, "Why art
thou come to torment me before my time?"
He is the father of vain thoughts; he beget-
teth them in the mind, on purpose to draw off
the mind from that sense, and to exercise it
in a variety of conceptions, in a self-liberty of
thinking and imagining concerning persons
and things. Here he oftenth his baits, and
layeth his snares; and never faileth to catch
and defile the unwatchful soul.

Now, if you should say, "What are these
vain thoughts?" I tell you, my friends, all
those thoughts and conceptions that either
bring not real profit to the soul, or that grieve,
hurt, or oppress that holy sense, which is be-
gotten of God in the soul. And that by his
thoughts are to be examined, is the light of
Christ Jesus: for as "that which may be
known of God is manifest in men, for God
hath shown it unto them," as saith the apostle
Paul to the Romans: so "all things that are
reproved, are made manifest by the light; for
whatsoever maketh manifest is light" saith
he to the Ephesians. By this light of Christ
Jesus examine your own thoughts; see whence
they rise, from whence they come, and what
they tend to. O friends, here is a mystery;
and the evil one worketh here in a mystery!
For where he cannot prevail to draw out the
mind from its sensible habitation to embrace
his representations of old lusts and pleasures,
that are wicked in themselves, he will present
you with lawful objects, your outward enjoy-
ments, business, and calling, and steal in upon
your minds in the crowd of those lawful things,
and there lay his snares, hid and covered, and
at unawares catch you.

My dear friends, blessed are they that see
Jesus their Captain, going before them, and
counselling and leading them, in all outward
and lawful concerns, that they offend not.
For, my friends, this know, you may unlaw-
fully think of lawful things; either in think-
ing on them unseasonably, (mark that) when
your souls should be wholly retired, and ex-
ercised in the Lord's light to feel his presence,
in which is heavenly life; or in thinking on
unlawful things carelessly, not with regard to
your Guide; he that hath bought you through-
out with his own precious blood, that he
might have the government of your bodies,
souls, and spirits; that is, of your bodily con-

cerns, as well as of the things relating to your
souls and spirits. This prevents much harm
and mischief in business and families, and pre-
serveth the divine sense that God hath be-
gotten, and the creature in it; so that its fellow-
ship and peace with the Lord runneth as a
river, it is not stopped or hindered by the de-
signs of the enemy: or, lastly, in thinking on
lawful things excessively, too much, more
than is needful, without limits, thereby grati-
fying the fleshly mind, which is enmity with
God, and that sense which he begetteth in the
soul. O, the mountains that are raised, by
such vain thoughts, betwixt God and the soul!
how doth the soul come under an eclipse, lose
light, and at last all sense, of the living God,
like men drowned in great waters! And thus
many have lost their condition, and grown
insensible; and then questioned all former ex-
periences, if they were not mere imaginations;
till at last they arrived at atheism, denying
and deriding God and his work, and those that
kept their integrity: for whom is reserved
the blackness of darkness forever, unless they
timely and truly repent.

But when this subtle enemy of man's sal-
vation seeth that he cannot make you bow to
the glory of this world, that all his snares
that he layeth in the things that are seen,
which are temporal, are discovered and broken;
and that your eyes are directed to those things
that are eternal, then will he turn accuser:
he will aggravate your sins, and plead the
impossibility of their remission: he will seem
to act the advocate for the justice of God,
that he might cast you into despondency, that
you may doubt of deliverance and salvation.
Many are the thoughts with which he per-
plexeth the sons and daughters of men: but
this know, that he was a liar from the begin-
ning; for the Lord doth not visit the souls of
any to destroy them, but to save them. For
this end hath he sent his Son a light into the
world; and they that bring their deeds to it,
are not of the devil, who hateth the light.
Neither doth the Lord cause his people to
hunger and thirst after him, and not fill them
with his good things.

Be assured, my friends, wherever the Lord
hath begotten desires after him, and wherever
sin is become exceeding sinful, yea, a burden
to the soul, the devil's kingdom is shaken, the
prince of this world is begun to be judged,
and God is at work for the redemption of that
soul. Hearken not to the voice of the serpent,
for that lost your first parents their blessed
paradise; and with the same subtle and lying
spirit he would hinder you from returning
into paradise. But when he is herein disap-
pointed, he shifteth his temptation, and pre-
senth another temptation, viz: "That though
you have begun well, yet you will never be
able to hold out to the end: that the tempta-
tions are so many, and the enemies so strong,
they are not to be overcome by you; and that
it were better never to profess such high
things, than to fall short of them; this will

but bring reproach to the way, and the people of it." Again, "That it is curiosity, and spiritual pride, and concitiatedness, for you to be thought better than others;" with the like suggestions, on purpose to stagger your resolutions and weaken your faith. Ah! he is a devil still, a liar, and a destroyer: look not to him, but keep to Jesus, who hath called you. Keep but your eye to him of whom the brazen serpent in the wilderness was a figure, and he shall cure you of all diseases, of all wounds and stings of serpents and scorpions, &c., that may attend you in the wilderness-travel, which is the hour of your temptation. God is exalting him, in you, a Saviour; there is he manifested, viz: "to destroy sin." Yea, "stronger is he that is in you, than he that is in the world: he is able to bind the strong man, and cast him out; do but believe truly in him, and cleave to him. Remember there were evil spies of old, those that brought false intelligence, that Canaan was a pleasant land, but the way impassable; but the faithful entered and inherited. Keep therefore in the righteous life of Jesus, and walk in his holy light, and you shall be preserved, through all exercises and difficulties, unto the eternal Canaan, the land of rest. Neither wonder at these things, that temptations attend you, or that the Lord trieth and proveth you; it is the way of all that have gone to God; for even Jesus was tempted and tried, and is therefore become our Captain, "because he overcame." Neither be ye cast down, because the Lord sometimes seemeth to hide his face from you, that you feel not always that joy and refreshment that you sometimes enjoy. I know what work the enemy maketh of these wild drawings of the Lord. Perhaps he will insinuate, "That God hath deserted you in his displeasure; that you must never expect to see him; that he will never come again;" and by these, and the like stratagems, he will endeavor to shake your faith and hope, and distract you with fear, and to beget great jealousies and doubts in you; and by impatience and infidelity, frustrate your good beginnings. But though David said of old, in the distress of his soul, "One day shall I fall by the hand of Saul," yet he overcame him, and had the crown. Yea, the Lord Jesus himself cried out in the agony of the cross, "My God, my God, why hast thou forsaken me!" Nevertheless he gloriously triumphed over all, and led captivity captive, for the joy that was set before him: which joy is before you; it is the mark of the prize of your great and holy calling. Wherefore faint not, neither murmur, if your spiritual Moses seems to withdraw awhile from you. Do not you make images in his absence, neither wax wanton; but possess your souls in holy fear and patience, waiting with holy reverence and diligence for his appearance, who is your victorious leader.

(To be continued.)

From "The Scientific American." Watchmaking in America.

(Concluded from page 35.)

The very first thing that arrested our attention upon entering the factory was a little boy making screws. At first we could not conceive what he was doing, for the screws he made were so fine that it takes nearly a hundred and fifty thousand to weigh a pound. On white paper they look like tiny dots, or specks. Yet, when viewed with a strong magnifying glass, they appear like perfectly

finished little bolts. Though having two hundred and fifty threads to the inch, yet the taps and dies are so perfectly matched that the screws go closely and firmly to their places. They are made of fine steel wire, in lathes driven by steam-power. The end of the wire is applied by the attendant to the revolving die, and the thread is cut, and the head marked off and partially severed, almost instantaneously. The operator then inserts the screw into a little bar, with prepared holes to receive it, and snaps off the wire. Another is made in the same way, and inserted beside the first. A row of them is thus set in an exact line, when the heads are pared down and polished by passing them over one wheel, and the slots are cut in the whole series by passing them over another. They are then unscrewed from the bar, and, after being tempered, are ready for use.

These almost infinitesimal screws are made with great rapidity, and are nevertheless such exact duplicates that they may replace each other indifferently. This principle of the equivalence of parts pervades the whole construction of the watch.

The most conspicuous as well as important parts of the watch are the wheels, which require to be brought to the highest possible perfection in two points, the teeth and the pivots. Let us see how these are attained by machinery. The wheels are made from the thin ribbons of sheet-brass. These are passed rapidly through a punching machine, which cuts out a blank or outline wheel at every stroke. A large number of these are then threaded upon a rod, or spindle, and screwed firmly together. They are now placed in the tooth-cutting machine, where a rapidly revolving tooth plows a groove, or furrow, along the surface from end to end. The spindle then turns on its axis the width of one tooth, and another groove is cut beside the first. This is repeated sixty or eighty times, according to the number of teeth required in the wheel, and a girl will finish in this way ten or fifteen hundred wheels in a day. The most difficult wheel to make is the scape-wheel, owing to the peculiar shape of its teeth.

Let us now consider the pivots—the little hardened-steel points upon which they run. This brings us to the most interesting part of the manufacture—the very romance of mechanics—the jeweling department, for the pivots run in perforated jewels. That the watch may be "immortal as well as infallible," all its points of friction must be made of the hardest substances that Nature produces, and these are the precious stones—ruby, sapphire, chrysolite. They can be only worked by tools of diamond and by diamond-dust. Diamond drills and chisels are made by skillfully working one diamond against another. Diamond-dust comes from Holland, and costs five dollars a carat, equal to seven thousand dollars a pound troy.

The stones to be cut, which come chiefly from South America, and are growing scarce, are little rounded pebbles. These are first cut into slabs by a gang of thin circular saws of soft iron, the smooth edges of which are toothed with diamond-dust applied in oil, the little diamond particles being bedded in the soft iron by turning against a steel roller. The stone is then pressed against their edges and rapidly cut through, a specimen larger than a pea being sawn in slices in forty-five seconds. The slabs are then skillfully broken

into minute pieces, and are ready to be turned in the lathe.

When the American Watch Company commenced business, jewels were only made by hand mechanism and by imported experts. Even these could not make their own tools but had to send to England for them. The extending operations of the factory, by which one part of the watch after another was first produced by machinery, did not alarm the jewel makers, who said, "You will never be able to disturb our branch of the work." They were informed, one day, that the thing was done, and their monopoly ended. Machinery, worked by steam, had been applied successfully, that jewels, more perfect than those before made, could be produced by gir after a week's practice.

In watches of the best construction all the bearings of the pivots are jeweled, and little bits of precious stones of microscopic precision of form are also set in the pallets to act upon the teeth of the scape-wheel.

The balance-jewel always has an *end-stone* or cap, the balance running on the end of it pivot in order that it may have the utmost freedom—the pivot being but the $\frac{1}{16}$ of $\frac{1}{8}$ of an inch in diameter. Diamonds are sometimes used for end-stones, but rarely, if ever, for jewels, it being next to impossible to drill holes sufficiently small in so hard a substance.

In forming all parts of the watch, one piece is so exactly like any other of its kind, that a thousand might be taken to pieces and mixed up, and then reconstructed with pieces taken indifferently. But in opening out a smoothing the fine jewel-holes, and in giving to the steel pivots their exquisite polish, microscopic differences arise which make it necessary to match them by exact measurement. The pivots are first classified by a girl, with a gage which measures to the ten-thousandth part of an inch. The jewels are then similarly measured and classified, and jewels and pivots of the same number exactly fit. But for an pivot of a particular watch a jewel is selected with a hole which is a degree or ten thousandth part of an inch larger, so that the may be sufficient play. Each watch is numbered, and the exact size of all its pivots and jewels is accurately recorded. Note not the advantage to the watch-owner of this highly perfected system. If any minutest part of his watch fails, wheel, escapement, pivot, jewel in whatever part of the world he is, it is reached by the postal system, he writes to Waltham, and by return mail gets exact duplicate of the failing piece.

When all parts of the watch are finished they are brought to the train room and put together, and then pass into the regulating department to be adjusted. This is indispensable, as no attainable exactness of workmanship, though the most expert and experienced finisher spent half his lifetime upon it, can produce a watch which, when first set up, runs with precision. The train may move accurately, as it is passive; but the temperature of the more living parts are not to be calculated upon beforehand. The conflict of the springs—the mainspring steadily force the hair-spring, and the hair-spring strikes back half a million times a day—must be exposed and harmonized. And so the adjuster sits down to the watch like a physician to his patient, notes its languid or feverish pulse, and makes such regulative prescriptions as will bring it to normal action.

But the door to extravagance is here widely opened. There is the substantial every-day watch, moderate in cost and reliable in performance; and there is the highly finished, exquisitely adjusted article upon which like a race horse, you can expend a great deal of money for a few seconds of time. Such, however, are demanded, and so the American Watch Company produces them. But they are of course, costly, because of the amount of attention which must be given to each individual watch. It has to be put through a six months' course of training, tried repeatedly in all positions, tormented in an oven, chilled in a refrigerator, and so exactly adjusted that one of these changes will disturb its rate of going. But these watches entail upon their possessors the most vigilant care, if the fine adjustments they are intended to give are to be realized. It is to the manufacture of the simplified and substantial watch, elegant but not fancy, and running with all desirable accuracy, such a watch as everybody can afford to depend upon, and which is cheapened by proved production without being lowered in character, that the American Watch Company has brought its resources of skill, enterprise, and capital.

For "The Friend."

Excerpts from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 27.)

"2d mo. 3d, 1848. I went to Philadelphia with a view of visiting a friend under affliction, and also attending the Select Quarterly Meeting on Seventh-day. But I was taken so early that I did not get to meeting. This occasioned some serious thoughtfulness. While I was engaged, I remembered the language that was spoken to David, 'Thou didst wilt it was in thine heart,' &c.: after which my mind was settled in quietness, and I was foreed with health to enable me to get home at evening.

"7th. This day closes my seventy-seventh year! Many and various have been the deep exercises through which I have passed in the course of my long life, which are known only to Him who knoweth all things; yea, who knoweth the bitterness of every heart, and knoweth in order to heal. If more days are allotted me, may they be increasingly dedicated to the service of my Heavenly Father, the best of masters; who, I trust I may thankfully say, has followed me with His goodness and mercy all the days of my life.

"3d mo. I went to Haddington, accompanied by my daughter J.; having felt much exercise on account of two individuals, who I understood were likely to remove, and who I feared were neglecting their best interests. Met with one of them, who patiently heard what was delivered; and I thought seemed to be somewhat impressed with seriousness. But I felt I fear for want of applying in good earnest to the Fountain of help and strength, will prove as the morning dew that soon witheth away. The other man I met with at another time not long after, in the road near my dwelling, being on my way to see him. He made a little stop, and I thought it seemed though the present time had better be made use of, he being willing to hear me. I expressed what arose, and I thought some consciousness attended. Oh! how often is my heart drawn out in desire for those my poor low-creatures, who seem to be, as they were,

living without God in the world; that they may yield to the convictions of Divine Grace; that they may have their hearts turned unto the Lord while time and opportunity are afforded; remembering that He hath declared, His spirit shall not always strive with man. Both the above opportunities were relieving to my mind, and appeared to be well received. After the last one we went to see several colored families, and read tracts on religious subjects to them; expressing as way opened, my desire that they might be increasingly concerned to seek the Lord while He may be found. Oh! I often feel it is very little we can do one for another, and yet how desirable it is to be so clear of the blood of all men, as to be fit to receive the welcome language addressed by our blessed Saviour; 'Let her alone; she hath done what she could.'

"3d mo. I went with my daughter J. to Philadelphia to attend to some business preparatory to going to house-keeping; and to visit some of our friends. In the course of our being there I attended three meetings, viz: Arch street, Sixth street, and Orange street. In all of them it seemed my place, according to my little ability, to suffer with the suffering seed in silence. I believe there is an itching ear in many to hear words; and I fear a desire in some, through an unsatisfied zeal, to express them. Oh! what darkness does a lifeless ministry bring over a meeting, and heavy burdens to the living members. Gracious Father! be pleased to watch over thy church and family; and strengthen thy little ones to come forward in humility and faith, in these days of close proving and searching of heart."

The concluding sentence of the above memorandum of our dear friend, has reminded of a record of that father in the church, John Churchman, when near the close of his dedicated life: "I feel earnest breathings to the Lord, that there may be those raised up in the church, who may go forth in humility, sweetness, and life, clear of all superfluity in expressions and otherwise, standing for the testimony, that they may be useful to the church in these difficult times."

"These difficult times" have not ceased; neither truly are we any whit less in need of those, who, "standing for the testimony" shall go forth, as saith H. Gibbons, "in humility and faith in these days of close proving and searching of heart." But Oh! how the natural, wise part in man, resisteth this crowning gem, humility—this self-nothingness and deep abasement of soul at the feet of the meek and lowly Jesus—how hard to lay the choice treasures, the fondly gathered stores of the head and heart, at the footstool of the Crucified! But there is no other way to the crown immortal; neither any other true way to usefulness in the Church of Christ. "To reign it is necessary first to suffer." There must be a death unto sin, before there can be a life unto righteousness. "It is the great love of God," says George Fox, "to make a wilderness of that which is pleasant to the outward eye and fleshy mind; and to make a fruitful field of a barren wilderness." The old building must be taken down, before the new in Christ Jesus can be erected. The old man with all his corrupt deeds must be put off, before the new man, which after God is created in righteousness and true holiness, can be put on. We can never know the heavenly power which is in Christ Jesus the everliving Foun-

datation, to rule and reign within us, till all other foundations are removed; not one stone left. This calls for the exercise of that saving faith, which (Ephes. ii. 8) is the gift of God; that faith whose fruits are found in faithful obedience to the Spirit of His dear Son manifested within; that faith which works by love to the purifying of the heart; that faith which is "the substance of things hoped for, the evidence of things not seen;" that living faith which "triumphs over death, and robs the dark, cold grave of victory." Oh! for more precious evidences of this "humility and faith" which would make us willing to suffer with a suffering Lord; to be crucified with Him, that thereby we may live unto Him; as saith the apostle: "I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me; and the life which I now live in the flesh, I live by the faith of the Son of God, who loved me and gave himself for me." Then would humility and faith in our lives, and conversation, and whole character, shine conspicuously; and after the axiom "they are the happiest who have the lowest thoughts of themselves, and they the most faith in whose eyes Jesus is the most glorious and precious," we should be made to drink of that "river, the streams whereof shall make glad the city of God, the holy place of the tabernacle of the Most High."

The Diary resumed, "4th mo. 30th. The subject of removing with my daughter J. to West Chester, is much before me; and the craving of my mind often is, that Divine Goodness may be so sought after, and kept near to, that we may in all our steps be preserved from bringing dishonor on the blessed Truth.

"7th mo. Early in this month we came to our new home in West Chester; and I can say with a degree of thankfulness, that it feels like home; and as though it might have been a right move. Dearest Father! be pleased to keep us near unto Thyself.

No date. "For some time previous to our changing our place of abode, my mind became exercised in the prospect of attending Ohio Yearly Meeting: though from my age, and unfitness every way so pressing upon me, it seemed for a season as though I could scarcely look to it, but with feelings of great discouragement. As the time drew near, I remembered that all things were possible with Him whom I desired to serve; and I was enabled, I trust I may say in fear and childlike simplicity, to open my prospect in the Monthly Meeting at Darby, the beginning of the Eighth month. Friends uniting therewith, they furnished me with a minute, setting me at liberty to attend the meeting aforesaid, and also, if way opened, to visit a few meetings on my way, going and returning. My dear friend Jane Garrett, being willing to accompany me, was also furnished with a minute; and next day, my brother Abraham Gibbons, obtained one from Birmingham Monthly Meeting, in order to join us in our prospect. We (my daughter J. likewise accompanying) accordingly left home the 26th of the month, and reached Mount Pleasant safely in five and a half days. The Select Meeting was held on Seventh-day. Several Friends from other Yearly Meetings, together with Benjamin Seebohm and Robert Lindsay, from England, were in attendance. It was a time of suffering and trial to many, caused by having un- sound views on doctrinal points spread among us, differing from those of our worthy prede-

cessors, and for which they suffered so much in order to spread and maintain. The Yearly Meeting commenced on Second-day, and was throughout a time of close proving to many who were endeavoring to keep their allotments in the Truth. While others, some of whom desire to find an easier way than true Quakerism leads into, and some, I believe, are giving their strength to those who are laying waste the precious doctrines and testimonies, given us as a people to uphold. My spirit was often in mourning; and desires were raised that the stumbling blocks cast before the dear youth, might not turn them out of the right path. May the Lord be pleased to turn the captivity of Zion, and build all her waste places. At the close of the Yearly Meeting, and after attending one appointed meeting at Short Creek, we proceeded homeward; the prospect of taking a few more meetings on the way still continuing. But when we got into the neighborhood of Westland Meeting, and at the house of my kind friends George and Ruth Smith, I was taken ill and remained nearly three weeks. Not long after I was thus laid low with sickness, the language addressed to the disciples formerly by our Divine Master, feelingly revived in my mind: "When I sent you without purse or scrip, lacked ye anything?" and they said, nothing." The feelings of my mind were so comfortable for a time, I thought I could adopt the same reply with thankfulness. After my health was so restored as to be able, we sat with Friends in their meetings at Westland, Redstone, and Pike run. These being relieving to my mind, we set our faces homeward, where we arrived safely the 15th of Tenth month; and I trust with minds clothed with gratitude to the Author of all our blessings, in being thus permitted to return to our comfortable home in safety, the journey having been performed under much bodily infirmity.

"Soon after our return home, I attended the Monthly Meeting at Darby, and returned the minute granted me in the Eighth month last, with information of the performance of the service which I believed had been required of me. I afterwards requested a certificate for myself and daughter to Birmingham Monthly Meeting. Upon receiving them from the former, and presenting them to the latter Monthly Meeting, it felt to me a solemn thing to be transplanted again as it were into another soil; and the breathing of my spirit was and is, that myself and dear child may be preserved from bringing dishonor upon the ever blessed Truth, as it is in Jesus Christ, our Holy Redeemer and Saviour."

(To be continued.)

Colonel Sir Henry James, in a recent lecture on the pyramids of Egypt, stated that in the king's chamber, inside the pyramid, some of the stones were thirty feet long. These stones, weighing some ninety tons, were not found in Egypt at all, but were brought down the Nile a distance of five hundred miles, and then placed in their present position, one hundred feet above the level of the ground. With regard to their finish, these syenite stones are of the very hardest known, and yet they are so exquisitely polished, and built in (to form a casing for the king's chamber) with such superior skill that the finest sheet of tissue paper could not be inserted between the stones, after these three or four thousand

years. Such workmanship would excite the wonder and admiration of the world, even in this age of science and improvement.—*Late Paper.*

Selected.

THE ELECTRIC TELEGRAPH.

Along the smooth and slender wires
The sleepless heralds run,
Fast as the clear and living rays
Go streaming from the sun.
No peals or flashes, heard or seen,
Their wondrous flight betray,
And yet their words are quickly felt
In cities far away.

Nor summer's heat, nor winter's hail,
Can check their rapid course;
They meet unmoved the fierce wind's rage,
The rough wave's sweeping force;
In the long night of rain and gloom
As in the blaze of day,
They rush with news of weal and woe
To thousands far away.

But faster still than tidings borne
On that electric cord,
Rise the pure thoughts of him who loves
The Christian's life and Lord;
Of him who taught in smiles and tears,
With fervent lips to pray,
Maintains high converse here on earth
With bright worlds far away.

Ah! though no outward wish is breathed,
Nor outward answer given,
The singing of the unseen heart
Is known and felt in heaven;
Those long, frail wires may bend and break,
Those useless heralds stray,
But Faith's least words shall reach the throne
Of God, though far away.

Selected.

THE LITTLE CLOUD.

Take courage—'tis but a little cloud,
That soon will pass away;
The hearts that now with grief are bowed
May only grieve to-day,
To-morrow up the azure height
The sun may dart his beam,
And then one joyous burst of light
O'er mount and vale shall stream.

When thwarted plans and baffled hopes
Become our only store,
And the crushed spirit barely copes
With ill's unknown bore,
Despair not—yet the tide will turn,
The gales propitious play;
Take courage—'tis a little cloud
That soon will pass away.

When doubts eclipse the ray of joy,
And fears their shadows cast;
When rugged seems the way to bliss,
And fogs come crowding fast,
Faint not—a mightier power than thine
Is pledged those fogs to slay;
Light shall at last for thee be sown,
The clouds shall pass away.

But shades not there the vale of death
A cloud of sombre fold?
Yes—but the eagle eye of faith
Detects the streak of gold.
Those radiant tints shall wider spread,
And form one burnished sea,
Till thine at last, triumphant saint,
Is immortality.

Every man may err in his interpretation of scriptures, further than that he hath a certain and infallible opening of them to his spirit, by that Spirit which gave them forth. The Spirit knoweth his own mind in every word which he hath spoken; but no man knoweth his mind, nor the meaning of his words, but as he reveals them. I Cor. ii. 11.—*Isaac Penington.*

[We received the following address last week, but not in time for our last number. It was issued by the "Associated Executive Committee of Friends on Indian Affairs," 13a 5th month. We think its spirit will commend it to the approval of all Friends who read; and we trust it has promoted the end designed.]

To the Superintendent, Agents, and others engaged in the work of Indian Civilization with the Central Superintendency.

Dear Friends:—Being assembled in our Annual Meeting, you have been brought very near to us, in christian feeling as brethren and sisters, engaged in carrying out the present benevolent policy of our government, in aid of a poor and deeply-injured people.

We are well aware that your present service requires not only great watchfulness, but untiring patience, such as we cannot attain of ourselves without the assistance of the Holy Spirit, which our ever-blessed Head has promised to those who love Him and go forth at His bidding. For those of you who have been exposed since our last meeting to the dangers incident to Indian warfare, our sympathy has been largely drawn forth, with earnest desires that you may be kept free day to day in humble reliance on Him who has promised preservation to all who call upon Him in sincerity and truth. Precious indeed is the consolation of those, who, in the midst of peril and alarm, can appeal to their Lord as occupying their allotment in conformity to apprehended duty. Against the dwellings—these the rain may descend, the floods may come, and the winds may blow, but the house is safe, because founded on Him whom it is said: "Thou wilt keep him in perfect peace, whose mind is stayed on Thee because he trusteth in Thee."

Submission to the Divine will is our duty, and will prove under all circumstances the source of our truest and greatest happiness.

For years and generations there have been those who, from a sense of duty, have been drawn to this good work of Indian civilization, whose faithfulness, and honesty, and zeal have evinced the motive which actuate them, and who, having discharged their duty in the service assigned them, have, we reverently believe, received their rich reward.

It is doubtless, in some measure, owing to the bright example they have left us that this invitation under which we are now engaged was made to us by the present Executive. This invitation must be accepted as a mark of confidence, not only in our religious Society, but in the well-known testimony to peace which we profess to uphold. Hence, it becomes especially incumbent on us all at the present juncture, to endeavor fearlessly to maintain it.

Although at seasons your situation may be comparable to the sparrow alone on the house top, yet He that seeth the secret thoughts of our hearts and inmost springs of action will weigh them in the balance of His own sanctuary, and reward every one according to his deeds, whether they be good or whether they be evil.

At this time it has been given us to enter into your exercises and trials as portrayed in some of the late letters received from you, as brethren to share with you therein according to our several measures, and the secret aspiration has arisen that the ever-blessed

lemer of men would be pleased to keep near to you, as a wall of defence on the right hand and on the left, strengthening you by His spirit, guiding you by His counsel, and assisting you with the sweet reward of peace. Signed by the members of the Associated Executive Committee of Friends on Indian Run, in attendance at the Annual Meeting, Mount Pleasant, Ohio, 8th mo. 18th, 1870.

For "The Friend."

Excerpts from the Journal of George Fox; with a few remarks.

(Continued from page 34.)

The journal of George Fox thus proceeds:—
 * * * The law of life fleshly-minded do not know; yet they will tempt you, draw you from the Spirit unto the flesh, so into bondage. Therefore ye, who love the love of God, and the law of his life, and the freedom that is in Jesus Christ, stand fast in him, in that divine faith which he is the author of in you; and be not entangled with the yoke of bondage. For ministry of Christ Jesus, and his teaching, bringeth into liberty and freedom; but the lust of the flesh, and the lust of the eye, and the pride of life, which is of the will of man, bringeth into bondage and under the shadow of death and darkness. Therefore none can be ministers of Christ Jesus but in the eternal Spirit, which was before the Scriptures were given; for if they have not his Spirit, they are none of his. Though they may have his Spirit, yet they will tempt you to condemn them that hate it, yet they will never bring any into unity and fellowship with the Spirit, except they be in it; for the law of the flesh is a burdensome stone to the self-will, earthly will, which reigns in its knowledge and understanding that must be overcome, and its own wisdom that is devilish. The Spirit of God is grieved, vexed, and rebuked, with that which brings into the yoke of bondage; and that which was against the Spirit of God must be mortified by it; for the flesh lusteth against the Spirit, and the Spirit against the flesh, and these are contrary the one to the other. The flesh would have its liberty, and the Spirit would have its liberty; but the Spirit is to have its liberty, and not the flesh. If therefore ye have the Spirit, join to the flesh, and be servants of it, then ye are judged and tormented by the Spirit; but if ye join to the Spirit, and not to the flesh, ye have liberty and victory over the flesh and its works. Therefore keep ye daily cross, the power of God, by which ye may witness all that to be crucified which is contrary to the will of God, and which shall not come into his kingdom. Therefore things are here mentioned and opened for information, exhortation, and comfort to us, as the Lord opened them unto me in this day."

I was under great temptations sometimes; my inward sufferings were heavy, but I found none to open my condition to but the Lord alone, unto whom I cried night and day.
 * * * I saw that there was an ocean of darkness and death; but there was a light and love, which flowed over the ocean of darkness. In that also I saw the infinite love of God, and I had great things. As I was walking by the steep side, in the town of Mansfield, the Lord opened unto me, 'That which people trample upon must be thy food.' And as the Lord

spoke he opened to me, that people and professors trampled upon the life, even the life of Christ was trampled upon; they fed upon words, and fed one another with words; but trampled under foot the blood of the Son of God, which blood was my life: and they lived in their airy notions talking of him. It seemed strange to me at the first, that I should feed on that which the high professors trampled upon; but the Lord opened it clearly to me by his eternal Spirit and power."

"I was sent to turn people from darkness to the light, that they might receive Christ Jesus; for to as many as should receive him in his light, I saw he would give power to become the sons of God; which I had obtained by receiving Christ. I was to direct people to the Spirit that gave forth the Scriptures, by which they might be led into all truth, and up to Christ and God, as those had been who gave them forth. I was to turn them to the grace of God, and to the truth in the heart, which came by Jesus; that by this grace they might be taught, which would bring them salvation, that their hearts might be established by it, their words might be seasoned, and all might come to know their salvation might. I saw Christ died for all men, was a propitiation for all, and enlightened all men and women with his divine and saving light; and that none could be true believers, but those who believed therein. I saw that the grace of God, which brings salvation, had appeared to all men, and that the manifestation of the Spirit of God was given to every man, to profit withal. These things I did not see by the help of man, nor by the letter, though they are written in the letter; but I saw them in the light of the Lord Jesus Christ, and by his immediate Spirit and power, as did the holy men of God by whom the holy Scriptures were written. Yet I had no slight esteem of the holy Scriptures, they were very precious to me; for I was in that Spirit by which they were given forth; and what the Lord opened in me, I afterwards found was agreeable to them. I could speak much of these things, and many volumes might be written; but all would prove too short to set forth the infinite love, wisdom, and power of God, in preparing, fitting, and furnishing me for the service he had appointed me to; letting me see the depth of Satan on the one hand, and opening to me, on the other hand, the divine mysteries of his own everlasting kingdom."

"When the Lord God and his Son Jesus Christ sent me forth into the world to preach his everlasting gospel and kingdom, I was glad that I was commanded to turn people to that inward light, spirit, and grace, by which all might know their salvation and their way to God; even that Divine Spirit which would lead them into all truth, and which I infallibly knew would never deceive any."

"The holy Scriptures were given forth by the Spirit of God; and all people must first come to the Spirit of God in themselves, by which they might know God and Christ, of whom the prophets and apostles learnt: and by the same Spirit know the holy Scriptures; for as the Spirit of God was in them that gave forth the Scriptures, so the same Spirit must be in all them that come to understand the Scriptures. By which Spirit they might have fellowship with the Father, with the Son, with the Scriptures, and with one another; and without this Spirit they can know

neither God, Christ, nor the Scriptures, nor have a right fellowship one with another."

George Fox and his faithful coadjutors considered themselves, no doubt, in the light of reformers, to restore things that had been lost sight of or lightly esteemed; and as "stewards," in their measure, "of the mysteries (or deep things) of God." Hence how much they spoke and wrote of "the dispensation of the grace of God;" of Christ the light of the world; Christ within the hope of glory, made known to the Apostle by revelation. "Whereby," he continues to the Ephesians, "when ye read, ye may understand my knowledge in the mystery of Christ." Which mystery the natural man that "receiveth not the things of the Spirit of God" cannot comprehend or know, being "foolishness unto him." It was the revelation of this mystery, so much dwelt upon by the Apostle, that our early Friends pressed upon all, the necessity of an experimental acquaintance with. This, they directed their readers and hearers so unceasingly to, that it may be taken as the cornerstone of the religious doctrines and testimonies they felt called upon to maintain, and which after the example of the primitive believers, and "according to the commandment of the everlasting God," they were to make "known to all nations for the obedience of faith." Thus we find George Fox, upon one occasion, rejoicing that he had been called to turn people to *that in themselves*, though not of themselves, that would save them.

Oh! that we may never turn away from a doctrine which is so according to godliness. But rather after the precept of the Apostle Paul to the Galatians, "Stand fast in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage." For, addeth he, "they that are Christ's have crucified the flesh with the affections and lusts." Christ through all time must remain to be the only means of salvation, and the Lord our righteousness, both as respects His most satisfactory sacrifice on the cross, and, through His going away, the sending of the Comforter to abide with us forever. It is this invincible power of God, Christ, His light and Spirit manifested within, so often dwelt upon by George Fox, that, as it is heeded and obeyed, shows us our alienation from Him by sin; shows us the indispensable need of a Saviour; our need also, through obedience to Him, of a new heart and a new spirit; together with our entire incapacity, without the grace that came by Jesus Christ, to ever be born again of the incorruptible seed and word of God, unto newness of life in Him.

The pure principles of Truth, as maintained in their first powerful promulgation by our forefathers, are yet dear to not a few of their successors; who can hardly sit silent spectators of the innovation upon innovation, even as wave followeth wave, and billow billow, which are now having place in some parts of our religious Society. While penning these notes, how forcibly has the writer been reminded of the declaration of Holy Scripture: "Another king arose, which knew not Joseph. The same dealt subtilly with our kindred, and evil entreated our Fathers," &c. New views of things, more in conformity with the world and its spirit, have now their supporters and defenders, who, like those that knew not Joseph, are seeking to substitute something of their own invention to pro-

ness a belief in, which the pure Truth never did, nor never will recognize. The tendency of which moreover is, to remove the ancient landmarks which our fathers have set, through a laying waste one by one, of the testimonies committed to us to bear; and thus to project an easier way to the Kingdom, than our Heavenly Lawgiver has anywhere represented it to be. But alas! with what apprehension and fear should we dwell upon the inspired interdiction: "He that diggeth a pit shall fall into it; and whose breaketh a hedge, a serpent shall bite him."

No one can experience the truths of our holy religion, but as the heart is yielded to, and opened and instructed by the Great Minister and Bishop of our souls; who will then take of the things of God and show them unto us; and will also open our understandings, as He did the two disciples going to Emmaus, causing the exclamation: "Did not our hearts burn within us, while he talked with us by the way, and while he opened to us the Scriptures." Blessed be His holy name, his ear is not grown heavy, nor is His hand shortened; while His power, infinite and omnipotent, is equal in every strait and calamity, to all the needs of His poor, dependent, and wrestling children.

Japan.

For "The Friend."

Shops in Yokohama.—There is one long street in the native town known by the name of 'Curio Street,' from the principal curiosity-vendors having established shops there. Buying and selling is quite as long a process in Japan as in China, but in the former is much more agreeable. In the first place, the scrupulous cleanliness of the shop and everything in it, is one great advantage; and another is, that everything is so admirably arranged in the Japanese shops that, while the owner is deliberating over the sum offered by the purchaser, the latter may amuse himself for hours in looking at other things, arranged in drawers, or trays, or shelves, round the shop. Even the commonest articles are beautifully made by these ingenious people. As joiners, I imagine, they are unequalled. I tried to get as many things as possible put into the little wooden boxes in which they pack one's purchases, simply for the sake of the boxes; they are so strong, and so perfectly finished. I am sorry to say that curiosities, like many other things, seem to have deteriorated since the admission of foreigners into the island. There are now many 'base imitations' of pretty things made wholesale for exportation to England and America. It is with great difficulty that really valuable things can be procured, so good are the imitations, and so few are the curiosity-hunters who can discern between them and an original. The ivory work is exquisite. Quite different in every way from the Chinese, and, in my opinion, infinitely superior. The Chinese are very clever, patient, and grotesque in their designs, but the Japanese possess an amount of real fun, and a sense of the ludicrous, which exhibits itself strongly in their works of art. There are certain little pieces of carved ivory, called 'nidjiks' (query as to the spelling, which I have made phonetic) or 'buttons,' though they do not resemble any buttons known to European requirements, which are fastened to one end of a cord that has a pipe and tobacco case, or pen and ink holder fast-

ened to the other end, to prevent its slipping through the waist-belt. Some of these 'buttons' are very beautiful; not only as carvings, but for the expression and taste displayed in the attitudes, grouping, and execution. There is, we were told, a large collection of fairy tales, legends, and myths, popular amongst all classes of Japanese; and scenes from some of these are constantly represented in the 'buttons'; also in small bronze plaques, which are used by the natives to let into the handles of their swords, and bought by foreigners to convert into ornaments, such as brooches, necklaces, bracelets, solitaires, &c. The Japanese are considered the finest metal-workers in the world, and I can readily suppose such to be the case after seeing specimens of both large and small bronzes, in which the blending of various metals, and engraving of the same, is what one could hardly imagine without seeing it. Storks, tortoises, frogs, and skeletons, are among their favorite subjects. Several of the fairy tales relate to the wars between the frogs and the snakes, the illustrations of which, as often seen upon large ivory cups, are perfect. You see the snake watching from the trunk or branch of a tree, about which he is coiled, while round the cup, frogs of various rank and degree march along, on their hind legs, headed, perhaps, by a small green frog, with a long lance in his hand, mounted on the back of an aldermanic brown frog, and upon the point of charging his enemy, the snake.

There are many other things used by the Japanese themselves, which are yet more curious and quaint, but which are so common, and in the country itself considered of so little value, that no one thinks of exporting them. Amongst them we found some blow-pipes which were very original. They were made of some kind of metal, in the form of a dumpy old woman, about an inch and a quarter high, whose face it required some ingenuity to discover. After being heated, soaked in water, and then placed upon a lump of hot charcoal opposite the fire she is to blow, the snow begins puffing away vigorously, hissing and spluttering, till she has blown the fire into a splendid blaze. Among the children's toys are paper pictures which look as if woven in *crêpe*; these, when gently pulled on all sides, grow to about twice their original size, still preserving the original forms. The illustrated Japanese books are very good, and show much artistic talent. I bought a few of them, which answered, as far as we could learn, to the little story books with wood-cut illustrations, such as would be given in England to school children. I selected them simply as studies for myself. A group of trees, a branch of bamboo, a bunch of leaves, a cottage and turn in a road, and such simple subjects, formed each of them a perfect study in itself, though appearing to have been drawn with one stroke of the pen. The latter is, in fact, a brush, but is made quite hard with gum or glue, except at the extremity.

The multitude of uses to which paper is put in Japan, is astonishing. I believe there is nothing the people would not make of paper should no other material be at hand. Rain coats, umbrellas, pocket handkerchiefs, lanterns, windows, boxes, string, pouches, which look as if made of morocco leather, hats, almost everything one could name. The paper is very fine and smooth, and ex-

tremely tough; so much so, that it is impossible to tear it across the grain, and the edges are always rough and jagged when torn across the grain. I should like much to have seen the manufacture of paper here, but the Japanese are most jealous of showing any of their home manufactures to foreigners. We saw a sheet of Japanese paper of any size. A good deal of it is stamped in patterns, colored, which, when used for windows, looks exactly like ground glass, or figured mus-

(To be continued.)

The Traveller's Tree.—This remarkable, beautiful tree belongs to the order *Musa*, although in some points its structure resembles the palms rather than the plantains. It is immediately recognized by its graceful crown of broad, green leaves, arranged at top of its trunk in the shape of a fan. The leaves are from twenty to thirty in number and from eight to ten feet long, by a foot and a half broad. They very closely resemble those of the banana, and when unbroken the wind, have a very striking and beautiful appearance. The name of "traveller's tree" is given on account of its affording at all times a supply of cool, pure water, upon the base of the leafstalk with a spear or pointed instrument. This supply is owing to the large broad surface of the leaf, which condenses the moisture of the atmosphere, from which the water trickles down into hollow where the leafstalk joins the stem. Each of these forms a little reservoir, in which water may always be found. This property of absorbing moisture is possessed almost as great a degree by the banana. The leaves are used to beat the roofs in case of fire, account of the amount of water they contain and the main stem is full of small chambers filled with water, which has been distilled from the smooth cool leaves of the tree.—*Siberia, Madagascar and its People.*

THE FRIEND.

TENTH MONTH 1, 1870.

In the last number of "The Friend" there is an interesting article, Dr. Edward Ash, on "The Beacon Convent, and the Yearly Meeting's Committee 1835-7."

He was one of the Committee appointed London Yearly Meeting to examine into, if possible, settle a difficulty and remove disunity existing among the members at Manchester; growing out of the promulgation doctrines, and the introduction of practices disapproved by some and maintained by others, belonging to that meeting. The principal instigator of the controversy was Is. Crewdson, who was the author of the well entitled "A Beacon to the Society of Friends" which was testified against by Friends in England, and by Philadelphia Yearly Meeting. Thus E. Ash had ample opportunity to make himself acquainted with the causes of disunity the course pursued by the committee, and differences of sentiment existing among themselves. How far he has acted prudently the only surviving member of that Committee to make public his account of transactions that involved so much and such contrary f-

and opinion which, if incorrect, however intentionally, there is no living conductor to rectify, we do not undertake to judge.

Though we differ from Dr. Ash on several important points of doctrine, and cannot admit to be a true Friend, yet forming our opinion altogether from his writings, we have always respected him for his frankness and honesty, in stating the points wherein he differs from the acknowledged faith of the Society; and his withdrawing from membership, so long as the main part of the members in England continued to maintain that faith, set forth by Barclay and other primitive visitors.

We attach no undue importance to the elements of any individual; but the concurrent testimony, of many, though given separately, and without intention to prove the existence of an unhappy disunity on doctrine our Society, is fairly available, to open the way, if possible, of those who *would* see the sadity.

Before giving the extracts from the article referred to, we may notice a misstatement in an essay recently published, where, speaking of the observations made in the first number of this volume, in reference to the letter of Fielding Thorp, the writer says: "Yet individual and unauthoritative expression animating F. Thorp's letter" has been (*unavoidably it must be admitted*) taken * * * as high it defined and committed the convictions, not only of London Yearly Meeting, of the great body of Friends," &c. We think that letter no such importance or *unavoidable* construction. Our language was *adds to the cumulative evidence* of the real character of the obstruction to the restoration unity and harmony within our religious society, as now constituted."

Speaking of the origin of the controversy in Manchester, E. Ash observes:

"The primary cause of the events which I about to relate is undoubtedly to be found in the previous existence in our religious Society of two different theological elements or schools of regarding christian truth, which was sufficiently indicated for my present purpose by saying, that the one is to be found embodied in the doctrinal portion of Barclay's theology, while the other is represented by the term 'Evangelical' in its modern conventional use. The former had therefore come from the Society's first age, while the latter had chiefly manifested itself since the middle of the present century.

To whatever extent these two elements were in themselves reconcilable, or were (as now) so regarded by a large portion of our members, there was another large portion to whom they appeared, and in whose manner of understanding them they no doubt were in reality, were, strongly antagonistic. It is of course impossible that such a state of feelings should long exist without giving rise to feelings of disunity among Friends of the same class, or that those feelings should not sooner or later openly manifest themselves, especially among the Society's Ministers and elders."

With the views which Dr. Ash has long held, differing from those promulgated by Barclay and others of the early Friends, and which he has labored so freely and so successfully to spread among the members of our Society, it was to be expected he would look with disfavor on any decided course being

pursued leading to the expulsion, by disownment or otherwise, of I. Grewsdon and those who united with the doctrines promulgated in the Beacon. Accordingly after speaking of the disunity that existed, the removal of which was one of the objects for which the Committee had been appointed, he observes:

"Now in what did this reported want of unity exist? Clearly not in the absence of that oneness of christian faith and hope and rule of life which the New Testament everywhere represents as constituting the bond of christian fellowship, but in different ways of looking at some particular parts or aspects of christian truth, and in the approval or disapproval of certain acts of individual persons. Now had these minor differences been of such a nature as practically and necessarily to disturb the Church's peace and good order, or had the parties complained of done anything, either in teaching or in practice, which was plainly opposed to the Society's views as authoritatively declared by the Yearly Meeting, it would manifestly have been right to use every proper means for bringing them to an end. But as this was certainly not the case, the right course would surely have been for the differing parties to exercise mutual forbearance, and for the Church patiently to bear whatever inconvenience or trial their differences necessarily involved; and I venture to think that this would be the course now taken in like or analogous circumstances. Apparently, however, the Society was not then prepared for it, owing to the restricted ideas about Church-unity which then so largely prevailed among its members; while one of the Queries to Ministers and Elders then in use served practically to cherish those ideas by affording a means for treating almost any difference of judgment or conduct as implying a want of unity. I cannot believe that this was its original intention; but since it was in practice put to such an use, we may be glad that it no longer has a place in our Church economy."

This is the kind of reasoning we hear so much of at the present time, in reference to the departures from the Faith of Friends among the members, and the "charity" that ought to be maintained towards them and their advocacy of newly imported opinions. We would greatly regret were Friends to become so narrow minded, so stripped of the spirit of the Author of the religion they profess, as not to recognize all who love the Lord Jesus in sincerity, be their profession what it may, as coming within that oneness of christian faith and hope which constitutes the bond of christian fellowship; but we cannot believe the cause of christianity would be bettered or in any way advanced, by mingling all such—Catholics, Episcopalians, Methodists, Presbyterians, &c., in one heterogeneous society. And yet they differ from Friends and each other, only "In different ways of looking at some particular parts or aspects of christian truth, and in the approval or disapproval of certain acts of individual persons."

There are two points of interest in the following, viz: the source of the first suggestion to Dr. Ash, that the doctrine of the "Inward Light," as set forth by R. Barclay, is unwarranted by scripture; and that his frank avowal of his disbelief in it, produced no evidence of an interruption of unity towards him.

"I had some time before arrived at the conclusion (*originally suggested to me by J. J.*

Gurney) that Robert Barclay's doctrine of the 'Inward Light,' was not, as a whole, warranted by the teaching of scripture. The subject of that doctrine sometimes unavoidably came before the Committee; and on one of these occasions I felt it to be my duty frankly to avow my view of it to my brethren. Much as it must have surprised and even pained some of them, I have no reason whatever for thinking that it interrupted their feelings of unity and brotherly confidence towards me; and when we consider the high authority which Barclay's Apology had then possessed in our Society for almost two centuries, this is surely saying a good deal."

There is much suggested by the following: "Would that those of our members who still declare that they adhere to the faith of the Society as set forth by its founders, but who nevertheless give their influence to recommend and defend the many innovations made upon it, would ponder its true teaching; consonant as it is with the mournful testimony of widespread passing events; that this supposed 'clearer general understanding of christian truth'; this 'broader and more comprehensive,' or 'more intelligent way of looking at christian subjects,' is nothing more than going back to the imperfect views of the spiritual religion of Christ, out of which our forefathers were brought by the inshining of the Light of Christ in their souls, and against which, though then as now represented as much more 'intelligent,' 'more comprehensive,' and more desirable to the natural man, they had to bear testimony. And if Friends would remain a distinct people, supporting the doctrines and testimonies of the gospel in their spiritual application and pure results, they must bear a like testimony against these retrograde movements now. Would that we all could harmonize in the support and defence of those doctrines and testimonies so dear to our predecessors, so invaluable to the whole christian world.

"The thirty-five years which have passed since the Beacon controversy began have witnessed great changes in our religious Society; greater, I think, than have been often seen in a like space of time in any part of the Universal Church. Some of them have undoubtedly been for the better; such as the large increase of activity and zeal among our members; a clearer general understanding of christian truth; a broader and more comprehensive—may I not also say, more intelligent—way of looking at religious subjects in general; and a growing disposition to leave matters which are not plainly parts of Christ's truth and law, to men's individual judgment and conscience, instead of endeavouring to bring about uniformity of opinion and practice by Church rules and regulations. Yet it may well be questioned whether our Society is in all respects changed for the better. Rather would it seem to me that in some things we come short of 'the days of our fathers'; that there is, on the whole, less among us of deep spiritual experience, feeling, and exercise; of close, humble, and watchful walking with God; and of that practical testimony against conformity to the spirit and ways and fashions of the world, which must ever remain to be an integral part of the calling and duty of Christ's people on earth. This much is certain, that in whatever degree these things are lacking amongst us, in the same proportion will our spiritual life and strength be the less,

and, by necessary consequence, our power, as a Church, to serve Him, and promote the advancement of his truth and kingdom among men."

SUMMARY OF EVENTS.

FOREIGN.—It is stated that the investment of Paris has been completed to the full extent requisite for strategic purposes. The French made an attempt at resistance at Chatillon, but it was not well sustained; the Paris volunteers fled almost as soon as the battle commenced, and the other troops were obliged to retreat. It is said that all defensive movements henceforth will be behind the walls. The Prussians occupy all the heights overlooking the Seine from Bellevue to Montreuil. The number of men under arms in Paris is stated at 48,000, almost as many as in the other provinces. The people in Paris have commenced sending mails from the city by balloons. The *Constitutionnel*, at Tours, publishes a note received by this means, which confesses that the city is completely surrounded, and says communication with the outside world can only be by means of balloons. The Prussian head-quarters has proved abortive, and declare that the French people prefer extinction to humiliation. A dispatch to the *New York Tribune*, attributes the failure of the negotiations between Bismarck and Favre, to the extreme weakness of the French government, which dared not follow its own judgment. Favre admitted at the outset, that he and his colleagues could give no guarantees of permanent peace, but desired an armistice till the Constituent Assembly could be chosen and meet. Bismarck was willing to grant an armistice on condition that Strasbourg, Toul and Verdun, were surrendered to the Prussians. Metz was not to be included. He did not interrupt their communications with Germany. It is believed that Favre would have accepted these terms, but he had no final authority from his colleagues, and returned to Paris to consult. In the meantime the difficulty of maintaining authority in the city had greatly increased. The French representatives are in the ascendant, oppose all negotiations, and the government was forced to reject the proposals. The French government has issued a decree that all municipal elections, as well as those for the Constituent Assembly, shall be suspended and adjourned. The Ministry has also issued a proclamation to the people, stating that France will rather bury herself beneath her ruins than accept the insolent conditions of Germany.

The city of Toul has capitulated on the same terms that were granted at Sedan. An official Prussian dispatch gives the number of prisoners as 23,49, including Prussian officers. A large supply of ammunition fell into the hands of the Prussians, together with 197 guns, 3000 rifles and other weapons, and much war material. A dispatch from the Prussian head-quarters, near Metz, reports the failure of another attempt of the French to escape from Metz on the 23d.

The French in force made a sortie from the city gates and beyond the walls. The Prussians were checked and they were driven back, after a severe contest of four hours. General Bazaine then dispatched a courier to the Prussian head-quarters, with an offer to capitulate upon condition that his troops shall be allowed to retain their arms, and be released upon parole with the promise not to resume hostilities within three months. This offer would probably be rejected.

Thiers on returning from his unsuccessful mission to England, was dispatched to Vienna, where he had an interview with Count Von Beust, and presented his appeal for the mediation of Austria on behalf of France. The Prussians are together with 197 guns, 3000 rifles and other weapons, and much war material. A dispatch from the Prussian head-quarters, near Metz, reports the failure of another attempt of the French to escape from Metz on the 23d.

The cholera is spreading rapidly in St. Petersburg. 2000 cases were reported in the hospital on the 24th ult.

A general revolt of Arabs has occurred at Algeria,

and the Chasseurs d'Afrique have consequently been sent back from Marselles.

The French journals express apprehensions that Tours may be attacked by the Germans, in which case they say the government will remove to Bordeaux.

Rome is now occupied by Italian troops. The pope has permitted to retain a guard composed of Italians solely, all the rest of his army has been dismissed. The prisoners taken in the capitulation of the papal army numbered about 9,300, consisting of 1,800 Italians, and 4,500 foreigners. A general vote of the people of Italy will decide whether Rome shall be the capital of Italy. The political prisoners at Rome have been liberated, among them Petroni, after seventeen years imprisonment.

More than a thousand cases of yellow fever have been reported in Barcelona, Spain, and of these about four hundred resulted fatally. The disease appeared to be spreading rapidly to other places on the Mediterranean and coast of Spain.

Havana is suffering severely from cholera and other diseases; last week the number of deaths from cholera alone was 560.

Tours dispatches of the 20th, state that there is nothing to fear from Paris. The Prussians had not undertaken anything serious in that direction. A dispatch to the *New York World*, from their correspondent at Rouen, states that a column of ten thousand Prussians had been signally defeated with heavy loss, on the line of the Orleans Railway, about sixteen miles from Paris.

The siege of Strasbourg continues. It is said that the Cathedral has been almost entirely injured by the bombardment. The astronomical clock in the tower was still going.

Tours is crowded with refugees. Hotels and private houses are filled to overflowing, and at night many people are compelled to sleep in the streets.

On the 21st ult. a vessel was longer in Paris, all the horses in the city having been seized for the purpose.

London, 9th mo. 20th. Consols, 92. U. S. 5-20's, of 1862, 90; ten forty's, 85.

Liverpool. Middling uplands cotton, 9 1/2; Orleans, 9 1/4.

UNITED STATES.—*Census Returns*.—The following are some of the results of the census as reported by telecommunication. Illinois has a total population of 2,567,632. In 1850 this State had 851,470 inhabitants, and 1,711,954 in 1860. The city of New York has 885,026 inhabitants; the city of Washington 109,538; Cleveland, Ohio, 93,018; New Orleans, La., 92,000; New York, N. Y., 82,000; Toledo, Ohio, 81,935; the Territory of Montana, 20,500 white population. If the population of Brooklyn be added to that of New York, of which it may be regarded as a suburb, it shows 1,281,087 persons in the two cities. *United States Minister to England*.—The President has appointed to the appointment to Oliver P. Morton, U. S. Senator from Indiana, and he has signified his acceptance thereof.

Philadelphian.—Mortality last week 265. Of crop, 10 consumption, 29; marasmus, 19; cholera infantum, 12. *The Cotton Crop* for the year ending 9th mo. 1st, 1870, officially reported at 3,134,946 bales, being the largest since the ordinary crop of 1857. The production of 4,800,000 bales. During the civil war the production of cotton was greatly reduced, falling in 1863-4 to 500,000 bales, and to 300,000 in the following year. The exports of cotton during the past year amounted to 1,174,745 bales, leaving about one million bales of the crop for home consumption.

Gold and Silver.—The commissioner of mining statistics gives the product of precious metals in the United States last year at \$63,500,000 distributed thus: California, \$20,000,000; Nevada, \$14,000,000; Oregon and Washington territory, \$4,000,000; Idaho, \$7,000,000; Montana, \$12,000,000; Colorado, \$2,500,000; Arizona, \$3,000,000; New Mexico, \$500,000; and Wyoming, \$3,000,000; other sources, \$1,000,000.

The Markets, &c.—The following were the quotations on the 26th ult. *New York*.—5-20's gold, 113 1/2; 10-40's, 188 1/2; ditto, 5-20's 1868, 110 1/2; ditto, 10-40's, 106 1/2. Superfine Star flour, \$4.30 a 95; shipping Ohio, \$5.25 a \$5.50; finer brands, \$5.75 a 8.00. White Michigan wheat, \$1.53; amber western, \$1.31 a \$1.35; No. 1 Milwaukee, \$1.27; No. 3 Chicago, \$1.07. Oats, 51 a 55 cts. Western mixed corn, 88 a 90 cts; yellow, 95 cts. Cotton, 17 1/4 a 18 1/2 cts. Carolina rice, No. 1, 97 a 98 cts. Cuba sugar, 9 1/4 a 9 1/2 cts. New Orleans cotton, 18 1/2 a 19 cts. Uplands, 21 1/2 a 25 cts. Superfine flour, \$5.25 a \$5.50; finer brands, \$5.75 a \$5.50. Amber wheat, \$1.46; Indiana red, \$1.38 a \$1.40. Yellow corn, 99 cts; western mixed, 95 a 97 cts. Oats, 51 a 55 cts. Clover seed, \$6.75. Timothy, \$4.62 a \$5.00. The arrivals and sales of beef, mutton, and other articles at the Avenue Drove-yard reached 2440 head.

Extra sold at 9 a 9 1/2 cts.; fair to good, 7 a 8 1/2 cts (common, 5 a 6 1/2 cts. per lb. gross. Sales of about 100,000 lbs. of 63 cts. per lb. gross, and 200,000 lbs. at \$11.50 a \$12.50 per 100 lbs. net, the latter for *Calcutta*.—Choice Maryland wheat, \$1.60 a \$ good to prime, \$1.35 a \$1.55; white, \$1.40 a \$ yellow corn, 93 a 95 cts. Oats, 47 a 49 cts. Ohio No. 2 spring wheat, \$1.06. No. 2 corn, 64 1/2 cts. No. 2 yellow corn, \$1.06. No. 2 wheat, \$1.14 a \$ corn, 70 a 72 cts. Rye, 75 a 80 cts.

The Superintendent of Friends Asylum, in this is desirous of obtaining the services of a well qualified Physician as an assistant. Applications will be received from respectable graduates in medicine.

Address SUPERINTENDENT, M. J. H. WHINSTON, M. D. Superintendent, Frankford, Phila.

RECEIPTS.

Received from Benjamin D. Stratton, Agent, O. Nathan B. Whitney, \$2, vol. 44; from George G. Agent, Pa., for Wm. Cope, \$2, vol. 44; from E. Woodworth, Mass, \$2, No. 44, vol. 44; from R. Mott, Agent, Io., for Joseph Patterson, Samuel De Rich'd Patton, Isaac Vernon, and John Hampton each, vol. 44; from Sarah C. Winner, Pa., \$2, vol. 44; from J. H. S. Wood, N. Y., \$2, vol. 44; from John L. J. O., \$2, vol. 44; and for Joseph Taylor, \$2, vol. 44; Hannah J. Roberts, Philada., \$2, vol. 44; from J. R. Kite, Agent, O., for Thos. Llewellyn, Rich'd Pen Jason Penrose, Joseph King, Aaron P. Dewees, J. Jaret Cotton, Jesse Dewees, Mary Wilson, Will Masters, David C. Green, near 18 King, Wm. Pickle each, vol. 44; from Mead Atwater, Mich., \$2, vol. 44; from Wm. Wood, N. Y., \$2, vol. 44; from Wm. N. Phila., \$2, vol. 44; from David Darnell, N. J., \$2, 44; from Hannah G. Wood, \$2 each, vol. 44; from Joseph Chambers, Pa., \$2, vol. 44; from Mahlon Moon, Pa., \$2, vol. 44; from Jesse Haines, Pa., \$2, vol. 44; from John Stokes, for Robt. Milhous, O., \$2, vol. 44; from Jos Winder, O., \$2, vol. 44.

Remittances received after Fourth-day morning will appear in the Receipts with the following week.

WESTTOWN BOARDING SCHOOL.

THE WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next.

Parents and others intending to send children to School, are requested to make early application to AARON STARBUCK, Superintendent, whose address is "Street Road P. O., Chester Co., Pa." When more convenient, application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 A St., Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

New Frankford, (Twenty-third Ward,) Philadelphia

Physician and Superintendent.—JUSTUS H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, Clerk of the Board of Managers, to 1313 Pine Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting-house, Sewickley, I on the 15th of Ninth month, DR. WILLIAM SAVERY

Philadelphian, to REBECCA, daughter of the late Joel Linton, of the former place.

DIED, at the residence of her son, WILLIAM R. TATE Woodbury, N. J., on the 4th of Ninth month, 1870, the 91st year of her age, ANNE TATUM, a beloved wife of Woodbury Monthly Meeting. Having, when young dedicated herself to her Lord, and walked through long and painful trials, she could say, "I loved a cross, and in the tranquil close she could say, "I love a Peace, sweet peace."

On 9th mo. 12th, 1870, at Germantown, MARY BONSAAL, wife of Edward H. Bonsaal, in the 72d yr of her age, a member of the Western District Monthly Meeting, Philadelphia.

WILLIAM H. PAILE, PRINTER.

No. 422 Walnut Street.

THE FRIEND.

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend,"

Excerpts from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 44.)

"12th mo. 31st, 1848. Our meeting at West-
minster to-day seemed to be favored with a
warm covering; wherein I felt that a re-
vival visitation was extended to some pre-
sent. May they not only hear the call, but
willing to obey it; lest the things which
ought to their peace be hid from their eyes.
The present has been an eventful year to
me. What the coming one may bring forth,
I know not. Mayst thou be pleased, O
merciful Father, to be with the widow and
orphan, supporting us through every trial,
enabling us to dedicate the few remain-
ing days of our life unto Thee and Thy ser-
vice! That so, through Thy adorable good-
ness and mercy, we may at the last, be pre-
pared to lay down our heads in peace.

"3d mo. 3d, 1849. I have long believed
it was not best for us, poor frail mortals,
to look for much gratification of self; but
to cling steadily, through this probationary
time, to eye our Divine Master; remembering
that not our own; but are brought with a
new life. This morning I feel my mind renev-
ely exercised in desire to be what the Lord
will have me to be, and to be more and more
ready to endure baptism and suffering, that
all which remains in me that opposes His
will may be removed; and I be enabled
to say, with holy magnanimity of soul, not
in will, O righteous Father! but thine be-
nevolence."

"5th mo. 20th. Having been prevented
from entering any account of our late Yearly
Meeting until now, may say I attended all the
sittings of it. Many minds went up thereto,
and believe, clothed with fervent desires that the
Head of the church would condescend to
be with the gathered assembly; which, ac-
cording to my feeble sense, was mercifully
answered; several sittings of the meeting being
conducted with His solemnizing presence. Our
Yearly Meeting, last year, referred the difficulty
of separating the separation in New England
Yearly Meeting, to the Meeting for Suffer-
ers, that they might examine the epistles
and other documents bearing upon the subject,
which have issued from each Body, claiming

to be New England Yearly Meeting. A long
account was produced, setting forth the diffi-
culties which led to the separation, and ex-
pressing the belief that the Larger Body, in
laying down meetings and disowning mem-
bers, had departed from the discipline of their
own Yearly Meeting. Notwithstanding, as
was stated, that it would be an unsafe prece-
dent to follow, in the setting up of a Yearly
Meeting as the Smaller Body was, yet that
the members of it, who had been disowned
by the Larger Body, should continue to be
members of our religious Society, and to such
acknowledgment by their brethren, as may
be necessary for securing the enjoyment of
those rights. The report was approved of by
the Yearly Meeting, and a copy directed to
be sent to each of those bodies claiming to be
New England Yearly Meeting; with a recom-
mendation to each, to examine closely, in or-
der to see if something cannot be done for the
restoration of harmony between them. The
foregoing is the substance of what took place
on the painful subject, as well as I heard, and
can now remember. The document was read
in the women's meeting, and the silent approbation
I believe of many hearts, was manifest
in the thanksgiving that arose to our alone
Helper, that our brethren had been enabled
to progress thus far in the closely proving
difficulty which has surrounded for several
years.

"After the Yearly Meeting closed, I went
to my son-in-law Samuel Rhoads', and spent
a few days, visiting some whom I had not
time to see before I left the neighborhood.
At one place, J. P.'s, my mind was impressed
with desires for the preservation of him and
his wife, which I ventured to express at the
table. It appeared to be well taken, and I
left them in the feeling of tenderness and
quietness of mind. Upon returning home
found my family in usual health, which is
cause for thankfulness.

"5th mo. I attended Cain Quarterly Meet-
ing on the 17th and 18th, wherein I had much
to feel, having been a member of it nearly
forty years. I think it is in a weak state.
Many of the elder class have been removed
by death, and in other ways, and too many
of the middle aged and younger ones, are I
believe making excuses, and not coming up
in that faithfulness which Truth requires.
The following Second-day I attended the Select
Quarterly Meeting at Concord; but being
taken with a chill the next morning, followed
by fever, I was not able to attend the meet-
ing that day, but was favored to get home
near evening in quietude of mind which I
esteem a great favor.

"6th mo. 24th. I ventured again to meet-
ing, and upon first sitting down felt my mind
clothed with solemnity. After my beloved
friend and relative, S. Emlen (she and her
family having recently come to West Chester
to reside) expressed by way of testimony what
was on her mind, I thought the spirit of sup-

plication was poured forth; and after a time
being made willing to express vocally what
arose, though in a broken manner, my mind
was favored with a degree of holy quiet,
wherein the language hath been brought to
my remembrance, 'In thy presence is fullness
of joy; at thy right hand are pleasures for-
evermore.' Gracious Father! keep me near
unto Thyself, I beseech Thee, and preserve
me from bringing dishonor on Thy spotless
Truth.

"9th mo. 2d. Having been prevented from
time to time, by various circumstances, from
making any entry in this way since the last
date, I may say it has been a time of exercise,
and often of much poverty of spirit, with close
proving of heart. A further trial, of no or-
dinary nature, has been permitted in the re-
moval by death, of my dear and well-beloved
friend and relative, Sarah Emlen; which took
place on Sixth-day night, the 27th of Seventh
month last, in the sixty-third year of her age,
of paralysis; by which she was deprived, a
few days before her death, of the use of her
right side, and her speech. She was a bright
example of dedication and love to her Divine
Master; and was frequently engaged in pro-
moting his blessed cause of Truth and right-
eousness. We labored together in the hope of
the Gospel, I trust, according to my ability
for it, in sweet unity. Although it is a close
trial to be deprived of such a fellow helper,
yet who can say, 'what doest thou?' A solemn
meeting was held after her interment.

"Yesterday the remains of our aged friend,
Abraham Sharpless, were interred. Though
over ninety years of age he was remarkable
for his activity, and I trust holy zeal in get-
ting to meetings, until within a few weeks
of his death. He appeared much concerned for
his own spiritual welfare, and that of others.
In sitting by him in his last illness, and while
appearing weighty and tender in spirit, he
with an audible voice expressed as follows:
'Peace be to them that are afar off, and peace
be to them that are near, and peace be to the
Israel of God.' It was precious to sit by him
and witness the sweet solemnity which pre-
vailed. I trust he is gathered as a shock of
corn fully ripe unto the heavenly garner.

"Having endeavored to be faithful at the
time of the funeral to that which seemed re-
quired, both at the house and at the grave, I
was favored to return with sweet peace. May
the praise be given to Him to whom it alone
belongs; being often sensible that of myself
without Divine aid, I can do nothing. That
I be kept in a humble, child-like state, is the
present breathing of my spirit.

"9th mo. Towards the latter part of this
month, I paid a visit to my children at Coates-
ville, and to my relatives at London Grove.
While at the latter place, I attended two meet-
ings appointed by our aged friend, Christo-
pher Healy; one at New Garden, and the
other at London Grove. The latter, the place
of my nativity, was an exercising one to me:

but endeavoring to be faithful, I was favored to return home, which I did that afternoon, without feeling condemnation.

"10th mo. 15th. I visited two friends who were under affliction, Priscilla Walter and Ann Bennett. The latter, an aged friend, seemed almost overwhelmed with suffering of body and mind: her only remaining child then lying a corpse; and she having had a fall the day before, by which she was inwardly hurt. My mind was dipped into near sympathy with her, and the passage respecting the disciples formerly, when they were tossed on the sea and were afraid, presented to me, which it seemed right to mention; and when they called on their Divine Master in faith, He arose and rebuked the winds, and the sea, so that there was a great calm: and that He was still able to calm the troubled mind of His humble, depending children. It seemed to me a time of renewed favor, and dear Ann said it felt like a brook by the way. The next day I attended the funeral of her son Gilpin Bennett, where a large company collected. My mind being closely exercised, I felt constrained at the grave to remind them of the uncertainty of this life, and the necessity of being diligent in preparing for that which is to come, while time was in mercy given. On our way home, W. P. T. being with me, I felt inclined to stop at a house to which my mind had often been drawn, though the inmates were strangers to me. After sitting a little while with them, and expressing what arose, the language presented, 'Surely the Lord is in this place, and I knew it not.' The visit appeared acceptable; my mind was relieved; and I trust no harm was done; which I esteem a favor, after having passed through considerable exercise on the occasion.

"10th and 11th months. In the course of these months, our friends Christopher Healy, Samuel Bettle, and Samuel Leeds, attended our meeting. In each of the meetings attended by them, much labor was bestowed, and an evidence mercifully granted that the Shepherd of Israel is still calling unto us through His devoted servants, for increasing faithfulness to His blessed will. May fruits appear equal to the favors received, that so none of us may be as the fruitless fig-tree, of which it was said, 'cut it down, why cumbereth it the ground.'"

(To be continued.)

Japan.

(Concluded from page 46.)

The Japanese china is beautiful, though not equal to the Chinese, except the 'egg-shell china,' which surpasses for delicacy and transparency, any that I saw in that country. There are other kinds of china that I have rarely seen in England, and which are, I think, though perhaps less curious, quite as beautiful as the 'egg-shell.' Among them the rarest, and most difficult to procure, is lacquered china. I bought the only four pieces we could find or hear of in Yedo, when we were there. They were small round tea-cups, and, like all tea-cups in China or Japan, without handles; they were white inside, and black, with leaves beautifully painted in red, on the outside. There is also a kind of china with the flowers, birds, or whatever the design upon it may be, raised above the ground of the plate, saucer, or bottle; and this is done both in thick and transparent china.

But of all the works of art in which the Japanese excel the Chinese, the lacquer is the most striking. Some of that now made is very fine, but not to be compared with the real old lacquer, which is very rare. This is hardly ever brought into the market, except when some old family is in such distress for want of money that they bring pieces of antique lacquer (which is as highly esteemed by them as family plate with us) to be sold at Yedo or Yokohama. There are on some of the noblemen's estates, manufactories of lacquer, from which their owners derive great wealth. Some are celebrated for the excellence of the lacquer. Articles made there are always marked with the crest or crests of the owner of the estate, so that that which is most sought after, such as Prince Satsuma's lacquer, may at once be recognized by seeing his crest upon each piece. We were in Japan just after Sir H. and Lady Parker had been paying a visit to Prince Satsuma at Kagosima, his country-house in the island of Kiu Siu, not many hours distant from Nagasaki. The description of the lacquer in his house was quite tantalizing to those who would never see it, but we could in some measure judge of its beauty from two bowls which were then given to Lady P., and which were far more beautiful than anything to be seen in the shops. In a Japanese house nearly all domestic utensils are made of lacquer. When it is good, it is said to become all the more beautiful by use, and the constant rubbing and cleaning, burnish the specks of real gold and silver inserted here and there, and polish the surface to an extreme brilliancy.

We here close our extracts from "The Antipodes and Round the World," a chatty, readable, pleasant book. The ideas we get of the Chinese and Japanese are the more interesting as the public mind is just now much agitated about these Asiatics, and strong efforts are being made to prejudice the community against them. We have no wish to go into the political aspect of the controversy, but we think the notion that these peoples are uncivilized can hardly be acknowledged after the insight into their private, every-day life, our author has afforded us; the fresher, as coming from one whose opportunities of seeing and judging have been better than has fallen to most previous travellers, who have given us a record of their observations.

We must recognize both nations as civilized and educated; the defects in their social systems belong to their religious status—not their civil condition. The want of both these interesting people is Christianity—the changing, purifying, sweetening influence of true religion. The removing of the strange superstitions which belong naturally to a false system of religious belief, and the substitution of the elevating influences of Truth in the place of them. But how painfully does the question present itself, how are these advantages to be brought home to them? The Chinese have lately sent an embassy to the powers of Europe—did they see ought to draw them towards Christianity in their reception? Was not the old idea of war and bloodshed, might, not right, strengthened by seeing our navies, our armies, our devices for killing one another? The Japanese also; their ports are thrown open to the so-called Christian world, but by what means? By force, and fear of our military power. Will they believe us if we tell them we are the followers of the Prince of

Peace? Will they think our religion any better than their own superstitions, if they only see us more refined in our cruelties—more dreadful in our skill in destroying human life, than themselves? The Japanese are even now modeling after us in these *unchristian* ways; but alas! seeing no improvement in our religion, as an element in advancing human happiness, over their own superstitions, the almost of necessity reject it.

Ought these things so to be? When was the time come when the professors of Christianity shall know their governments to have advanced so far in the direction true religion would lead them, as that "they shall be their words into plowshares, and their spears into pruning hooks—nation shall not lift up sword against nation, neither shall they learn war any more?" Then can we consistently go unto them that dwell afar off in the dark places of the earth, with the glad tidings of the Gospel of Peace, but till then, how are we keeping them away from us, and prejudicing their minds against the Truth? Alas! we not, as a people, guilty of our brother's blood in this thing?

For "The Friend."

Tender Counsel and Advice by Way of Epistle.

(Continued from page 42.)

All these things are for your good, that proud flesh may be debased, and that the soul may be redeemed. Wherefore bear the hardness of the Lord; whom he loveth, he chasteneth his anger lasteth not forever, but his mercies endure forever. Shrink not from the punishments of his holy word; let it divide asunder between the soul and spirit, the joints as marrow in you; suffer your right hands to be cut off, and your right eyes to be plucked out, that do offend; let not the pain scare you. O bear the pure searchings of this heaven word! yea, if your minds be stayed in it, you will find it to be a word of patience, which will keep you; for all virtue is in it. Keep it, and be still. "It is good," said one of old "that a man should both hope, and quiet wait, for the salvation of God. Yea, it is good for a man that he bear the yoke in his youth (this is your youth) and such an one sitte alone, and keepeth silence, because he has borne it upon him." Ah! blessed are they that bear this holy yoke, who are come to this silence, who die daily; that not they, but Christ, may live and rule in them; thereof hear him, and take up his cross, and follow him. Follow him, keep him company; I hath beaten the path, and trod the way; stand aside at his cup, neither shun his baptism go with him to Caiaphas, to Pilate, and to the cross; die with him to the world, and you shall rise with him unto life eternal. Honor, glory, and immortality are at the end of this race! Oh that you may run it with cheerfulness and perseverance!

But this is not the utmost stratagem of the enemy; he hath yet a more plausible, and more dangerous device, wherewith to destroy the holy sense that God hath quickened, who he seeth these temptations resisted, and that he cannot hinder a religious work in the soul by any of his baits taken from the things that are seen; and that is, his drawing you in imaginations of God, and Christ, and religion, and into religious duties, not in God's way; time; nor with Christ's Spirit. Here he transformed into the appearance of an angel of light, and would seem religious now, a saint

ea, a leader into religion, so that he may put
 up him out of his office, whose right it is to
 care, prepare, enable, and lead his children
 with his holy power and spirit. Yea, if he can
 keep the creature's will alive, he knoweth
 ere is a ground for him to work upon; a
 race that he can enter, and in which his seed
 will grow. If this will of man be standing,
 he knoweth that the will of God cannot be
 one on earth, as it is done in heaven. O this
 ill is God's enemy, yea, the soul's enemy;
 and all will-worship ariseth hence: yea, it is
 the offspring of the serpent, and of the will of
 man; and it can never please God. Let all
 ware of this; God is a Spirit, and he will be
 worshipped in his own spirit, in his own life,
 in the worship of God standeth in the will of
 God; and is not brought forth of the will of
 the flesh, or of the will of man. Remember
 that the word came not to Esau, the first-born,
 the hunter, that stayed not at home; but to
 Jacob, the plain man, he that dwelt in tents;
 him came the word of the Lord, that dwelt
 in a still and quiet habitation. For in the
 silence is God's word heard, into which
 the hunting nature of Esau, the first-born, can
 never come. It can never stand still, and
 therefore it can never see the salvation of
 God. Against this nature watch; and know
 Jacob, that inherits the birth-right; the elec-
 tion of God (though now a worm) to wrestle
 shall prevail. The worm Jacob, is Israel a-
 lone, to whom belong the statutes and the
 ordinances. "The word came to Jacob, and
 he statutes to Israel:" here is dominion, gov-
 ernment, exaltation: this is the lot of worm
 Jacob. Wait, therefore, "till the angel come
 on the waters," before you step one step
 ye followers of the Lamb, that hath visited
 us, the Captain of your salvation? Run not
 your own wills; wait for his word of com-
 mand, do nothing of your own heads and con-
 vings, yet do all with diligence that he re-
 teth. Remember what became of them of
 that, offered false fire; O stay till a coal
 in his holy altar touch your hearts and
 our lips! Jesus told his mother, at the mar-
 riage in Cana in Galilee, "His hour was not
 yet come;" he rejected the will in her, and
 did, till his time was come; that is, his
 other's time, "in whose hands are the times
 and seasons;" whose will be came to do, and
 at his own; leaving us therein a blessed ex-
 ample, that we should also follow his steps;
 it is, not to attempt to perform even things
 of God in our own wills, nor out of God's sea-
 son and time, which is the best: for in his
 seasons he is with us; but in our own seasons
 and wills he withdraweth himself from us.
 And this is the cause that the nation's wor-
 shippers have little sense of God in their
 hearts, and that their priests cry out against
 a vain sense; lest the people should go alone,
 and come to a more acceptable worship.
 My dear friends, as you would enjoy God's
 presence, love, and life, and be acceptable with
 him, wait in his holy light and Spirit, that
 hath visited you, against these stratagems of
 Satan, and wake not your beloved before his
 face: watch against the will, that instrument
 of Satan, and enemy of God's glory, and your
 own comfort. Let it be bridled, subjected,
 and kept under Christ's yoke, yea, subdued,
 that the will of God may be done in you and
 in you, which bringeth glory to the Lord,
 and eternal peace to the soul. One sign,
 rightly begotten, outweigheth a whole volume
 of self-made prayers; for that which is born

of the flesh, is flesh, and reacheth not to God's
 kingdom, he regardeth it not; and all that is
 not born of the Spirit is flesh. But a sigh, or
 a groan, arising from a living sense of God's
 work in the heart, it pierceth the clouds, it
 entereth the heavens; yea, the living God
 heareth it, his regard is to it, and his Spirit
 helpeth the infirmity. He loveth that which
 is of himself, and hath care over it, though as
 poor as worm Jacob. "For the cries of the
 poor, and the sighings of the needy will I
 arise," saith the Lord: the poor in spirit, that
 have parted with all, that they may win
 Christ; that need him only, and seek him
 above all, who have no helper in the earth,
 but have denied all earthly helps, that he
 might bring and work their salvation for
 them. And as you are not to run in your own
 wills, nor to offer up sacrifices of your own
 preparing, so have a care how you touch with
 those that do; how you bow to their wills,
 and join with their sacrifices. For all these
 things greatly help to extinguish the divine
 sense begotten in your hearts by the word of
 life. And as you are faithful to the light and
 spirit of Christ, which giveth you to discern
 and relish between that which standeth in
 your own will, and the will and motion of the
 Spirit of God in yourselves; so will you, by
 the same light, discern and savor between
 that which proceeds from the will of man, and
 the will and motion of the Spirit of God in
 others; and accordingly either to have, or not
 to have, fellowship with them; for what hath
 light to do with darkness? Or what hath
 light to do with flesh? Or what hath life to
 do with death? "For the grave cannot praise
 thee, O Lord; death cannot celebrate thee:
 they that go down into the pit cannot hope
 for thy truth. The living, the living, he shall
 praise thee, as doth my soul this day." This
 was the testimony of the blessed prophet
 Isaiah, and it standeth true forever: accord-
 ing to the prophet, "Thou hast ordained peace
 for us, for thou hast wrought all our works
 in us."

(To be continued.)

Report of the Board of Managers to the Association of Friends for the Free Instruction of Adult Colored Persons.

The schools under our care were opened in
 the building at the corner of Raspberry and
 Anora Streets, on the 4th of Tenth month,
 1869, and were continued during the usual
 period of five months. The men's school has
 been taught by William J. Alsop, as Principal,
 with three assistants; and the women's by
 Rachel M. Griffith, with two assistants.

The usual elementary branches of spelling,
 reading, writing and arithmetic, have been
 the chief studies pursued, and some attention
 has been paid to geography, mental arithmetic,
 and the tables of weights and measures.
 Considerable information on a variety of use-
 ful subjects has also been imparted by a series
 of questions and answers, in which the scholars
 were often exercised towards the close of the
 evening, and members of the Association have
 on several occasions, occupied an hour in
 familiar lectures on topics not connected with
 the usual routine of study. On one evening
 the magic lantern was exhibited to both
 schools, collected in the lower room.

One hundred and sixty-nine men, and one
 hundred and thirty-six women have been en-
 tered during the past season, making a total
 of three hundred and five. This number is

less than for several previous years, a gradual
 diminution having been noticed since the
 winter of 1864-5, when five hundred and forty-
 six names were registered, the largest upon
 our records.

The attendance at school of persons of this
 class, many of whom have not the control of
 their time, is very variable. Some men and
 women were rarely absent after registering
 their names, while a large number did not at-
 tend regularly, and others for various reasons,
 ceased their connection with the school after
 a longer or shorter period. The number pre-
 sent each evening during the term, has aver-
 aged 41 in the men's, and nearly 20 in the
 women's school. These averages are not so
 large in proportion to the number entered, as
 usual.

The teachers have diligently attended to
 their duties, excepting when prevented by in-
 disposition, in which cases substitutes were
 generally provided. The improvement of
 many of the scholars has been quite apparent,
 particularly among the regular attenders.

The practice of reading the Holy Scriptures
 at the close of the evening, has been continued.
 The New Testament is also regularly read by
 many of the scholars in the classes, and the
 ability to read it easily, is a strong motive we
 believe with some, in their persevering efforts
 to attend the schools.

The diminution in the number of men and
 women attending these schools within the
 past few years, before adverted to, we believe
 is partly due to the removal to other places
 of a considerable number of freedmen, tem-
 porarily residing here, and we hope will not
 tend to discourage those who have heretofore
 aided in their support. Several of us have
 had reason to know that these schools con-
 tinue to be valued by the resident colored
 population of this city, and on former occa-
 sions, as well as on the closing of the men's
 school on the 25th ult., have witnessed the
 estimation in which they are held, both by
 recent scholars, and by those whose little stock
 of school learning was obtained in them many
 years ago. We believe there are many of both
 classes who look forward to their successive
 re-opening with unabated interest.

In view of the increased responsibilities
 which are now devolving upon the colored
 race in many portions of our country, we
 think it will be felt that the present is not the
 time to relax in our efforts to sustain them,
 and trust that they may continue to receive
 the support of all those who have hitherto
 been interested in maintaining them.

On behalf of the Board of Managers,
 GEO. J. SCATTERGOOD, *Clerk.*
 Philada., Third mo. 1, 1870.

Managers.—Elton B. Gifford, Samuel Wool-
 man, Geo. J. Scattergood, Thomas Elkinton,
 Ephraim Smith, William Smedley, Joseph W.
 Lippincott, Richard J. Allen, Jas. G. McCollin.

Oh! that I may never speak a word, nor
 do any action that may grieve his good Spirit,
 nor break my peace with Him. May I never
 eat, nor drink to excess, nor wear anything
 in apparel contrary to the pure Truth; nei-
 ther be found in any carriage or behavior, in
 conversation or communication, that may give
 any occasion whereby truth may suffer. This
 was, and is the desire, and cry of all the faith-
 ful, and of those that truly fear the Lord, and
 have known what the first love is, and the
 blessed effects of it.—*John Banks.*

Culture of Maddar in Smyrna.—The United States consul at Smyrna gives the following account of the culture of the madder root in that region:

The ground usually selected is a flat or level plain, composed of a red and damp soil, but well drained. The color of the soil is said to affect the color of the root, giving it a deeper red tinge, which is the quality most highly prized. When grown on hillsides, or on high, hard ground, it is of a lighter color, and is less esteemed than the former. As a rule, a dark soil is always chosen when it can be procured.

Planting begins in the Fifth mo., and is repeated at intervals of a fortnight till the Tenth month, to render the earth as friable as possible.

As the rains generally set in about this time, the ground is allowed to rest until it is plowed for sowing, which takes place in the Second and Third months. Between the Tenth month and the Second month, however, the ground may be replowed whenever it is practicable. The seed is sown broadcast and the ground manured and left undisturbed. About 300 pounds of seed are sown on an acre. As soon as the plant has grown some inches the ground is hoed and weeded. This operation is repeated as often as possible. Six months after sowing, drills are made of the width of about one foot, at intervals of three feet, the earth from these drills being thrown over the plants so as to completely bury them.

This is repeated every year, or as often as it is thought requisite, in order to force the strength of the plant downward and produce roots instead of stems and leaves. Some of the roots thus treated attain the depth of six feet. This process is performed only on the plains; on hillsides it would be useless, as the rains would wash away the earth too frequently. The plant is allowed to remain in the earth from three to seven years; but the usual time is five or six. As a general rule the longer it remains in the soil, up to the seventh year, the thicker and better it will become. In certain locations, however, where great dampness prevails, the work cannot be allowed to continue more than three years, as a certain grass springs up which completely chokes it, causing the destruction of the crop.

When the roots are to be taken up the stems are cut down and the seed collected. Drills are then dug to the required depth, and the roots on either side laid bare, which renders the extraction of the whole easy and complete. The roots are laid in bundles, and then carried to a reserved piece of ground well beaten and perfectly dry, having been previously prepared for their reception. On this the madder is spread out to dry, through the powerful action of the sun's rays. Although an easy process, this is a most important one, and should be performed thoroughly; as, if the madder is packed damp, mould will ensue and deteriorate the quality. For this reason principally the summer season is always selected for this purpose. In winter it has to be dried in ovens, but the quality becomes inferior, and it seldom dries well. The roots are packed as closely as possible in hair bales containing 420 pounds, and then sent to town. Here the bales are opened and the roots subjected to steam pressure, which reduces their bulk one-half. They are then enveloped in canvas, and bound with iron hoops ready for shipment.

DO THY LITTLE—DO IT WELL.

Selected.

Do thy little—do it well;
Do what right and reason tell;
Do what wrong and sorrow claim—
Conquer sin and cover shame.
Do thy little; though it be
Dreariness and drudgery;
They whom Christ's apostles made,
"Gathered fragments" when He bade.

Do thy little; never mind
Though thy brethren be unkind;
Though the men who ought to smile
Mock and taunt thee for awhile.
Do thy little; never fear
While the Saviour standeth near;
Let the world its javelins throw;
On thy way undaunted go.

Do thy little. God hath made
Million leaves for forest shade;
Smallest stars their glory bring;
God employeth every thing.
Do thy little; and when thou
Feel'st on thy pallid brow,
Ere has fled the vital breath,
Cold and limp, the sweat of death—

Then the little thou hast done
Little battles thou hast won,
Little masteries achieved,
Little wants with care relieved,
Little words in love expressed,
Little wrongs at once confessed,
Little favors kindly done,
Little toils thou didst not shun,
Little graces meekly won,
Little slights with patience borne—

These shall crown thy pillowed head,
Holy light upon thee shed.
These are treasures that shall rise
Far beyond the shining skies.

—A. A. A.

CONTENTMENT.

Selected.

As wishing will neither procure nor prevent,
I hope to continue in a state of content;
And yield to my lot with a proper submission,
And think myself blest in my present condition.

I'll not wish for riches, because of its snares,
Nor yet for more business, because of its cares;
But humbly submit to what a bountiful heaven
Has furnished as needful, nor sparingly given.

A mind free from guilt, and possessing true peace,
Of these are the riches I hope to increase,
A state betwixt ease and constant employ,
Is the state I would choose, and the state I enjoy.

Selected.

On the Gradual Work of Salvation.

The first operation of this heavenly light, on those who are convinced by, and turned to it, the gift of the Father, which Christ Jesus, in his parable to the Jews, compared to a grain of mustard seed, and to a little leaven, which a woman took and hid in three measures of meal, until the whole came to be leavened, is to show man his inward state and condition. The first step in the way of life is, to be turned to this holy principle, that teacheth the obedient to know God savingly; and when man comes to have a true sense of his fallen estate, and sees how he hath transgressed against that eternal being that gave him life and breath, who waiteth long to be gracious, and knocketh at the door of the heart, and has striven by his Divine light, the sense hereof will break the heart, and tender the spirit before the Lord. And under the weight of the great burden of sin and iniquity, there will be a crying out, My sins, they are too heavy for me to bear, and mine iniquities are gone over my head; saying Paul did, "Oh, wretched man that I am! who shall deliver me from the

body of this death?" Here the eye comes to be opened that sees him, whom man in his disobedience hath pierced afresh and put to open shame; and then there will be days of mourning, and wailing because of him; and this is truly the day of Jacob's trouble. In the sense of this deplorable fallen state, and the loss suffering of the Lord, and the long striving of his spirit, thou wilt see, that in the justice of God, eternal death might be thy portion; but that which brings into this sense, begets a secret cry in the soul, after a Deliverer and saviour, and will also give a true sight, that there is no way for thy soul to be redeemed, but in and through the tender mercies of the Lord Jesus Christ; which thou wilt see can no other way be effectually begun in thee, but in the way of the judgments of the Lord; for it is through judgment that Zion is redeemed, and her converts with righteousness. And here also thou wilt see that the measure of the sufferings of Christ yet behind must be filled up in thee for no other way can any man pass unto life, peace, and joy, with the Father of spirits, but the way the Captain of salvation passed, who was through death; and here thou wilt begin to arm thyself with the same mind. *None cease from sin any further than as the sufferer in the flesh the crucifying of the affection and lusts thereof;* and here the end of the Gospel's preaching comes to be known and witnessed, which is, that all men might be judged as men in the flesh, that so they might live to God in the spirit. And in this inward exercise, the Lord God Almighty will bow down his ear, and answer the cries of the awakened soul, and manifest his word of power, which all in this state will know to be sharper than any two-edged sword, piercing to the dividing asunder of thy immortal soul from the spirit and nature of transgression and its daily workings, as *subjection and obedience are yielded to it, making a separation between joints and marrow, and giving thee discerning of the thoughts and intents of the heart.*

As the soul gives up in love to God, *free to follow him in the way of his judgments, and gives up to the sword of the Lord, that which is for the sword, and that which is for destruction to be destroyed, the precious work of the Lord will prosper.* And although this is a time of sorrow, of trouble and anguish, yet it is a good day. Therefore strive not to get from under it, neither to make haste; for the true godly sorrow worketh repentance, which is never to be repented of. *After the true repentance, follows the true knowledge of remission and forgiveness;* and so thy iniquities, by the judgments of the Lord, come to be blotted out and then the times of refreshment come from the presence of the Lord, and from the glory of his power.

As there is a faithful abiding in inward watchfulness, and continual obedience to the heavenly light, in which the beginning of the work of God was known, there will be a going on from step to step in the footsteps of the flock of Christ Jesus, and a growing from strength to strength, over sin and the nature thereof, and from one degree of grace to another; and the eye of the understanding will be single; and here everything which doth let will be seen, and the soul will not start aside from an inward travail, until the which hindereth be taken out of the way and until all the rule and authority of the enemy be subdued under the feet of the Lord

nted, and the government of the soul be
his shoulders, whose right it is to reign
all.

nd here salvation, redemption and restora-
n is effectually enjoyed, *through faith and*
effectual working of the Almighty power of
Y, auto whom be the glory of his own
rk for ever; and here will be a growing
increasing until there is a coming into
precious state and image, in which man
before he fell.—*Charles Marshall.*

Selected for "The Friend."

The Trinidad Pitch-Lake.

was in the autumn of 1863, that I visit
the English colony of Trinidad; and I
never forget the effect produced upon
by the first glimpse of this truly picture-
and beautiful island. It is situated at
mouth of the river Orinoco, and extends
latitude nine degrees thirty minutes, to
degrees fifty minutes north, and is sepa-
rated from the province of Cumana, on the
th American Continent, by the Gulf of

The island appears at a distance like
immense ridge of rocks along its whole
front; but, on entering the Gulf of Pa-
we behold one of the most magnificent,
egated, and luxuriant panoramas that
ure ever formed. To the east, the waves
the mighty Orinoco dispute for the empire
the ocean with contending billows; the
y mountains of Cumana rise from the
m of the horizon in stupendous majesty;
on the west, appear the cape, headlands,
ntains, hills, valleys, and plains of Trin-
enamelled with eternal verdure, and pre-
ing a *coup d'œil* which is rarely surpass-

Nor is the mind disabused of these de-
fectful emotions on penetrating into the in-
ter of the island. Its azure skies, deep-blue
fertile glades, and elastic atmosphere,
e, in the language of one of its historians,
and all, combined to crown Trinidad
the appellation of the Indian Paradise.

is not the object of this article to furnish
aphic account of the island, but merely
ive a description of a very remarkable
monon existing there, called "Pitch-
e." I had not long been in the island,
re an opportunity presented itself of
ing a party of ladies and gentlemen on a
to this interesting lake, which I readily
led myself of. The lake is distant from
at of Spain, the capital of the island, some
y miles, and is most readily accessible by
er. The western shore of the island, for
at twenty miles, is quite flat, and richly
ded, and, though only one or two houses
perceptible from the sea, the interior is
e cultivated. Nearer, toward the lake,
shore assumes a more smiling aspect.
we once see a noble forest; there, a sheet
right green points out a case-field. Cou-
nuts and palm trees are sprinkled over
andscape, and now and then a well-bui-
d, close to the water's edge, appears,
a verdant lawn extending from it to the
and the ground sometimes broken into
osities, and then slightly undulating.

The lake is situated at Cape La Brea,
ere we arrived in a small steamer used for
veying passengers to and from different
es along the coast. After wending our
over rocks of pitch and crustated sand,
soon came to the road leading directly to
lake, and, emerging from it, the spectator
eds on the border of what appears at the

first glance to be a lake, containing many
wooded islets, but, on a second examination,
proves to be a sheet of asphaltum (pitch).
The lake is elevated eighty feet above the
level of the ocean; a gradual ascent leads to
it, which is covered with pitch in a hard state,
and trees and vegetation flourish upon it. In
some places beds of cinders are found; and a
strong sulphurous smell pervades the ground
to the distance of eight or ten miles from the
lake, and is perceived in approaching the
shore.

The lake is bounded on the north-west by
the sea, on the south by a rocky eminence,
and on the east by the usual argillaceous soil
of the country; it is nearly circular, and
more than half a league in length, and the
same in breadth. The variety and extraor-
dinary mobility of this phenomenon are very
remarkable; groups of beautiful shrubs and
flowers, tufts of wild pine-apples and aloes,
swarms of magnificent butterflies and bril-
liant humming birds, enliven a scene which
would be an earthly representative of Tartar-
us without them. With regard to mobility,
where a small islet has been seen on an evening,
a gulf is found on the following morning,
and, on another part of the lake, a pitch islet
has sprung up, to be in its turn adorned with
the most luxuriant vegetation, and then
again engulfed. The usual consistence and
appearance of the asphaltum (except in very
hot weather, when it is usually liquid an inch
deep) is that of pit-coal, but of a grayish col-
or. Sometimes, however, the asphaltum is
jet-black and hard. Deep crevices, or funnels,
are, found in various parts, filled with
excellent, limpid, running water, and often
containing a great variety of mullet and
small fish. Alligators even are said to have
been seen in these extraordinary chasms.
Pieces of what was once wood are found com-
pletely changed to bitumen, and the trunk of
a large tree, on being sawn, was entirely im-
pregnated with petroleum. Where the petro-
leum mixes with the earth, it tends greatly
to fertilize it, and the finest fruits of the
island come from districts bordering on this
singular lake, the pine-apples, in particular,
being less fibrous, more aromatic, and of a
deeper golden color, than are to be found
anywhere else. The pitch at the side of the
lake is perfectly hard and cold, but, as one
walks toward the middle with the shoes off,
in order to wade through the water, the heat
gradually increases, and the pitch becomes
softer and softer, until at last it is seen boiling
up in a liquid state, and the soles of the feet
become so heated that it is necessary to
dance up and down in a most ridiculous man-
ner. During the rainy season it is possible
to walk nearly over the whole lake, but, in
the hot season, a great part is not to be ap-
proached. Although several attempts have
been made to ascertain the depth of the
pitch, no bottom has ever been found. In
standing still on the lake, near the centre,
the surface gradually sinks, forming a sort of
bowl, as it were; and, when the shoulders be-
come level with the lake, the prudent travel-
ler will make the best of his way out.

Science is at a loss to account for this ex-
traordinary phenomenon, for the lake does
not seem to occupy the mouth of an exhaust-
ed crater, neither is the hill on which it is
situated of volcanic origin, for its basis is
clay. The flow of pitch from the lake has
been immense, the whole country round be-

ing covered with it, and it seems singular
that no eruption has taken place during the
memory of man, although the principle of
motion still exists in the centre of the lake.
During the past three years several thousand
tons have been shipped to this country, and
yet I am assured by a gentleman residing
there, with whom I am in frequent corres-
pondence, that no diminution is visible. My
last advices from Trinidad inform me that a
company, formed in the United States, was
at that time engaged seeking for oil in the
neighborhood of the lake, and that oil had
been discovered in several places.—*Late Pa-
per.*

For "The Friend."

Yet a Favoured People.

"It is gratefully to be acknowledged, that
notwithstanding many in our Society have
adopted the customs of the world, and drunk
of its beguiling spirit, we are yet a favoured
people. In our religious assemblies may be
felt a gathering Power, that would help us
in our christian pilgrimage, and increase our
knowledge in Divine truths, settle, establish
our christian faith, and sanctify our hearts,
with all our affections."—*Mary Capper.*

Such as the above are encouraging testi-
monies. And we doubt not that there are, in
the present day, those, and not a few, who,
though they often mourn, even to strewing
their tears, in secret over the state of things
among us, are nevertheless cheered at seasons
by the condescensions of heavenly power and
goodness, which to rightly exercised, wrest-
ling souls, remains to be "a spirit of judg-
ment," a strength and savor of life, that can
alone nourish the patient, waiting, contrite
ones, and do them effectual good. May these
not lose sight of the freshly descending show-
ers of Heavenly Love, but be encouraged to
hold on their way in patience though in tribu-
lations; to trust in the Lord in meekness, in
lowliness, and in godly simplicity of soul;
that His power may be more and more felt
in them, and seen to be upon them.

The Lace-leaf Plant, (*Oxycirandra fenestralis*.)

—As the name implies, the leaf is like a piece
of lace work, or, more strictly speaking, like
a skeleton leaf, the spaces between the vein-
ing being open. The veining is something
like that of a lily leaf, the longitudinal fibres
running through the whole length, and cross-
ed at very regular intervals by the trans-
verse ribs, which are of threadlike fineness.
The scientific name, *fenestralis*, ("windowed")
conveys this idea of a regular arrangement of
structure. The leaf stalk varies in length
with the depth of the water; always keeping
a little below the surface. Each plant has ten
or a dozen leaves branching from the root,
which in the specimens brought to me resem-
bled a small potato. It is used for food by
the Mulogay, and in taste is like the farina-
ceous yam, common to most tropical countries.
The plant grows in running water, and thrives
best in a warm situation where the water is
tepid. The flower grows on a long stalk, and
rises above the surface of the water. It is of
a pinkish color, dividing into two curiously-
curved hairy tufts. Few objects can be im-
agined more beautiful or interesting for cul-
tivating in an aquarium than the lace-leaf plant,
which Sir J. W. Hooker terms "one of the
most curious of nature's vegetable produc-
tions."—*Sibree's Madagascar and its People.*

For "The Friend."

The Greatest Deceivers.

That wise seer, George Fox, writes as subjoined concerning deceivers. May his readers by digging deep and laying the foundation of the spiritual building on Christ Jesus, the unchangeable rock and foundation of every age and generation, thus experience preservation, not only from deceit and deceivers in these perilous times, but know also the spiritual house to stand strong when the winds and waves of trial shall come.

"The Lord opened to me *who the greatest deceivers were, and how far they might come*; even such as came as far as Cain, to hear the voice of God; such as came out of Egypt, and through the Red Sea, to praise God on the banks of the sea-shore; such as could speak by experience of God's miracles and wonders; such as were come as far as Corah, Dathan, and their company; such as were come as far as Balaam, who could speak the word of the Lord, who heard his voice and knew it, and knew his Spirit, and could see the star of Jacob, and the goodness of Israel's tent; the second birth, which no enchantment could prevail against: these that could speak so much of their experiences of God, and yet turned from the Spirit and the Word, and went into the gaudyings, these were and would be the great deceivers, far beyond the priests. Likewise among christians, such as should preach in Christ's name, should work miracles, cast out devils, and go as far as a Cain, a Corah, and a Balaam in the gospels; these were and would be the great deceivers. They that could speak some experiences of Christ and God, but *lied not in the life*, these were they that led the world after them, who got the form of godliness, but denied the power; who *inwardly ravaged from the Spirit, and brought people into the form, but persecuted them that were in the power*, as Cain did; and ran greedily after the error of Balaam, through covetousness, loving the wages of unrighteousness as Balaam did. These followers of Cain, Corah, and Balaam, have brought the world, since the apostles' days, to be like a sea. Such as these I saw might deceive now, as they did in former ages; but it is impossible for them to deceive the elect, who were chosen in Christ, who was before the world began, and before the deceiver was: though others may be deceived in their opinions and prophecies, not keeping their minds to the Lord Jesus Christ, who doth open and reveal to his."

A Daring Voyage.—The following detailed account of the rash and foolish, but successful voyage, of the little boat "City of Ragusa," across the Atlantic, is given in the Boston Herald:

"Ninety days ago a boat, less than 20 feet in length, and carrying two men and a dog, left Liverpool, England, with the avowed purpose of crossing the Atlantic to New York. The bold and hazardous project was the subject of much amazement at the time, but since then the startling events which have been transpiring on the scene of the eventful war in Europe, have absorbed the interest of the public to such a degree, that the bold adventurers have been to a great extent forgotten. Information has been received of their whereabouts, however, at several points on the voyage, from other crafts by which they have been seen, and about five

o'clock yesterday afternoon the tiny craft was signalled approaching our harbor. At six o'clock the collector's tug started down the harbor and met the venturesome mariners at about eight o'clock, opposite the lower light, and towed them in.

"The boat which has thus accomplished a voyage so hazardous, and so altogether novel, is named the City of Ragusa, is twenty feet in length over all, six feet beam, and two feet eight inches in depth, drawing two feet of water; she is yawl rigged, and spreads seventy yards of canvas; is fitted with a two-bladed steam propeller, worked by hand, and her hull is of wood, the boards being only one-half an inch in thickness. In this miniature ship are all the arrangements for cooking, &c., and the capacity for carrying provisions and water, sufficient for the voyage which has just been so successfully terminated. The 'crew' consists of two men, John Charles Berkeley, the commander, and Nicholas Primoraz. These are the two men who, actuated, as the former says, by a 'mere whim,' were induced to make this attempt, which few could regard as anything but foolhardiness, after seeing the craft in which they launched their destinies, and hung their lives by a mere thread. The former has followed the sea from boyhood, and has passed an eventful life. He saved two lives off the coast of Kent, on the 25th of September, 1858, for which he was awarded a medal by the British Humane Society. He is an Irishman, and has a home in Dublin. His companion is an Austrian.

On Thursday, June 24, these daring spirits launched their frail bark, and accompanied only by a dog, left Liverpool. In ten days they put into Queenstown, where they were obliged to remain four days, in order to have some caulking done on their boat, which was leaking, and left there on the 16th, having on board one ton of ballast and 500 weight of coals. They took the northern route, the same as taken by the Cambria, the prevailing winds being westerly; and for the first thirty-five days they suffered a great deal, being kept wet through continually. They were also unable to cook on the first part of the voyage, and were compelled to eat their meat raw, which added to their discomfort, and helped to discourage them. After being eighteen days out, they became short of fire-wood, with no means of getting a supply."

At this time they picked up a barrel containing about four gallons of tar, which was a great aid to them. They used the tar on the decks and the barrel for fuel.

"On the 28th of August they lost one of the crew, the dog, who died. They had a great deal of heavy weather, but the little bark bore herself nobly, and the men themselves expressed surprise that she rode the heavy gales so stanchly. She was leaking all the way, and the pumps, of which they have two, were kept at work constantly. In the severe gales of last Saturday they experienced the hardest time on the voyage, but suffered no disaster, save the carrying away of the jigger boom. The largest number of miles made in one day was 153, which was made in the first part of the voyage, and the smallest, 11 miles. The average speed was four knots an hour. A number of vessels were spoken on the voyage, among which were the bark Radelif, on the 25th of June, bound to Quebec; the ship Maxwell, August

9th, and the homeward-bound steamer, I sia, August 24th. From the first two these ships they took in supplies of provisions and water. Two whales were v neighborhood of Cape Clear, coming near enough to be touched with the hand, and giving voyagers some alarm lest they should up their frail ship. One of 'Mother Carr Chickens' attended them from the time it left Queenstown till they passed Geog. bank.

"The men say that they had the most perfect confidence in the success of their enterprise, and in the roughest gale could go sleep with the greatest composure. Only lateness of the season prevents them from turning home as they came. Their original intention was to go direct to New York, they concluded to put into this port, and to go from here to the former place, and will main this side of the Atlantic till next summer.

"They were towed to Long wharf by tug, and there can be seen this smallest all crafts that ever traversed the broad Atlantic."

Concerning Justification and Sanctification Justification is freely by Jesus Christ in sight of the Father, and not by works of man's own righteousness. Such as are taught Christ, and guided by him in all the ways of truth and righteousness, are justified by him and none else, not in any word or work yet soever, but in what they are led to fulfill him. *It is the new man that is justified, not the old; he that is born of God, and not that are born of the flesh.* Such cannot be God, neither can such be justified by him, they are not taught of him, nor saved, nor restored, nor redeemed, and therefore are justified nor cleared from condemnation in sight of the Lord. Those who live in iniquity and sin, and the ways and works of the world which are evil, are condemned by Christ Jesus and not justified, though in words they profess him, yet of justification by him they be no part.

Sanctification is by the working of the eternal Spirit in the heart of the creature, who purgeth out and taketh away all unrighteousness. As the works and fruits of darkness witnesseth against, and witnesseth unto Jesus who takes away all sin and destroys the power of the devil, that man may be holy and pure in the sight of his Maker. Every one that hath the witness of his justification, hath operation by the eternal Spirit of sanctification, and all that receive Christ Jesus, hath lighted every man that cometh into the world, receive sanctification and justification by him, and he unto us is made so of Father. He that can receive it, let him Edward Burroughs.

A Sharp Reproof.—Speaking of Frederick William I. on his death-bed, Hagenbach says "Trust in the merits of Christ became for him a mere pillow, on which he was disposed falsely to recline even on his death-bed. I nobly did Provost Roloff, his spiritual guide shake him from his dangerous slumber in hour of death, when he said to him, in presence of his court: 'I have often told your majesty that Christ is the ground of our salvation, provided we both apprehend him in faith and afterwards follow his teachings for example, and come to have his mind; so let

is change does not take place we may hope for salvation. If God should save majesty by a miracle,—of which, however we have no example,—in your present heaven would afford you but little happiness. Your army, your treasure, and your glory remain here; not even your servants follow you, upon whom you may vent fierceness of your anger, and in heaven angels are heavenly-minded." The king silent.—*History of the Church.*

THE FRIEND.

TENTH MONTH 8, 1870.

Note received from a Friend in New York with the following:

"In a recent number of 'The Friend,' I read an account of a new mode of preparing for making Musical Instruments. Who amongst you are entering in this business? Are the Instruments intended for family petting service?"

"We recollect aright, the paragraph here referred to, was descriptive of a mode for dry seasoning or drying wood, taken from our Journal; the effect of which, the writer said, was such, that the wood so treated did not shrink or warp, and was therefore fitted to the construction of furniture and other instruments. The inference drawn by your Friend from the last few words seems to us strained as if he had inferred our intention to get a shot-tower and make bullets for killing, because we stated that the mixture (little arsenic in molten lead, would assist after in assuming a spherical form, when dropped from a height. Be that as it may, whatever the spirit that dictated the remark, we accept it as a proper caution to observe due vigilance to keep our columns free from every thing that may be even imagined to tend to a tenacious wrong thing.

"The allusion to the 'service' of musical instruments induces a few remarks on, what we are becoming a growing practice among a large number of members in our Society, viz., the introduction of music and musical instruments into their families. Plausible reasoning drawn from the undisputed fact that there is no intrinsic evil in music; and also that it may be considered a recreation in accord with the plan of Divine Providence in fitting the ear to produce, and the ear to appreciate and enjoy sweet sounds, like some other reasoning from abstract truths, has led to opinions and hurtful conclusions. We need not enter into particulars, nor show the fallacy of the assumption, by applying the same kind of argument to other admitted pleasures, and analogous capabilities and delights pertaining to man's physical and sensuous nature. It is well known that where members of our Society have proceeded to carry out the conclusions arrived at from the specious premises relative to this subject, the natural fruits have been to allow the children to waste much precious time in the effort to acquire a passable knowledge of music; and that its practice has produced frivolity and dissipation, by giving rise to musical entertainments. We have lately heard of musical instruments being introduced into families under the plea of advantage being derived from the music, as an accompaniment to the singing of hymns. If

we should suppose this singing of hymns, were engaged in as an act of worship, only when it was performed with the spirit and with the understanding also, which alone could authorize it, and which we have good reason to doubt being the case in a number associated together, it is yet very contrary to the principles of the gospel, as held by Friends, to employ instrumental music in such a performance.

"The practice of the devotees of Lamaism in Tibet, to place written prayers in wheels, which are kept revolving by the force of running water, under the supposition that they are thus acceptably offering their petitions to their deity, is spoken of by travellers with pity for their ignorance, and wonder at their superstition. But wherein does the principle differ, if we attempt to offer praise to the Almighty by the use of analogous means, which can act only on our own external senses. The organ, the melodeon and other instruments of music employed for such purposes, are really quite as much, to quote the expressive language of an honest Presbyterian Elder, a vain attempt "to praise God by the aid of machinery," as are the Lamaists' water-wheels.

"Members so acting, be their reasoning what it may, well know that their practice does not correspond with the religious profession they make to the world, and the world so understands it, and estimates their religious character accordingly.

"The introduction of music among Friends, whether it is called sacred or secular, is one of the fruits of the adulterated Quakerism, now so popular with many; and like many other of the products of the 'degenerate plant of a strange vine,' is well calculated to increase and spread defection from first and fundamental principles.

Minneapolis, 9th mo. 20th, 1870.

To the Editors of "The Friend."

"In regard to the Philadelphia Epistle, referred to by a London Friend, I do not quite understand. Does he intend to convey the idea that London Yearly Meeting, as a body, has changed its views in regard to the doctrines set forth by our worthy predecessors, George Fox and others? Again, is the writer one in unity with the body, or is he a separatist? I am not acquainted with the individual by reputation or otherwise."

"In reply to the queries contained in this extract from a letter received from a correspondent, we can only say, we are informed that Fielden Thorp, the author of the communication alluded to, is a recommended minister belonging to London Yearly Meeting, largely employed in its affairs, and considered in full unity with its governing members. We think there can be no doubt that he wished his readers to understand that Philadelphia Yearly Meeting still clings to the faith of Friends as set forth by Fox, Barclay, &c., while "the Society of Friends in England, as a body, has ceased to hold these views," on certain important points.

OHIO YEARLY MEETING.

The general meetings for business convened on Second-day, the 26th of 9th month, and closed on the evening of the 28th. They are said to have been larger than any held since the separation in 1854. The attendance of the younger class of Friends has been increasing for several years, and their solid and quiet

department on this occasion gave ground to hope that many among them may become more and more useful in the church. The different sittings of the meeting were favored with that solemn and settled feeling which enabled those present to transact the business with "decency, forbearance and love of each other."

In the minutes of Hickory Grove Quarter, Iowa, was contained a request, forwarded by one of its Monthly Meetings, for advice as to what should be done in the case of persons coming among them and claiming to be Friends, but who from separations and other causes, could not produce the usual certificates of membership. The subject was referred to a large committee of men and women, whose report, made at a subsequent sitting, was adopted. They recommended that such persons should apply to the overseers, and if these were satisfied that the individual so applying possessed such rights, and that his conduct had been consistent with his profession, they were to refer the case to the Monthly Meeting for its judgment thereon.

"The case of the Indian natives was introduced; a subject which had claimed the attention of Ohio Yearly Meeting from its first establishment. It felt that the fertile lands which its members possessed had been wrested from their former owners, with very inadequate compensation; and that therefore a debt was due to these, independently of the benevolent feelings which ought to flow towards the suffering children of our common Father. In carrying out this concern, it had contributed towards maintaining schools among the Indians, through the agency of Indiana Yearly Meeting, until the recognition by Indiana of those who separated in 1854, had closed the correspondence between the Yearly Meetings, and shut up that door of labor. A lively interest was felt in the subject. Friends were encouraged to keep it alive in their minds, and it was referred by minute to the consideration of the next Yearly Meeting.

Considerable feeling was manifested in regard to the proper training of the children, and the members were encouraged to an increased zeal in maintaining schools for their education under the care of Monthly Meetings. This concern for the children was manifested also in the affectionate and lively exhortations which were on several occasions delivered, persuading them to bow their necks to the yoke of Christ and to become His followers.

The report from the Committee having charge of the Boarding School, showed that in the operations of the past year the receipts had exceeded the expenditures by a few hundred dollars. The manner in which it had been managed not only financially, but in other respects, was very satisfactory, particularly in the interest shown by the pupils in co-operating in its success. The school is expected to have nearly as many scholars the coming session as it can comfortably accommodate.

The meeting for worship, held on Fourth-day morning, was a favored and comforting opportunity; and at the conclusion of the Yearly Meeting in the afternoon, the shutters were raised, and after a few words had been spoken, a solemn silence spread over the assembly, under which covering the meeting closed.

There were no ministers in attendance, with minutes for service, except one from

within the limits of Philadelphia Yearly Meeting.

SUMMARY OF EVENTS.

FOREIGN.—The position of affairs around Paris has not materially changed of late. The country in the immediate vicinity has all been received by the Prussians, and the French are to be disciplined. The two departments of the Seine are all under their control except the city of Paris. A Tours dispatch says, that advices from Paris to the 25th inst., had been received by balloon. At that time perfect order existed in the communications, and all had been received by carrier pigeons. These accounts speak in numerous instances made by the French against exposed posts of the besiegers, some of which inflicted considerable loss on the Prussians. In one of them the French captured 400 Germans, and retook ground previously occupied by the Prussians. The French reports say, the besiegers have hitherto kept themselves carefully beyond the range of the guns on the walls of the capital, and the defenders are impatient at their inactivity. The Paris authorities have ordered a daily distribution to the inhabitants of 500 beaves and 4000 sheep. These are to be sold by the butchers on account of the State, at certain fixed prices. It is supposed the Prussians will not commence a bombardment of the city until their heavy guns arrive. The restoration of bridges and tunnels, and repair of railroads between Paris and Germany is said to be nearly complete.

On the 25th inst., Strasbourg surrendered unconditionally, with seventeen thousand men, and four hundred and fifty-one officers. This event is the most important that has occurred since the capitulation at Sedan. It releases the large army required in the siege, for military operations elsewhere. By the surrender the Prussians took 170 guns valued at \$2,000,000, a great supply of small arms and ammunition, and a large quantity of military stores. Strasbourg was only surrendered when the helpless condition of the place rendered it almost inevitable. The inhabitants generally were famishing, and suffering from a deadly fever, so that the dead and dying lay all over the streets. This state of things induced the French to surrender to capitulate. The city has suffered terribly by the siege, and many entire streets are in ruins. The cathedral has not been seriously damaged. Thousands of persons, a large proportion of whom are women and children, have perished.

The siege of Metz continues. On the 24th inst. Bazaine made another effort to break through the Prussian lines. The French carried the outworks of one position and turned the flank of another, but were at length forced to retire under the forts. It is now said that Bazaine has succeeded in sending 4000 men on any terms whatever. There is great scarcity of salt in Metz.

A Prussian force moved upon Orleans, came near the city which was evacuated by the French, but did not enter it. After a halt the Germans moved back towards Paris.

The cholera is raging among the German troops at Chalons, and malignant typhus at Rheims. The infected districts are surrounded by a sanitary cordon.

The blockade of the River Elbe has been renewed by the French fleet. German vessels abroad are warned of the fact.

The total number of guns already captured by the Prussians is stated to be 1072. They have 150,000 French prisoners in Germany. Many of them have been set at work constructing canals in Hanover.

The official journal of the French government publishes a decree fixing the time for the election of the Constituent Assembly, and prescribing the manner in which the election is to be held. The total number of representatives is to be 753, to be elected from France alone, no provision being made for Algeria or other colonies. The voting is to be by ballot, and the election is to take place on the 16th inst.

A large number of private documents belonging to the emperor, which he recently seized at the Tuileries by officers of the new government, have been published at Tours, in the official journal of the republic. They throw discredit on the private life of the emperor, and implicate many noted persons among his adherents.

The President of Luxembourg, Servais, Minister of State, and the Emperor, are now at the Hague on the 1st inst. It is said he is negotiating for the transfer of the duchy to Prussia. The pope declines to quit Rome, and will for the present remain at the castle of St. Angelo, with an Italian guard.

Madrid dispatches speak of the great alarm in Barcelona and other Spanish cities, on account of the continued spread of the yellow fever. Upwards of 120,000

of the inhabitants of Barcelona had fled from the city. The Spanish government has been officially advised of the promulgation of the emancipation law in Cuba.

As the Emperor's visit to the public sentiment, has been so far from successful, the Emperor has written a letter of condolence to the Empress Eugenie. At a meeting of the British Cabinet on the 30th ult., the European situation came under discussion. The meeting was fully attended by the ministers. After a discussion the final decision arrived at was that nothing was to be done, as it was not expedient to recognize the only government with which any relations could be at present established in France. Gladstone, in reply to a workman's deputation, said that the recognition of the French republic must follow a popular vote sustaining the change of government.

The Emperor's visit to the English coast proved an entire failure. Notwithstanding the earnest solicitations of the veteran statesman for an interview with the Emperor, the latter politely and positively declined. Gortschakoff repeatedly to Thiers the impossibility of recognizing in him any official authority, and the inexpediency of the Russian government holding official intercourse with a person whose avowed position was to create distrust and enmity on the part of Russia toward a friendly power.

Count Bernstorff, the Prussian ambassador to England, has entered a formal complaint against the continued shelling of the coast of England. From the English Earl Granville replied, that under the existing laws of England, nothing could be done to prevent such shipments, which might be made to one power as well as another, and that Parliament alone could change the existing laws.

A despatch from Bombay mentions the death of Lord Maw, Viceroy of India. Tien-Tsin advices report that the Chinese have refused the ultimatum of the French.

Dispatches of the 3d, via London, from the Prussian head-quarters around Paris, show that the army is quietly closing in around the city. On the first instant the Prussians were in a sort of circle, and the Prussians on the south side of Paris, afterwards retiring behind the protection of the guns. Both sides suffered considerable loss. The Prussians took 500 prisoners. The Canal de l'Oureg has been drained by the Prussians, to deprive Paris of water. The London Times believes the resistance of Paris will not exceed a week.

It is stated that a large German army is now forming at Toul in order to operate against Lyons. The vote in the Papal territory for annexation to Italy was almost unanimous, there being only about 50 negative votes. People are flocking from all parts of Rome to London. Five newspapers have already started there.

London, 10th mo. 3d. Consols, 92½. Five-twenties, of 1862, 90; ten forties, 85½.

Liverpool.—Uplands cotton, 8½d; Orleans, 8½d.

UNITED STATES.—The Public Debt on the first inst., including interest due and unpaid, amounted to \$2,476,960,819. The amount in the Treasury, in coin and currency, was \$128,150,167, leaving the net debt \$2,348,810,652, a decrease during the past month of about nine millions. The decrease since 3d mo. 1st last has been \$91,414,825.

Philadelphia.—Mortality last week 270. Consumption, 30; small-pox, 11; convulsions, 13; cholera infantum, 14; drowed, 6; old age, 9.

Miscellaneous.—The complete returns of the census of Delaware, gives a population of 125,050 in the State, against 112,216 in 1860. Massachusetts is found to have 1,457,251 inhabitants; against 1,231,066 in 1860. Wisconsin, 1,112,348; has 39,924 inhabitants. Minnesota has a population of 435,577.

It is stated that the Western Union Telegraph Company now owns 33,000 miles of line, with 105,000 miles of wire. The company employs about 7,000 persons.

The First National Bank of Deuver had recently in its weighing bar of gold, 100,000 lbs. of gold, valued at \$2,000,000. It weighed 2,348 ounces, and measured 12½ inches long, 6½ inches wide, and 4½ thick.

Very heavy rains fell in Virginia on and about the first inst., causing destructive freshets, especially in the upper valley. The destruction of bridges, mills, dams, &c. was very great, and many persons, it is reported, have perished in the floods.

The Markets, &c.—The following were the quotations on the first inst. New York.—American gold, 113½. U. S. sixes, 1881, 113½; ditto, 5-20s 1865, 110½. Superfine flour, \$4.85 to \$5.10; shipping Ohio, \$5.30 to \$5.55; ditto, 1st quality, No. 1, \$5.75 to \$5.90; ditto, 2d quality, No. 1, \$1.30 to \$1.32; No. 2, do, \$1.12 to \$1.16; No. 3, do, \$1.08 to \$1.09; amber State, \$1.31 to \$1.37; White Michigan, \$1.48 to \$1.57. New oats, \$2 to 56 cts.; old western, 49 to 50 cts. Western mixed corn, 87 cts.; yellow, 93 to 94 cts. Good middling cotton, 17 cts.; middling, 18½

cts. Superior Flour.—Superfine flour, \$4.50 to \$5.50; brands, \$5.75 to \$8.50. Kentucky white wheat, \$ amber \$1.64 to \$1.47; Indiana red, \$1.38. Rye, 87 cts. Western mixed corn, 94 to 96 cts.; yellow 91 to \$1.02. Oats, 50 to 52 cts. Clover seed, \$6.75. Lard, \$1.75 to \$5.50. The arrivals and sales of beef at a reached 3254 head. Prices were lower, extra sell 8½ a 9 cts., a few choice at 91 cts.; fair to good, 7 cts., and common, 5 to 6 ½ cts. per lb. gross. A 17,000 sheep were sold at 5 ¼ cts. per lb. gross. 1 sold at \$1.10 to \$1.25. No. 1, \$1.10 to \$1.25. No. 2, \$1.12 to \$1.13; No. 1, \$1.20 to \$1.22. Yellow corn cts.; white, 68 cts. Oats, 38 to 45 cts. Rye, 74 to 75

RECEIPTS.

Received from Abner Woodman, O., per Jehu Kite, Agent, \$2, vol. 44; from Henry Harrison, No. 2, vol. 44; from Thomas Cook, Agent, Pa., for Horace G. Cooper, Richard Chambers & son, vol. 44; from Josiah Stratton, Jo., \$2, vol. 44; from Amv. C. Hoopes, Phila., \$2, vol. 44; from Es. Stratton, Agent, O., for Merab Hall, Nathan H. Strong, and Sarah Taylor, \$2 each, vol. 44, and per Barton Bean, O., \$2, vol. 44; from Noah Hartley, \$2, vol. 44; from Moses B. Bullfinch, Mass., \$2, vol. 44; from Job Barton and Nathaniel Corbin, N. J., \$2 each, vol. 44; from Hannah Roberts, Pa., \$2, vol. 44; from Job Borton, N. J., \$2, vol. 44; from Wm. F. Reeve, N. J., \$2, vol. 44; from Joseph Pusey, Pa., \$2, vol. 44; from Barton Bean, O., \$2, vol. 44; from Thomas Emmet, No., \$2, vol. 44; from M. M. Morlan, Agent, O., Sarah Allison, \$2, vol. 44; from Geo. W. Cooper, Pa., \$2, vol. 44; from Jordan Ballard, O., \$2, vol. 44.

Remittances received after Fourth-day morning will appear in the Receipts until the following week.

FRIENDS' BOARDING SCHOOL FOR FEMALE CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to care for the school, and manage the Farm attached to it. Application may be made to the

Encaver Worth, Marshallton, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Onley Pa., do. Joseph Scattergood, 413 Spruce Street, do.

The Superintendent of Friends' Asylum, in this is desirous of obtaining the services of a well qualified Physician as an assistant. Applications will be received from respectable graduates in medicine.

Address J. H. WORTHINGTON, M. D., Superintendent, Frankford, Philad.

WESTTOWN BOARDING SCHOOL.

The WINTER SESSION of this Institution will open Second-day, the 31st of Tenth month next.

Parents and others intending to send children to school, are requested to make early application to Abner Woodman, Superintendent, when a "Street Road P. O., Chester Co., Pa." When no convenient application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 1/2 St. Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE

Near Frankford, (Twenty-third Ward.) Philadelphia Physician and Superintendent.—JUSTUS H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, G. Bous, of the Building, No. 13 E. Third Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting-house, Smith's Jefferson Co., Ohio, on Fourth-day, the 21st of N month, 1870, ELW W., son of Joseph and Penina (Bous) of Bethel, ALIZA JANE, daughter of Joseph and Finley W. and Rebecca D. McGrew, of the same place.

DIED, at her residence in this city, on the 4th mo. 1870, HANNAH, widow of the late Joseph Shoop aged 74 years, a member of Philadelphia Mont Meeting.

WILLIAM H. PAILE, PRINTER. No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TENTH MONTH 15, 1870.

NO. 8.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

From the "American Naturalist."
Flowerless Plants.

The Fungi are cellular plants, without roots, living in the air, often nourished through a stem by an amorphous spawm, or cormium, instead of a root, and propagated by very minute spores, serving the same purpose as the seeds of flowering plants.

The largest species found in California, is a kind commonly known as Touchwood, or Red Tinder (*Polyporus*), of a semicircular shape, between one and two feet across, and to eight inches thick; this large species have only seen attached to the living trunks of the Laurel Tree (*Oreodaphne California*). Its name signifying many pores, denotes itself, the lower surface being a mass of little tubes or pores, angular like honey-comb.

It is indeed it makes a slow but sure fire and cold, wind proof, so that as a slow match for blasting purposes it is perfectly safe. It lasts at the rate of an inch in five minutes; its rate, of course, will vary a little with thickness. The corky kinds of fungi to which it belongs continue to live and increase for many years, although in general mere size is a reliable index of age in this field of inquiry, we know that under favorable circumstances the Scaly Polyporus (*P. squamosus*), the largest size of any known. Instances of five inches in circumference, and weight thirty-four pounds avoirdupois, growing these vast dimensions in the short space of three weeks.

The power of these plants to disintegrate the hardest wood is very remarkable, causing it to yield much more rapidly than the ordinary influences of the weather. Among the most agricultural obstacles in the vast field of most new countries, are the old stumps, which, if left simply to the action of the weather, might be something less than a century in decaying; yet if these were once sprinkled with water in which fungi had been washed, they would shortly crumble to atoms under the magician's wand, a mere shred of interlaced cottony touchwood, the spores and cells of which would be seen to be

traversed and disorganized by this amorphous mycelium. Only a few of these plants are known to us, nor do we know their uses except in a few instances. Many of the species we know are very destructive to the trunks of living trees, on which they grow. In the first instance they may grow on parts which are diseased, but the insidious mycelium spreads with great rapidity; the moment any growth of this kind appears the tree should be felled, or if a valuable ornamental tree, the parts affected should be carefully removed, and a strong solution of sulphate of copper or corrosive sublimate be supplied.

Most Polypori are close and tough in their texture, and rather indigestible; still some are eaten. Berkley declares that the most delicious of all fungi is the *P. casearius*. Several other species besides our *P. ignarius* are used as tinder and moxa, and some are said to make famous razor-strops. Certainly a more satiny cushion could not be devised. The common small species, with variegated concentric rings (*P. versicolor*), is used to lure insects from the mycologist's more valuable specimens. One is used in Russia, pounded and put in snuff, to improve its narcotic properties; another has been manufactured into coarse clothing. Only one, I believe, is worshipped, i. e., the *P. sacer*, a most striking object, much venerated by the negroes on the West African coast.

Perhaps many of us have experienced the pleasures of a walk in the woods after a thunderstorm in the warm days of August, and felt our lungs swell with a thrill of strength to the very fingers' ends, while breathing the balmy odors of the wood; it was not all the breath of flowers, nor foliage, nor any conspicuous form of commonly recognized vegetation. Some may remember having searched for the sweet knots to take home with them, hiding the uncouth thing in the house in order to excite the pleasing wonder and prying curiosity of the loved ones, as to where that sweet odor came from! It was the sweet scented Polyporus, another species of the same plant. Similar fragrance is observed in one species growing on the birch which is used to scent snuff; another like the soft contents of the puff ball, is celebrated for staunching blood. This fungus has been much used as a remedy, and its virtues vaunted in this country for the cure of consumption in its early stages; so also have similar surprising effects been attributed to the use of *Agaricus emeticus*. The phosphorescent agarics of the olive and palm are luminous like large fire-flies, and a few suffice to light up a large room sufficient to read by.

It is often said that some allied mushrooms are unwholesome, and therefore there is danger, and upon the whole, it is best to let them alone. In reply, might we not inquire if the carrot, celery, parsnip, angelica and onion are not allied to the deadly hemlock? The potato, egg-plant and tomato are also close akin to the poisonous night-shade. The innocent

arrow-root, too, is the actual product of the fearful woorai, or *marattia arunannacca*, with which the savage poisons his arrow-points in war. The universal practice in Russia is to salt fungi; and beside they are often subsequently washed and treated with vinegar, which would be likely to render almost any species harmless. Any one familiar with our coast and bays will not fail to hear of cases of poisoning with shell-fish, and there are also sad cases on record of death from these as well as the edible mushroom, or *Agaricus campestris*. Fungi vary in quality with climate, meteorological conditions, soils, &c., so that the safest way is to eat only those raised in garden beds for the purpose; always bearing in mind that much depends upon the mode of preparation and cooking.

The Grape Disease (*Oidium Tuckeri*), is the result of a parasitic fungus, terribly devastating to the wine crops of Europe, the losses of which are estimated by millions, and so frightful as to threaten starvation to thousands; fortunately, the native vines of America are not subject to it, even when cultivated in proximity, on the European Continent.

This fungus plant is easily destroyed by dusting on them flowers of sulphur with a soft brush, when the fruit is well set, about the size of a pea. One application, George Hobler, of Alameda, assures me, has proved an infallible remedy with his foreign grapes; had he known its value sooner it might have saved his English gooseberries, which he had plowed up and cast away in utter despair. Currants, and other fruits, are also victims at times. Indeed, one species, *Oidium albicans*, called Thrush, grows in the mouths of children. This can be transplanted and cultivated; a weak solution of potash or saleratus will dissolve out the albumen and leave the plant wholly exposed and unchanged. Now, the use of this knowledge is, that the same law and similar remedies are indicated here, as where it attacks the vine, namely, to kill the parasite and cure the disease. It is always pleasing to be able to see in rational light why our grandmothers were right in being so partial to sulphur. One dram of sulphite of soda to an ounce of water is a sure cure.

The *Oidium fructigenum* is often seen in whitish pubescent spots of a greenish gray on oranges; and on apple trees it destroys the fruit while still hanging to them; beans, plums, peaches and hops, &c., are also often destroyed, or much injured by its ravages.

A digression into the rationale of remedies for these evils would greatly interest us, but we must forbear; they turn, however, upon a few simple physiological facts—in a word, the Flowerless Plants on land or sea have an oily or shiny coating to the spores, neither the sea water nor air actually touch them; but the moment this adhesive oily or mucilaginous matter is destroyed, they perish; hence the use of ley, lime, ashes, &c., together with many chemical washes.

It is impossible in a short article like this to dwell upon all the mildews, white and black (*Puccinia* and *Antennaria*) which ruin wheat fields in the North, and orange groves in the South. Rust, or red mildew (*Uredo rubigo*), which, however, is not so injurious as some others, but is still a serious evil—the smut (*Uredo segetum*)—bunt (*Uredo caries*), where the grain looks well, but is a mass of black fetid spordia when crushed. If any one of these fungi, out of a thousand, would spread famine and death broadcast over the earth, is it of no use to investigate the subject?

That the diseased or fungoid cereals referred to are very dangerous to man and beast, no one of proper information will doubt or deny; why they are less dreaded than the larger poisonous fungi, is sufficiently manifest. The Ergot of grasses (e. g. *Agrostis*, *Festuca*, *Elymus*, *Dactylis*, &c.) and chiefly of rye, is one of this class; the fungus is perhaps better known as spurred rye—the symptoms of poisoning from eating it, are general weakness, intoxication, creeping sensation, cold extremities and insensibility; then follow excruciating pains, and lastly, dry mortification—the fingers and toes drop off.

I have known only one case so suddenly serious that the patient lost the fingers and toes; but very many instances where ultimate death of both men and cattle have followed the use of fungoid grain; and also mouldy provisions. Cheese, however, is supposed to be improved by it, and in parts of Europe they inoculate with a plug taken from a mouldy, and introduced into a new cheese; or the curd is exposed for a day or so before making up, so that the floating spores in the air may inseminate the mass. If to some they are improved, there is a species or condition of mould that I have every reason to believe is dangerous to persons of a consumptive predisposition. The black dust of hay fields (*Ustilago*) acts in a more direct manner—hay makers are attacked by violent pains and swellings in the head and face, and great irritation of the entire system. The blue bread mould (*Penicillium*), or a condition of it is found on the inside of casks, the spores of which prove poisonous; this is well illustrated by the two coopers who entered a great tun to clean off this mould, when they were seized with violent pains in the head, giddiness, vomiting and fever, scarcely escaping with their lives.

(To be continued.)

Concerning Faith.—As the entrance of the divine Word quickeneth the soul, so it first communicates a degree of faith, through which it operates; for true faith is the gift of God, and the Holy Spirit is the Spirit of faith, which is not a bare belief of truths concerning Christ, but a faith in him. The faith in Christ is not comprised in giving credit to narrations and doctrines, and a mode of practice framed by the wisdom of men upon it; for that centers short of the essential substance of faith. Gospel faith in man believes the truth of all that is revealed by the Spirit, both in the heart and in the Sacred Writings; because it feels it, savours it, and is one with it. It not only assents to the scriptural accounts of the incarnation and whole process of Christ in Judea; but it also receives his internal appearance, consents to his operation, and concurs with it.

—Joseph Phipps.

If Heaven is lost, all is lost.

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 56.)

"5th mo. 12th, 1850. My mind having been exercised for more than a year past in the prospect of visiting the meetings of Redstone Quarterly Meeting; and, if way opens for it, some or all the meetings of Short Creek and Salem Quarterly Meetings in Ohio, the subject altogether felt weighty. My own infirmities in a religious sense, with bodily infirmities pressing heavily upon me, seemed almost appalling; yet apprehending the time would fully come to open it to my Friends, I did so accordingly in our Monthly Meeting the first of the present month. Having obtained its concurrence, my daughter J. and cousin James Emlen gave up to accompany me, which was also approved by the meeting; since which my mind has been preserved for the most part in quiet trust, which I esteem a favor. And now the language often arises, 'Send down thy light and thy truth, and let them lead me to thy holy hill and to thy tabernacle.' And be thou pleased, O Lord! to preserve me in patience, and also from bringing dishonor on Thy spotless Truth. After obtaining liberty of the Quarterly Meeting of Concord, many Friends expressing tender sympathy therewith, we set out on our journey the 25th. Next day were at Lampeter Meeting, to my satisfaction. Thence, after travelling about a week, we reached the house of our kind friend Samuel McGrew, in the neighborhood of Seavickly Meeting, which we attended. It is a branch of Redstone Quarterly Meeting. We next proceeded to the meetings of Salem Quarter, five in number. From thence, accompanied by our friend Jehu Fawcett, from Salem, we came to, and were kindly entertained at John Hobson's; a comfortable resting-place. We attended Cross Creek Meeting on First-day, Smithfield Monthly Meeting at the same place on Second-day; and Short Creek Monthly Meeting on Third-day. These meetings were exercising, but I was enabled to deliver what impressed my mind. We then proceeded to the remaining meetings of Short Creek Quarter, I think eleven in number, and were at several of them a second time, feeling an engagement of mind to do so, and which proved relieving. We then crossed the Ohio river, and came on to the remaining meetings of Redstone Quarterly Meeting, five in number. Many deep exercises were my portion in the course of this journey, under a painful apprehension that the minds of the people too generally were looking outward, for that which can alone be found within. And yet I trust there is a remnant in the different places, who are desirous of maintaining their fidelity to the King of kings, and our religious Society on its original foundation. My mind was often secretly drawn forth in tender solicitude on behalf of our dear young Friends in this day of trial and unsettlement; and frequent opportunities occurred, wherein I was engaged, according to my little ability, to encourage them not to look without, but to have their minds turned inward to the alone Source of help and strength, whereby they might come to experience an establishment upon that Rock which never faileth. Having endeavored to do according to that which seemed required, we were favored to reach home the 17th of Seventh month in safety; and under a thankful sense that a little

For "The Friend."

help had been afforded from the Holy Sacramentary from time to time, strengthening me poor and unworthy as I am, to cast off the weight of exercises which rested upon me, nevertheless not being entirely relieved respecting, and feeling tenderly drawn toward the Monthly Meeting of Middleton (Ohio), addressed a few lines thereto by way of epistle, which tended wholly to remove the burden and enabled me to experience a relieved and peaceful feeling. May I be sufficiently thankful for such unmerited mercy.

"Not long after our return from the visit to Ohio, my mind became religiously concerned on account of a poor unhappy man in prison at Boston, Massachusetts, under sentence of death for the dreadful crime of murder. His name was _____.

Notwithstanding my desire, if consistent with the Divine Will, to be excused from this heavy exercise of making an attempt to see the prisoner, yet it so increased upon me, as to induce me to consult a few friends thereupon. They felt the subject weighty, but did not altogether discourage me. After again endeavoring secretly to know the mind and will of my Divine Master, and not feeling myself excused without making the effort, my brother-in-law Abraham Gibbons, and Martha Jeffer accompanying me, we set out on the 23d of Eighth month, and reached Boston next evening, the seventh of the week, under as much exercise as my poor mind was well able to support. The sheriff being inquired for, as not found at home, we had to await his return in patience, which was not until Second-day morning; when upon being informed of our desire to see the prisoner, he said _____.

_____ had early chosen his spiritual adviser (so called) and did not wish to see ministers of other societies; but our request should be made known to him, and we were informed of the result. Accordingly in a few hours we were told that the prisoner declined seeing us, but would be willing to receive any written communication from us, which should be subject to the inspection of the sheriff. Feeling my mind afresh impressed with desires that the mind of the poor erring man might be turned toward to the alone Source of help and strength and he made sensible of the necessity of a new heart through being born again, I ventured to address a few lines to him expressive of my exercise, which were left with the sheriff after which the language consolingly arose: 'Let her alone, she hath done what she could.' And feeling at liberty to return home, we so, and were favored to reach it in safety. Third-day evening, the 27th: since which my mind has been covered with peaceful quiet an inestimable favor. Soon after our return we were informed that what I wrote to the prisoner had been handed to him, and the sheriff hoped he would be benefitted thereby.

It is no new thing for a testimony not to be received, even when the messenger Divinely commissioned. The apostles were sent out by their Heavenly Master without charge by Him: "Whosoever shall receive you, nor hear your words, when ye part out of that city, shake off the dust from your feet," &c. A lively sense of the doer's goodness and mercy, a clear impression of the awfulness of eternity, a heart full with love to Him, and thence to all who love, equally with themselves He died to save, and as a crowning seal, a clear intimation that He requires such to go forth, thus,

ben, and there, will induce in those, who with true zeal desire to serve Him, a cheerful sacrifice of home and the endearments of domestic life, to proclaim that grace and truth which came by Him, if so be they can but deliver their own souls, in the humble, though earnest endeavor to exalt their glorious Lord's name and kingdom in the earth. These may not be received, neither their testimony; though by their secret-seeing Father, who looketh on the heart, and hath respect to the motive hereof, the sacrifice may be accepted, and the peace of the servant be made to flow as a river. But O! the solemnities of the dying our to those who are not brought to a sense of their sinful and lost condition, as children of our fallen father, nor to that "godly sorrow which worketh repentance to salvation not to be repented of." No words can express the awfulness of the invisible world to these! Having neglected His invitation, or done despite to the grace of their crucified, but risen and glorified Saviour, they are left without needed support of His sustaining presence, and the consolation of His ever blessed Spirit, when summoned before that just judgment seat, whose decisions shall be final and eternal.

"In the 11th month," she continues, "I attended the Quarterly Meeting of Calm, in company with my cousin James Emlen. The feast of Truth seemed at a low ebb there, but a little ability was granted to labor for the rising of it. We lodged on our way at our friend Charles Downing's, where my mind was drawn into exercise, more especially towards his daughters, which I endeavored to express in the ability vouchsafed; and a peaceful feeling was experienced. My mind often drawn out in desire for the preservation of our dear young Friends in this day of trial. On our way to Calm, my mind was attracted towards a small dwelling, with a secret range to see the inmates. After crossing a large stream of water on a log, and encountering some other difficulties, we got to it; whence we soon saw another small tenement, the inmates of which were parents of the female head of the first one we got to, whose being sent for, soon came. It seemed to me that some solemnity was felt; and after expressing what arose, we were favored to return safely to the carriage, with, on my part, a relieved mind. They were colored people; and some of them expressed much thankfulness for the visit. I have on different occasions, sometimes by verbal communications, and at others by writing, not mentioned in these notes, felt my mind drawn in this way, to families and individuals. This, when has been believed to be a Divine requirement, yielded to in the obedience of faith, I had ease to believe is one of the ways which my Divine Master sees meet for me to be exercised in; and although attended with ease and deep searching of heart, and much the cross, yet I think I may say that my secret desire has been on these occasions, to do the will of my Heavenly Father, without mixture of the creaturely part. And now, while penning the foregoing, 5th of First month, 1851, desires have been raised to the Father of mercies, that He would be pleased to make me more pure, more acceptable in His sight. Be pleased, O Lord! to enable me, day by day, to look unto Thee for the knowledge of Thy blessed will, and for strength to perform it the few remaining days of my

lengthened out life. And wilt Thou be pleased to be with me, thy unworthy creature, in the solemn closing moments."

(To be continued.)

The Forests of the Upper Amazon.—A dense forest impenetrable save by the trails, stretches away on every side to the Andes, and to the Atlantic, and northerly and southerly along the slope of the entire mountain chain. The forest is such an entangled mass of the living and the fallen, it is difficult to say which is the predominant spirit—life or death. It is the cemetery as well as the birthplace, of a world of vegetation. The trees are more lofty than on the Lower Amazon, and straight as an arrow, but we saw none of remarkable size. A perpetual mist seems to hang on the branches, and the dense foliage forms dark, lofty vaults, where the sunlight never enters. The soil and air are always cool, and never dry. All our watches stopped, and remained immovable till we reached Pará. It is this constant and excessive humidity which renders it so difficult to transport provisions, or prepare an herbarium. The pending branches of moss are so saturated with moisture, that sometimes the branches are broken off to the peril of the passing traveller. Yet the climate is healthy. The stillness and gloom are almost painful; the firing of a gun awakens a dull echo, and any unlooked for noise is startling. Scarcely a bird or a flower is to be seen in these sombre shades. Nearly the only signs of animal life visible thus far were insects, mostly butterflies, fireflies, and beetles. The only quadruped seen on our journey to the Napo, was a long-tailed marten caught by the Indians. The silence is almost perfect; its chief interruption is the crashing fall of some old patriarch of the forest, overcome by the embrace of loving parasites that twine themselves about the trunk or sit upon the branches. The most striking singularity in these tropical woods is the host of lianas or air-roots of epiphytous plants, which hang down from the lofty boughs, straight as plumb-lines, some singly, others in clusters; some reaching half way to the ground, others touching it and striking their rootlets into the earth. We found lianas over one hundred feet long. Sometimes a toppling tree is caught in the graceful arms of looping *sipós*, and held for years by this natural cable. It is these dead trunks, standing like skeletons, which give a character of solemnity to these primeval woods. The wildest disorder is seen along the mountain torrents, where the trees, prostrated by the undermining current, lie mingled with huge stones brought down by the force of the water. In many places the crowns of stately monarchs standing on the bank interlock and form a sylvan arch over the river.—Orton's "The Andes and the Amazon."

Sometimes our common yellow butterfly congregates about wet patches in flocks of several hundreds; but this is nothing to the swarms of butterflies, rivaling the clouds of locusts, that are sometimes met with in the tropics. Sir Emerson Tennent describes flights of butterflies occurring in Ceylon "apparently miles in breadth, and of such prodigious extension as to occupy hours, and even days, uninterruptedly in their passage." He says: "A friend of mine drove for nine miles through a cloud of white butterflies, which were passing across the road by which he went."

For "The Friend."

Tender Counsel and Advice by Way of Epistle.

(Continued from page 81.)

Wherefore I exhort you, in the spirit of truth, and in the counsel of the God of truth, who keep in the divine sense and watch, if you would endure to the end in the will of God. And I say again, touch not with man-made ministers, nor man-made worship, let their words be never so true: it is but man, it is but flesh, it is but the will; and it shall have no acceptance with God: O this is the golden cup of the whore that is gone from the leadings of the Spirit, with which the nations are defiled: have nothing to do with it. Keep to Christ Jesus, God's great light; follow him, as he shineth in your hearts, and ye will not walk in darkness, but have the light of life: not of death to condemnation, as in the world; but unto life, which is justification and peace. And remember that nothing bringeth to Christ, that cometh not from Christ. Wherefore all ministry that cometh not from Christ, God's great Prophet and High Priest to all true-born Christians, cannot bring people to Christ. Man only gathereth to man, to hear and believe in man, and depend on man; and if the church of Corinth sought a proof of Christ's speaking in Paul, that had begotten them, and had wrought the signs and works of an apostle in them; how much more reason have you to demand a proof of Christ's speaking in the priests and ministers of this world, who have not wrought the signs and works of the apostles or true ministers? And by what should you try them, but by the light and Spirit of Christ in you? Yea, it is Christ Jesus in you, that giveth you to savor if others speak from Christ in them. And this the apostle referreth the Corinthians to, for a proof of Christ's speaking in him: for nothing leadeth to God, but that which came from God, even Christ Jesus the Son of God. O let him be your vine, and know him to be your doctrine; sit under his holy teachings, whose doctrine shall drop as myrrh upon your souls: he will feed you with the bread of God, that cometh from heaven, that feedeth and leadeth them thither that feed upon it: and He is that bread.

Therefore wait and watch until his daily and hourly visitations to your souls, and against all the approaches of the enemy, that so he may not take you at unawares; but that you may be preserved from the power of his darts, and the force of his temptations, by the holy armor of light, the defence of the faithful ancients: "If you be willing and obedient, you shall eat the good of the land." Now is your day, now is your time; work while the light is with you; for the night cometh, in which none can work. Not only the night of eternal darkness to the wicked; but the night of death unto all: for in the grave there is no repentance, neither can any man there work the works of God. You know the foundation: Is he elect? Is he precious to you? Have ye chosen him? Yea, I am satisfied you have: see what you build upon him. Have a care of hay, straw, and stubble! Have a care of your own wills and spirits! Labor not for the bread that perisheth, as all the bread of man's making doth: but labor you, in the light and strength of the Lord, for the bread that never perisheth, that bread that cometh from heaven, that nourisheth the soul in that light that is heavenly, that is "hid with Christ in God;" the Root and Father of life; that of

this fountain you may drink, that is clear and pure, that cometh from the throne of God, and of the Lamb, and not of the muddy puddle of man's invention. There is a bread that perisheth, and there is a drink that perisheth; and wo to them that feed thereon, for their souls shall perish also, if they repent not. But there is a bread that never perisheth: and there is a fountain that springeth up unto eternal life, and blessed are they that feed and drink thereof, for they shall have eternal life with God. This is that which only satisfieth what is born of God; it will feed on no other bread, nor drink of no other water. I cannot but warn you all, that are come to the Lord's day, that you cease from all other food, from man and man's will and invention; for that stifleth the divine sense; that overlayeth and killeth this heavenly birth. There are no grapes to be gathered of thorns, nor figs of thistles: keep to your own vine and fig-tree, Christ Jesus; sit under him, that you may eat of his fruit, which is the fruit of life, "the hidden manna," hid from the nature and spirit of this world, a mystery thereunto. Two things consider: First, you must wait till the manna cometh; and then you are not to be idle; you are to work; and next, as it daily cometh, so it must be daily gathered and fed upon: for the manna that was gathered yesterday, will not be food for to-day; it will not keep for that use. And as it was outwardly, so it is inwardly. Time past is none of thing; it is not what thou wast, but what thou art; God will be daily looked unto. Didst thou eat yesterday? That feedeth thee not to-day; therefore Jesus taught his disciples, and us in them, to pray for our daily bread; and for the present sustenance, and to look no farther but depend upon the Lord, and live by faith in him, that raised up Jesus from the dead; so that the time to come is no more ours, than the time past can be recalled.

Wherefore, "Blessed are they that fear the Lord, and confide in him, they shall never be confounded; they shall lack no good thing; for the Lord loveth Israel, he is good unto Israel, and all that are of an upright heart;" whose hearts look up to heaven, and not down to the earth; neither love, nor live in, the vain lusts of the world: see shall "abide in his holy tabernacle, such shall dwell in his holy hill," even they that "walk uprightly, that work righteousness, and speak the truth in their hearts; in whose sight a vile person is contemned, but who honor them that fear the Lord." O my dear friends, I know experimentally, that this is hard to flesh and blood; that which is born of the corruptible seed; but that can never enter into the kingdom of God: that must be crucified by Christ, that hath crucified Christ: "blood requireth blood." Wherefore give that which is for the famine, to the famine: for the fire, to the fire: and for the sword, to the sword. Let all the sinful lusts be famished; let the stubble be burnt, and the corrupt, yea, and the fruitless tree, that embreth the ground, be "cut down and cast into the fire." Let the work of the Lord be done in you; let him purge his floor, and that thoroughly; that you may come out as pure as gold seven times tried, fitted for his use that hath chosen you; that you may bear his mark, and wear his inscription, "Holiness to the Lord;" so you will be vessels of honor in his house. Therefore I say, let your houses be swept by the judgment of the Lord, and the little leaven of the kingdom leaven you

in body, soul, and spirit, that holy temples you may be to his glory. This, I know, is your desire, that are on your travel to this blessed enjoyment.

Well, you believe in God; believe also in Christ, the light that hath visited you: and if you truly believe, you will not make haste: you will not make haste out of the hour of judgment; you will stay the time of your trial and cleansing, that you may be, as I said, as pure as gold seven times tried; and so receive the Lord's mark and stamp, his image and approbation; that you may be his throughout, in body, soul, and spirit; sealed to him in an eternal covenant.

Dear friends, gird up the loins of your minds, watch and hope to the end; be not slothful, neither strive; despond not, nor be presumptuous: be as little children; "for of such is the kingdom of God." Dispute not, neither consult with flesh and blood: let not the prudence of this world draw you from the simplicity that is in Christ Jesus. Love and obey the truth; hide his living word in your hearts; though it be as a hammer, a fire, a sword, yet it reconcileth, and bringeth you to God, and will be sweeter to you that love it, than is the honey, and the honey comb. Fear not, but bear the cross, yea, without the camp; the camp of this world's lusts, glory, and false worship. But this know, when the enemy cannot prevail by any of these stratagems, if you resist him as "the god of this world's glory, the prince of the air, and the false prophet;" then he turneth dragon; then he declareth open war; then you are heretics, fanatics, enthusiasts, seducers, blasphemers, unworthy to live upon the earth. But in all these things "rejoice, and be exceeding glad, for great shall be your reward, in the kingdom of our Father." What if your parents rise up against you; if your brethren betray you; if your companions desert and deride you? If you become the song of the drunkard, and the scorn and merriment of the vile person? Yea, though the powers of the earth should combine to devour you, let not your hearts be troubled. "Shun not the cross, but despise the shame, and cast your care upon the Lord, who will be afflicted with you in all your afflictions; in the fire he will be with you, and in the water he will not forsake you." O let your eyes be to him, whose name is as a strong tower, the sanctuary of the righteous in all ages; that you may be able to say in your hearts, with David of old, "The Lord is my light and my salvation, whom shall I fear? The Lord is the strength of my life, of whom shall I be afraid? Though a host should encamp against me, my heart shall not fear; though war should rise against me, in this will I be confident. One thing have I desired of the Lord, that will I seek after, that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to inquire in his temple. For in the time of trouble he shall hide me in his pavilion, he shall set me upon a rock. When my father and my mother forsake me, then the Lord will take me up. I had fainted, unless I had believed to see the goodness of the Lord in the land of the living. Wait on the Lord, be of good courage; and he shall strengthen thine heart. Wait, I say, on the Lord."

(To be concluded.)

The Condor.—In his paper entitled "Notes on the Condors and Humming Birds of the

Equatorial Andes," Prof. James Orton, of Vassar college, said no bird has suffered more from the hands of the curious and scientific than the condor. Exaggerated stories of its size and strength continue to be published in our text-books—as, for example, that it carries off children, and that the expanse of its wings is from fifteen to twenty feet; whereas, it is not capable of lifting from the ground over a dozen pounds, and it is doubtful if any specimen ever measured twelve feet. Neither Humboldt nor Darwin found one over nine feet, but an old male in the Zoological garden, of London, measures eleven feet.

Whether this greatest of unclean birds is generically distinct from the other vultures is yet a question among ornithologists, some including in the genus *Sarcorampus*, the California and king vultures. My own observations of the structure and habits of the condor incline me to say it should stand alone. It is also very certain that, contrary to the usual supposition, there are two species of condor on the Andes. The brown kind has been considered the young of the royal black, but it is evidently distinct. The reasons for this belief were given in detail by Professor Orton.

The largest condors are found about the volcano of Cayambi, near Quito, and most commonly around vertical cliffs. It is often seen singly soaring at a great height in vast circles. It never flaps its wings except in rising from the ground. Humboldt saw one fly over Chimborazi; I have seen them sailing at least 1,000 feet above the crater of Pichincha. It is a marvellous eater. I have known a condor of moderate size to devour in one week a calf, two sheep and a dog. It will eat everything but pork and cooked meat. The only noise it makes is a hiss like that of a goose. Incubation occupies about fifty days, ending in April. The young cannot fly till they are over a year old, for up to that time they are as downy goslings. While molting, they are fed by their companions, molting time not being uniform.

There is a singular difference between the sexes, the eyes of the male being light brown and in the female bright red. The females are also smaller in size, and want the crest and wattle. The toes are less prehensile than those of the other raptors. Professor Orton also gave some new facts respecting the hummer of the Andes as the result of his own observations. The group polytminae comprises ninety-two of known species. Their headquarters seem to be New Granada. Many of them are restricted to very narrow localities. Of the 430 species known, eighty-four are found in Ecuador. If the wanton destruction of specimens for decorative purposes continues, several genera will soon be exterminated.

Nidification is uniform at the same altitude and latitude. In the valley of Quito it occurs in April. The nest is built in six days. Some are cup-shaped; others hang like a hammock by spiders' webs, while the long-tailed species constructs a purse-shaped net. Professor Orton here exhibited several specimens to show how strikingly the nests of the Andean species differ from those of our own hummer—the latter being covered with lichens, and the former invariably with moss. The usual number of eggs laid is two, and these are of a pinkish hue. Incubation lasts twelve days at Quito, and there is but one brood a year, though two in Brazil.—*Scientific American.*

For "The Friend."

Annual of the Bible Association of Friends in America.

In again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association on the 2d of Eleventh month, the Corresponding Committee would press upon Friends, who have been engaged in the distribution of Holy Scriptures, the importance of furnishing full and accurate answers to all the queries, and of forwarding their report *seasonably* to the Depository.

It may be recollected, that in making donations to Auxiliaries, the board are guided in deciding what number of Bibles and Testaments shall be sent to each, by the information given in its report. Hence those Auxiliaries that do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every case, how boxes should be marked and forwarded; and their receipt should always be *promptly acknowledged*.

Address John S. Stokes, No. 116 N. Fourth street, Philadelphia.

SAMUEL BETTLE,
CHARLES RHOADS,
ANTHONY M. KIMBER,
Committee of Correspondence.

Philadelphia, Tenth mo. 1870.

QUERIES.

1. What number of families or individuals have been gratuitously furnished with the Holy Scriptures by the Society during the past year?

2. What number of Bibles and Testaments have been by the Auxiliary within the past year?

3. How many members, male and female, are there belonging to the Auxiliary?

4. What number of families of Friends reside within its limits?

5. Are there any families of Friends within your limits supplied with a copy of the Holy Scriptures in good type, and on fair paper; if so, how many?

6. How many members of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?

7. How many Bibles and Testaments may probably be disposed of by sale within your limits?

8. Is the income of the Auxiliary sufficient to supply the wants within its limits who are not duly furnished with Holy Scriptures?

9. What number of Bibles and Testaments would be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?

10. What number would be required in order to furnish each member of our religious Society, capable of reading the Bible, with a despatch of a copy, and unable to purchase it.

11. How many Bibles and Testaments are now on hand?

Selections from John Griffith's Journal.

"Silence, if duly considered, may be the best source of instruction for those whose life is in trials or outward declarations. I have thought much amongst us are so void of right understanding, as to suppose there is a kind of necessity for something to be done by way of ministry, at marriages and funerals especially, being hard for them to comprehend that they can be so honorably conducted without having observed some, who but little contented to maintain our testimonies, by an uniform consistent deportment, yet appearing zealous on these occasions, taking a deal of pains, and travelling many miles, and sometimes from one preacher to another, to make themselves sure of one; and when they have been so successful as to prevail upon one to do so, it would no doubt be a great disappoint-

ment were they to be wholly silent. In this situation the minister himself may, unless well grounded, be exposed to temptation to gratify such. My principal view, in this remark, is to show how remote such are from the truth they profess, and how nearly allied to other professors of christianity, who make religion chiefly to consist in outward performances, and think it not like a christian burial, when a corpse is committed to the earth without something said over it. If that over-anxiousness in the people should prevail on the preachers amongst us to answer their cravings and expectations, either in attending, or when there, in gratifying them with words, without a due regard to the holy weight and impressions of the word of life as the *alone moving cause to public service*, they would be in danger of being lost as to the *living body* in the Society; and although such might continue, in a consistent form of sound words and sound doctrine, as to the external appearance, yet the substance being lost, their performances would be no more than as sounding brass or a tinkling symbol; some to our sorrow have been observed to lose ground by such means. What can we imagine more offensive to the gracious bountiful Giver, than to prostitute such a precious Divine gift, by making it subservient to the carnal, unspiritual desires of those who are strangers to God, yet love to hear of him, and his glorious acts, by the hearing of the ear."

"Surely the complaint of the Lord by the mouth of his prophet, concerning Israel, was mournfully verified in the city of London, respecting a great part of the Society. 'My people have committed two great evils, they have forsaken me, the Fountain of living waters, and hewn them out cisterns, broken cisterns, that can hold no water.' Such is a mere profession, though of the truth itself, without the real possession. This is holding the truth in notion, speculation and imitation only. The name may be said of whatever is done in religion, without the immediate influence, direction and leading of the Holy Author's spirit and power. Sound doctrine may be preached, as to words and the main scope thereof, and true principles imbibed from education, tuition or other outward means, yet the man's part being alive, active, and always ready, the child's and fool's state, that knows its sufficiency for every good word and work, to be immediately received from God alone, is neither experienced nor abode in, 'for it is not you that speak, but the Spirit of your Father which speaketh in you, or by you.' I say that without this living sense of things, all is but a broken cistern, it will hold none of the water of life, which is the real cause that the endeavours and apparent zeal of some for the promotion of religion, are so dry, insipid and inefficacious. Truth will carry its own evidence, the spring of action being the Holy Spirit of Christ, it will gain the assent of all his children, and answer his pure witness in the hearts of the rebellious, far beyond what many conceive or imagine; upon which I would just observe, that the only way to preserve the strength, glory and dignity of a religious Society, is for all who undertake to be active in it, certainly to feel the Lord leading and directing them in all their services; and on the other hand, the sure way to desolation is, when the active members in religious things move therein by the strength of human abilities only."

Chimborazo.

Coming up from Peru through the cinchona forests of Loja, and over the barren hills of Assuay, the traveller reaches Riobamba, seated on the threshold of magnificence—like Damascus, an oasis in a sandy plain, but, unlike the Queen of the East, surrounded with a splendid retinue of snowy peaks that look like icebergs floating in a sea of clouds.

On our left is the most sublime spectacle in the New World. It is a majestic pile of snow, its clear outline on the deep blue sky describing the profile of a lion in repose. At noon the vertical sun, and the profusion of light reflected from the glittering surface, will not allow a shadow to be cast on any part, so that you can easily fancy the figure is cut out of a mountain of spotless marble. This is Chimborazo—yet not the whole of it—you see but a third of the great giant. His feet are as eternally green as his head is everlastingly white; but they are far away beneath the bananas and cocconut palms of the Pacific coast.

Rousseau was disappointed when he first saw the sea; and the first glimpse of Niagara often fails to meet one's expectations. But Chimborazo is sure of a worshipper the moment its overwhelming grandeur breaks upon the traveller. You feel that you are in the presence-chamber of the monarch of the Andes. There is sublimity in his kindly look, of which the ocean might be proud.

It looks lofty from the very first. Now and then an expanse of thin, sky-like vapor, would cut the mountain in twain, and the dome, islanded in the deep blue of the upper regions, seemed to belong more to heaven than to earth. We knew that Chimborazo was more than twice the altitude of *Ætna*. We could almost see the great Humboldt struggling up the mountain's side till he looked like a black speck moving over the mighty white, but giving up in despair four thousand feet below the summit. We see the intrepid Bolivar mounting still higher; but the hero of Spanish-American independence returns a defeated man. Last of all comes the philosophic Boussingault, and attains the prodigious elevation of 19,600 feet—the highest point reached by man without the aid of a balloon; but the dome remains unscathed by his foot. Yet none of these facts increase our admiration. The mountain has a tongue which speaks louder than all mathematical calculations.

There must be something singularly sublime about Chimborazo, for the spectator at Riobamba is already nine thousand feet high, and the mountain is not so elevated above him as Mont Blanc above the vale of Chamouni, when, in reality, that culminating point of Europe would not reach up even to the snow-limit of Chimborazo by two thousand feet. It is only while sailing on the Pacific that one sees Chimborazo in its complete proportions. Its very magnitude diminishes the impression of awe and wonder, for the Andes on which it rests are heaved to such a vast altitude above the sea, that the relative elevation of its summit becomes reduced by comparison with the surrounding mountains. Its altitude is 21,420 feet. One fourth of this is perpetually covered with snow, so that its ancient name, *Chimparazo*—the mountain of snow—is very appropriate. It is a stirring thought that this mountain, now named with snow, once gleamed with volcanic fires.

There is a hot spring on the north side, an immense amount of debris covers the slope below the snow-limit. Chimborazo is very likely not a solid mountain: trachytic volcanoes are supposed to be full of cavities. Bouguer found it made the plumb-line deviate 7" or 8".

The valleys which furrow the flank of Chimborazo are in keeping with its colossal size. Narrower, but deeper than those of the Alps, the mind swoons and sinks in the effort to comprehend their great majesty. The mountain appears to have been broken to pieces like so much thin crust, and the strata thrown on their vertical edges, revealing deep, dark chasms, that seem to lead to the confines of the lower world. The deepest valley in Europe, that of the Ordesa in the Pyrenees, is 3,200 feet deep; but here are rents in the side of Chimborazo in which Vesuvius could be put away out of sight. As you look down into the fathomless fissure, you see a white fleck rising out of the gulf, and expanding as it mounts, till the wings of the condor, fifteen feet in spread, glitters in the sun as the proud bird fearlessly wheels over the dizzy chasm, and then ascending above your head, sails over the dome of Chimborazo. Could the condor speak, what a glowing description could he give of the landscape beneath him when his horizon is a thousand miles in diameter. If

"Twelve fair counties saw the blaze from Malverni's lonely height,"

what must be the panorama from a height fifteen times higher!

Chimborazo was long supposed to be the tallest mountain on the globe, but its supremacy has been supplanted by Mount Everest, in Asia, and Aconcagua, in Chile. In mountain gloom and glory, however, it still stands unrivalled. "The Alps have the avalanche, 'the thunderbolt of snow,' and the glaciers, those icy Niagaras, so beautiful and grand. Here they are wanting. The monarch of the Andes sits motionless in calm serenity and unbroken silence. The silence is absolute and actually oppressive. The road from Guayaquil to Quito crosses Chimborazo at the elevation of 14,000 feet. Save the rush of the trade wind in the afternoon, as it sweeps over the Andes, not a sound is audible; not the hum of an insect, nor the chirp of a bird, nor the roar of the puma, nor the music of running water. Mid-ocean is never so silent. You can almost hear the globe turning on its axis. There was a time when the monarch deigned to speak, and spoke with a voice of thunder, for the lava on its sides is an evidence of volcanic activity. But ever since the morning stars sang together over man's creation, Chimborazo has sat in sullen silence, satisfied to look "from his throne of clouds o'er half the world." There is something very suggestive in this silence of Chimborazo. It was once full of noise and fury; it is now a completed mountain, and thunders no more.—*Andes and the Amazon.*

Some words which I met with in the letters of Isaac Penington many years since, and which, I suppose, he might have addressed to much such a person as myself, have remained with me as a kind of prophecy, which, "whether I will hear, or whether I will forbear," must be fulfilled. They were these:—"Thou must die exceedingly inwardly, and deeply, again and again."—*M. A. Kelly.*

[The following letter and appeal speak for themselves. S. I. Capper is a well known Friend in England, who appears to speak of what, he has in part witnessed. It may be remembered, that prior to the breaking out of the present war, France was threatened with prospective famine from failure of the crops, while yet she possessed her wealth and labor to provide against it. Now the greater part of both these are gone, or rendered unavailable, and what was feared as a future evil, has become a dreadful reality. How this fearful calamity will go on spreading and destroying, may be imagined from the following official notification:

LONDON, Oct. 10.—A note from the Prussian Government informs the powers that Paris threatens to hold out until it is starved. In that event two millions of people would be in the hands of the Prussians, who will be unable to furnish supplies for a single day, as there is nothing edible within several days march of Paris. Hence the people cannot abandon the city by the roads. The inevitable consequence will be that hundreds of thousands must starve.

And yet, with this anticipation of inconceivable suffering to be inflicted on millions of human beings, this professedly christian Government declares it intends to prosecute the war to its bitter end.]

To the Editor of "THE FRIEND."

Liverpool, 23d of 9th mo., 1870.

Dear Friend:—The tremendous struggle between France and Germany, which has deluged with blood the plains of Lorraine and Champagne, has supplied an almost exhaustive demand upon the humanity and philanthropy of Germany and the rest of Europe. Of France I would say nothing, for in the very crisis of its fate, and the agony of the life and death struggle around its capital, it would be absurd to expect that it should be able to devote either money or thought to anything but the means of resistance. In Germany I have witnessed the rare devotion with which men and women of all ranks and classes are straining every nerve to relieve the sufferings of the wounded, without distinction of friend or foe. Noblemen are reducing their establishments, and adopting the utmost simplicity of living, in order to have the more to give, and poorer men are making sacrifices which require to be seen in order to be credited.

Belgium has not been behindhand in the good work, and I met a Dutch gentleman in Brussels this day last week, who told me Holland had already contributed £100,000 to the fund for the relief of the wounded. He was, at the time, going through to Sedan with a Dutch ambulance.

It is gratifying to know that England has taken a foremost position in the blessed work of mercy.

In that work, doubtless, the members of our religious Society have done their share, but it has occurred to me, and, with thy permission, I should like to submit to thy readers, whether it does not peculiarly devolve upon us to endeavor to alleviate the misery caused by the war to the non-combatant population of the districts over which the hostile armies have swept. From considerable personal observation of the conduct of the German armies in the conquered country, I can speak to their forbearance, courtesy, and even kindness to the inhabitants.

But after all war is war, and the very feeling of the greater part of a million men comparatively limited districts, is enough to and actually does, cause a famine. I shall never forget the answer given to me by thy mistress of a very large farm, situated near one of the outposts before Metz. My friend and myself had been unable to get anything to eat at Ars sur Moselle that morning, and I was about eleven when we approached the farm. We stopped to inquire if they could let us have some bread. The mistress the house stood with her husband and son by her side. They were all in tears. "I you are very badly in want, I will share with you a little I have put by for thy children," was her reply. Of course we could not accept it. She said she only prayed that the "good God would send peace, and give her courage to the end." But where village farm, as they have done around Sedan, vital positions upon the battle-field, there the misery is tenfold greater. In the deadly conflict everything is destroyed, and the peasant must think himself fortunate if he escapes with the lives of those who are dear to him. The appeal of the "Arrondissement of Briey," which first appeared in the *Daily News*, of the 21st inst., and which I enclose for publication, put the case so very much better than I can do it, that it is unnecessary for me to add another word as to the need of assistance. Probably help will be forthcoming from other sources, and it will be for those who supply the funds to decide how to apply them wisely and effectually. The "Mairies," and municipal authorities of the little villages themselves, as being conversant with the position of each inhabitant, would seem to afford ready channel.

In the humanity, not to say magnanimity with which wounded and prisoners have been treated during this war, as well as in the wonderful outflow of loving assistance to the sufferers, from all parts of Europe, may we not discern the dawning of a better spirit, which before long it is to be hoped will render war itself impossible.

In this work of mercy, which will assuredly make for peace, it would be only fitting that the "Society of Friends" should take a prominent part.

I am, sincerely, thy friend,
SAMUEL JAMES CAPPER.

[Advance Copy of Appeal to be published.]
To all neutral nations, and to those among beligerent nations who have not suffered hostile invasion in the war of 1870.

We, the people of those portions of France which are occupied by the German armies more especially of the Departments Moselle, Meuse, Muerthe, and Ardennes, call upon you for aid. Not for aid to enable us to destroy life, but for aid to maintain human life now and after the advent of the peace which all the world desires. Most generous sympathy for the sick and wounded has been manifested by those whom we now address; munificent hands have poured healing balms upon the direct victims of war's dreadful engines brave hearts have interposed to stay the sweep of the Destroying Angel's scythe while yet other miseries, a little farther from view, but wider far in their threatened extent, have been overlooked. The people of France depend for their subsistence on the grains which they raise and the cattle which

y breed. In the sections of country that have been traversed by the German armies, being remains of the provisions that had accumulated in time of peace. Our ovens, stables, and barns are burned or riddled with cannon shots. The fields and meadows are trampled down by the tread of encamped hosts. Neither cereals nor grass have been harvested this autumn. All our beasts of burden, all our bees, sheep and swine, have been taken from us. Our laborers are pressed into the French army as soldiers, or into the German army as teamsters. There remains not even seed corn. We are destitute of strength to prepare the trampled and sown seed for next season's harvest; destitute of material to sow; destitute, in many places, of ground to sow upon; as miles upon miles of territory are made inviolable by the plough, by reason of the sacred and inviolable seed of human corpses with which they have been sown. Starvation stares us in the face now; famine and pestilence are the legacies which war will surely leave to us for the coming winter and spring; the cry of children begging the father for bread, which he has not, is already upon the air; the tears of houseless widows and orphans, falling upon the open field where these fortunes camp, prevent the blood-spots from drying.

Now, our British brethren, know the condition and security of a land where "every man's house is his castle"; you have for centuries not felt the ravages of invasion; fancy the destruction of all your means of subsistence, and then refuse, if you can, to help—help quickly—your neighbors who are suffering.

Now, our American brethren, must know the condition in which we live; yet you have been quickly restored; your country is naturally rich. Ours is naturally poor; our resources bear no comparison with yours; and the strength which will be ineffably greater than is with you.

Now, our brethren of the entire human family—not even excepting those of victorious Germany, who surely, we believe, do not regret our annihilation—we implore you come to our rescue.

The original is signed, first by "Roland Maire of Briey," and then those of the civil and ecclesiastical authorities of many such villages and towns situate between Metz, Nancy, and Sedan.]

THE FRIEND.

TENTH MONTH 15, 1870.

ments which will add much to the interesting history of the latter half of the nineteenth century, have been crowded into the three months. They are not only important in their immediate results, but the ulterior consequences almost sure to flow from them, will probably materially change the condition of freedom, in all its political and religious relations. The circumstances which preceded the declaration of war by France against Prussia, and the train of events that has accompanied the march of the German forces to the walls of Paris, can hardly be interpreted in any other way, than as a loosened scourge from the hand of the almighty Ruler of nations, to chastise the irreligious and immoral people; brought

about by the culmination of their own blind and unchristian policy; and through the agency of a colossal power, ignorantly and presumptuously defied.

It may be said that since the assumption of the title of emperor, Louis Napoleon has, at times, swayed the imperial sceptre with moderation; and pursued a policy that has developed the resources of France, and stimulated the enterprise of its inhabitants; but it cannot be forgotten that he ascended the throne, by a course of action steeped deeply in treachery and bloodshed; and that the undeserved ennoblement of himself and his family, has been the object of his primary attention. With all his plausible pretence, that the "Empire was Peace," and his oft-repeated intention to relax the galling constraint of his tyrannical rule, the world has not been so far hoodwinked, but that it could see the energies and wealth of the empire, were devoted to promote its military equipment and discipline, so as constantly to endanger the peace of Europe; and that he loosened his iron grasp on the liberties of the people, only as he became alarmed by the power and determination they manifested, and the consciousness, that did they rise in their might, they would hurl him from his throne. There seems little doubt that the war in which France is now struggling, was inaugurated by Louis Napoleon, with the hope that should success attend his arms, the military enthusiasm thus created, would induce the nation to accept his son as his successor, and establish the Buonaparte dynasty. The reverse of his ambitious schemes has come so suddenly and so crushingly, as to astonish the world. Of the immense armies, with which he commenced the campaign, and proposed to march to Berlin, there is but a small remnant left, and the career of this bold, bad man is ended—at least for the present—by captivity as a prisoner of war. Though the French have been considered a brave and warlike people, in the present conflict, they have been able to accomplish little or nothing, towards staying the invasion of their country; and crippled, divided, and almost in despair, with the mighty host of their enemies around their boasted city, they appear alike incapable to repair the disasters that have attended their every move, or to avert the final catastrophe threatened by their conquerors.

In the tremendous and bloody conflict, the Prussians, though they have suffered severely, with an apparent disregard for human life, and the loss of tens of thousands of their trained countrymen, have made a triumphant march from the Rhine to Paris, and the tone of their commanders shows they are not a little elated by their success, and the self-confidence created in their ability to exact their own terms of peace. Much has been said of the superior morality of the Germans, and that being Protestants, their triumph will remove the barriers erected by Romanism, against the spread of their religion. But a cold deism and rationalistic neology pervade German society, and licentiousness is rampant in most of their cities. In few countries are the rights of conscience more unsparingly disregarded, especially where they interfere with the cherished policy of making every subject a soldier; thus doubly contravening the precepts and commands of the Prince of Peace; so that the purer form of christianity professed, sustains reproach from both government and people. Therefore while thun-

dering at the gates of Paris, and drinking in the plaudits of surrounding nations, King William and his renowned Minister, unconscious that they and their armies are but instruments, by which the chastisement of a sinful people is executed, may yet find they will not be allowed to go unpunished; that their own wickedness shall correct them, and their backslidings reprove them. There is a lesson in the words of the prophet, instructive to rulers of nations now, as when spoken, "I will punish the fruit of the stout heart of the King of Assyria, and the glory of his high looks. For he saith, By the strength of my hand I have done it, and by my wisdom; for I am prudent: and I have removed the bounds of the people, and have robbed their treasures, and I have put down the inhabitants like a valiant man." "Shall the axe boast itself against him that heareth therewith? or shall the saw magnify itself against him that shaketh it? as if the rod should shake itself against them that lift it up, or as if the staff should lift up itself, as if it were no wood." We think the tone of some leading periodicals, implying that this frightful and unusually destructive war is to be approved as a means for promoting christianity and benefiting humanity, is altogether erroneous, and virtually reflects contempt upon the gospel of peace and salvation. It is more than eighteen hundred years since this last dispensation was ushered in, with the glorious anthem of peace on earth, and good will to men. The whole scope and spirit of its religion are directed against all war, and the lusts from which it comes. Its design is to bring all nations under the government of Christ, the Prince of Peace. When therefore "The kings of the earth set themselves, and the rulers take counsel together, against the Lord and his anointed, saying: "Let us break their bands asunder, and cast away their cords from us," is it any marvel if we see the prediction in measure fulfilling "Thou shalt break them with a rod of iron; thou shalt dash them in pieces like a potter's vessel." He that sitteth King on the holy hill of Zion, has permitted the destroying angel to go forth, and bitter lamentation for the dead may be heard throughout both countries. Whatever good may be evolved from subsequent events, the war itself cannot lose its character as a scourge and a crime.

Another extraordinarily interesting event, is the deposing of the pope as a secular prince, and depriving him of temporal power. Coming so closely after the announcement of his infallibility; which with its blasphemous assumption, and its horrible dooming to everlasting perdition all who denied that assumption, seems more like the description given by the apostle of the man of sin, "Who opposeth and exalteth himself above all that is called God, or that is worshipped," than anything heretofore known, and brought about in the way it has been, gives the occurrence an aspect of divine interference, for the termination of a system that for ages has oppressed the whole of christendom, and again and again drenched its lands with the blood of conscientious dissenters from its unrighteous pretensions. The subject is one which offers many interesting points for remark, but we may not occupy more of our space. It probably will not be very long ere the direct or indirect effects of this revolution will be felt throughout the world.

SUMMARY OF EVENTS.

FOREIGN.—The cable telegrams do not report any marked change in the position at Paris and the vicinity. The whole German force now occupying the lines before Paris, consists of six army corps, numbering, it is estimated, about 250,000 men, besides cavalry, which would probably bring the total to 320,000 or 340,000 men. They were still engaged in preparations for a regular attack on the fortifications, and for the shelling of Paris. Many heavy siege guns and mortars have been received and planted in position. A Berlin telegraph of the 8th says, that on the hills between Sevres, St. Cloud and Bougival, batteries of siege guns have been placed. A mortar battery at St. Cloud threatens the neighborhood of the Elysian Fields. It was expected the bombardment would commence about the 16th inst.

A dispatch from the New York *World* says: "It is understood that the national guard of Paris consists of 50,000 regulars of the line, 350,000 Parisians, and 200,000 garde mobile; that these men are drilled incessantly, and that it is confidently believed in the city, that the army of Paris alone will, at no distant date, be able to assume the offensive against the invaders. There had been no street rioting or fighting whatever, all the reports of that nature were erroneous.

Communications are received occasionally from the besieged, by means of balloons. On the 7th inst., two balloons, one of them carrying a man, were launched by the Americans. One was successful and escaped the Prussian fire to which, for some time, they were exposed. In five hours the adventurers landed safely, and were conveyed by special train to Tours. They report that the Parisians are determined in their defence of the city, which is quiet and orderly, and think that it is impossible to capture it except through famine. The appearance of Paris is much as usual. The shops are open daily, but close earlier than before the siege.

The election for members of the Constituent Assembly is disapproved by the Paris government of national defence, and is therefore indefinitely postponed. The proposition issued by the Assembly, in the resolution of the Tours government is declared to be the result of an error, being opposed to the decree of the government of national defence, which alone is binding. The elections must be adjourned until they are possible throughout the republic.

The garrison at Metz continues to make frequent sorties, but always with the same result. The French are each time driven back with loss. A Versailles despatch of the 8th says, last night the entire garrison of Metz, including the national guard, made a sortie to the north, on both banks of the Moselle. Their attack was on the entrenched positions of the Germans, and they were repulsed, when they returned to the fortress with a loss of 1,500 men. The Prussians lost nearly 600 men. On the two succeeding days the French made great efforts to break through the lines of the besieging forces, but they were again unsuccessful. The loss of life on both sides is reported to be 10,000 persons were rendered homeless by the bombardment of Strasbourg. Subscriptions for their relief are general throughout Germany. During the entire siege of Strasbourg, the Prussians lost 906 men killed and wounded.

On the 8th a severe engagement took place about forty miles south-west of Strasburg. The German loss was 20 officers and 410 men killed and wounded, while that of the French was said to be three times as great. The Germans took 600 prisoners.

Garibaldi has landed at Marseilles. About 12000 Italians have also arrived in France to aid the republicans.

The controversy between Prussia and England in regard to the violation of her neutrality by the export of arms to France, is growing more and more serious. In his last dispatch the Prussian ambassador reviews the whole question at great length, and exhibits in all his points out how the English government shifted ground, first requiring proof of the alleged supplies to France; that when the proof was furnished, Earl Granville declared the traffic legitimate, and that the custom authorities had no power to stop it. He further says: "The sworn testimony of the fact that 40,000 small arms have been exported to France since Sept. 30th, and that a number of manufactories, especially in London and Birmingham, are working day and night for the French agents. I possess authenticated copies of contracts between the French government and English houses, and the export of arms and munitions of war is thoroughly organized at several British ports."

The Masonic fraternity of England have contributed

£70,000 sterling for the relief of families of German soldiers.

A dreadful earthquake has just occurred in Calabria. Many lives were lost, and several villages utterly destroyed.

The Italian government has formally repudiated any design looking to the annexation of Nice and Savoy. The result of the Plebiscitum in the Roman States is officially published as follows: For Italian unity, 13,365; against unity, 1,507.

A note from the Prussian government informs the Powers, that Paris threatens to hold out until it is starved. In that event two millions of people would be in the hands of the Prussians, which will be unable to furnish supplies for a single day, as there is little edible within several days' march of Paris. Hence the people cannot abandon the city by thousands and the inevitable course of the thousands must starve.

The foreign ambassadors at Tours are negotiating for quarters in Bordeaux, in view of the contemplated removal of the government thither. The vintage has begun in Champagne, and the workmen are protected by the Prussians.

Recently informed the Mayor of Versailles that Prussia had no objections to the elections for the National Assembly, but that the French Government had countermanded them. King William has relieved Versailles from the payment of 400,000 francs which had been levied by the Prussians.

The dispatch of the 10th says: "The following statement is official. The government of Prussia, unable to recognize the actual government of France, will not restore the Bonapartes."

A Florence dispatch of the 16th, announces that a decree has been issued annexing the Roman provinces to the Kingdom of Italy. The laws of Italy are to be introduced, and an amnesty proclaimed. General La Marmora is appointed Lieutenant Governor of the Papal provinces. "The pope preserves his dignity and the inviolability of his prerogatives as a sovereign."

A Tours dispatch of the 10th mentions the arrival in that city of a Prussian soldier, a sentry, who escaped from Paris in a balloon. He declares that Paris is absolutely impregnable; that it cannot be captured or surprised, and that there is no danger of the sedition or starvation which the Prussians have been counting on. The force of the defenders, he says, consists of 100,000 regulars, 100,000 militia, and 60,000 regular troops. The provisions are sufficient for many months. He says, the winter rains will soon come, finding the Prussians far from home, decimated by French arms, by hunger and by disease.

The French journals, of Orleansist or legitimist complexion, are all in the highest eulogy of the elections, while other journals applaud the measure.

London, 10th mo. 10th. Consols, 92½. U. S. 5-20's of 1862, 91; of 1867, 89½; ten forties, 85½.

Liverpool.—Uplands cotton, 8½; Orleans, 8½. Red western wheat, 8s. 6d.; red winter, 8s. 10d. per cental.

Exports.—New York, 14th mo. 10th.—The census is at completed, and the total population is stated at 939,536. In 1845 it was 726,836.

Philadelphia.—Mortality last week 231. Males, 136; females, 95. Consumption, 42; debility, 16; old age, 11. The mean temperature of the Ninth month, by the thermometer at 6 o'clock, is 67.5 deg., the highest, the highest during the month, 86 deg., and the lowest 54.50. The amount of rain 1.71 inches. The average of the mean temperature of the Ninth month, for the past eighty-one years, is stated to be 66.26 deg., the highest mean of temperature during that entire period occurred in 1867, 72.99 deg., and the lowest, in 1840, 69 deg.

Massachusetts.—The President of the United States has issued another proclamation enjoining neutrality in the war between France and Prussia, and declaring also that any frequenting and use of the waters within the territorial jurisdiction of the United States, by the armed vessels of either belligerent, for the purpose of preparing for hostile operations, or as posts of observation upon the ships of war or privateers, or merchant vessels of the other belligerent lying within or being about to enter the jurisdiction of the United States, must be regarded as unfriendly and offensive, and in violation of that neutrality which this government is determined to maintain.

A dispatch received by the Secretary of the Interior, from a special Indian Commissioners Brunat and Campbell, dated Fort Laramie, 10th mo. 8th, says they have had a conference of three days with Red Cloud and his chiefs, and have concluded several treaties. No depredations, they say, have been committed by these Indians for five months. We are satisfied they all desire permanent peace, and the influence of Red Cloud and all the chiefs will be used effectually to maintain it.

The goods sent for them were distributed yesterday and they are greatly pleased with both the quality and quantity.

The Markets, &c.—The following were the quotation on the 10th inst. 1867.—Wool.—American grade, 113 U. S. 1867, 1181; ditto, 2-50's 1868, 1104; ditto 10-40, 5 per cent. 160½. Superfine lino, \$5.10 a \$5.33; Superfine Ohio, \$5.50 a \$5.70; finer brands, \$5.75 a \$5.90. No. 1 Chicago spring wheat, \$1.27 a \$1.30; amber wheat, \$1.32 a \$1.35; amber Michigan, \$1.53 a \$1.56; white Kentucky, \$1.60; per cent. 100, \$1.50. Ohio, 90's, 54 cts.; State, 56 a 58 cts. Western rye, 90 cts. Western mixed corn, 85 cts.; yellow, 90 cts. *Philadelphia*.—Cotton, 161 a 163 cts. for uplands New Orleans. Superfine lino, \$4.50 a \$5; finer brand \$5.25 a \$5.25. Red wheat, \$1.35 a \$1.40; amber \$1.4 a \$1.47. Rye, \$7 a 90 cts. New York, 94 a 96 ½ cts. Western mixed, 85 a 88 cts. Western oats, 50 a 52 cts. Delaware, 48 a 50 cts. Clover seed, \$6.50 a \$6.7. Timothy, \$4.75 a 5 cts. The receipts of beef cattle at Avenue Drove-yard reached 8,118 head. Market do. 7 a 8 cts., and commencing a 6½ cts. per lb. gross. Sold of 10,000 sheep at 4 a 5½ cts. per lb. gross. Hogs sold \$11 a \$12 per 100 lbs. net, the latter for corn fed *Chicago*.—Extra spring lino, \$4.75 a \$6. No. 2 sprit wheat, \$1.08. No. 2 corn, 62½ cts. Oats, 36 a 36 ½ cts. Rye, 72½ cts. No. 2, barley, 53 cts. *Cincinnati*.—Red wheat, \$1.10 a \$1.15. Old corn, 60 a 62 cts.; new, 57 cts. Oats, 35 a 45 cts. per bush, 15½ cts. *St. Louis*, 31 cts. Corn, 68 cts. Oats, 37 a 44 cts.

RECEIPTS.

Received from Jas. R. Kite, Agent, O., for David B. and Ellwood Burgess, \$2 each, vol. 44; from Ferdinand Herman, Mass., \$2, vol. 44; from Joseph Wall, Wm. P. Fisher, \$4 each, vol. 44; from John A. Kite, O., vol. 44; from Asa Garretson, Agent, O., for Jose Gibbons, \$4, vol. 44 and 45; from Wm. P. Townsend Agent, Pa., for Margareta J. Mercer and Margaret E. Pyle, \$2 each, vol. 44, and for Edw'd H. Hall, \$6, No. 52, vol. 44; from Philip P. Dunn, N. J., \$2, vol. 44; and from Thos. A. Bell, Pa., \$2, vol. 44; from Levi Fish, M. D., Mass., \$2, vol. 44; from Benj. D. Stratt, Agent, O., for Lewis B. Walker, \$2, vol. 44; from Th. Bundy, O., \$2, vol. 44; from Anne Fin, Pa., \$2, vol. 44; from Wm. Fisher, O., per G. M. Morlan, Age \$2, vol. 44.

FRIENDS' BOARDING SCHOOL FOR INDIA CHILDREN, TUNESSASA, NEW YORK.

A suitable Friend and his wife are wanted to take charge of this Institution, and manage the Farm connected with it. Application may be made to

Ebenezer Wistar, Marshallton, Chester Co., P. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morlan, Onley P. O., do. Joseph Scattergood, 413 Spruce Street, do.

WESTTOWN BOARDING SCHOOL.

THE WINTER SESSION of this Institution will open Second-day, the 31st of Oct. Friends who are desirous of sending children to this School, are requested to make early application AARON SHARPLES, Superintendent, whose address "Street Road P. O., Chester Co., Pa." When convenient, application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 A St., Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

New Frankford, (Twenty-third Ward,) *Philadelphia* Physician and Superintendent—JUSTUS H. WOKINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. C. GREEN, C. of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

DIED, at Haddonfield, N. J., Sixth month 16th, 1867, WILLIAM JESSE ROBERTS, in the 34th year of his age, a member of Western District Monthly Meeting, West Chester, Pa. He was a native of Pennsylvania, and died on the morning of the 17th of Ninth month, 1867, MARY, wife of William Llewellyn, in the 67th year her age, a member of Pennsylvan Monthly Meeting, being enabled to bear a lingering illness, with patience and resignation to the Divine will, her close was peaceful.

WILLIAM H. PILE, PRINTER. No. 422 Walnut Street.

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

For "The Friend,"

tender Counsel and Advice by Way of Epistle.
(Concluded from page 60.)

O my dear friends, let it be your daily and hourly work to wait upon God. How often does David speak of waiting upon God? He is the sweetness of it: therefore retire into your holy chamber: be still, and the Lord will speak comfortably unto you. Blessed are they that wait upon him; whose expectations are fully from him. "For though the youth shall not be weary, and the young men shall not fail, they that wait upon the Lord all renew their strength; they shall mount up with wings as eagles, they shall run and not be weary, they shall walk and not faint." "waited," said David, "patiently for the Lord, and he inclined unto me, and heard my cry." And this was his testimony, "Behold, the eye of the Lord is upon them that fear him, to deliver their souls from death, and to keep them alive in famine: for the Lord is faithful unto them that are of a broken heart, I saveth such as be of a contrite spirit." Did you hear it, therefore he could speak it. O my dear friends, who are compassed about with many tribulations; the Lord God, your strength, is near you to sustain you. He bore the holy reproach of Jesus, and despised the shame of his cross, and did never desert you? Be not cast down, though the eye of reason there seemeth none to you, nor not to save; though enemies within, and enemies without, encamp themselves about you; though Pharaoh and his host pursue you, and great difficulties be on every hand of you, and the dismal Red Sea be before you, stand still: make no bargains for yourselves: let all flesh be silent before the Lord; and "His arm shall bring you salvation." Yea, when you are ready to go down into the pit, that your throat is dry with crying, and your eyes seem to fail with waiting, your salvation shall spring as the morning; because his mercies are to all generations, and the seed of Jacob never sought his face in vain. "The poor man cryeth," said David: "Yet poor man was this? He that is poor in his own eyes, that hath no helper in the world but God." "This poor man cried, and the Lord heard him, and saved him out of all troubles." "Our souls," said the righteous

of old, "waited for the Lord, for he is our help, and our shield forever."

Wherefore, my dear friends, be not you discomforted, for there is no new thing happened unto you: it is the ancient path of the righteous; "For thy sake," says David, "have I borne reproach; I am become a stranger to my brethren, and an alien unto my mother's children. When I wept, and chastened my soul with fasting, that was to my reproach. I made sackcloth also my garment, and I became a proverb to them: they that sit in the gate, speak against me; and I was the song of the drunkard. Save me, O God, for the waters are come in unto my soul: and the water-floods are ready to swallow me up. They persecute him whom thou hast smitten; and they talk to the grief of those whom thou hast wounded." Do you not know this, dear friends? Are not your tears become a reproach, your fasts a wonder, your paleness a derision, your plainness a proverb, and your serious and retired conversation a by-word? Yea, when the Lord hath wounded, have not they also grieved? And when the Lord hath smitten you, have not they mocked? But this was David's joy, "The Lord is my Shepherd, I shall not want: he restoreth my soul, he leadeth me in the path of righteousness, for his name's sake; he maketh me to lie down in green pastures; he leadeth me beside the still waters. Yea, though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me, thy rod and thy staff they comfort me;" who was the comforter and preserver of Shadrach, Meshach, and Abednego, that refused to obey the king's command against the commandment of God; they would not bow to his image; but rather chose the fiery furnace, than to commit idolatry, or bow to another thing than to the living God. "Did not we cast three men into the midst of the fire?" said Nebuchadnezzar: "Lo I see four men loose, walking in the midst of the fire, and they have no hurt: and the form of the fourth is like the Son of God." O my friends, the fire obeyeth him, as well as the winds and seas: all power is given to the Son of God, who is given to you for your salvation. Well; Shadrach, Meshach, and Abednego, the king callesth out of the fire, and they have no harm; though the mighty men that cast them into the fiery furnace were consumed. The God of Shadrach, Meshach, and Abednego, is magnified by the king's decree: and Shadrach, Meshach, and Abednego, are by the king highly preferred. Here is the end of faithfulness: here is the blessing of perseverance: God will bring honor to his name, through the patience and integrity of His people.

And it was this Son of God that preserved Daniel in the lion's den; it was his voice that David said, "divideth the flames of fire; he rideth upon the winds, he sitteth upon the floods. The voice of the Lord is powerful; the voice of the Lord is full of majesty: they that trust in him shall never be confounded."

Blessed are they whose God is the Lord; for he is a present help in the needful time of trouble. The angel of the Lord encampeth round about them that fear him, and he delivereth them. O taste, and see, that the Lord is good: blessed is the man that trusteth in him. O fear the Lord, for there is no want to them that fear him. The young lions shall lack, and the old lions suffer for hunger; but they that seek the Lord shall not want any good thing. Many are the afflictions of the righteous, but the Lord delivereth them out of them all: for the Lord redeemeth the souls of his servants, and none of them that trust in him shall be made desolate."

For which cause, my dear friends, "cast away every weight, and every burden, and the sin that doth so easily beset you." Neither look at the enemy's strength, nor at your own weakness; but look unto Jesus, the blessed Author of your own conviction and faith: the Mighty One, on whom God hath laid help for all those that believe in his name, receive his testimony, and live in his doctrine; who said to his dear followers of old, Be of good cheer, I have overcome the world; fear not, little flock, it is your Father's good pleasure to give you the kingdom: and they that endure to the end shall be saved; I will not leave you comfortless, said he, I will come to you; he that is with you, shall be in you. This was the hope of their glory, the foundation of their building, which standeth sure. And though sorrow cometh over night, yet joy shall come in the morning. Ye shall weep and lament, said Jesus, but the world shall rejoice; and ye shall be sorrowful, but your sorrow shall be turned into joy, and their rejoicing into howling. And lo I am with you unto the end of the world. Be ye therefore encouraged in the holy way of the Lord: wait diligently for his daily manifestations unto your souls, that you may be strengthened in your inward man, with might and power, to do the will of God on earth, as it is done in heaven. O watch, that ye enter not into temptation: ye, "watch unto prayer, that ye enter not into temptation, and that you fall not by the temptation." Christ said to Peter, "Canst not thou watch one hour?" Every one hath an hour of temptation to go through; and this is the hour that every one is to watch. Jesus, the Captain of our salvation, was under great temptations; he was sad unto death; he did sweat drops of blood; but he watched, he prayed, he groaned, yea, he cried with strong cries; but through suffering overcame; and remember how in the wilderness he was tempted, but the angels of the Lord ministered to him. So they that follow him in the way of the tribulations and patience of his kingdom, God's angel shall minister unto them all: yea, he will keep them in the hour of temptation: he will carry their heads above the waves, and deliver them from the devouring floods.

Wherefore, finally, my friends, I say unto

you, in the name of the Lord, "Be of good cheer!" Look to Jesus, and fear not man, whose breath is in his nostrils; but be valiant for the truth on earth. Love not your lives unto the death, and you shall receive a crown of life and glory; which the God of the fathers, the God of the prophets, the God of the apostles, and the God of the martyrs, and true confessors of Jesus; yea, the God and Father of our Lord Jesus Christ, shall give unto all those that keep the pure testimony of his Son in their hearts, and patiently and faithfully endure to the end.

Now to him that is able to keep you from falling, and to present you faultless before the presence of his glory with exceeding joy; to the only wise God, our Saviour, be glory and majesty, dominion and power, both now and forever. Amen.

I am your friend, that sincerely loves you, and earnestly travails for your redemption.

WILLIAM PENN.

From the "American Naturalist."

Flowerless Plants.

(Concluded from page 65.)

Alluding to fungi on forests, fruits, shruberies, grapes and grains, a passing word will not be amiss on the potato disease, caused by the *Botrytis infestans*; its ravages, however, are too well known to this generation for particular details. Another, the *B. bassiana*, attacks the silk worm in China and Syria. The *Achorion microsporum*, *Trichophyton* and *Lichen agrarius*, are well known to attack man, to say nothing of the strong probability of their being the origin of malaria, typhus, cholera, and the plague, &c., besides numberless epidemics, which, at least, are preceded and unduly accompanied by these strange and often microscopic wonders of the vegetable kingdom. Unlike other plants the fungi in place of purifying the air—at least, so manifestly—from the poisonous carbonic acid and the other elements of injury, and giving us back the vital oxygen, steal away this, and shed on the shadowing wings of every dark corner of the earth an element, which, if it exceeded a tenth, would annihilate the race; besides all this, they throw off hydrogen, which causes abrasions and sores—mostly of the mucous membranes and air passages; and, finally, as we have seen in some cases, they exhale specific poisonous substances; while myriads of spore-seeds so minute and light as to be scarcely less volatile than ether itself, are poured forth upon the gentlest breeze, were it even so slight as to leave the gossamer unmoved. Let us not, however, look altogether upon the dark and dismal side of the picture. They all may be, nay, are, beneficent forms of life, only less poisonous and otherwise injurious than would be the fleeting noxious vapors they catch from the atmosphere. It is notorious that in stagnant water, or in that other fluid, the air—where decomposing organisms take on innumerable forms of life—there is the purified and purest portion of the pond. Even the noisome mosquitoes, dragon flies and reptiles, with flowerless plants, render fluids salubrious that were hastening to putrefaction and death.

The Fly Agaric (*Agaricus muscarius*), is so named from its being used to poison flies. This intoxicating fungus is often seen in hilly or subalpine regions, particularly in our forests of fir and birch, where its tall, trim, white stem, and rich scarlet cap, studded with white,

scaly warts, form a beautiful contrast to the soft, green carpet of moss from which it springs, and the elegant emerald foliage that overshadows it. This very poisonous fungus is to the north-eastern nations of Europe and Northern Asia, what opium and hemp are to India and China, awa to the Sandwich Islands, cocoa to the Peruvians, and what tobacco and various spirituous liquors are to Europe and America. Thus we see, as a reverend writer justly remarks, that the indulgence of these narcotic cravings has at last degraded itself to so low an object in the scale of nature as a common foodstuff; and that, too, in the most revolting manner possible to conceive. The Kamtschatkan and the Koriat races are so dreadfully degraded that they personify this fungus under the name of *Mocko Morro*, as one of their household gods—like the god *Siva* of the Hindoo Thugs; if urged by its effects to commit suicide, murder, or some other heinous crime, they pretend to obey its commands, and to qualify themselves for premeditated assassination, they have recourse to additional doses of this intoxicating product of decay and corruption. When steeped in the expressed juice of the native whortleberry, it forms a very strong intoxicating kind of wine, which is much relished. But the more common way of using the fungus is to roll it up like a bullet and swallow without chewing, otherwise it would disorder the stomach. Dr. Greville in the fourth volume of the "Wernerian Transactions, says, one large or two small fungi are a common dose to intoxicate for a whole day, i. e. by drinking water freely, which augments the narcotic action. The desired effect comes on from one to two hours after taking the fungus. Giddiness and drunkenness follow in the same manner as from wine or spirituous liquors; cheerfulness is first produced, the face becomes flushed, involuntary words and actions follow, and sometimes loss of consciousness. Some persons it renders remarkably active, proving highly stimulant to muscular exertion; but by too large a dose violent spasmodic effects are produced. So exciting is it to the nervous system of many that its effects are very ludicrous; a talkative person cannot keep silence or secrets—one fond of music is perpetually singing, and if a person under its influence wishes to step over a straw or stick, he takes a stride or jump sufficient to clear the trunk of a tree. It is needless to say delirium, coma and death often result as in the case of alcoholic spirits.

It is worthy of note that the very same erroneous impressions as to size and distance produced by this plant, are also created by the *hashsheeh* of India, and are also frequently noticed among idiots and lunatics. It has been suggested that many of these may have suffered martyrdom at the stake during the witch mania of Scotland, owing to their natural and temporary defect—*inability to step over a straw* being considered the conclusive test of familiarity with evil spirits. And with those devoted to its intentional use, we should say it really does come within one of it. It is curious to observe how the effects produced by various species of poisonous fungi should be so very similar to alcoholic liquors. The effects in both cases may be traced to a kindred cause. Alcohol, as all know, is the product of fermentation or corruption, arrested at a certain stage of fungoid growth, as also is the case with the yeast and rising process of the pastry cook and brewer. Having,

hence, one common origin, it is less wonderful that their effects should be similar; and, we may add, they tend to produce a like poisoned condition in the human body. This is exemplified in excessive beer and liquor consumers, though slight accident or even scratch on which will often cause death.

The common Puff Ball (*Lycoperdon botivum* and *pratense*) requires special notice. When slowly burnt and the fumes inhaled it produces intoxication, followed by drowsiness and the perfect insensibility to pain, with loss of speech and motion, while one is still conscious of everything that happens around—realizing the truth that it is possible for one to lie stretched on the funeral bier sensible to weeping friends; aware of the last screw being fixed in the coffin and the last clod clapped down upon us in the churchyard, and yet unable to move a hand or a lip for our own deliverance. Experiments have recently been made on cats, dogs, and rabbits, and similar effects have been found to invariably ensue. And for aye it has been used in this manner for stupidifying bees, and thus robbing their hives with impunity. The inhalation in man, however, continued too long, vomiting, convulsion and ultimate death results.

That these fungi are sometimes purely meteoric, is proven by their fastening upon and rapidly extending themselves; hence the matter is manifestly conveyed to them by the air and moisture. Many Polypori, to grow on hard tissue of volcanoes without a particle of organic matter. Nevertheless, in healthy conditions of air, soils, and the objects attacked, we have often seen to be true communitants, so that in most cases they may be deemed consequences, rather than causes; one prefers that view of the subject—our chief concern being a review of the facts. Sometimes, indeed, require certain specific conditions so well known that they can be grown to order, leading shrewd observers to the plausible conjecture that they are of spontaneous generation.

Berkley and McMillan, from whom we extract, mention that in Italy a kind of Polypore greatly relished, is grown simply by singeing the stump or stems of hazel-nut trees or placing them in a moist, dark cellar. The plants and other parasites sometimes invading organisms, both animal and vegetable in their most vigorous state, but we may say, in general terms, that whatever fosters, lowers the standard of life in the human, the animal, or in the plant, surely invites these disorder-inspecting gnomes from beneath; which move to and fro in the earth-messengers of the shades!—ready to alight upon and claim as their own all such trenches upon the outer realms of death.

I well recollect, many years since, while residing in the pine forests of Russell county, Alabama, one of my neighbors (Oliver) was desperately annoyed by some mysterious factor, like carrion. A general search was instituted, and at length an abominable fungoid was found growing beneath the steps of a log cabin. I have only known of two instances of this kind. It may, however, be common in the piney wood sections of our country. This is a species of *Clathrus*, a putrid, revolting, jelly-like mass of raw flesh just beneath the loosely-lifted soil. It diffuses such a loathsome stench that none could endure it.

One might object that this stench was owing to its putrid state; not so at all; it is the

nal factor of the fungus, just as we find in common pole-cat weed and cabbage, several arums, stapelias, &c. Unless the hiding place of this pest is discovered—and little else is likely to come to the premises until—and the intolerable nuisance abated, its surroundings, they are apt to repeat themselves. There is a popular superstition at if any one should accidentally touch this noxious mass it would produce cancer—the custom of carefully covering it or with leaves, moss, earth, &c., to prevent a possibility of a contagion.

We do most solemnly warn the reader that a most vigorous health may not too rashly assume upon a forced, foolhardy or wanted careless contact with these fungi.

Recent researches seem to show us how low we yet know, and well do they warn us to form too hasty conclusions; nevertheless, with one voice they proclaim these fungi be more abundant and much more important than is commonly supposed. They are doubtfully the secret or obscure and often suspected proximate causes of many diseases of animals and of man—operating either directly or indirectly.

Builders have a woful knowledge of numerous fungi found on wood, the most familiar to us from my earliest recollection is the Weeping Morel (*Merulius lacrymans*), a crying ill. Both this and the *M. vastator* are sufficiently devastating to all timbers in warm, moist situations where there is no free circulation of air, as in hollow trees, cellars, waiting, timbers of ships, sills, sleepers, &c. These invaders, little less than legion, all pass under one common designation, the *dry rot*. Weeping morels at first appear in a white spot, or point, spreading their filaments flat over the surface of the timber in rounded white cottony patches from one to eight inches wide, and so onwards; near maturity it forms a mass of yellow, orange or brown, weeping threads, or veins, colored tears; they soon attract upon myriads of dirty, rusty-colored spores which spread destruction far and wide; wood, books, and walls crumble in its coming path; buildings often, though taken down and the stones scraped and fired, scarcely suffice to stay the scourge. Is this the leprosy the wall spoken of in Leviticus? Heat applied to dry wood only hastens the malady—it can be forestalled by cutting the timber in winter when the sap is out; and, better still, immersion in water for a long time, to fully pliant or extract the entire juices, as is now practised by the best ship-builders and nest wheelwrights, carpenters, &c., who regard it a worthy and enduring reputation. It is said that the ships in the Crimea Sea suffered more from this insidious foe than from the ravages of fire, or the shots and shells of their enemies. We have seen samples of this light, crumbly, papery shelled wood, with its weight and strength totally consumed.

By a strong wash of corrosive sublimate solution over the timbers of cellars these decrepit or weeping morels are at once rendered dry, and the evil often entirely arrested in the midst of its havoc.

Lastly, most of us have heard, and many have no doubt seen, specimens purporting to be a caterpillar turned into a plant, or some such similar foolishness. We have one in the herbarium which any one may see at their leisure. This is one of those parasitic fungi, that rob and kill in order to supplant and live

on other's gains; the dying grub's head never sprouts up as a plant, but the seeds or spores of the *Spheria Robertsi* alight upon the caterpillar of a moth, the *Hepialus*, when it buries itself in the mossy woods to undergo metamorphosis, and by its growth destroys the napping grub. Two species of these are used by the Chinese, who sell them in bundles of eight or nine, with the worms attached, which they place in the stomach of a duck and roast for the patient to eat.

For "The Friend"

Selections from the Journal of George Fox; with a few remarks.

Of George Fox's Journal and Life, Sir James Mackintosh says: "It is one of the most extraordinary and instructive documents in the world; which no reader of competent judgment can peruse without revering the virtue of the writer."

"The Lord said unto me, 'If but one man or woman were raised by his power, to stand and live in the same Spirit that the prophets and apostles were in who gave forth the scriptures, that man or woman could shake all the country in their profession for ten miles round.' For people had the scriptures, but were not in the same light, power, and Spirit, which those were in who gave forth the scriptures; so they neither knew God, Christ, nor the scriptures aright; nor had they unity one with another, being out of the power and Spirit of God. Therefore we warned all, wherever we met them, of the day of the Lord that was coming upon them."

"It is not circumstances we contend about; but the way of Christ and his light, which are but one; though the world hath imagined many ways, and all out of the light, which by the light are condemned. He who preached this light, said, 'He that knoweth God, heareth us; he that is not of God, heareth us not; hereby know we the Spirit of truth, and the spirit of error.' It is the same now with them that know the truth; though the whole world lies in wickedness. All dispensations and differences that are not one in the light we deny; and by the light, that was before separation, do we see them to be self-separations in the sensual, having not the Spirit. Their fruits and end are weighed in the even balance, and found to be in the dark, with all the lo-heres and lo-there's; and the presence of Christ is not with them, though the blind see it not; who see not with the pure eye, which is single; but with the many eyes, which lead into the many ways. Nor are any the people of God, but who are baptized into this principle of light; which all the faithful servants of the Lord were ever guided by in all ages, since the apostasy and before. For the apostasy was and is from the light; and all that oppose the light are apostates. Who contest against the truth, are enemies to it, and are not actuated by the Spirit; but have another way than the light."

In an epistle to Friends in the ministry, he writes:—"The Lord God Almighty over all in his strength and power, keep you to his glory, that you may come to answer that of God in every one. Proclaim the mighty day of the Lord, of fire and sword, which will be worshipped in spirit and in truth; and keep in the life and power of the Lord God, that the inhabitants of the earth may tremble before you; that God's power and majesty may be admired among hypocrites and heathens,

and ye in the wisdom, dread, life, terror, and dominion, preserved to his glory; that nothing may rule or reign but power and life itself, and in the wisdom of God ye may be preserved in it. This is the word of the Lord God to you all. The call is now out of transgression, the Spirit bids, come. The call is now from all false worship and gods, from all inventions and dead works, to serve the living God. The call is to repentance, to amendment of life, whereby righteousness may be brought forth, which shall go throughout the earth. Therefore ye that be chosen and faithful, who are with the Lamb, go through your work faithfully in the strength and power of the Lord, and be obedient to the power; for that will save you out of the hands of unreasonable men, and preserve you over the world to himself. Hereby you may live in the kingdom that stands in power, which hath no end; where glory and life is."

"Dear friends, dwell in patience, and wait upon the Lord, who will do his own work. Look not at man, in the work; nor at man, who opposeth the work; but rest in the will of the Lord, that so you may be furnished with patience both to do and to suffer what ye shall be called unto; that your end in all things may be his praise. Take up his cross freely, which keeps low the fleshly man; that Christ may be set up and honored in all things, the light advanced in you, and the judgment set up, which must give sentence against all that opposeth the truth; that the captivity may be led captive, and the prisoner set free to seek the Lord; that righteousness may rule in you, and peace and joy may dwell in you, wherein consisteth the kingdom of the Father; to whom be all praise forever! Dear friends, meet often together; take heed of what exalteth itself above its brother; keep low, and serve one another in love for the Lord's sake."

"All my dear friends in the noble seed of God, who have known his power, life, and presence among you, let it be your joy to hear or see the springs of life break forth in any; through which ye have all unity in the same feeling, life, and power. And friends, though ye may have been convinced, and have tasted of the power, and felt the light, yet afterwards ye may feel a winter-storm, tempest and hail, frost and cold, and temptation in the wilderness. Be patient and still in the power and in the light that doth convince you, to keep your minds to God; in that be quiet, that ye may come to the summer; that your light be not in the winter. For if ye sit still in the patience which overcomes in the power of God, there will be no flying. The husbandman, after he hath sown his seed, is patient. And ye by the power being kept in the patience, will come by the light to see through, and feel over winter storms and tempests, and all the coldness, barrenness, and emptiness; and the same light and power will go over the tempter's head; which power and light was before he was. So in the light standing still, ye will see your salvation, ye will see the Lord's strength, ye will feel the small rain, ye will feel the fresh springs, your minds being kept low in the power and light: for that which is out of the power lifts up. But in the power and light ye will feel God revealing his secrets, inspiring your minds, and his gifts coming in unto you; through which your hearts will be filled with God's love, and praises to him that lives forevermore; for in

his light and power his blessing is received. So in that, the eternal power of the Lord Jesus Christ preserve and keep you! Live every one in the power of God, that ye may all come to be heirs of that, and know that to be your portion; even the kingdom that hath no end, and the endless life which the Seed is heir of. Feel that set over all, which hath the promise, and blessing of God for ever."

The pure and unsophisticated doctrines of ancient Quakerism, as thus set forth by George Fox, fail not to remind, when contrasted with the easy-going, modern and modified Quakerism of to-day, of our dear Saviour's precept: "No man also having drunk old wine straightway desireth new; for he saith the *old is better.*" In view of this truth, would that the desire were more prevalent amongst us duly to heed the significant appeal of the prophet: "Thus saith the Lord, Stand ye in the ways, and see, and ask for the *old paths*, where is the good way, and walk therein, and ye shall find rest for your souls." And likewise heed Christ's direction to His church, which He at the same time encourages to keep in the footsteps of the flock, and to feed beside the shepherds' tents: "Tell me, O thou whom my soul loveth, where thou feedest, where thou makest thy flock to rest at noon: for why should I be as one that turneth aside by the flocks of thy companions." The first verse of a familiar little poem entitled "The March of Refinement," also harmonizes well with the same:—

"Sons and daughters of Fox, from your slumbers awake ye,

No longer in listless indulgence recline!
From the fetters of sloth and luxury break ye,
And put on your beautiful garments and shine."

The "beautiful garments" of humility, meekness, and dedication of our all to the Lord, being faithfully put on and livingly worn, might give much cause for contrition and abasement; but O! how would they exalt the dear Redeemer's kingdom, and power, and glory, over every thing within us and without us; abundantly proving that every sacrifice of self, or of that which can never find acceptance upon the Lord's altar, will have a soul-satisfying reward: how it would exemplify the truth to us-ward: "The King's daughter is *all glorious within*; her clothing is of wrought gold," &c. Then would the Saviour's blessing rest upon us, "Ye are the light of the world;" and His precious injunction be verified to our unspeakable joy, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." Then, too, would we more fully appreciate the favor and blessing attached to fellowship and membership in a religious Society, in allusion to which one of its convinced and distinguished members, could thus write in the seventy-eighth year of her pilgrimage: "With reverence and heart-contriting thankfulness, I acknowledge the mercy that united me to a religious people, whose genuine principles of faith in Christ Jesus, as a Mediator, a sacrifice for sin, and reconciler to God the Father, through justification and sanctification, is *fully satisfying to every faculty of my soul*, as the glad tidings of salvation."

George Fox, though jealous for the honor of the truth as it is in Christ Jesus; and, in the wisdom and authority given him, was prompt to reprove where he saw it needful, and that without partiality, in order for their help; yet, as is shown in the foregoing selec-

tions, he was also very tender, and even loving towards those, who with sincere devotion of heart, though in much weakness and fear, and amidst many discouragements and tribulations, were engaged to walk in that straight and narrow way which alone leadeth to life. These he tenderly entreats to dwell in patience, which overcomes in the power of God; who will then do His own work. He pleads that righteousness may rule, and peace and joy dwell in them, wherein consisteth the kingdom of the Father; to whom, he submits, be all praise forever. He reminds them that the light and power of Christ was before the tempter; wherein if they abide steadfast, they will see their salvation, and will see also the Lord's strength; for in His light and power, His blessing is received.

Had this light and power of the Lord Jesus, the quickening spirit of the second Adam, but full place in us of the present day, how should we become as a city set upon a hill that could not be hid. Unchangeably true remains that divine aphorism concerning our blessed Redeemer: "In him was life and the life was the light of men." O! that we might diligently and savingly heed the precept of our holy Lawgiver: "Yet a little while is the light with you. Walk while ye have the light, lest darkness come upon you: for he that walketh in darkness knoweth not whither he goeth. While ye have the light, believe in the light, that ye may be the children of light." Truths indeed ever safe and pertinent; and never more needed. In accordance with this doctrine, does not the change in us, even the great work of regeneration, begin in the Spirit of God enlightening, through His day-spring from on high, our dark hearts, as was the case with the two disciples going to Emmaus? (Luke xxiv. 13 to 34): Whence, through whole-hearted submission, and taking heed to which, we are enabled—"For all things that are reprovable are made manifest by the light"—to see our wretched and lost state as children of the first Adam, and walking in Christ, the Alpha and Omega, who has said, "I am the light of the world;" "He that followeth me shall not walk in darkness, but shall have the light of life," we may know our souls to be healed of that malady, sin, which if not turned from and repented of, must ever separate the soul from the King immortal and invisible, dwelling in the light, and from His ever-glorious kingdom, which consisteth in righteousness, and peace, and joy in the Holy Ghost. But as obedience to the discoveries of this light, keeps pace with knowledge, our path will be like that of the just "that shineth more and more unto the perfect day;" till, through the Lord's unspeakable mercy, we shall be permitted to become inhabitants of that glorious city, which hath no need of the sun, neither of the moon to shine in it: for the glory of God doth lighten it, and the Lamb is the light thereof."

On *Instantaneous Conversion*.—Very gross is the deception of those, who imagine the whole work of regeneration to be instantaneous. This can be nothing else but a delusion of Satan, to settle people at rest in a state of self security as long as he can. Oh! what a length of time it takes, to work out that rebellious, stiff-necked, backsliding nature, which was born in Egypt, before the new generation is raised up, that is fit to enter the promised land.—*John Griffith.*

Selected.
QUIETNESS, AS A CANOPY, COVERS MY MIND.

Great God, thy name be blessed,
Thy goodness be adored,
My soul has been distressed,
But thou hast peace restored.

A thankful heart I feel,
In peace my mind is staid,
Balsamic ointments heal,
The wounds by sorrow made.

Though elements contend,
Though wind and waters rage,
I've an unshaken Friend,
Who doth my grief assuage.

Though storms without arise,
Emblems of those within,
On Christ my soul relies,
The sacrifice for sin.

Though inward storms prevail,
Afflicting to endure;
I've help that cannot fail
In Him that's ever sure.

Though outward war and strife,
Prevail from sea to sea,
I've peace in inward life,
And that sufficeth me.

Though clamor rear its head,
And stalk from shore to shore,
My food is angels' bread,
What can I covet more?

Though ill reports abound,
Suspicious and surmise,
I find, and oft have found,
In death true comfort lies;

That death I mean whereby
Self-love and will are slain,
For these the more they die,
The more the Lamb doth reign.

And well assured I am,
True peace is only known,
Where He the harmless Lamb,
Has made the heart his throne.

Then, then may tempests rage,
Canon may roar in vain;
The Rock of every age,
The Lamb, the Lamb doth reign.

Job Scott.

Drreams.

From "Good Health."

Whether our views are materialistic or spiritual, we must adhere to the principle that mental activity is inseparably connected with the brain. It is the instrument by which the soul manifests its activity, and, as from an imperfect instrument the most skilful performer can produce only imperfect music, so the capabilities of the mind are dependant upon the state of the brain. As in sleep its nourishment is considerably lowered by the diminished supply of blood, so also, as Durham's experiments upon sleeping animals, whose skulls be partially opened, have shown, the arterial, that is, the oxygen bearing vessels, are more contracted and less abundantly filled than in the waking condition, and, consequently, the capability of the brain is much less. Mental activity is reduced to a minimum, and especially must all complicated processes, above all things the judgment, come to a pause. Still our thoughts and ideas continue to spin themselves out even in sleep, according to the same inductible law as they do when we are awake, but they lack the regulating and limiting conduct of the judgment and the understanding. This partial activity of the brain is to dream.

The dream is not a dark and inexplicable

something of whose origin we are ignorant; is a product of the same brain function which is active in our waking state. Our thoughts in dreaming depend as much upon the association of ideas as they do when we are awake. In accordance with this law every idea immediately on its rise calls up a series of other ideas connected with it by resemblance of circumstance, similarity of sound in the words which express it, or agreement in the order of time, &c.

In the waking state the judgment always exercises a restraining influence upon the play of our fancy, and prevents us from joining together the unusual and incongruous; but in deep our ideas are associated in the lowest manner. When we are awake one idea follows another; but when we are asleep, several ideas simultaneously present themselves, and, uniting together, form themselves into one complex whole; or, from the rapidity with which they follow each other, and the indistinctness of their connection, one idea unobtrusively takes the place of another.

In the waking state we can call up ideas by the effort of the will. We can think of what we wish. This, however, is not always the case. Very often it happens, as if by accident, that ideas spring from the treasure of our memory to which we voluntarily give further entertainment, or by which we are unwillingly led to other ideas distasteful to us. So also dreams, where the voluntary calling up of any given idea is impossible, the mind is led to involuntary activity by means of ideas stored up in the memory. Most frequently the first impetus to a series of dream-pictures given by some marked and striking impression which has been made upon us during the day, or by thoughts which have occupied our minds shortly before falling asleep. These are often uninterrupted continued; but not less often we are rapidly led to others, and we are then unable to detect the connection between the two.

When we are awake the impression of the senses are by far the most prolific source of mental activity. But in sleep, as we have seen, the senses have ceased to exercise their functions, though still, to a certain extent, capable of excitement. Under strong impressions the senses of hearing and of feeling are susceptible even in deep sleep, but the resting idea is almost always confused, and presents an entirely different image is presented; as in the twilight we sometimes take the trunk of a tree for a man sitting by the way-side. The indistinctness of the impression made upon the senses allows the fancy to fill up in its own colors, and so it comes to pass that any excitement of the sense of hearing or feeling in sleep gives occasion for visions, of which only the most general outline originates in external conditions. There are many examples of this on record. Meyer relates that he once dreamed that he was attacked by robbers, who laid him full length back upon the ground, into which they drove a stake, passing it between two of his legs; but on awaking he found that these two members were only separated by a wall.

Another relates that, having a bottle of hot water placed at his feet, he dreamed that he had reached the top of Etna, and was treading on burning lava. In a similar manner, if we are uneasy in bed and throw off the cover, we dream that in the cold of winter

we are wandering half-clad through the streets; or, if there is a strong wind blowing, we dream of storms and shipwreck; or a knocking at the door produces dreams of an attack by thieves. It is very seldom that words spoken in sleep are distinctly understood, and equally seldom that they call up in the mind of the sleeper the idea they represent. I may mention an instance or two in which dreams could be controlled in this way. Dr. Abercrombie relates that an English officer who accompanied the expedition to Ludwigsburg in 1758 dreamed, to the great delight of his comrades, any kind of dream they chose, according to the words they whispered in his ear.

The excitement of the internal susceptibilities gives occasion for dreams almost more frequently than the external senses. By internal susceptibilities I mean those sensations which indicate to us the position of our internal organs, and which are usually known as general feelings, and to which belong the condition of being well and unwell. These sensations come within our consciousness during sleep, but, as might be expected, darkly and indistinctly. Connected with them in a similar manner as with the impressions of the external senses, are certain symbolic dream-pictures, the most common of which is nightmare. This originates in a cramped condition of the respiratory muscles, and a consequent difficulty of breathing. Similar results will follow if the stomach be overloaded, for it then presses upon the diaphragm, and thereby confines the lungs. When we are awake we trace this disordered respiration to its correct cause—namely, a local affection of the organs of the chest, and there it ends; but in sleep we are in harmony with the law of association, and arise from the feeling of oppression the idea of weight and the image of a superincumbent object. We also dream of heavily laden wagons passing over us, or of dark, shadowy apparitions emerging from the ceiling and gradually settling down upon us.

Not unfrequently we find that, instead of this, we dream of some great trouble or sudden fright, for in the waking state experiences often render respiration difficult. We then dream, for example, that we are attacked by robbers; and when we endeavor to secure our safety by flight, we find, to our consternation, that our feet refuse to serve us, and we remain, as it were, rooted to the ground. We try to call for help, but find that we are unable to produce a single sound, until at last, after long struggling, the muscles of respiration are released from their restraint, and we awake—sometimes with a loud cry.

In a similar manner is experienced the dream of falling from a great height. It usually happens while we are falling asleep, and depends upon the circumstance that the gradual relaxing of the muscles caused by sleep is, by some momentary excitement, reversed, and the result is a shrinking back of the body similar to that experienced in falling from any lofty position. Somewhat different from this is the dream of flying. According to Scherner it depends upon our consciousness of the action of the lungs, their rising and falling motion giving to us in our dream the notion of flight. There are a great many more conditions of the body which, if they come into our consciousness during sleep, awake in us, in harmony with the law of the association of

ideas, a certain kind of dreams. The emotions also produce a definite impression upon their character. "Great joy," some one has written, "originates a different class of dreams than great sorrow; and ardent love gives rise to dreams not produced by hatred, deep repentance, or an accusing conscience."

If we accustom ourselves attentively to notice our dreams, we shall easily perceive the confirmation of the law laid down. But we shall also find that it is exceedingly difficult to reproduce a dream correctly. It is so for two reasons. The imagery of dreams, in by far the greater number of cases, is so indistinct and shadowy, and in its particulars so inadequate, that by the effort to recall them, we involuntarily bring to our help the imaginative power of our waking moments, and thereby give to them definite color and outline. The other reason is, the innate tendency of the human mind to look at all things in their logical connections. When our dreams consist of a series of pictures, often connected only by the very loose bond of the association of ideas, we bring to them by their reproduction, unintentionally of course, a logical connection and correspondence with the real life which originally they did not possess.

During the period of deepest sleep the function of the brain is so weakened that we retain no recollection of it, and sound sleep has, therefore, come to be called a dreamless sleep. Sometimes we know that we have dreamed, but are wholly unable to recall a single trace of that which has engaged our sleeping thoughts. But shortly before we awake, when the oxygen stored up in the blood corpuscles begins to bring the process of waste and repair in the brain into more energetic operation, our dreams become more lively and connected, and, for this reason, are more easily retained by the memory. The cases are very few in which dreams are so vivid that we are unable to distinguish them from real events. Professor Jessen, a celebrated physician to the insane, gives a striking example, in the following words:

"One winter morning, between the hours of five and six, I was awake, as I believed, by the head keeper, who informed me that the friends of a patient had come to remove him, and at the same time he inquired whether anything required mention. I replied that he might permit the patient to depart, and immediately lay down again to sleep. I had no sooner done this than it occurred to me that of the intended removal of this patient I had heard nothing, but that it was of the departure of a woman of the same name I had been advised. I was compelled, therefore, to seek further information, and, having hastily dressed myself, I went to the dwelling of the keeper, whom, to my astonishment, I found only half clad. Upon my asking him where the people were who had come to fetch away the patient, he replied, with surprise depicted in his countenance, that he knew nothing of it, for he had only just risen, and had seen no one. This reply did not undeceive me, and I rejoined that it must have been the steward who had visited me, and I would go to him; but as I was descending the steps which led to his house it struck me that the whole affair was a dream—a fact, however, which I had not until that moment suspected."

This example is particularly interesting from the length of time which elapsed after the professor awoke, and during which he

had been thoroughly aroused by the act of dressing and going to the keeper, yet the delusion which regarded the dream as a reality continued, and at last, without any apparent cause, suddenly vanished.

Proportionately more frequent are the cases where the a waking is imperfect, but still sufficient to induce a course of action corresponding with the supposed realities of the dream. There are instances on record where people, deceived by the alarming imagery of a dream, have committed acts of violence for which they could not be considered responsible.

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 59.)

"3rd mo. 12th, 1851. Having been poorly for several days, which has afforded time for serious reflection, my mind has been impressed with the need, we as a Society have, of being more and more redeemed from the applause of men, each one endeavoring with a single eye, to attain to the mind of Truth respecting ourselves; taking that for our safe guide; and not weakening our faith, and occasioning much conflict by looking outward. Holy Father! be pleased to be with those in this day of sifting, whose hearts are drawn unto Thee in fervent solicitude, that thou wouldst spare thy people, and give not thine heritage to reproach.

"6th mo. 8th. Having for some time past felt my mind drawn to attend the Monthly Meetings constituting Calm Quarterly Meeting, with one or more of the particular meetings; and obtaining the concurrence of our own Monthly Meeting, accompanied by my worthy relative, James Emlen, and my daughter J., I left home the 31st of Fifth month, and attended Bart meeting next day. Way not opening with sufficient clearness to appoint a meeting on Second day, we spent the time in visiting my dear widowed friend Sarah Cooper; also a sick young woman, (Lydia Simmons), and some others. Third day attended Sadsbury Monthly Meeting, where I had much to feel, having been a member of it about forty years. The three following days attended Bradford, Uehlan, and Robeson Monthly Meetings. The life of religion appeared to me to be at a low ebb in most of them, particularly the last mentioned. The language again and again saluted my mind while among Friends there. 'How is the gold become dim! how is the most fine gold changed!' They are few in number, and it seems as though the perishable things of this life had so taken hold of their minds, that the pure seed of the Kingdom is oppressed as a cart under sheaves. It was a time of suffering; but having endeavored to attend to the mind of Truth in the course of the foregoing visit, I was favored to return with the reward of peace. We were absent one week.

"Having for some time felt my mind at times turned toward a young man (George Pharaoh), in prison in West Chester under sentence of death for the murder of Rachel Sharpless, on the 6th of Seventh mo., in company with my cousin James Emlen, I went to see him. We felt a secret hope that the poor, erring youth was in some degree sensible of his wickedness, and fervent desires were raised, that the work of repentance might be more earnestly sought after by him; and

that it might be mercifully granted by the Lord Almighty, whose mercy seat covers His judgment seat.

"Having felt my mind at times, almost ever since we came to West Chester, in bonds on account of a prospect of appointing a meeting on a First day afternoon, for those who seem to be spending their time in the gratification of self, too much forgetting the Lord that bought them; and as the view was not confined to those of our own Society exclusively, it felt to me the more weighty, even too mighty for me. But the exercise increasing, and having the approbation of Friends, a meeting was appointed in the afternoon of the 31st of Eighth month. It was large, and felt to me that a renewed visitation was extended to some who had been feeding as on the husks; who were tenderly entreated no longer to put by the heavenly visitor, times and seasons being not at our command. A solemn covering spread over the meeting, under which I trust many minds were seriously impressed; and after solemn supplication the meeting closed, under a thankful sense of the renewed extension of heavenly kindness. My mind was thus relieved from a weight which had long rested upon it. May all the praise be ascribed unto Him, to whom alone it belongs.

"9th mo. 25th. This day my mind has experienced, I trust, more of the sustaining arm of Divine mercy than is often the case; tending to renew my faith in the all-sufficiency of Holy Help, causing desires to arise that I may be enabled to thank Him for His mercies past, and humbly hope for a continuance thereof, according to his blessed will.

"10th mo. 4th. I left home, in company with my sister, Edith Edge, and brother, Abraham Gibbons, to attend the burial of my beloved cousin, Ellis L. Pusey. We attended West Grove meeting next day, being First day. It was an exercising meeting to me; apprehending there were some present who were building a structure in their own will and wisdom, which retarded their progress in becoming experimentally acquainted with the Lord our Maker. These were earnestly and tenderly entreated to become scholars in the school of Christ, and learn of Him. Supplication followed that they might be made sensible that there were no joys equal to the joys of God's salvation. I thought the meeting was favored with a solemn covering, and closed peacefully. In the afternoon we attended the burial, which was large. My mind was again exercised in desire, that we who were present might feel it a solemn occasion, and the language presented, 'Be ye also ready, for in such an hour as ye think not, the Son of man cometh.'

"After leaving West Chester to attend the funeral of my cousin, we heard of the decease of — at Wilmington, whither I went on Second day morning, arriving there about eleven o'clock." She says some painful feelings attended her mind at this funeral, and thus concludes the memorandum respecting it: "Gracious God! be pleased, O God! Thee, to enable me, a poor unworthy worm of the dust, to look unto Thee day by day, and to do Thy blessed will: that so the language may not, in the winding up of time, be applicable to me, 'The harvest is past, the summer ended, and I am not saved.'

"21 mo. 1852. I have entered my eighty-second year. Attended our Quarterly Meet-

ing at Concord. Here our valued friend Mary Kite, gave a satisfactory account of her religious visit to the Yearly Meeting of North Carolina, and the meetings constituting it.

No date. "After having passed through much exercise in the prospect of having meeting with the inmates of the Chest county poor-house, my mind became impressed with the belief that it would be right for me to be resigned to it; and according I mentioned the subject to the select members of our Monthly Meeting, who encouraged me to attend to the prospect; and after the needful arrangements were made, a several Friends being willing to accompany a meeting was held on First day afternoon, the 14th of Third month, with a family and inmates, about two hundred number, much to the relief and satisfaction my own mind.

"4th mo." Our dear friend, after stating under this date, that she had attended our Yearly Meeting, with some few remarks thereon, thus concludes: "It is not likely shall attend another annual assembly, as the infirmities of age are pressing upon me. My desires are raised, that the hands of the laborers may be strengthened by the might God of Jacob to do his work; and that a session of laborers may be raised up, to support the precious doctrines and testimony given to us as a people, that Zion may again arise in her ancient beauty."

It is no marvel that the above Christian, sire, coupled, it may be, with grave fear should be entertained by one, in her measure as was the prophet Elijah, "very jealous of the Lord God of hosts." For, surely the hands of the laborers were never more to hang down through weakness, nor the apprehension greater respecting a succession faithful, whole-hearted workmen and women true to the death, who, in humiliation, contrition, and obedience, and in the power and life of a crucified yet risen and glorified Redeemer, shall stand for the law and the testimony committed to this people to bear before a world, which would, if possible, render them no less of their cross than of their crown. How often is the query reiterated, "of whom shall Jacob arise, for he is small?" If it is believed that the hands of the builders and burden-bearers, now striving to turn the battle to the gate, would be much strengthened by the cheering, consoling evidence, that the dear young people, as "a succession laborers," were submitting themselves to the heavenly discipline of true self-denial and daily cross that the Saviour calls to; who would train them for usefulness in their day and generation, even to cause their hands war, and their fingers to fight in that warfare, which, while it is represented by the Prophet, as "with burning and fuel of fire," at the same time dignified with immortality and crowned with eternal life. Thus we flourish in the house of the Lord, such we flourish in the courts of our God. This would not only be made fruitful in the field of offering, and joyful in the house of prayer but be a strength and encouragement to those now bearing the burden and heat of the day; and whose greatest joy would be to sons and daughters in true self-renunciating walking in, and enjoying the exceeding riches of the Saviour's grace, and the comfort of Holy Ghost, unto the edification of the church the spouse and body of Christ.

"6th mo. 19th. I returned from a visit to my children at Coatesville. It was a time of exercise on divers accounts: and desires were formed that my dear A. and M. might be more thoroughly resigned to take up their daily cross, and follow their meek and lowly Saviour.

"First day, the 20th, I attended our meeting at West Chester. A solemnity seemed to pervade us, wherein the secret petition of my heart was, that we might be kept humble, and given to know with holy certainty the voice of the true Shepherd from that of the stranger, and that every living desire begotten of the Most High, after holiness, without which no man shall see the Lord, might be cherished. I thought the petition nearly ready for vocal utterance, when the meeting closed, and left me in sadness. But as it is not without disobedience, I trust that He who knoweth our frame, and remembereth us are but dust, will in mercy forgive; and may I be helped to be more instant in season, the present breathing of my spirit.

"In the latter part of 8th month my mind was unexpectedly brought under exercise, on reading an account of a poor colored man in prison at Newcastle, under sentence of death, which seemed best to me that I should endeavor to see him; and, after some time, I was made willing to mention my exercise to some friends (the elders), who did not discourage; and my dear friends, James Emlen and Martha Jefferis, being willing to accompany me, we accordingly left home on First day afternoon, the 5th of Ninth month, lodged at Wilmington, and next morning proceeded to Swadest, and were readily admitted into the apartment where the poor man was. He appeared very uncomfortable as to the outward, but we were united in believing, that his mind was turned to the right source for help and strength, and that the work of repentance was in mercy going forward. After endeavoring to relieve my mind, both in testimony and supplication, for the poor erring man, and dear Martha having also had something to communicate, we came homeward: my mind being clothed with thankfulness for having been enabled to yield to apprehended duty, and for the reward of peace.

"7th mo. 29th. In our Monthly Meeting, my dear friend, Mary Kite, opened a concern to visit the families of West Chester Preparative Meeting. A similar prospect having tended my mind for some time past, and in order to visit a part thereof, and Friends uniting therewith, we went in company with James Emlen and Martha Jefferis, who were so liberated to accompany us. My friends visited all the families, except a few who were not at home, and I accompanied, as was intended, to the relief and satisfaction of my brethren mind. Oh, the weightiness of visiting families!"

(To be continued.)

Selected.

The year 1727 was rendered memorable by resolution of Dublin Yearly Meeting of Friends, against the practice of importing groves from their native country, and contained in the minutes of their proceedings. A later says, it should appear that the Quakers Ireland were the first public body who protested against the slave trade; the abolition of a traffic which had clothed England with glory, and Europe with shame. As far back

as the year 1688, a meeting of Friends, held most probably in the meeting-house belonging to Friends, which in the recollection of Friends now living, was situated in a rich valley of Germantown, on the banks of Wingahocken creek, presented to the Yearly Meeting of Friends in Philadelphia, a memorial against slavery and the slave trade.

The want of Tenderness and true Humility.

—There is no one thing relative to the religious state of our Society in this land, more discouraging to me than the want of tenderness and true humility, so seldom seen amongst our youth. Much of this precious sense of the Divine influence is not, I think, to be met with in very many places where it has been my lot to visit within the last year and a half; but if an individual here and there, mercifully and peculiarly met with, would fully submit to the power, I believe these would have many followers.—Sarah (Lynah) Grubb.

Clonmel, Sixth mo. 19th, 1817.

None are justified by Christ and his righteousness, without them, but as they have received Christ and his righteousness, and witnessed them revealed in themselves.—Edward Burroughs.

THE FRIEND.

TENTH MONTH 22, 1870.

The accounts we have received both by letter and orally, of the recent session of Ohio Yearly Meeting, have been to us particularly satisfactory and encouraging. One Friend, on whose judgment in such matters we can safely rely, says: "It was the largest meeting, both public and select, that has been held since the separation in 1854, and I think the most comfortably held within the last twenty-five years; and I might safely add, not of merit, but of the condescending goodness of the Shepherd of Israel, to gather near to himself, and more fully under his government, a backsliding, and in some respects, it is to be feared, a retreating people. A feeling of unity was spread over the assembly from sitting to sitting; and I believe most were prepared to appreciate it."

We can rejoice when a right sense of our shortcomings is present with Friends in their collective capacity, if it is accompanied with a proper appreciation of the responsibility resting upon them, and fervent seeking for that strength and wisdom to order the affairs of the church, which are obtained from its glorified Head alone; together with an earnest travail of soul to be made and to do what He may be pleased to require. As this work of the Holy Spirit prevails, it removes all selfish and sectional predilections; makes the promotion of the cause of Christ the primary object of regard; and as his love circulates from member to member of his body, qualifies them when one suffers, to suffer with it, and when one is honored, for all to rejoice together.

We apprehend it has been peculiarly grateful to most of the members of Philadelphia Yearly Meeting, to find from year to year, that their fellow members of the Society in Ohio Yearly Meeting, have been mercifully preserved from the unhealthy excitement that

has manifested itself in so many parts of the Society, and that, like our own Yearly Meeting, that body is still enabled to maintain its adherence to the doctrines and testimonies of the gospel as ever held by Friends. Sixteen years have passed away since many of the members of Ohio Yearly Meeting separated from it, and of all the co-ordinate bodies then existing, the Yearly Meeting of Philadelphia alone maintained its fraternal connexion with the original meeting. Many worthies who then stood firmly in both meetings for the cause of Truth and church governments for the cause of the Christian movement, have been gathered to their everlasting reward. To those of that class who yet remain in the militant church, it must be a source of joy to see among the young people, those who are willing to bow their necks to the yoke of Christ, and despising the shame, taking up the cross, and striving to come up in the footsteps of his companions. May the number of these multiply both in Ohio and among our own members; young men and young women, who though making little noise or show of their religion, but rather sitting alone and keeping silence before the Lord, are yet experiencing the washing of regeneration and the renewal of the Holy Ghost, so as to be transformed, and thus prepared to carry on the Lord's work at his bidding, in the church and in the world.

In the sad controversy and defection, we fear we might rightly say, the revolutionary innovations, that have been and still are going on in our religious Society, circumstances they could not avert or control, have separated Ohio and Philadelphia Yearly Meetings from other similar organizations. Claiming to be part of "the pillar and ground of truth," these meetings could consistently do no otherwise, than not only uphold sound doctrine, but also maintain an unequivocal testimony against the Society's retreating to opinions and practices, out of which our forefathers were led by the Holy Spirit, but which a large portion of the members have adopted, as being "evangelical," in contrast with those spiritual views promulgated by its founders, and held by the Society from their day to this. In striving to perform this duty, we sincerely believe they have violated no principle of church government heretofore recognized by the Society, and they have striven to cherish that charity which "vaunteth not itself, is not puffed up, doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh not evil." But their testimony, though receiving the approval of many in all the Yearly Meetings, has been denied by some, derided by some, and resented by others. For years there has been no epistolary intercourse between these two bodies; but, struggling for the same faith, the unity of their rightly exercised members has not been broken, but rather grown stronger, as, under the operation of the one Spirit, they have felt the fellowship of suffering. They have had and still have to mourn, as the prophet describes the mourning of Hadadrimmon, "The family of the house of David apart, and their wives apart; the family of the house of Nathan apart, and their wives apart." But as the Lord's work is allowed to go on in the hearts of the members individually, they will be more and more firmly knit together, in that unity which outward commotions and difficulties cannot meddle with; and in the Lord's time, we firmly believe, they will see of the

travail of their souls and be satisfied; and He will open the way for the two meetings again to address each other in the language of the Spirit to the churches. To hasten the arrival of the longed for renewal of former intercourse there is no way in which the individual members can labor more effectually, than by giving themselves up to the transforming power of Divine Grace, which will make them quick of understanding in the Lord's fear, and prepare them to exemplify the fulfilment of the apostolic advice, "Let all bitterness, and wrath, and anger, and clamor, and evil speaking, be put away from you, with all malice. And be ye kind one to another, forgiving one another, even as God for Christ's sake, hath forgiven you."

SUMMARY OF EVENTS.

FOREIGN.—Up to the 16th inst., the situation at Paris had not, to appearance, materially changed. The Prussians still occupied the positions around the city which they took up in its first investment several weeks ago. Two despatches, both of numerous sorties made by the garrison, in each of which the Prussians were driven back and sustained serious losses; but Versailles dispatches from the Prussian head-quarters do not confirm these statements. One of the 16th says, the reports of French successes before Paris are untrue, and are intended for the purpose of rekindling the courage of the people. Two small skirmishes between out-posts were the only encounters that had occurred during the week. The besiegers have received large reinforcements, but have not yet obtained a sufficient number of heavy guns to make bombardment effective. The prisons of Paris, with the bombardment, must take place, are numerous and difficult of access, and hence the official announcement that nothing decisive can be looked for from that quarter in less than three weeks.

The French army of the Loire was driven out of Orleans by the Prussians on the 12th inst., after a severe engagement in the immediate vicinity of that city, and prisoners. Orleans is 55 miles S. W. from Paris, and is now held by the German forces.

A Berlin dispatch of the 17th says, that Marshal Bazaine has made offers of capitulation.

It is stated that the English minister to France, Lord Lytton, has recently suggested to Count Bismarck the expediency of an armistice. Bismarck replied that Prussia would be glad to make peace at any time and anywhere; but no proposition looking to a truce would be entertained for a moment.

It is believed in London that negotiations are on foot with a view to effecting a peace, and that the main obstacle now is the belligerent temper exhibited by the Prussians.

Soissons, after a vigorous defence of four days, capitulated to the Germans, who took 4000 prisoners and 132 guns.

A diary written by a Parisian, which has fallen into German hands, admits that Paris is provisioned for only two months longer, and that the only hope of the besieged is to act on the offensive and dislodge the besiegers.

A large portion of the French prisoners are being moved as rapidly as possible from open camps into inclosures and inferior fortifications, in consequence of the inclemency of the weather, which has engendered much disease owing to the greatness of their number. Many who are willing to work are permitted to accept employment, and hundreds of officers are employed in the most efficacious mode of instruction in French.

The people of Alsace and Lorraine are reported, by their conquerors to be contented under Prussian rule. The peasants are gathering their harvests.

The early meeting of the North German Parliament has been decided upon to make provision for the war. The amount to be appropriated has been reduced from 100,000,000 to 80,000,000 thalers.

Each canton in France has been required to furnish a battalion of soldiers for the national defence. The total number of cantons in France is about 2500.

The royal proposal against the annexation of Rome to Italy has been published. It is a long document, but contains no new features. Considerable time will be required to prepare Rome to serve as the Italian capital. The seat of government in the mean time will remain at Florence. General Halban has been appointed to command the irregular French forces in the Vosges.

The preliminaries of marriage between the Princess Louisa, fourth daughter of Queen Victoria, and the marquis of Lorne, eldest son of the duke of Argyll, has been arranged with the consent of the queen.

During the past four years, 17,000 emigrants from foreign countries to Canada, 256,921 of whom 204,769 passed on to the United States.

A dispatch dated Marienburg, 10th mo. 16th, says: "A balloon which left Paris at seven o'clock this morning with four passengers and two sacks of mail, alighted at seven o'clock on the 15th, outside the city. The captain, reports that Paris is still crowded. A battle occurred on the 15th, outside the walls, wherein 3000 Prussians were killed." The latter part of the dispatch is probably either wholly false or exaggerated.

Paris.—Washington, the United States Minister, remains in Paris.

Advices from Metz state that the epidemic in and around the city is growing worse. The *Cologne Gazette* reports that the rinderpest not only prevails in the camps, but is raging in the Rhine valley, and has also broken out in Brandenburg.

A Berlin dispatch of the 17th says: "The commissioners of Wurttemberg and Bavaria, leave for Versailles this week, to enter upon negotiations for the completion of German unity. A Vienna dispatch says the journals of that city are nearly unanimous in favor of German unity."

A powder magazine, in the suburbs of Alexandria, exploded on the 16th inst., in which fifty persons were killed and wounded.

A terrible hurricane has occurred in the Island of Cuba, causing much destruction of property, and the loss of many lives. The wind was accompanied with a deluge of rain, which caused a junction of San Juan and Yumun rivers at Matanzas, and the overflow of different parts of the city. About 2000 persons, it is believed, were drowned.

London, 10th mo. 17th. Consols, 92 $\frac{1}{2}$. U. S. 5-20's of 1862, 89 $\frac{1}{2}$; of 1867, 90; ten forty's, 86 $\frac{1}{2}$.

Liverpool.—Midling uplands cotton, 8 $\frac{1}{2}$; Orleans, 8 $\frac{1}{4}$.

UNITED STATES.—Philadelphia.—Mortality last week 229. Males, 118; females, 111. Under two years, 81. Of consumption, 40.

Census News.—The population of the State of Vermont is reported at 330,235. In 1850 it was 315,068.

The population of St. Louis is 312,963, in 1850 it was 160,773. Newark, N. J., has 105,542 inhabitants, and Richmond, Va., 51,093. Nevada has a population of 11,896.

A former slave of the Davis family has received a prize of the best bale of long stapled cotton delivered at New Orleans.

The Markets, &c.—The following were the quotations on the 17th inst. *New York.*—29 $\frac{1}{2}$ American gold, 113 $\frac{1}{2}$. U. S. sixes, 1881, 113 $\frac{1}{2}$; ditto, 5-20's 1863, 110 $\frac{1}{2}$; ditto, 10-40, 106 $\frac{1}{2}$. Superfine flour, 53-20 a \$5.50; shipping Ohio, \$5.00 a \$5.75; finer brands, 26 a \$8.00. White Genesee wheat, \$1.60 a \$1.75; white Michigan, \$1.40 a \$1.55; amber western, \$1.34 a \$1.38. No. 1 Chicago spring \$1.33 a \$1.34; No. 2, do, \$1.16 a \$1.20. West Canada barley, \$1.20. New Ohio oats, 55 cts; western, 53 cts. Western mixed corn, 84 a 89 cts; yellow, 90 cts. *Philadelphia.*—Cotton, 105. Cotton, for uplands and New Orleans. Superfine flour, \$4.50 a 4.75; extra 53 a 57.5; finer brands, 26 a 28.25. Indiana red wheat, \$1.38 a \$1.40; amber \$1.40 a \$1.44. Rye, 83 cts. Mixed western corn, 80 a 84 cts; Penna. yellow, 86 a 87 cts. Oats, 50 a 52 cts. Clover seed, 6-25 a 6.75.

Baltimore.—The arrivals of sales of slave cattle at the Indiana Drove-yard reached about 3:45 o'clock. Extra sold at 9 a 9 $\frac{1}{2}$ cts; fair to good, 6 a 8 $\frac{1}{2}$ cts, and common, 5 a 6 cts. per lb. gross. Sales of 15,000 sheep at 5 a 5 $\frac{1}{2}$ cts. per lb. gross, and 3555 hogs at \$1.2 a \$1.22 per 100 lbs. net for corn fed. *Chicago.*—No. 2 barley, 93 cts. *Baltimore.*—Maryland amber wheat, \$1.60 a \$1.70; good to prime, \$1.40 a \$1.50; common to fair, \$1.15 a \$1.25. Yellow corn, 85 cts. Oats, 47 a 50 cts. *St. Louis.*—No. 2 red winter wheat, \$1.74, 49 a 42 a 45 cts. Rye, 60 a 66 cts. Land, 16 cts. *Cincinnati.*—Winter red wheat, \$1.10 a \$1.12. Old corn, 52 a 55 cts.; new, 43 a 45 cts. Oats, 33 a 41 cts. Barley, 25 a 21 cts.

AUXILIARY BIBLE ASSOCIATION OF FRIENDS.

The Annual Meeting of the Philadelphia Auxiliary Bible Association of Friends, will be held at No. 109 North Third Street, on Fourth-day the 26th inst, at 8 o'clock, P. M.

A. M. KIMBER, Secretary.

Paris, 10th mo. 14th, 1870.

RECEIPTS.

Received from Clayton Brown, Ind., per John F. Agent, \$2, to No. 5, vol. 45; from Thos. Ward, Thos. D. Langstaff, J. W., per Richard Mott, Agent, each, vol. 44; from Larkin Pennell, Phila., \$2, vol. from Alice Hibberd, Pa., \$2, vol. 44; from Deborah Hatton and Samuel C. Hutton, Pa., per Isaac Hall, each, vol. 44; from C. J. J. Wood, 44; per Thos. Conard, Agent, \$2, vol. 44; from Thos. Wistar, Ph. \$2, vol. 44; from Samuel Pancoast, Pa., \$2, vol. from Olive Holloway, O., per M. M. Moran, Agt \$2, vol. 44; from Chas. Lippincott, N. J., \$2, vol. 44

FRIENDS' SCHOOL FOR BOYS AND GIRLS.

Haddonfield, N. J., is now open.

A few can be accommodated as boarders. Application may be made to Charles Rhoads, No. South Seventh street, or to the Teacher, John Box at the School.

The Trustees of the above School, from frequent sections of its management, would recommend J. Boodle to patronage, he having had long experience a teacher, and given general satisfaction, during three years he has had the school in charge.

Trustees: Zebedeo Nicholson, Charles Rhoads, Chas. L. Willis, John E. Redman, John H. Ballinger.

BIBLE ASSOCIATION OF FRIENDS.

The Annual Meeting of "The Bible Association Friends in America," will be held in the Committee rooms of the Arch Street Meeting-house, Philadelphia, on the evening of Fourth-day, the 2d of Eleventh month, at 8 o'clock.

The members of the Philadelphia Auxiliary, men and women, and Friends generally are invited attend. CALEB WOOD, Secretary.

FRIENDS' BOARDING SCHOOL FOR INDIVIDUAL CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Marshallton, Chester Co., I. or Thomas Wistar, Exc. Chase P. O., Philadelphia Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

WESTWTON BOARDING SCHOOL.

The WINTER SESSION of this Institution will open Second-day, the 21st of Tenth month next.

Parents and others intending to send children to School, are requested to make early application JABOB SHARPLES, Superintendent, whose address is Street Road P. O., Chester Co., Pa. When convenient, application may be made to CHARLES ALLEN, Treasurer, or to Jacob Smedley, No. 304 A St., Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

New Franklin, (Twenty-third Ward,) Philadelphia Physician and Superintendent.—JUSTUS H. WRIGHT, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, Clk of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

DIED, on the 19th of Seventh month last, at the residence of her sister, Amy Abertson, in Philadelphia SARAH, widow of John Collins, formerly residing in Medford, N. J. in the 76th year of her age, a member of Frankford Monthly Meeting.

On Sixth-day, the 30th of Ninth month, 18 JOHN FORSYTHE, in the 88th year of his age, a member of Goshen Monthly Meeting, Chester Co., Pa.

suddenly on Third-day morning, the 4th in the 61th year of his age, JONATHAN E. PERRY, of Loud Grove, Chester Co. He was a highly esteemed elder and overseer of London Grove Monthly Meeting His sudden and unlooked for removal from an act and useful life, loudly admonishes survivors, be ye ready, as in the midst of life, death is at hand. Although the call was sudden, his family and friends have cause to believe he was found watching, with lamp trimmed, and his light burning.

WILLIAM H. PILE, PRINTER.
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TENTH MONTH 29, 1870.

NO. 10.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Three Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

For "The Friend."

Formation of Glaciers.

It is well known that as we ascend in the atmosphere, either by rising in a balloon, or by climbing the sides of a mountain, the air becomes cooler. If we continue our ascent, we come to a point where the average temperature of the air for the year round is below the point at which water freezes, and where, in the upper part of lofty mountains, the snow remains unmelted throughout the year. In this region of perpetual snow, the direct rays of the sun are still powerful enough to melt a portion of the fleecy covering, during part of the year, but the accumulations of the winter are too great for the melting power of the summer sun, and there is always left a residuum unmelted.

If we imagine a mountain elevated by volcanic power, or by any of those mighty agencies which are ever at work perpetually changing the face of the earth, and protruded so far into the heavens as to be above the line of perpetual snow, it is evident that during the first year of its existence, its upper portions would be covered with a head dress of snow, thickest at the summit, and gradually thinning as we descend until the line was reached where verdure takes the place of whiteness and desolation. If we suppose the eight of the mountain to be such that five feet of snow remained on its upper slopes at the end of the year, and there was no means of removal of this mass except the melting action of the sun's rays, it is evident that at the close of the second year it would have thickened to ten feet, at the end of the third year to fifteen feet, and when an hundred years had rolled past, five hundred feet of snow would crown the top of our mountain. Observation shows that no such accumulation exists. Though the Alps, the Andes and the Himalayas have pierced the clouds for thousands of years, yet their coating of snow is but of moderate thickness, and there is no increase of it. There must then be some means provided which shall bring these masses down to the warmer atmosphere which surrounds the bases of the mountains, where they may be melted and again take their places in that great system of circulation which pervades nature. To some extent (though but slight) this is effected

by the winds which seem to play with newly fallen snow, drifting it away like clouds, piling it in over-hanging masses, baring exposed prominences and filling depressions. After snow has lain awhile, especially when it has been exposed to the sun, the surface becomes partially melted and refrozen, and then is no longer susceptible to the moving power of the wind. On steep mountain slopes, avalanches often descend bringing large quantities down to the warmer regions beneath, and Alpine travellers describe their effects and their phenomena, as among the striking objects to be witnessed in those wild scenes where they most frequently occur. Yet they are comparatively local in their character, and their numbers and extent altogether insufficient to account for the regular disappearance from the mountain crests of the snow-fall. The glaciers which abound in high mountain regions are the outlet furnished by nature for the snow, or rather they are the snow itself compacted into ice under the influence of pressure and partial melting. The weight of the snow above, gradually but surely forces the mass down the mountain side, flowing as water would flow (but incomparably more slowly) into the ravines and valleys, where it accumulates often to a great depth. In a mountain chain, such as the Alps, we may consider two adjacent peaks with the elevated though lower ridge connecting them as forming the outline of a section of a huge funnel, the terminal and narrow portion of which is represented by a valley or ravine, often very narrow, into which the wide expanse of country above converges, and which must receive the drainage from the whole. If the wide part of the funnel is above the line of perpetual snow, this drainage comes in the form of snow and the ice formed from it. As the material which has been spread over a surface of miles in extent is gradually forced into a narrow ravine, and as from its nature, it can move downward but slowly, it must fill the valley to a corresponding depth, and will continue to flow down it to the lower and warmer country, until it reaches a point where it melts as rapidly as the ice is supplied from the mountains in the rear. Hence in cold seasons the glacier projects further into the plains, and in warmer seasons the foot of it is melted away, and the glacier shortened.

The question may naturally and reasonably present to the thoughtful mind—that the glacier is composed of ice, while the source of its supply is snow—How is one converted into the other?

Every school child who has played at snow-ball, will have noticed that when moist snow is compressed in the hand it hardens into a ball; that the outside portions which have been most softened by the heat of the hand in moulding it, become translucent like ice, and in fact are converted into ice. The same change is observed in the snow on our roads and pavements, where it is subjected to the

pressure of the feet of the passers by. It gradually becomes solidified, converted into ice. Ice as well as snow possesses this property of regelation as it is termed. Pound a lump of ice, on a warm summer's day, into fragments, and squeeze a handful of those fragments together, they will freeze together and unite into one mass, and this effect will take place, not only in the air, but if the hand which holds them is plunged into water as hot as the skin can bear, the hot water will have no power to prevent the pieces of ice which are brought into contact from freezing to each other. The mountain snow is converted into the ice of the glacier in virtue of the same general law, by the pressure of the mass above it.

When the glacier has thus been formed, and, with its mass of solid and apparently unyielding ice, fills the narrow valleys of the mountains, the first impression would be that further motion was impossible. This feeling would be strengthened by the irregular character of the valleys so filled, sometimes widening and again contracting into a narrow gorge, and sometimes dividing around a projecting mass of rock, and then uniting together beyond it. But in despite of all obstructions, the glacier, which is a river of ice, steadily flows onward, filling the wide spaces and contracting itself in the narrow ones, sweeping past obstructions, dividing into branches and again reuniting, as a river of water would do. Accurate observations have been made to determine its rate of motion, which is found to follow the same laws as that of a river, being faster towards the centre and surface of the stream, and retarded by friction near the sides and bottom. Two points are selected on opposite sides of a valley, and in a line between these a row of stakes is firmly planted in the ice of the glacier. On returning to the spot the following day, and ranging a line between the two points on the solid rock, the stakes are found to have moved downward. In the summer of 1857, Prof. Tyndall placed such a line across the Mer de Glace, among the Alps. He found the stake nearest the edge of the mountain moved 12½ inches in 24 hours, while nearer the centre of the glacier the motion was 31½ inches. In another line, at a different point, the motion varied from 7½ to 25½ inches. In a third line the extreme motions were 6½ and 23½ inches. In one of the smaller branches of this glacier the motion was as slow as 9 inches per day.

To my mind, there is something grand and ennobling in the idea of a solid river, silently and slowly but with irresistible force and unswerving steadiness, moving onward to its appointed end. It seems an emblem of the grand designs of overruling Providence, which move towards their fulfilment according to the laws which He has impressed on them, which are but the expression of His will. Their motion may seem to us so slow that we may imagine no progress is made, and like a

traveller entangled among the mighty crevasses of the glacier, we may see apparent confusion and destruction around us, when in reality all is in harmonious fulfillment of the Divine law.

The power of *regelation*, before referred to, that is of freezing together when brought into contact, which ice possesses, is one that is largely brought into action in the motion of glaciers. If we take a straight bar of ice and place it between two blocks of hard wood, whose surfaces are curved, the one hollowed and the other rounded, so as to fit into the hollow, and subject it to severe pressure, we shall find on removing the blocks, that the ice will no longer be straight, but will have assumed the curved shape of the wooden mould in which it had been pressed. In this experiment, the first effect of the pressure has been to break the brittle mass, and the fragments have refrozen together in the shape which the mould indicated. A similar process is constantly going on in the glaciers. The downward pressure of the ice and snow separates the particles of ice from each other, permitting them to flow past obstructions, and these particles again unite together; and thus, by an unceasing action of these forces which separate and unite, the mighty mass of the glacier, quietly and slowly moves downward. In addition to the motion thus described, there is a sliding forward of large masses, producing the grooves and scratches on the surface of the rocks, which geologists often observe in valleys where ancient glaciers existed, and which have now disappeared.

In the course of its downward flow, when the glacier comes to a portion of the valley where the inclination of the floor becomes steeper, it is plain that in passing over the line where the steeper descent begins, the ice at the surface of the glacier must move through a larger arc than the bottom ice. As it possesses no power of stretching itself, it is rent by transverse cracks, or crevasses as they are termed. If we imagine a glacier sliding down a slope until it reaches a precipice, we will see that when it projects beyond the edge of the precipice, so as to be unsupported, the weight of the mass (many hundred feet in thickness) will soon become too great for the strength of the ice to sustain, and it must give way and fall forward. This is what takes place when a glacier moves over the line where a steeper descent commences, only that in this case the falling motion is soon arrested by the ice which had previously passed forward. The series of crevasses thus formed is among the grandest features of the glaciers. Huge openings, of many hundred feet or yards in length, and so deep that the eye cannot penetrate the profound chasms, add wildness to the scene, and present often impassable obstacles to the adventurous traveller who is exploring the wonders of Alpine regions. Some of the stereoscopic views of these chasms are very wild and beautiful.

One who has examined a series of such views, and thus learned to appreciate the wildness and vastness of these rents and fissures of the glacier ice, might naturally suppose that their formation would be attended with grand and terrific displays of force, such as mark the resistless action of earthquakes and volcanic eruptions. But this is not the case. It is a very rare circumstance for any one, even the guides of the Alps, who spend much time on the ice, to witness the com-

mencement of a crevasse. We must bear in mind the slow motion of the glacier, seldom more than one inch in an hour, and we will see that these grand effects must be produced by slow and almost imperceptible gradations.

Professor Tyndall thus describes a case of crevasse-forming which came under his own observation.

"On the 31st of July, 1857, M. Hirst and myself, having completed our day's work, were standing together upon the Glacier du Géant, when a loud dull sound, like that produced by a heavy blow, seemed to issue from the body of the ice underneath the spot on which we stood. This was succeeded by a series of sharp reports, which were heard sometimes above us, sometimes below us, sometimes apparently close under our feet; the intervals between the louder reports being filled by a low singing noise. We turned hither and thither as the direction of the sounds varied; for the glacier was evidently breaking beneath our feet, though we could discern no trace of rupture. For an hour the sounds continued without our being able to discover their source; this at length revealed itself by a rush of air-bubbles from one of the little pools upon the surface of the glacier, which was intersected by the newly formed crevasse. We then traced it for some distance up and down, but hardly at any place was it sufficiently wide to permit the blade of my pen-knife to enter it."

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 71.)

"11th mo. 10th, 1852. In company with cousin James Emien, I attended the funeral of Abia Taylor, an aged Friend, and member of Bradford Meeting. It was, as is often the case at funerals, a time of close exercise to me; feeling it right to endeavor to turn the minds of the people inward to the alone Source of help and strength, in order to be prepared for the solemn close of life: believing there are those in attendance sometimes at funerals, who do not often or willingly go to any place of worship. Towards such my mind is often drawn while standing round the grave, in very earnest solicitude, that they may improve the remaining time allotted them, to their everlasting advantage; remembering that the High and Holy One hath declared, His spirit should not always strive with man. I was favored to return with some evidence of Divine regard.

"1st mo. 16th, 1853. This day twenty-one years ago, I with my dear children, were numbered among the widows and fatherless; and the prayer of my heart was on the solemn occasion, as it has often been since to Him who had been pleased to remove from me my outward stay and counsellor, that He would be with me and mine, preserve us from all evil, and enable us to walk in the way that pleased Him. Many weary steps and painful feelings have been experienced in my widowed state, sometimes under a sense of shortcomings and steppings aside out of the right way, for want of more earnestly watching unto prayer. Of late it has been a time as it were, of turning over the leaves of my life, wherein many exercises, close provings and conflicts have been remembered, when the silent language of my heart was with that of David: 'Is his mercy clean gone forever?"

Yet as faith and patience have been sought after, He in whom are hid all the treasures of wisdom and knowledge, has been pleased in His own time to return with healing in His wings, and my faith and hope have been renewed in the all-sufficiency of Divine support when the trust and hope have arisen, 'Surely goodness and mercy have followed me all the days of my life.' Gracious Father! be pleased to be with me; guide and guard me through the few remaining steps of my life, and enable me to do all Thy blessed will. That thou may be prepared, through Thy goodness and mercy, to receive the clean linen, pure and white, the righteousness of saints; and to enter that city whose walls are salvation, and whose gates are praise.

"2d mo. 16th. Close provings and besetments have been my portion of latter time wherein the enemy of my soul's peace has been permitted to buffet and follow closely with doubts and fears, led I had through inadvertence, cast a stumbling block in the way of others, and retarded my own eternal welfare. This morning, before I arose, feeling renewal of conflict and exercise, the secret inmost, earnest breathing of my spirit was to our Saviour, that He would be pleased to afford a little of the calming influence of His own good Spirit, and give me to know His blessed will; when the language seemed impressively spoken, 'Draw nigh unto God, and he will draw nigh unto thee.' And to His praise of His excellent name be it spoken, He has in good measure calmed the troubled sea and given me renewedly to hope in His mere and goodness. Be pleased, O holy Father to bruise the head of the serpent, for Thou alone canst do it, and preserve me from doubting again.

"4th mo. I attended our Yearly Meeting under much discouragement and lowness of mind, and considerable infirmity of body. The meeting was favored to proceed in the weighty concerns which came before it, in more harmony than at some former annual gatherings. It seemed as though the house of David was growing stronger and stronger, and the house of Saul weaker and weaker, yet there was cause for mourning on account of an unsanctified ministry appearing in a few individuals. May He who is the Head of His own church, work in us and for us, until that is offensive in His holy eyesight may be purged out; and more of the calming, cementing influence of His blessed Spirit be felt to prevail, and the body be edified in love.

"5th mo. 5th. My mind has of latter time often been clothed with mourning, proving and besetments; wherein the enemy has been permitted to come in as a flood, and the sea is often felt of increased watchfulness unto prayer. But in our week-day meeting this morning, my mind became impressed with earnest desires, that we might be more and more redeemed from the things which perish with the using, and know an advancement in the high and holy way, cast up for the ransomed and redeemed of the Lord to walk in and ability was afforded vocally to supplicate the Father of mercies for preservation, an increased dedication to His blessed requiring. My mind has since been favored with peace full quiet, a heavenly treasure in the earthly vessel, not at all at our command; yet more to be desired than the increase of corn, wine or oil.

"6th mo. 12th. Poverty and leanness con-

ine to be much my portion of late. But going to meeting this morning in stripped dress, and I trust true self-abasement, desires were raised for a little of that bread which nourisheth the soul, if consistent with the divine will: when after a time, the humble voice of those whom our Divine Master called essed, revived in my mind: 'When saw we an hungered,' &c., with the consoling answer, 'Inasmuch as ye have done it unto one of the least of these my brethren, ye did it unto me.' The revival whereof seemed to have healing virtue in it, for which I desire to be thankful."

It is the invariable way of our God to bring us, before He raiseth up; that under the humiliating and painful sense of our unworthiness, and that we are nothing, and have nothing, and can do nothing, all our dependence may be upon Him alone. The Psalmist saith: 'I waited patiently for the Lord; and he inclined unto me, and heard my cry. He brought me up also out of an horrible pit, out of the dry clay, and set my feet upon a rock, and established my goings. And he hath put a new song in my mouth, even praise unto our Lord.' It was thus out of poverty and weakness that our dear friend was made strong in the Lord, and in the power of His might; and coming having the harp hung upon the willows mourning silence, to know it afresh tuned the praise of Him who had delivered out of every temptation, and preserved alive to the praise of His all-powerful grace. Herein, what written is verified; "Thou hast wrought our works in us;" and, "All thy works all praise thee, O Lord; and thy saints shall see thee."

"8th mo. 31st. Our Monthly Meeting at West Chester. Our friends David and Debbiee open attended it. The former was acceptably engaged in testimony and supplication. It seemed to me a time wherein it might be said there was a harmonizing together in labor for our Father's honor; a favor which being by no means at our command, claims our humble attitude to the Author of all good. Gracious Father! be pleased to enable us often to examine into the state of our minds, and preserve us from every false appearance."

"9th mo. 2d. Notwithstanding I have made few entries of this kind for nearly three months, yet I think I may say in truth, my mind has been daily desirous to be enabled to speak acceptably before the Most High, and latter time, has been more preserved in the quiet than for some time before; and at seasons a little of that bread handed, which is precious: confirming in the belief, that the name of the Lord is a strong tower, where to the righteous flee and find safety."

"28th. Having for a considerable time felt exercised in the prospect of visiting the friends of Uchlan Monthly Meeting, I was to be joyfully liberated for the service. My beloved end Martha Jeffries, being willing to accompany me, it was also united with."

"10th mo. 6th, we accordingly attended Uchlan Monthly Meeting; wherein our friends William Trimble and Charles Downer were appointed to accompany us. The service was indeed weighty, and the necessity of keeping the eye single to Him whom I believed had put us forth, was never more pressingly felt than on the present occasion. The duties were about forty in number, and the service was performed under much bodily inability; yet we were enabled to proceed from

lay to day to its conclusion; when I was favored with the reward of peace, far surpassing all earthly enjoyments. Gracious Father! be pleased, I beseech thee, to keep me in the straight and narrow way; and enable me from time to time to render unto Thee that which is Thy due, thanksgiving and praise.

"Not long after the foregoing visit was performed, I went to see my dear son and family at Coatesville. I distributed some tracts on religious subjects while in the neighborhood. Also called at a house on the way, to which I felt my mind a little drawn, and left some of the same, which appeared to be well received. After spending nearly a week with my dear children, grandchildren and other connexions, and visiting Samuel Lukens, who is in declining health, I was favored to return home without condemnation."

"11th mo. 2d. Our friends, Samuel Leeds, and William and Elizabeth Evans, attended our Monthly Meeting, held at West Chester. Their company and religious labors were acceptable and edifying. Many fruits were brought forth to the praise of the Great and Good Husbandman, adequate to the manifold favors received, is the present breathing of my spirit."

"12th mo. 18th. First-day. On sitting down in our meeting at West Chester, I was early impressed with the importance, of not only presenting the body before the High and Holy One, but of being brought into stillness before Him; which we cannot attain to, in our own will and time. In the feeling of my own nothingness, and inability to do any good thing, I was led to crave preservation, and to be made quick of understanding in the fear of the Lord; that so I might not become as the withered branch, or as the salt that had lost its savor: which I sometimes greatly fear. Gracious Father! keep me, I beseech Thee, humble and watchful!"

(To be continued.)

How to Eat. From "Good Health."

On this all-important subject many theories have been propounded, whole volumes written; and yet as often has the very point been missed which ought never to have been forgotten, viz., that we must listen to the voice of nature. In our present enlightened age of science, and spelling made easy, most of us know that one of the first receiving houses for food is a double-mouthed bag, lightly slung in the space below the end of the breast-bone, and called a stomach; that this bag is rather a complex structure, furnished with blood-vessels and glands, which keep it in working order, and with a set of nerves, which telegraph to the brain when the working is out of order. The middle and outer coats of this bag have some muscles handily interwoven, and these are more plentiful and stronger at the lower mouth of the bag, and act the part of doorkeeper, to prevent refractory morsels of food from bolting through the opening, for the bowels. Then, for the blood-vessels,—the very term implies the function;—and the glands, what are they for? To secrete juices which shall help to digest the food; while the nerves are the telegraphic system which permeates the whole structure, and signals very distinctly to the brain when blood-vessel, gland, or muscle, is failing to do its respective duty, or doing this duty inefficiently. If, then, we can bear in mind two great facts connected with the stomach, namely,—that it has, first,

a set of blood-vessels, and therefore can be inflamed; and, secondly, that it has nerves, and therefore can be pained,—we may perhaps feel more disposed to be cautious in our treatment of the same. Luckily for us, it is a good stout bag, and will stand plenty of wear and tear; but the proverbial camel has its back broken by the last load, and the stoutest leather will occasionally give way, instead of stretching to circumstances; so, is it to be wondered at that the stomach sometimes strikes work?

My reader may ask, "How am I to tell whether this or that food agrees or disagrees with me?" I answer, "By your sensations." The nerves will telegraph the state of affairs. At first uneasiness, and then pain, will tell you whether the food you have taken has agreed, or the reverse. And, indeed, it is a question of agreement; you must come to terms with your stomach; for if you do not, it will eject the unwelcome lodger, or pinch and gripe you into submission. So that by listening in time to the warning given by pain and uneasiness, you may avoid the life-long trouble of indigestion."

I have spoken of the stomach individually as a separate organ, because it is perhaps more generally understood, if not more generally talked of; but we must not forget the part played by the bowels in the great drama of digestion. "Your stomach is out of order" is about the first sentence uttered by the medical man to his patient who shows him a furrowed tongue. Sir James Esyre has discoursed pleasantly and well on "The Stomach and its Difficulties." "I have a weak stomach" is the complaint of the dyspeptic. It is, as I said before, a good, stout organ, and will bear much rough work; and it is well for us that Nature has so constructed it, for when so many bolt their food with little or no mastication, how necessary is it to have another set of teeth lower down, to reduce the precipitated morsels to that more harmless compound known as chyme. This is what the stomach does for us,—remasticates our food,—only the teeth are replaced by certain juices, the constituents of which are a Babylonian mystery to physiologists. The stomach thus does the first hard work that has been shirked or slurred over by the teeth; and, though supplied so richly with blood-vessels, is rarely attacked by inflammation; showing that, after all, we must look to the poor neglected bowels for most of our digestive troubles. The remarkable example of the keeper of the Eddystone lighthouse off the coast of England only proves this fact too plainly; for when that building was destroyed by fire in 1755, one of the men, on looking up at the burning mass, evidently with his mouth wide open (from astonishment no doubt,) swallowed 7 oz. of the molten lead that fell from the top, and lived for ten days afterwards.

After such a case as this, what will not the stomach valiantly undertake? What has it not undertaken? There are instances of the great endurance of the human stomach; but they are by no means examples for us to turn fire-eaters or Indian jugglers, but rather to warn us against making any rash trials of the powers of the stomach; for there is one little peculiarity about this organ,—that, after repeated attempts to stay the progress of a tough morsel, the valve which stops unassisted exports becomes weary, and passes the contraband wares through sheer fatigue. The

consequence is, that the fragments which withstood the peptic machinery of the stomach not only defy, but wound the more delicate surface of the bowels. Pause then a moment before raising a tounge, though tempting morsel to the mouth, and think of the journey it will undertake, when it has once fairly shot the rapids of the gullet, and got into the seething current of food that whirls and eddies in the great stomach lake below; and, as lighter craft glide safely over the Canadian rapids, so let your food morsel be light, and the transit will lose all danger.

Given, therefore, a stomach, strong yet sensitive, having a still voice like conscience, and bowels delicate and impressionable—is it not fair that Nature makes us suffer through these organs, when we insult her so grossly by irritating them with bad food, ill-cooked, half masticated, and wholly unfit for the purposes of nutrition? We deserve to suffer, and richly too. Sometimes we pour chemical compounds into the beautiful laboratory of Nature, and call them stimulants, but our chemistry is ill-applied. Stimulants they are in one sense, for they excite the coats of the stomach and bowels into a state of chronic inflammation. But this is not the whole sum of our folly. Barely satisfied with the mischief already worked by bad food and villainous drink, we crown all by vexing the unoffending liver, "more sinned against than sinning," with blue pill, and the already wounded bowels with black draught. Is it wonderful that we suffer? Is it surprising that we fall sick? How about that pain behind the shoulders as if somebody had knocked you down; and that pain in the stomach, as if the same assailant had trampled on you when you were down? Did not that tough, leathery fragment, served as a steak, and chewed like rhinoceros hide, play some part in originating these pains? And did not the water, putting a deceiver before you with an inky fluid in it, call it wine? Port wine I think he called it, and misquoted the year of its birth by a quarter of a century. And did you not pour this liquid fire over the inflammatory steak below, swallowed but not digested? And then, did you not, rushing wildly away to your office, bury yourself in your books? And was it a wonder that indigestion, the demon of dyspepsia, piped to his own?

This picture is by no means overdrawn. Hundreds of city merchants lead this spasmodic life for a few years, and then wonder that their stomachs are out of order. The wonder is, that their stomachs have kept in order so long. To those who say, "You have shown us how to get indigestion, but we want to cure it," I answer, "Do not talk about curing it, but rather ask how you shall prevent the same." This will be the safer and the more satisfactory plan; for though it is a very good thing to go to a doctor (for the doctor), it is a much better thing to keep away from him (for the patient); and if you can learn this happy art, enjoying good health at the same time, you have discovered the true elixir of life.

To begin with, take your meals regularly: do not dine at 2 P. M. the day after, and 7 P. M. to-morrow, and 4 P. M. the day after; but fix some stated hour. Dining late is, as a rule, preferable to mid-day dinners, for dinner ought to be the principal meal of the day, and, to be enjoyed as well as digested, admits of neither hurry nor interference. The work of the day should be over; and a long rest, fol-

lowed by light occupation before bed-time, will be singularly conducive to health as well as happiness. What profit or pleasure can you get out of a dinner when you know that an army of clerks awaits your supervision, or that some very tall and remarkably stout ledgers have to be balanced as soon as the cloth is removed? You wait with impatience for the courses to be served, for the food to be swallowed; but as for the digestion of the same, that is quite beyond your jurisdiction; your business is to clear so many dishes in a given time; your work is cut out before you, and you are not the man to shirk it. But you must consider that you have a stomach to superintend as well as clerks, and that if you do not give the bowels a passing thought, the balance will be dead against you in the ledger of health. Do not forget the good old adage, "After dinner rest awhile." Let your meals be considered as important an item in the business of the day as watching the firmness of foreign markets, the looseness of gray-hairings, or the fluctuating fortunes of the Mexican republic. If you are to ignore the art of dining, you may as well repudiate at once the art of living and working, for rest assured that, unless you dine with judgment, you will not be able to calculate with foresight; and, just for the lack of a little gastronomical knowledge, you may be a bankrupt.

Be careful as to the character of your food—your imports let us call them; let them be nourishing, digestible, and judiciously cooked, for if these three qualities are combined, you will include a fourth, namely, that they shall be palatable. It is easy enough to tell you what is nourishing; those household words, beef and mutton, imply a multitude of dishes that shall nobly support life, and rarely fail to please the palate. Possibly you may reply, "That's nothing new; anybody could have told us to eat beef and mutton; we have been eating it all our lives." True, you have done so, but unconsciously of its merits. It may be that you have been eating beef for forty years, and yet you may be even now profoundly ignorant of its full merits and capabilities. You have not always eaten it with judgment; you have eaten it tough, perhaps, or with the juices of the meat extracted, or with greasy accessories that do not harmonize with either the meat itself or the consumer thereof. Perhaps you have, with unfeeling fidelity, stuck to the same joints, scorning any change to interest the stomach or stimulate the appetite; so that familiarity with these household words has bred contempt. Study variety, or let your cook do so, if she has brains (I do not write for those who keep a male *chef de cuisine*); if your cook lacks intelligence, let your wife come to the rescue; for, in common courtesy, we will admit that she, at any rate, is gifted with these organs of thought. There is a general idea prevalent that all beef is pretty much alike, more often tough than tender. But there are bullocks and bullocks, beef and beef, of varying qualities.

To the Sincere. — I cherish the belief that our religious meetings, whether consisting of few or many, and whether times of silent exercise, of suffering humiliation, or of secret rejoicing, are to the sincere, times of pure instruction.—*Mary Capper.*

The Pastor's Caution Revived.

During Wm. Penn's continental journey in 1677, he met, on his arrival at Wiewart, with some earnest seekers after the truth, who when met together, gave a most lively account of their religious experience. After a number had given an account of their change Wm. Penn gave a circumstantial relation how he had been gradually drawn off from the vanity and pride of life, what adversity he had met with at the University of Oxford, and of his conviction under the ministry of Thomas Loe. He concluded his relation with a serious admonition to go on in the true fear of God.

At parting, one of the Pastors asked him, "The truth rose not at first among a poor, illiterate and simple people?" "Yes," answered William Penn, "and it is our comfort that we owe it not to the learning of this world." To which the Pastor replied: "Then let not the learning of the world be used to defend that which the Spirit of God hath brought forth for scholars now coming among you, will be apt to mix school learning amongst your simpler and purer language, and thereby obscure the brightness of your testimony." W.

An Appeal of the Executive Board of the "Friends' Association of Philadelphia in its vicinity for the relief of Colored Freedmen."

The usual time for the reopening of the Freedmen's Schools having arrived, the Executive Committee in making arrangements for conducting them during the ensuing term feel it necessary to appeal to all those interested in this great work, for funds to enable them to carry on such schools as may be started.

During the last season the number of schools in operation was forty-seven, which were supported at an expense of about \$21,000. It is our wish, should the contributions warrant, to sustain this year about twenty-two or thr schools, in the more populous districts of central North Carolina and south western Virginia, and to maintain them in such an efficient manner that from them the country schools may hereafter be supplied with teachers—encourage and assist such schools as are reported by the Freed people themselves, with occasional donations of books and other school material, as may be thought advisable, and heretofore, to alleviate physical suffering, &c. such relief as may be in our power.

The Freedmen's Bureau having been discontinued during the present year, the assistance which we have heretofore received from that source will now be cut off, as also aid from the "Peabody Fund"; therefore, the prosecution of the work will depend entirely upon the liberality of our contributors.

Our treasury is now nearly empty, and estimating the expenses by those of former years, to carry on the proposed work, it will be necessary to raise not less than \$10,000.

When the Association commenced its work the great need pressing upon it was to mitigate bodily suffering, but the Freed people having in most cases become more than self-supporting, this work has been gradually superseded by an educational one—numbers of schools taught by teachers from the north and supported chiefly by the Association were established. Each year the colored pe-

have done more toward supporting these schools, both by paying part of the expenses, & by furnishing teachers from among themselves, so that now we feel that our field has been narrowed to comparatively few schools, designed principally to educate teachers.

Although we feel that our work has lessened, yet we believe that it is not yet accomplished, but that it still appeals strongly for further support.

Contributions will be received by R. CADRY, Treasurer, No. 111 S. Fourth Street.

Taking a Wild Bees Nest.

I have just been assisting (at least, so far looking on) at a very interesting operation, the taking of a wild bees nest. The incident is, I am told, one of frequent occurrence, the honey-bees often sending forth a colony swarming time, which seek a new abode for themselves. Even the little boys have their eyes open, and their attention awake to the motion of the forest bees, watching their flight, and often following the direction they have taken in hopes of seeing others, which may serve as so many finger posts to guide their track, till at length the increasing numbers of bees thronging the air announce the proximity of their home, when a little search with a practised eye soon traces the industrious insects to their very hole; and the chieftain, having carefully marked the spot, makes home with the triumphant intelligence that he has found a "Bee-tree." A tree of this kind, in which a swarm had hived, having been discovered yesterday, I went with a friend and a couple of negroes to see them take it down. They carried two axes, a bundle of loose cotton, to make a smoke with, and a "gum," or square box, to live the bees; the possession of the bees being not so desirable than the acquisition of the honey.

We soon arrived at the spot, which was in a forest, a few yards only from the high road, and at no great distance from the house. My attention being directed to a large and tall tree of the long-leaved pine species (*Pinus laustris*). I perceived, far up in the branches, a round orifice, about which several bees were clustering, going out and coming in, departing and arriving to and from all parts of the compass. The men lighted a little fire, stripped, and commenced felling the tree, one on each side. The trunk was thick, but the negroes were skilful and sinewy, and plied their axes until the perspiration streamed profusely from their glossy shoulders. Not a stroke was given in vain, and very soon the lumber trunk was supported only by the under interval left between the two deep crotches, as if balanced on the edge of a prism. At length, so little was the preponderance of either side, that the bushy head quivered in the sky, with a tremulous motion for several seconds, fore we could determine to which side it would incline; at length it slowly bowed, danced, cleft the air with a roar, and plunged into a deafening crash among the bushes and boulders, snapping its own stout limbs like wax, and scattering the moist earth far over the leaves on every side.

One of the men ran immediately to the hole of the hive, which was about three inches in diameter, perfectly round, and smooth, worn by the continual passage of the bees, and fastened from the same cause with a white substance, probably wax, bleached by the sun

and rain. Having lighted a handful of cotton, smothering up the flame in the midst of it, he held it close to the orifice, blowing in the dense choking smoke, to prevent the bees from coming out, which they had already begun to do in some numbers, alarmed, doubtless by the downfall of their house.

While he was doing this, the other was gathering green leaves from the chestnuts, oaks, and hickories, which he cleverly rolled up into a solid cylinder. This, when large enough, was thrust into the entrance of the hive to stop it up, while they opened it in another place to extract the combs. The next proceeding was to discover the situation of the comb, which could only be ascertained by repeated trials, cutting into the trunk in different places. Aware that the hive was above the entrance, they first cut a notch on the opposite side from the orifice, and about two feet above it; but as soon as the axe had penetrated the hollow, the bees began to hum and cluster to the light, whereby the men knew that they had not reached the top of the nest. Preventing, therefore, the egress of the imprisoned bees at this opening, by holding the smoking cotton there, until it could be closed by another stopper of rolled leaves, they made a new trial about two feet higher. Here, however, the bees were as thick as before; so, having closed this also in the same manner, they made a third cut still higher, and at length discovered that they had reached above the top of the nest.

One of them now blew the smoke into this orifice, while the other having fixed the "gum," and supported it by props over the original entrance, drew out the stopper of rolled leaves, in order that the bees, being driven out by the smoke blown in at the other end, might take refuge from the annoyance in the new hive, and thus render the seizure of the honey more easy. But the bees did not seem to manifest that decided preference for the new lodging over the old one that the negroes desired; so they, becoming impatient, proceeded to split off the longitudinal chip or section of the trunk, contained between the first two cuts, supposing that by so doing they should expose the mass of comb to view. As they peeped in, however, by lifting up one edge, before the piece was quite detached, and perceived that the comb was not there, they did not split it off, but tried the upper chip; here, at last, they exposed the long oval combs lying one over another as the fallen tree now lay, but side by side, and parallel to the sides of the trunk when it was erect.

The men now began to cut out the comb with their knives, disregarding the bees, which crawled about, manifesting little disposition to sting, seeming "more in sorrow than in anger;" but probably in reality stupefied and disabled by the effects of the smoke. We all feasted on the honeycomb, which was full to overflowing of rich, clear honey, nearly as transparent and colorless as water, indicating that the swarm was young. A good deal of the comb was either dry and empty, or contained the young bees in different stages of their growth; some being in larva and pupa, others perfected, but with their members yet soft and white.

The men now removed the "gum" from the original entrance, and placed it over this main opening, blowing in smoke at both extremities, but as they had taken out most of the comb, I did not remain to watch the re-

sult; a great many of the bees were flying off when I left. They had, previously to commencing operations, rubbed the inside of the gum with salt and peach-leaves, the smell and taste of which are believed (with what foundation I know not) to be attractive to these insects. Not one of us was stung, except one of the negroes, and he before they began to cut into the hollow.—*Gosse's Alabama.*

Selected for "The Friend."

Copy of a Letter from S. Fothergill to E. Sibson.

Warrington, 2d mo. 20th, 1761.

Dear friend and kinswoman E. Sibson:—Amongst the many wishes of thy Friends for thy happiness, none desires it with more sincerity than myself, though more silent about it than some others; and as a testimony of it, I sit down to throw before thee a few hints which may contribute to thy advantage, as attended to, even to render thy life easy and happy; useful to others, and thine end honorable and peaceful.

First and principally thy duty to the Almighty Lord and Maker of all things, by whom, and through whom all things visible consists, the sovereign Author of all blessings, let Him ever be looked unto and remembered by thee in this light, and let thy mind be humbly engaged to seek his favor; let nothing impair thy love to, and dependence upon him; he it is that can blast every pleasing prospect, can wither every hope, and sanctify every affliction. Be not ashamed to demonstrate thy hope is in him, by humbly walking before him; it is in vain to expect a total freedom from sorrowful events, and an excellent mercy to have on such occasions the Staff of all ages to lean upon.

Secondly, Thy duty to thy husband, who, if I judge right, will, from his affection and tenderness for thee, be entitled to every degree of a mutual return from thee. Study his temper, accommodate thy own to it. I have seen great inconveniences arise in the married life through inattention; where the wife hesitates at the request of her husband, and yields at last a reluctant obedience, this imperceptibly diminishes that tender affection, which is the very life and comfort of the married state, gradually creates a distance, and then life may be uncomfortably dragged along, but not happily enjoyed. Cultivate in his mind, and thy own, every religious sentiment, strengthen that part as much as possible; hereby a two-fold cord of Divine love and natural affection will unite you in a covenant never to be broken.

Thirdly, Towards Friends of the meeting into which thou art removing, let thy conduct be humble, affable and exemplary; not assuming, but the contrary; preferring others that others may prefer thee. Humility is the surest way to honor; let no emulation to be greater than some, and equal to the greatest ever be suffered to be harbored in thy breast; for this will insensibly raise displeasure, envy, and other disagreeable affections in the minds of others.

And let thy dress be rather beneath than on the level of thy circumstances, it will be to thy reputation.

Fourthly, Let it become thy constant watch to avoid that ruinous practice of tattling, tale-bearing, and secret reflection; these sources of division and mischief are hateful to God and man; this character sets itself as the ob-

ject of general contempt; its hand is against every one, and every one's hand and heart will be against them who merit it. The concerns of one's own mind and family are sufficient to employ a prudent mind, without interfering in the business of others unnecessarily. Notwithstanding this, secret reproof where just, and immediately addressed to the party, is a beautiful, useful part of friendship.

Fifthly. Let thy husband's relations become dear to thee; it is a connection of tender affinity; cultivate every sentiment of friendship and affection for them, especially his mother, with every of those anxieties a son must secretly sympathize.

Excuse, dear cousin, the freedom of these hints, they arise not from any painful apprehension of a contrary conduct, or thy being in any great danger; but my affection for thee induces me to wish thee to be found in the way to blessing; even the blessing of the heaven above, of the earth beneath, the blessing of the ancient mountains, and of the everlasting hills. May the Lord of all favor crown thee and thine with them, is my humble prayer on thy behalf. I am thy faithful friend and affectionate kinsman,

SAMUEL FOTHERGILL.

Changing Color.—In shaking bushes to procure caterpillars, I often shake off a pretty little lizard, of a bright pale-green color, about five inches in length, of which two-thirds at least are tail (*Aolis bullaris*). It is nimble, but not nearly so swift as the other lizards; when shaken off, it soon runs up another bush, where it seems quite at home among the leaves. The *Sassafras* (*Lavrus sassafras*) is its favorite resort. It feeds on insects: I once saw one with a brown grasshopper in its mouth: I should have thought it would need more agility than it appears to possess, to catch such prey as this; but probably it effects its purpose by creeping cautiously towards its prey, and then seizing it by a sudden spring, as a cat does a bird. I have observed, that, when pursued to the end of a twig or branch, it will often leap to another at a short distance, and secure its footing without difficulty.

I had been inclined to consider the changes of color attributed to some lizards a gross exaggeration, if not a mere fable: but I had recently the satisfaction of witnessing a change of this sort in the present species. The children had been chasing a little lizard about the logs of which the school-house is built, for some time; but it manifested great cunning and agility in avoiding them, creeping through many of the crevices between the logs, being sometimes in the school and sometimes on the outside; they at length caught it, however, and brought it to me. It was all over of a brownish-black hue, except a line down the back, which was pale dusky. One of the lads told me that it was the little green tree-lizard, which had become black from being on the dark logs, and that it would turn green again if placed on a leaf. This I could not at all believe, though it corresponded with that species in size, shape, and general appearance. But as it was easy to put it to the test of experiment, I let the lizard hop upon a small solitary plant in the sunshine, bidding some of the children watch it, without disturbing it. They soon brought it to me again, telling me that it was changing; and upon looking at it, I could distinctly per-

ceive a tinge of green upon the black. Still incredulous, however, and thinking it might possibly be fancy, I put it into my desk; and about half an hour after, on opening it, I was no less surprised than delighted to see the lizard of a brilliant light green, the line down the back blackish; there was not the least hue of green in the black at first, nor was there any blackness in the green hue now; the change was complete. I suppose the black color was not caused by the animal's being on the dark logs, but was the effect of anger on being chased.

When irritated, and also during other seasons of excitement, the skin of the throat is thrust forth, by a peculiar mechanism, to a great extent; this part then becomes of a bright crimson. The scales with which this lizard is clothed are very small, and scarcely observable. It is perfectly harmless, and is an elegant little creature, of very graceful and active motions, running and leaping.—*Gosse's Alabama.*

Justification and Sanctification.—The following remarks upon these important doctrines were penned by John Crook. They are extracted from a treatise on Truth's principles, which is prefaced by the following note written in 1698. "It being allowed by some late adversaries, that we are more sound on the fundamental doctrines of the Christian faith, than they thought of; yet they persist to object, that we have altered our religion, and that our ancient Friends held grievous errors; I am, therefore, willing in the 81st year of my age, that this following treatise should be reprinted, that they may see what myself, with our ancient friends, held in the year 1663.

We believe that justification and sanctification are distinguished, but not divided; for as he that sanctifieth and justifieth is one, so do these go together; and when the soul hath the greatest sense of justification upon it, through the virtue of the blood of Jesus by the living faith, then it is most in love with holiness, and at the greatest distance from sin and evil; and whenever there is a failing in sanctification, there is also some eclipse in justification in the eye of the soul, until faith hath recovered its strength again, which is lost by sin's prevailing. For as the farthest and clearest sight is in the brightest day, so it is with the soul, when it is most in the brightness and beauty of holiness, its justification appears most glorious, and its union and communion most sweet and lasting; and so, like twins, as they are much of an age, so they are like one to the other; and, "what God hath joined together, let no man put asunder."

On Acceptable Works.—Whatever works are brought forth by any creature, though the same in appearance (as those) which are accepted of God from another, yet not being moved unto, nor guided in, by the spirit of the Father, but brought forth in the will and wisdom of the creature, which is from below, and acted in imitation, from the saints' works; these works are not accepted, and well pleasing to God, but are an offence unto him, and sin against him.—*Edward Burroughs.*

The Watchword.—Surely, persevering waiting at the Redeemer's feet, seems to me the watchword for the present time.—*M. Capper.*

Animal Happiness.—An eye accustomed on to the small and generally inconspicuous butterflies of our own country, can hardly picture to itself the gaiety of the air which swarms with large and brilliant-hued Swallowtail and other *patrician* tribes, some of which, in the extent and volume of their wings, may be compared to large bats. These occur, to not by straggling solitary individuals: in glancing over a blossomed field or prairie knoll, we may see hundreds, including, perhaps, more than a dozen species, besides moths, flies, and other insects.

When contemplating such a scene thronged with life, I have been pleased to think of the very vast amount of happiness that is aggregated there. I take it as an undoubted fact, that among the inferior creatures, except when suffering actual pain, life is enjoyment; the mere exercise of the bodily organs, and the gratification of the bodily appetites, is the highest pleasure of which they are capable: for as Spenser says—

"What more of happiness can fall to creature
Than to enjoy delight with liberty?"

Fate of the Butterfly.

To look then on the multitudes of beings assembled in so circumscribed a spot, all pursuing pleasure, and all doubtless attaining the end, each one with an individual perception and consciousness of enjoyment,—what grand idea does it give of the tender mercies of God, as a God of providence!

Let us extend the idea:—there are about one hundred thousand *species* of insect known; let your mind try to guess at the number of *individuals* of each species in the whole earth, (perhaps if you count the cloud of mosquitos and gnats that issue from a single marsh in a single night, it may assist you in the conjecture,) think of the other less populous orders of animals, fishes, mollusks, &c. &c. reduce them to individuals, and you may have some distant approximation to one idea of Him who "openeth His hand and satisfieth the desire of every living thing." EVERY LIVING THING! I have often thought that no one can appreciate the grandeur, the sublimity, of this sentiment; the Psalmist, like the devout naturalist.

Without the trial comes not victory, nor without the cross the crown.

THE FRIEND.

TENTH MONTH 29, 1870.

When our Saviour pronounced a blessing on them that mourn, and declared they should be comforted, He certainly had allusion to those who mourned from a sense of having displeased their heavenly Father by violating His righteous law, or to those whose righteous souls are grieved at seeing the world running counter to its true interest and the divine will, or to those who are baptized in suffering on account of the state of the church. This mourning, being an effect of the operation of the Holy Spirit on the heart, its results, if patiently borne, are similar to those described by the apostle as witnessed in 1 day. "For behold, this self same thing that ye sorrowed after a godly sort, what carefulness it wrought in you, yea what clearing of yourselves, yea what indignation, yea what fer-

a what vehement desire, yea what zeal, a what revenge. In all things ye have approved yourselves to be clear in this matter." His sorrowing "after a godly sort" always aids to this searching of heart, to this fearful constant watch to become, or to keep, clear of that which is wrong.

The mourning disciple of Christ, then, whether he is taking his first steps in the straight and narrow way, or has grown in the path until he has become able to bear his share of the suffering that remains to be filled for the body's sake, may rest assured, however his afflictions may for the present seem grievous, that, if allowed to effect the purpose intended by his omniscient Master, he will sooner or later receive the recompense promised. "Blessed are they that mourn, for they shall be comforted."

There is nothing new in these reflections, as they have occurred while dwelling on the subject brought before us now, as at other times, by many honest-hearted Friends throughout the different meetings, are wading along, day after day, under deep discouragement, and at times feeling ready to faint by the way, strongly attached to the doctrines and testimonies of the gospel, as ever held by Friends, who seeing the departures from primitive purity and principles, and hearing apologies for those departures, from quarters where they had hoped for better things, and the profession of great peace and light on the part of those who are manifestly straying in the self-denying path in which our predecessors trod, are ready to conclude it is useless longer to attempt to stem the swelling current of innovation, and they may as well let things take their obviously determined course, their sorrow, perhaps we may say, in the earnestness of their affliction, they seem ready to adopt the plaintive language of the vanished Israelites in their captivity, "By the waters of Babylon there we sat down, we wept when we remembered Zion; we hanged our harps on the willows in the midst thereof."

We think we can, in measure, sympathize with those who are thus giving expression to feelings such as these, and with others who, while equally tried with the same things, are wearing the sackcloth underneath. We, too, receive our discouragements in conducting this moral, and striving, however feebly, to eradicate the cause of old fashioned Quakerism, which is the cause of truth and righteousness. So, at such a time, if truly desiring to see our people restored to primitive christianity and their unity, can plead a right to be exempt?

Discouraging as the state of the Society is, apprehend that some dear Friends are taking a too gloomy view of our situation, thinking all is lost that is in danger. In despondency we are liable to forget that cause of truth is the Lord's cause, and that is watching over it by day and by night. The best of men, even those who, like the prophet, can say, "We have been very jealous of the Lord God of hosts," are not always permitted to know how many are preserved among the tribes, who have not given up their allegiance to the king of Israel and his royal cause. They may also be mistaken in the effect of their own faithfulness, and earnestness of deliverance from that which oppresses them. It therefore requires care to cast away their faith, and incur the

condemnation of those formerly, who said, "It is vain to serve God, and what profit is it that we have kept his ordinance, and that we have walked mournfully before the Lord of hosts." Let all such remember the injunction "In your patience possess ye your souls," and rest trustingly on Him whose promises are sure. "Blessed are they that mourn, for they shall be comforted."

There is abundant reason for confidence, that in time, the truth will prevail in our religious Society. It is not wise to judge of the whole by what comes most readily to the surface. There may be not a little superficial, voluble pretension, intruding into services for which it is unfit, and making large show of will-worship and avowed good works; but there is also much sincerity and truth, restraining from known departures from the right way, and drawing to serious consideration of the end to which the Society appears to be drifting. If the foundations could be destroyed, we might well ask, what shall the righteous do? But the foundation standeth sure, still having the same seal, and every one that departeth from iniquity will, through Divine mercy, not only save his own soul, but in some measure, aid the spread and final triumph of Christ's cause.

In meetings where the most affecting changes have taken place, there are upright Friends, perhaps little known, and who may appear to have sanctioned defection, because of not standing firmly against it, but who have no intention wilfully to desert the doctrines or to sacrifice the testimonies heretofore held by the Society. They have fallen short in the performance of their duty, but they are to be sympathized with, and we doubt not many of them will rejoice, when there shall be light and strength enough to retrace the steps that have been taken, from the spirituality and purity of our holy religion. Among the young men and women who have been visited by the Day Spring from on high, there are those—perhaps many—who like the man blind from his birth, have had their eyes opened, so as to see men as trees, walking; and who, not waiting for further washing, with a zeal for religion, but not according to knowledge, have run into things not called for, and not convenient for them. May we not hope that, in the cool of the day, these may be again subjected to the washing of regeneration, and have their spiritual sight cleared, so as to recognize their mistakes, and embrace the whole truth as it is in Jesus. Surely the hearts of all who are longing for the restoration and prosperity of the Society, should go forth towards these with affectionate solicitude, and when qualified therefor, in earnest prayer that they may be gathered to the softly flowing waters of Shiloh; that they may learn to wear the humbling yoke of Christ, and thus be fitted for vessels of use and honor in his house; and we should cherish the hope that these prayers will be answered.

But say some of our disconsolate brethren and sisters, many leaders of the people, while discarding first one and then another of the testimonies of Truth, are betraying them into forms and practices out of which faithful Friends have been brought by the Holy Spirit, and the majority of the members love to have it so. Thus the Society is losing its characteristics, as holding a self-denying, spiritual religion; is assimilating with others, and may finally be merged in them. These are sad

truths, and we feel are depressing and discouraging; but they should not induce any to grow weary in well doing, or give out by the way. We may draw confidence and comfort from the teachings of the past. We often refer to the extraordinary spread of gospel truth, that attended the preaching of the founders of the Society, and the equally marked effects resulting from their consistent lives and conversation. Let us call to mind the suffering they underwent ere the final triumph of truth, and their enlargement. There was a time when the prisons of Great Britain were crowded with those innocent, patient sufferers for the testimony of Jesus. They were stripped of their worldly substance; they were whipped; they were banished, and to human reason it seemed as though the wrath of their enemies would exterminate them. But they knew in whom they trusted, and were mainly anxious to bear all with christian meekness, and to watch lest in the hour of sore trial they should bring dishonor on the religion they professed. However dark the day of persecution, however improbable it appeared, shut up in dungeons as so many of them were, that the truth of the spirit, as opened to them by the Holy Spirit, would spread among the people and convert them from the error of their ways, their faith failed not; their confidence rested on Omnipotence, and they cheerfully left the result to their gracious Master. Listen to a few of the words sent forth through the bars and bolts of Aylesbury jail by the "long mournful Isaac Penington."

"As the Lord is able to overturn you, so if ye mistake your work, mis-interpreting the passages of his providence, and erring in heart concerning the ground of his former displeasure; and so through the error of judgment, set yourselves in opposition against him, replanting the plants which He will not have grow, and plucking up the plants of his planting, do you not in this case provoke the Lord, even to put forth the strength which is in him against you? We are poor worms. Alas! if ye had only us to deal with, we should be nothing in your hands! But if his strength stand behind us, we will prove a very burdensome stone, and ye will hardly be able to remove us out of the place wherein God hath set us, and where He pleaseth to have us disposed of." * * * It is the delight of the Lord and his glory to deliver his people, when to the eye of sense it seemeth impossible. Then doth the Lord delight to stretch forth his arm, when none else can help; and then doth it please him to deal with the enemies of his truth and people, when they are lifted up above the fear of him, and are ready to say in our hearts concerning them, they are now in our hands, who can deliver them."

Cheer up then ye prisoners of hope; add to your faith virtue; add to your patience godliness, to your godliness brotherly kindness, to your brotherly kindness charity, and rest assured that in due time, if ye faint not, ye shall reap the reward: "Blessed are they that mourn, for they shall be comforted."

SUMMARY OF EVENTS.

FOREIGN.—The London Times of the 23d, contains a special telegram from Berlin, stating that Prussia has repeated her willingness to grant an armistice if the principle of the cession of territory be conceded. The mere dismantling of the fortresses in Alsace and Lorraine, under a European guarantee, is insufficient. A London dispatch of the 23d says, it is reported that

England will immediately offer direct intervention for an armistice. Lords Lyons and Loftus have taken steps to that effect at Paris and Berlin, and perfect accord in the matter exists between England, Austria and Italy. Dispatches of somewhat similar tenor come from Brussels and Rome, making it probable that the three governments are endeavoring to procure a cessation of hostilities.

The situation at Paris does not appear to have undergone any change. The city is still closely invested. The sorties of the French, which were on a small scale, and without important results.

A large German force was advancing on Amiens, and had arrived near that city. The Prussians took 6,000 French prisoners at the capture of Orleans. The official report of the captures made at Soissons states that nineteen cannons, five hundred and thirty-four muskets, one hundred and twenty-eight guns, 150 tons of gunpowder and 70,000 bombs, fell into the hands of the Germans.

The Prussian army in France is kept up by constant reinforcements, and it is estimated that there are now fully six hundred thousand German soldiers on French soil. These are stationed along the whole route from Paris and Germany, and in many other places. Collisions between small parties of armed men frequently occur, but the French appear to have no armies outside of Paris, capable of meeting the invaders.

There has returned to the United States a successful mission to London, Vienna and St. Petersburg. Kenry was sent to Madrid to ask for material aid, but on the advice of friends he refrained, and only asked leave to import arms from Spain and the Spanish colonies. This was however refused, and he returned to London without effecting anything. The Tours government does not feel secure in its present location, and preparations have been made for the removal of the governmental departments south at a moment's notice. Papers, books and correspondence are kept packed, with the exception of such as are required for immediate use, and a strong force of mounted guards is ready at all hours to move at an escort.

Negotiations have been going on for the surrender of Metz, but have so far proved abortive. Bazaine proposed to surrender all his own army on the same terms as the surrender at Sedan, except that the regular garrison of Metz should continue to hold the fortress. By this plan at least half of the investing army would be released, but the Prussians refused these terms because the reduced garrison could still hold the place.

A Tours dispatch of the 24th says, that Orleans is now occupied by 25,000 Prussians, with sixty pieces of artillery. It is stated that the French have a large army near Orleans. The French journals all express distrust of England, and fear that she is acting in the interest of Prussia. *Le Francais* says: "All are surprised at the attitude of England in this affair. Having paid no attention to the solicitations of Jules Favre, or the arguments of Thiers, she suddenly does much more than has been asked for by the initiative, and proposes bluntly the suspension of arms, to allow an election of the Constituent Assembly, which may make peace." Another says: "France asks not for an armistice, but has not authorized England to ask for one. Since the failure of Favre, France has thought only of ordering for the surrender of Metz."

The German army now investing Paris, have appropriated one day's pay as a fund for the relief of the sick and wounded.

It is said there is no evidence in existence of Napoleon's having accumulated a vast private fortune.

The Belgian garrison at the Prussia 5,000 Germans who were expelled from France. They will be forwarded beyond the border at the expense of the Belgian government.

The rinderpest on the continent prevails from Poland to the Atlantic, and seems to be spreading rapidly.

It is reported that the French have a large army of all the Powers, will remain at Rome. He has formally suspended the session of the Ecumenical Council, "owing to the sacrilegious invasion, which might prevent freedom of action of the Pope and the fathers." The 25th inst. has been fixed as the day for the delivery of King William the Fourth's message. The Catholic hierarchy of Great Britain have issued a protest against the action of the Italian government in occupying the Papal territory. They call upon all good Catholics to form "prayer unions," to protest against the treatment of the Pope, and to prepare documents on this subject to be presented to the Pope on the appeal to the British Parliament.

Later advices from China are much more pacific. A dispatch dated Tientsin, 9th mo. 20th, says two mandarins have been transported and fifteen men beheaded

for complicity in the outrages on French residents. Besides, an embassy is preparing to go to France.

The steamship Cambria, of the Anchor line, on her voyage from New York to London, was wrecked and totally lost on the north coast of Ireland. About 10 P. M. on the 20th inst., the steamer struck a small rocky island, about ten miles from the shore, and soon sunk. Five boats left the sinking vessel filled with the crew and passengers, but owing to the roughness of the sea they were quickly overwhelmed. The only person who was saved, and who is now in New York, was a single sailor who was rescued. The number of passengers was 127. In all about 180 persons perished by the disaster.

London, 10th mo. 24th. Consols, 92½. U. S. 5-20s, of 1862, 89½; do. of 1867, 90½; ten forties, 87½. Liverpool, 4½. U. S. cottons, 81c. 90c. 100 lbs. 91c. California white wheat, 11c. 107c. 100 lbs. Red winter, 10c. 34c. 10c. 4d.

UNITED STATES.—*Census Items*.—The population of Massachusetts is stated to be 1,458,040. New Hampshire, 318,000. Vermont, 330,235. Rhode Island, 217,919. Connecticut, 537,908. The average increase in these five States, since 1860, has been about 14 per cent. The census has been completed in forty-five counties forming the western district of Pennsylvania, and the aggregate is found to be 717,957, being an increase of 48,918. Louisiana is stated to have 1,710,269 inhabitants, having increased since 1860, Albany, N. Y., 210,000; New York, 89,163; Illinois, 1,800,000; and Trenton, N. J., 229,471. Scotland, 335,762; and London, 9,223. Reading, 34,004. Lancaster, 20,161. Erie, 19,894; in 1860, 9,119; Williamsport, 16,066; in 1860, 4,253. The live stock in the State of Illinois is returned as follows: 875,009 horses; 83,546 mules and asses; 30,876 beaves and cats; 1,434,280 sheep; and 2,220,651 hogs.

Philadelphia.—Mortality last week 235. Consumption, 28; group, 11; diphtheria, 9; old age, 12.

New York.—The assessed valuation of real estate in that city the present year is \$742,134,350, and personal property 306,292,939, making an aggregate of \$1,049,127,289, which is 285,560,452 greater than that of last year.

Earthquake.—On the 20th inst., between 11 and 12 o'clock A. M., an earthquake was felt in Canada and over a large part of the northern States, from Maine to Ohio. At the Dudley Observatory, Albany, it was observed at 12:07 A. M., and lasted about one minute. The walls of buildings, and a very marked vibration. Open doors would make to vibrate, and objects hanging on walls were put in oscillation. At the time of the shock a rumbling noise was heard, clock pendulums swinging north and south were made to vibrate east and west, and a strong earthquake was felt in the city of New York. In many places much alarm was caused, but no serious damage occurred anywhere.

The weather record kept at Yale College, shows that the average temperature of the Sixth, Seventh, Eighth and Ninth months, was higher than for the corresponding months of any year since 1763.

The *Market*, &c.—The following were the quotations on the 24th inst. New York.—American gold, 112. U. S. sixes, 188L, 113½; ditto, 5-20's 1867, 110½; ditto, 10-40, 5 cents, 106½. State flour, 25,55c a 26,25c; Ohio, \$3.50 a \$6.70. No. 1 spring wheat, \$1.36 a \$1.38; choice white State, \$1.70 winter red and amber, \$1.33; No. 1 red, \$1.25; No. 2 red, \$1.15; No. 3 red, \$1.05; No. 4 red, \$1.00; No. 5 red, \$0.95; No. 6 red, \$0.90; No. 7 red, \$0.85; No. 8 red, \$0.80; No. 9 red, \$0.75; No. 10 red, \$0.70; No. 11 red, \$0.65; No. 12 red, \$0.60; No. 13 red, \$0.55; No. 14 red, \$0.50; No. 15 red, \$0.45; No. 16 red, \$0.40; No. 17 red, \$0.35; No. 18 red, \$0.30; No. 19 red, \$0.25; No. 20 red, \$0.20; No. 21 red, \$0.15; No. 22 red, \$0.10; No. 23 red, \$0.05; No. 24 red, \$0.00. Philadelphia.—Cotton, 17½ a 18 cts. for uplands and New Orleans. Flour, \$5.75 a \$8.50. No. 3 red wheat, \$1.38 a \$1.40; amber, \$1.42 a \$1.45. Rye, 93 cts. Yellow corn, 84 a 85 cts.; new, 68 a 70 cts. Oats, 50 a 53 cts. Clover seed, \$4.0 a \$5.50. Timothy, \$1.20 a \$1.30. V. corn, 100 bush, \$9 a \$10. No. 1 white, \$1.25; western, \$1.35 a 1.40. Yellow corn, 75 a 82 cts. Oats, 47 a 48 cts. Chicago.—Spring extra flour, \$4.50 a \$5.50. No. 2 spring wheat, 1.05. No. 2 corn, 54 cts. No. 2 oats, 35 cts. Burley, 81 cts. St. Louis.—No. 2 red winter wheat, \$1.18 a \$1.20. Oats, 42 a 44 cts. Lard, 16 cts.

FRIENDS' ASYLUM FOR THE INSANE.

New Franklin, (Twenty-third Ward,) Philadelphia. Under the supervision and superintending—JOSIAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, Clerk of the Board of Managers, No. 1213 Pine Street, Philadelphia, or to any other Member of the Board.

WESTTOWN BOARDING SCHOOL.

The WINTER SESSION of the School will commence on Second-day, the 31st of Tenth month.

Pupils who have been regularly entered and who by the cars from Philadelphia, can obtain tickets to West Chester, and thence to Philadelphia, Railre corner of Thirty-first and Chestnut streets, by giving their names to the Ticket-agent there, who is furnished with a list of the pupils for that purpose. In such a passage, including the stage fare from the Rail Station, will be charged at the School, to be paid with the other charges at the close of term. Conveyances will be at the STREET ROAD S. 7105 on Second and Third-days, the 31st of Tenth, 1st of Eleventh month, to meet the trains that Philadelphia at 7.45 and 11.20 A. M., and 2.30 P. M.

Baggage may be left either at Thirty-first and Chestnut streets, or at High-street at Market Street. If at the latter place, it must be put under the care of Hibbard Alexander, who will convey it thence to Thirtieth and Chestnut at a charge of 10 cents per trunk to be paid to him. Those who prefer can have their baggage sent for to any place in the built-up part of City, by sending word on the day previous (through Post-office or otherwise) to H. Alexander, No. 5 No. Eighteenth St. His charge in such case for taking to school to Thirty-first and Chestnut streets, will be 10 cents per trunk. For the same charge he will also accept baggage from the other railroad depots, if the charges are left at his office, No. 5 No. Fourth and Chestnut streets. If any baggage, if properly marked, will require any attention from the owners, either at West Philadelphia depot, or at the Street Road Station, will be forwarded direct to the School. It may always go on the same train as the owner, but it will on the same day, provided the notice to H. Alexander reaches him in time.

DURING THE SESSION, passengers for the School will meet at the Street Road Station, on the arrival of the first train from the City, every day except First-day. Pupils who are to be sent to Philadelphia, if left at Fries Book Store, No. 304 Arch street, will be forwarded every Sixth-day at 12 o'clock, except on the last two *Six Days in the Twelfth month*, and the expense charged their bills.

Tenth month 21st, 1870.

BIBLE ASSOCIATION OF FRIENDS.

The Annual Meeting of "The Bible Association of Friends in America," will be held in the Committee room of the Arch Street Meeting-house, Philadelphia on the evening of Fourth-day, the 2d of Eleventh month, at 8 o'clock.

The members of the Philadelphia Auxiliary, men and women, and Friends generally are invite attend.

CALEB WOOD, Secretary.

FRIENDS' SCHOOL FOR BOYS AND GIRLS.

Haddonfield, N. J., is now open.

A few can be accommodated as boarders.

Application may be made to Charles Rhoads, No. South Seventh street, or to the Teacher, John Bos at the School.

The Trustees of the above School, from frequent objection of its management, would recommend J. Bos to patronage, he having had long experience as teacher, and given general satisfaction, during the three years he has had the school in charge.

Trustees: Zebebe Nicholson, Charles Rhoads, Chas. L. Willets, John E. Reduan, John H. Ballinger.

FRIENDS' BOARDING SCHOOL FOR INDIVIDUAL CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Marshallton, Chester Co., Pa., or Thomas Wistar, Fox Chase P. O., Philadelphia.

Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

MARRIED, on the 20th inst., at Friends' Meet House, Haddonfield, N. J., Josiah F. JONES, of Germantown, Pa., to Deborah T. HAINES, daughter of D. Haines, of Burlington Co., N. J.

WILLIAM H. PILE, PRINTER.
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, ELEVENTH MONTH 5, 1870.

NO. 11.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

Selections from the Diary of Hannah Gibbons; a Minister deceased.

For "The Friend."

(Continued from page 75.)

"2d mo. 26th, 1854. First-day. Though feeble in body, I was favored to get to meeting; and on sitting down, a comfortable solemnity seemed to be spread over us: which I trust was more general than at some other times. The greatness and goodness of Him whom we had met to worship, and our feeble state, were livingly brought before me, attended with an humbling sense of our blessed Saviour's declaration: 'Without me ye can do nothing.' Desires were raised for the continuance of His mercy; and that He would be pleased so to interpose, in seasons of close conflict and besetment with His tribulated children, as to put the armies of the aliens to flight; strengthening their faith, and enabling them from time to time to pursue the path which He is pleased to open before them, with holy alacrity. It was a time of renewed favor to me, which I desire to have in grateful remembrance; more especially as poverty and strippedness, with doubts and fears, had been much my portion for some time before. Gracious Father, be pleased I beseech thee, to keep me from casting away my confidence in Thee, Thou ever blessed Shepherd and Bishop of souls."

Truly noticeable and interesting is the fact, how steadily engaged Hannah Gibbons was, to keep close to the Lord in reverential prayer. From Him, the great Counsellor in the heart, who teacheth as never man taught, she realized a wisdom profitable to direct unto every good word and work. These secret aspirations, and turning our thoughts in humility, and, it may be in silence, to heaven and heavenly things, is what draws from our secret-seeing Father, the blessing of instruction and preservation; of life and of peace. Herein He communes with us, through the still small voice of His Spirit, saying in our hearts, this is the way, walk thou in it, when we would turn to the right hand or to the left.

Oh! that our hearts were more poured out in secret supplication, panting, as the hart or the water-brook, after the well-spring of

life which Christ Jesus only can give. Then should we be permitted more often, and more richly to partake of those streams which make glad the whole heritage of God. While is not all that is wanting, a teachable, and contrite, humble spirit, with that hunger and thirst after righteousness which our heavenly Shepherd has pronounced blessed: saying, "they shall be filled."

Then may we, after the example of this faithful handmaiden of her Lord, watch unto prayer with all perseverance. May every trial send us to this great resource of the Christian. Not pharisaically, or in any way that looks like ostentation, but in secret, wrestling, importuning entreaty. This sort of humiliation and prayer is the life of all we do. This enables to keep close to the Lord as little dependent children; and to such He will be a God nigh at hand. He will not break the bruised reed, nor quench the smoking flax; but will be graciously pleased to verify to these His ancient promises, "If any man lack wisdom, let him ask of God, and it shall be given." "Call upon me in the day of trouble, and I will deliver thee, and thou shalt glorify me."

The subjoined letter to her friend William Evans, was written about this time, viz:

2d or 3d month, "1854.

"My dear friend William Evans,—Thy acceptable letter was duly received, and has been frequently read, being found answering as face doth face in a glass. Oh! the buffetings and besetments which the poor soul is at times permitted to experience from the cruel one! wherein there is no safe resting-place but in endeavoring to keep the eye of the mind single unto Him, who was tempted in all points as we are, and yet without sin. He alone knows how to succour those who are tempted, and I believe will in seasons of this kind, as there is a cleaving close unto Him in faith and patience, make way for our escape, enabling the poor, tribulated, humbled mind to adopt the language, 'The name of the Lord is a strong tower: the righteous runneth into it, and are safe.' Desires are raised that we may not be suffered to cast away our confidence in the unfailling arm of Israel's Shepherd. I think I often see our standing to be as on a sea of glass; wherein great is the necessity of watching unto prayer. Here is no time to be idle, lest, as formerly while men sleep the enemy sow tares. Truly it is a day when he is very busy, striving to draw the mind away from the pure and simple Truth as it is in Jesus, and persuading the unwary that there is an easier way to the kingdom of heaven, than by self-denial and the daily cross. Oh! may such be given to believe that the enemy of all righteousness was a liar from the beginning, and continues to be so. May these have their minds drawn to that foundation which standeth sure; against which the gates of hell shall not be able to prevail.

"It was pleasant to find your evening meetings had been held to satisfaction. I often thought of thee and dear Elizabeth, not doubting but that you felt much exercise and responsibility, attended with desire for their being held to profit. When I was a child and had the privilege of attending them, I often thought they were good meetings; and I doubt not they have been seasons blessed to many, even as bread cast upon the waters. It may be also, and I trust has been so, to some who do not attend Friends' meetings in the day time. I have often had to remember the language of our blessed Saviour, 'Other sheep I have, which are not of this fold:' and if the little few who remain in our poor Society, that may be comparable to the 'remnant of Jacob' in the midst of many people, keep their habitations in the blessed Truth, I have believed, and continue to believe, that there will be a gathering unto them, and strength will be renewed to journey forward in the ever-blessed cause of truth and righteousness. I unite with you in the hope, that a change of feeling has taken place in the minds of individual members of our Yearly Meeting: that more of a disposition prevails to look at things deliberately and in calmness; and as this disposition increases, I believe that of alienation will decrease, and there will be more of a seeing eye to eye, more of a harmonizing together for the honor of Truth. That this may be our happy experience as a body, is often the breathing of my spirit.

"The extract from dear Asenath Clarke's letter was cordial to my mind; and O! that her cheering prospect may be realized,—a belief that the day is not far distant when the true followers of the Lamb will be greatly increased, &c. Her concluding remarks are very similar to what have been the feelings of my own mind. But how things are to come to an amicable and harmonious issue, we must leave with the Judge of all the earth, who will do right. I now unexpectedly remember some expressions of worthy deceased R. Jordan: 'Oh! the excellence,' said he, 'of patient, quiet suffering.'

"Our Yearly Meeting is fast approaching. Whether I shall get there is uncertain, feeling the infirmities of increasing age pressing upon me, and as if home is the best place for me. Yet I desire that those who are permitted to assemble, may so experience the solemnizing power of Truth to prevail, that the busy, active spirit which is not of it, may be kept down, and the pure Truth exalted over all, to the comfort of the heavy-hearted, whose desire is that Zion may arise, shake herself from the dust of the earth, and put on her beautiful garments." * * * The conclusion of this letter has not come to the hands of the Compiler.

The Diary continues: "3d mo. 1854. I believe I may say of a truth that my mind is daily exercised in desire that the day's work may keep pace with the day; and that there

may not be a relaxing or growing lukewarm in the work of the soul's salvation.

"Having felt drawn towards a family, members of our Society, who are about to remove from among Friends, with their tender offspring, I thought it seemed best to propose having an opportunity with them. This being approved, and my beloved friends James Emlen and Martha Jefferis being willing to accompany me, we accordingly sat with the family on the evening of the 24th. It was a time of close exercise; but as I endeavored in simplicity to express that which seemed given, my mind was after a little time, favored to settle down in peaceful quiet.

"26th. First-day afternoon I went, accompanied by my daughter, to see ———. We found her apparently near the confines of the silent grave; and I felt a hope that the spirit was about to return to God who gave it. I thought there was a solemnity felt; and my mind being drawn towards a young man in the family, though altogether a stranger to me, I ventured to express a few words on taking leave of him, on the necessity of preparation for the solemn close of this life, which afforded solid satisfaction. Gracious Father! wilt thou be pleased to keep me in the straight and narrow way which leadeth unto Thee, Thou King of saints.

"4th mo. Our Yearly Meeting occurring, I was favored to get to nearly all the sittings of it. It was more satisfactory than any we have had of latter years; that busy, active, and dividing spirit, which has so disturbed our meetings, was very much kept down; and the Blessed Head of the church condescended in mercy to overshadow the assembly at seasons, with the solemnizing influence of His own blessed Spirit, to the comfort and refreshment of many minds; and Friends were favored to transact the weighty business of the meeting in a good degree of harmony. Indeed it felt to me a time wherein we had cause to thank God and take courage.

"After Yearly Meeting my daughter J. and I went to Germantown on a visit to my sister Edith Edge and family. Her son Thomas being in declining health, it was grateful to me to be with them, and share in their affliction. The dear youth was, in a few days after we left them, taken to his final resting-place; and I trust was gathered in mercy.

"25th. In company with my daughter J., I attended the funeral of our friend ———. It was a time of close exercise to my poor mind; and the day being wet and unpleasant, added to the difficulty of my getting about. Truly my infirmities press more and more upon me. I went under discouragement, but to the praise of the Lord's excellent name be it spoken, I was favored to return with peaceful feelings."

(To be continued.)

Selected.

In all cases where contrary sentiments occur, and where we are required earnestly to contend for the faith, the more the meekness of the Lamb is adopted and abode in, the more indisputably He is known to be the Lion of the tribe of Judah, going forth conquering and to conquer. I sympathize nearly with such among you, who dare not turn aside from the directions of Heaven, but follow the Ark into Jordan. May the holy covering of peace and meekness be upon them, and it will be in the end a garment of praise.—
Cor. of Samuel Fothergill.

Mud Wasps.

I watched with much interest the proceedings of a Dauber in building her mud-cells; it is a pretty species (*Pelopaeus flavipes*). She has chosen the ceiling of a cupboard in my sitting-room, where, previously to my observing her, she had made one cell, and the half of another parallel to it; the former was closed, the latter had got its contents of spiders, and only wanted closing. Such was the *status quo*. I had not seen the Dauber go in for some time, so that when she did go in I watched her from her commencement. She came empty, and having for some moments peeped in and examined the contents to see that all was right, she suddenly flew out at the room-door, (which, as well as the window, was almost constantly open,) and returned in about a minute with a lump of soft wet mud in her jaws, about twice as large as her head. Where she got it in so short a time I don't know; it was perfectly kneaded, and free from all lumps and grit, and was worked when laid on as freely as butter. I suspect that it was formed of dry dust, on which she had poured a drop of fluid from her mouth. She laid the substance on the open end of the unfinished cell, and spread it about with her jaws very expeditiously and skillfully, till the orifice was quite closed up. She then flew off and returned with a similar load, which she applied upon the last to make it thicker. When she was gone the third time, in order to observe her behaviour, I thrust the head of a pin through the newly-laid mortar, opening a hole into the cell. On her return, she at once perceived the hole, and deposited her lump upon it, spreading it about as before. I played her the same trick several times, at all of which her proceedings were the same, save that at length she seemed to become very angry, and endeavored to catch the house-flies that were flying and crawling near. I have no doubt that she suspected them of having a hand in it. At all events, she jumped at them very snappishly whenever they came near, and sometimes even with the load in her mouth, but I did not see that she caught one. Once, too, a large *Ichnumon* was lurking about, at whom she fiercely flew, and I think they had a short struggle. At times she would linger at a little distance, after depositing her load, apparently hoping to catch the insidious housebreaker, "in the manner," as lawyers say.

At length I broke off a large piece from the side and bottom of the old part, exposing the spiders to view; this, however, she speedily built up as before, at two or three loads, adding to the standing part all round the hole, and not at one side only. After this I did not put her industry to the task any more, but suffered her to finish her work, which she did by adding another layer or two to the end. I, however, made a hole in the first cell, which was quite hard and dry, to see if she would observe it, which she did at once, and clapped her load of mortar on it. I noticed that while working, though the wings were closed incumbently, she kept up a shrill buzz, like that of a bee when held in the fingers; her antennae, which were usually carried nearly straight, were during the plastering curled up, and continually vibrating; and moving on the surface of the work, evidently trying it by touch, which seemed to me adverbs to the theory that calls the antennae "ears." In seeking her materials she was gone never more, often

less, than a minute, and always brought a lump similar in appearance, which was invariably carried in the jaws, without any aid from the feet.

The Dauber has built another cell on the other side of the first, which is now therefore in the middle. I again pestered her by sticking a small tin-tack in the newly-laid mud, just where she would have to deposit the next load. When she came, she appeared quite "bothered;" she ran backward and forward, and round and round, over the cells for some time, with the mud in her jaws, as if at a loss what to do in so novel an exigency. It was a different case from the former; a hole could be stopped up, but here was an intruding substance just where she wanted to deposit. Should she lay it on, the incumbrance would be more firmly imbedded; should she place it elsewhere, it would be wasted, not being needed, or perhaps be positively injurious; should she attempt to remove the evil, her mouth was occupied, and she was unwilling to lose her burden. At length, however, as the least of the evils, she seized the tack with her jaws and drew it out, dropping her mud in the effort. When she was away the next time, I bundled up a worsted thread, and pressed it on the soft work, which presented a still more serious obstacle, as she could seize only a small part of it, which would yield without coming away; however, by taking hold of several parts of it successively, and tugging at them a long time, and by walking round and round with it in her mouth, she at length got it out. These instances of sagacity and perseverance greatly pleased me. After laying on a load, she always cleans her antennae with her fore feet, and her feet with her jaws: on arriving she never alights at the nest, but always on the inside of the cupboard-front, and crawls along the ceiling to it.

I pulled down the nest of the Yellow-footed Dauber, to which other cells had been added in succession after the last record. On examining them now, I find three perfected insects have made their exit, one has died in making its way out, two are in pupa, one black and near perfection, the other white and newly turned, and two are in larva, one large, the other very small, making eight originally in the nest. Many of the spiders remain un eaten; and most of them are handsomely studded with scarlet spots on a black ground. It was in looking at these pupae that I first was aware how a difficulty of no ordinary magnitude is got over. How do insects whose abdomen is peduncled, draw it out of the pupa skin, seeing the peduncle is so slender? I should have guessed that the skin would be ruptured, but it is not so. These Daubers have a very long and slender peduncle; but the skin of the pupa, closely adherent in every other part, is as wide around the peduncle as around the abdomen, like a loose garment stretched from the summit of the thorax to that of the abdomen. What a beautiful example of Divine foresight in creation!

In a corner of a closet stood a little phial about an inch and a half high, which had held ink, but being uncorked, the contents had dried up. Looking at it this morning I was surprised to find it closed with a white dry substance like pipe-clay; and on breaking this, was still more surprised to find the clue of the mystery. It held no less than eighteen spiders, of a few of which, however, the

abdomen was wanting. The case was clear; a Dauber, to save himself the labor of building a cell, had found and made use of this substitute; a very curious instance of insect laziness, or rather, perhaps, of the economy of industry.

I perceive that the Dauber last mentioned has returned to the phial, and having, no doubt, observed that it had been handled, has taken out every one of the spiders, which she has strewn around, and having filled the bottle with newly-caught spiders, has again sealed it up with mud. I think we may infer from this that the parent exercises a measure of watchful guardianship over her young, sealed as they are from her sight and direct interference.—*Gosse's Alabama.*

For "The Friend."

"That the Most High ruleth in the kingdoms of men, and that justice and judgment are the habitation of His Throne," has been fully proved, and realized, in the freeing from bondage of the poor slave, as if He had used the same language, formerly uttered respecting His people who were suffering under hard taskmasters in Egypt, saying unto Moses, "I have surely seen the affliction of my people which are in Egypt, and have heard their cry by reason of their taskmasters; for I know their sorrows; and I am come down to deliver them out of the hand of the Egyptian. Exodus iii. 7. And has He not more recently frustrated and disturbed the plans of finite and shortsighted man, in unsettling the quietude and self-complacency of one, whose word was a law, and who professed to be the Head of the Church; thus permitting good to come from evil doings, and as the Psalmist says: "Surely the wrath of man shall praise Thee: the remainder of wrath shalt Thou restrain." Therefore let us not be too anxious or troubled, because man seems defiant, and sets at naught the principle and spirit that breathes peace on earth and good will to men; but seek for the faith that "He can work, and who shall let it." For as David testified, when his son Absalom was endeavouring to rend the kingdom from him, "It is better to trust in the Lord, than to put confidence in man. It is better to trust in the Lord, than to put confidence in princes."

Let us then, dear friends, seek for ability to do only the will of Him, whose hand is full of blessings, and seek to avert any of the judgments that might be permitted to overtake our beloved city, the founding of which William Penn called the "Holy Experiment," for I fear at times we are fast losing our title to the "Quaker City," for is not almost every inducement held out to catch the feet of the unwary, and entangle them in the meshes of sin? Even our public acts are far from being the fruits of His spirit, who declared, "Ye cannot be my disciples, except ye take up your daily cross and follow me." But amidst all these departures, let us hope and trust there are many righteous, humble servants, interceding for the protection of Him, of whom it is said in the book of Job: "He beholdeth all high things: He is a king over all the children of pride," and put our trust in Him, who answered the intercessions of faithful Abraham, saying: "I will not destroy it for ten's sake."

Spend the day well, and thou wilt rejoice at night.

The Ostrich.

"Gavest thou * * * the wings and feathers unto the ostrich? Which leaveth her eggs in the earth, and warmeth them in the dust, and forgetteth that the foot may crush them, or that the wild beast may break them. She is hardened against her young ones, as though they were not hers; her labor is in vain without fear; because God hath deprived her of wisdom, neither hath he imparted unto her understanding. What time she lifteth up herself on high, she scorneth the horse and his rider." Job xxxix 13 to 18.

Dr. Livingston, in his "South Africa," says: The ostrich generally feeds on some spot where no one can approach him, without being detected by his wary eye, which is placed so high that he can see a great way. As the wagon moves along far to the windward, he thinks there is an intention to circumvent him, and he comes rushing from the distance of perhaps a mile so near to the front oxen that the traveller sometimes gets a shot at the silly bird. When he begins to run, all the game in sight follows his example. The natives who come upon him in a valley open at both ends, sometimes take advantage of his folly. They commence running, as if to cut off his retreat from the passage through which the wind blows; and although free to go out at the opposite outlet, he madly rushes forward to get past the men, and is speared. He never swerves from the course he once adopts. Terror only causes him to increase his speed, and run faster into the snare. If pursued by dogs, he will turn upon them, and inflict a kick which sometimes breaks the back of the animal that receives it. The lion occasionally contrives to catch him. When feeding, his pace is from twenty to twenty-two inches; when walking at other times it is about four inches more; and when terrified it is from eleven and a half, to thirteen and even fourteen feet in length. In general the eye can no more follow the legs than the spokes of a carriage wheel in rapid motion; but I was once able to count the steps by a stop-watch, and if I am not mistaken, the bird made thirty strides in ten seconds. Reckoning each stride at twelve feet, we have a speed of twenty-six miles an hour. These rapid runners are sometimes shot by a horseman making a cross cut to their undeviating course, but few Englishmen ever succeed in killing them.

The ostrich begins to lay her eggs before she has fixed on a spot for her nest. Solitary eggs, named by the Bechuans "lesetta," are thus found lying all over the country, and become a prey to the jackal. The nest is only a hollow a few inches deep in the sand, and about a yard in diameter. She seems averse to select a place for it, and often lays in the resort of another ostrich. As many as forty-five eggs have been found together. Some of them contain small concretions of the matter which forms the shell, which has given rise to the idea that they have stones in them. Both male and female assist in the incubation, several eggs are laid outside the nest, and are thought to be intended as food for the first hatched of the brood, till the rest coming out, the whole can start together. I have several times seen young in charge of a cock, who made a very good attempt at appearing lame in the plover fashion, in order to draw off the attention of pursuers. The little ones squat down and remain immovable when too small to run far, but attain a wonderful degree of speed when about the size of common fowls.

When caught they are easily tamed, but are of no use in their domesticated state. The flesh is white and coarse, and when in good condition has some resemblance to tough turkey.

The egg is possessed of great vital power. One which had been kept in a room during more than three months, in a temperature of about 60°, was found to have a partially developed live chick in it. The Bushmen, when they find a nest, carefully avoid touching the eggs, or leaving marks of human feet near them. They go up the wind to the spot, and with a long stick occasionally remove some of them. Thus, by preventing any suspicion, they keep the hen laying on for months, as we do with fowls. The eggs have a strong disagreeable flavor, and it requires the keen appetite engendered by the desert, to make them tolerable to an European.

The food of the ostrich consists of pods and seeds of different kinds of leguminous plants, with leaves of various shrubs; and, as these are often hard and dry, he picks up a great quantity of pebbles, many of which are as large as marbles. He eats small bulbs, and occasionally a wild melon for the sake of the moisture.

Selected.

The way of God is a way of faith, as dark to sense, as it is mortal to self. The children of obedience, with holy Paul, count all things dross and dung, that they may win Christ, and know and walk in his narrow way. Speculation will not do, nor can refined notions enter it; the obedient only at the good of this land. They that do my Father's will, says the blessed Jesus, shall know of my doctrine: them he will instruct. There is no room for instruction, where lawful self is lord and not servant. For self cannot receive it, that which should, is oppressed by self; fearful, and dares not. What will my father or mother say? How will my husband use me? or, what will the magistrate do with me? For though I have a most powerful persuasion, and clear conviction upon my soul, of this or that thing; yet considering how *unmishd* it is, what enemies it has, and how strange and singular I shall seem to them, I hope God will pity my weakness, if I sink; I am but flesh and blood; it may be hereafter he will better enable me; and then is time enough. Thus selfish fearful man.—*No Cross no Crown.*

Selected for "The Friend."

Anecdote of a Bishop of London.

It is related of a bishop of London, that being in want of some article connected with house furniture, he sent to the house of a Friend in the city for patterns of the article he wanted. When the bishop's message reached the Friend's shop, the Friend was absent, but a young and consistent Friend in his employ went to the palace with the desired patterns.

After having shown them to the bishop, he was desired to leave them until next morning, when after the approval of a pattern, a message should be forwarded to the house for a party to return and take the order.

When the young man reached the warehouse, he found his employer there, who queried of him "where he had been," and on being informed, remarked very sharply, that he supposed he should lose the order from the young man's stiffness, and requested to be informed when the bishop's messenger arrived.

The following morning the bishop sent down according to promise, and the Friend having been acquainted, away he started. On being introduced to the bishop, the Friend made a profound bow, and accented the bishop in a manner quite inconsistent with his profession.

The bishop perceiving this, asked him "if he was the person who called upon him yesterday?" To which the Friend replied, "No; he had left the young man at home, as he preferred calling personally." The bishop told him that he should prefer seeing the person who had previously called upon him; and added to the following effect: "Let me give you a few words of advice, never to be ashamed of consistently carrying out your profession; for however much others may differ from you in religious opinion, they always admire the conduct of those who consistently carry out the views they hold."

The Friend who transcribed the foregoing incident, 5th mo. 19th, 1850, had the account from the young man himself.

[We owe the author of the following communication an apology for the long delay in its appearance. When received—weeks ago—it was placed among other copy for publication, but was accidentally lost sight of.—Eds.]

For "The Friend."

When First-day schools were first agitated amongst us, no doubt many had their own thoughts about them, and have since made quiet observations leading to the same conclusion. It surely is a matter of surprise they have been entered upon in so light a manner by us. Other denominations, who have long maintained them, according to their own way and belief; having them superintended by those considered able for the work, we may leave, and look how they are with us. In some places some of the most trifling (in general conduct) of our younger members collect children who have had the advantage during the week of school learning. Bible truths are professed to be taught; little papers are distributed; on some we see a picture of the administration of the rite of water baptism, with words setting forth the efficacy thereof, and other things contrary to practice and belief of Friends. Why is it our own little tracts will not do for such occasions? We are told they are not *attractive* enough; that we cannot expect these children to come to our way of thinking. Now some of us remember that when but very little children, situated outwardly in unfavorable places, accidentally coming in possession of some of these tracts, reading them to profit, and in good measure comprehending what was intended to be set forth in a truthful narrative. The workings of Divine Grace within the heart, when given heed to, is able to make plain, even to a child, the plain path of obedience. And whatever will tend to gather unto Him, may not be neglected. If it is religious instruction these schools are intended to confer, it should be done in a manner creditable to our profession. Without doubt there are localities where any kind of learning is not easily obtained, in which these schools may be opened with some profit. But the expounding of the scripture without witnessing a Divine opening thereof, may prove more bewildering to the mind than taking its own plain, unvarnished words; to "visit the father-

less and widow in their afflictions, and keep himself unspotted from the world," and "Suffer the little children to come unto me."

Some years ago, a young birth-right member, whilst tarrying where there was no meeting, was invited by a Presbyterian minister to take a class during the absence of a teacher, in a (so-called) Sabbath school. On saying, I am a Quaker, the minister replied, "Teach Quaker doctrine then." This young Friend, whilst at school, had delighted in committing to memory scripture lessons, and felt all sufficient for the work. But when the children read their verses, and looked up to him for an explanation, he was made sensible that something more was needed than a knowledge of words; and refraining from teaching, he was taught a lesson not to be forgotten. The good seed is still sown in the hearts of the children of men, the harvest for gathering is yet plenteous; but the right kind of laborers are few. Pray ye, therefore, the Lord of the harvest, that He would send forth laborers into his harvest. These, like their Master, may have met no man hath brought them, and gather fruit unto life eternal, where the sower and the gatherer may rejoice together.

"Truth is ever true,
In this age as the last, and error false,
To-day as it was yesterday. No age
Can outgrow truth, or can afford to part
With the tried wisdom of the past, with words
That centuries have sifted, and on which
Ages have set their seal, and handed down
From venerable lips of solemn men,
Who learned their wisdom in a graver school,
And in an age of keener, sorer, conflict
Than we have known in this gay holiday;
When truth and error seem but things of taste,
Changelings of fashion, altering year by year.
Guard, then, those ancient wells, those living springs
Of which our fathers drank, and were refreshed."

Stone Images on Easter Island.—A paper was read by J. L. Palmer, R. N., on a recent visit to Easter Island in H. M. S. *Topaz*. During the visit the singular colossal stone images which excited the astonishment of Captain Cook and the earlier voyagers were accurately observed and measured, and a specimen of them brought away to deposit in the British Museum. J. L. Palmer described the topography of this remote island in the South Pacific. It is only twelve miles in length by four in width, and lies in a part of the ocean far away from other islands, at a distance of two thousand miles from the coast of South America, and one thousand miles from the nearest Polynesian islands to the west. The island is entirely a volcanic formation, and presents numerous extinct craters, one of which yields the gray lava of which all the stone images are made, and another the red tufa from which are carved the crowns or hats that formerly rested on their heads. The present inhabitants are only nine hundred in number—a good-looking, pleasant-tempered, set of people. They belong to the Polynesian race, and have a tradition of their immigrating from Oparā at no very distant period. The interest attaching to the island was an ethnological one, and concerned the race who sculptured the vast quantity of stone images now existing in its stone platforms in various parts of the island, or inside large stone chambers or houses. The platforms, chambers, sculptures, and mural paintings were described by the author with minuteness, but he did not propound any theory as to their origin. He stated that the inhabitants knew nothing of the matter, that

they were undoubtedly of great antiquity, and that it was probable they were executed by a race who had long since passed away.—*Scientific Opinion.*

That which has stood, will yet stand.—The present is a time peculiarly calculated to depress; for yet, within the borders of our religious Society, we find there is, too generally, a sliding from that situation in which Infinite Wisdom and Power placed our early predecessors; when their light shone as from a hill, and men seeing their good works, were induced to glorify our heavenly Father.

I could say much more in a plaintive strain, but forbear. Let me watch well over my own heart! Besides there is room, amidst all our occasions of sadness, to be humbly thankful that the Sure Foundation is kept to, by a living remnant; and also that a little firm faith is vouchsafed, that the ancient testimonies of the immutable Truth will continue to be upheld by at least a few; and the standard raised in its own dignity and simplicity. That which has stood the test of ages will yet stand through all, being truth and righteousness unfailling, and it requires not the torch of human reason to search it out.—*Sarah (Lynas) Grubb.*

Ripe Figs.—Figs are now ripe. There is a fine prolific tree in our garden, and I had watched with much interest the gradual maturing of the fruit, and the putting on at length of the soft blue bloom, which is the token of ripeness; until this appears the fig is not worth eating. Somewhat impatient to taste this far-famed fruit fresh from the tree, I had plucked one which appeared to my experienced eye ripe, being plump, soft, and deep brown; but the acidity of the milky juice that oozed from the skin, and the chaffiness of the interior, rather damped my enthusiasm. "If this is your ripe fig," said I to myself, "it is but a sorry affair." But only a day or two thereafter, I perceived a great change; several of the fruits were bloomed all over with that soft, blue, powdery surface, which we are familiar with on our own plums. I gathered one, but it was too soft and tender to bear even the pressure of my fingers necessary to hold it; the skin was thin, and devoid of any acrid milk; the interior pulpy, and of the most luscious sweetness. I certainly award the palm to the fig, of all the fruits I have ever tasted.—*Gosse's Alabarna.*

There is something in the heart and conscience that improves evil; there is no need of proof for this, every one's experience tells him the truth of it; if you will hear this check and reproof it gives to evil, you will find also that it will stir up to good, and encourage you to go on in the one way; and to flee from the other. Now, believe and know for certain, *this is Christ; and this is the voice that He says, his sheep hear and know, (John x. 3, 4, 5) even this that has been so long slighted and neglected in the conscience,—this so much baffled and slighted voice, is that way by which Christ speaks: hear him thus, or not at all.*—*A. Jeffrey.*

There is no greater instance of a weak and pusillanimous temper, than for a man to pass his whole life in opposition to his own sentiments, and not dare to be what he thinks he ought to be.

FRIENDS.

Selected.

Friend after friend departs ;

Who hath not lost a friend ?
There is no union here of hearts,
That finds not here an end ;
Were this frail world our only rest,
Living, or dying, none were lost.

Beyond the flight of Time,
Beyond this vale of death,
There surely is some blessed clime
Where life is not a breath,
Nor life's affections transient fire,
Where sparks fly upward to expire.

There is a world above,
Where parting is unknown—
A whole eternity of love,
Formed for the good alone ;
And faith beholds the dying here,
Translated to that happier sphere.

This star by stars declines,
Till all are passed away,—
As morning light and higher shines
To pure and perfect day ;
Nor sink those stars in empty night,
They hide themselves in heaven's holy light.

James Montgomery.

THE COMMON LOT.

Selected.

Once in the flight of ages past,
There lived a Man ; and who was he ?
Mortal ! how'er thy lot be cast,
That Man resembled thee.

Unknown the region of his birth,
The land in which he died unknown ;
His name has perished from the earth,
This truth survives alone :—

That joy and grief, and hope and fear,
Alternate triumphed in his breast ;
His bliss and woe,—a smile and tear !
Oblivion bids the rest.

The bounding pulse, the languid limb—
The changing spirit's rise and fall ;
We know that these were felt by him
For these are left by all.

He suffered,—but his pangs are o'er ;
Enjoyed,—but his delights are fled ;
Had friends,—his joys are now no more ;
And foes,—his foes are dead.

He saw whatever thou hast seen ;
Encountered all that troubles thee ;
He was—whatever thou hast been ;
He is—what thou shalt be.

The rolling seasons, day and night,
Sun, moon, and stars, the earth and main,
Ere which his portion, life and light
To him exist in vain.

The clouds and sunbeams, o'er his eye
That once their shadows and glory threw,
Have left in yonder silent sky
No vestige where they flew.

The annals of the human race,
Their ruins, since the world began
Of Him afford no other trace
Than this,—*There lived a man !*

James Montgomery.

For "The Friend."

Pennsylvania in Early Days.

The following extracts from the "Life of A. Penn, in the 5th vol. of Friends' Library interesting, and may be new to some of readers.

One of the objects of attention with Wm. in, before the end of the year 1682, was to attend the principal town of the province, a situation chosen for this purpose, was remarkably favorable. The name assigned his new capital of the province, was excessive of the principles of its founder. The Indian name of the place where that city now stands was Coaquannock.

So favorable an opinion was entertained of the country assigned to William Penn, and of the character of its proprietor, that within little more than a year after the arrangements were made for settling it, between twenty and thirty vessels arrived with emigrants, amounting collectively to more than two thousand individuals. A large part of these were members of the religious Society of Friends. They had left their own country to avoid the vexations and vices of Europe, that they might lead quiet and peaceable lives, and worship God according to their conscientious persuasion. The diffusion of the doctrines of Christianity among the ancient inhabitants of the land, appears to have been one of the objects in view, with these early settlers in Pennsylvania. Though these emigrants were not generally rich, yet many of them possessed considerable estates, and were persons of good education. They were mostly sober, industrious people; of reputable characters, well qualified to advance the interests of this rising colony. As they arrived in succession they were kindly received, and assisted by those who were there before them; and scattering along the Delaware, as choice or convenience suggested, the country was thinly peopled from the falls, at Trenton, to Chester. The inhabitants, including the Dutch and Swedes, who had been long residents in the country, are computed at the time to which we have arrived, to be about four thousand; so that William Penn may be said to have raised up a colony at once in his new domains.

It may be readily conjectured, that the establishment of meetings for Divine worship, and the preservation of order, would early occupy the attention of the settlers in Pennsylvania. We accordingly find, that before the arrival of William Penn, a meeting of Friends was held at Shackamaxon, and that in 1682, a meeting was held in a frame house erected for the purpose, within the present limits of Philadelphia. A meeting of the Society appears to have been held at Upland, Chester, several years before the arrival of William Penn, and at that place a meeting of record, probably the first in the province, was held as early as 1681. A meeting was settled at Darby in 1682.

In the course of the year 1682, and the two following ones, great numbers of emigrants arrived from England, Ireland, Wales, Holland and Germany, who extended their settlements into the interior of the country. The Welsh settled on both sides of the Schuylkill, and have left in the names of the townships, Merion, Haverford, Radnor, Tredyffill, Gwynedd, &c., a lasting memorial of their original locations. Among the emigrants from Germany, were a number of Friends, formerly inhabitants of Crisheim in the Palatinate, among whom William Penn had travelled in the service of the Gospel during the year 1677. They formed the flourishing settlement of Germantown; and by their opportune removal, escaped the calamity which a few years afterwards overtook their native land, when Louis XIV. in the wantonness of power, desolated the Palatinate with fire and sword.

During the year 1683, William Penn appears to have been occupied with the secular concerns of the province. A session of the legislature was held at Philadelphia, the members being chosen as representatives of the freemen, and acting on their behalf. A new

charter was granted to the inhabitants by the proprietary. Very considerable progress was made in the building of the new city, so that by the end of the year, no fewer than an hundred houses had made their appearance. The land in the vicinity was in places cleared and brought into cultivation; and the grains of Europe were beginning to flourish on the virgin soil of Pennsylvania. A letter written a number of years afterwards, by one of the companions of William Penn, describing the situation of the colony at this time, is deemed, on account of its native and beautiful simplicity, not unworthy a place in these memoirs.

"After our arrival," says he, "we found it a wilderness. The chief inhabitants were Indians, and some Swedes, who received us in a friendly manner; and though there was a great number of us, the good hand of Providence was seen in a particular manner, in that provisions were found for us by the Swedes and Indians at very reasonable rates, as well as brought from divers other parts that were inhabited before.

"After some time, I set up a mill on Chester creek, which I brought ready framed from London, which served for grinding of corn and sawing of boards, and was of great use to us. Besides, with Joshua Tittery, I made a net, and caught great quantities of fish, which supplied ourselves and many others; so that, notwithstanding it was thought near three thousand persons came in the first year, we were so providentially provided for, that we could buy a deer for about two shillings, and a large turkey for about a shilling, and Indian corn for about two shillings and sixpence per bushel.

"And as our worthy proprietor treated the Indians with extraordinary humanity, they became very civil and loving to us, and brought us in abundance of venison. As in other countries the Indians were exasperated by hard treatment, which hath been the foundation of much bloodshed, so the contrary treatment here hath produced their love and affection.

"After our arrival there came in about twenty families from High and Low Germany of religious good people, who settled about six miles from Philadelphia, and called the place Germantown. About the time when Germantown was laid out, I settled upon my tract of land, which I had bought of the proprietor in England, about a mile from thence, where I set up a house and corn mill, which was very useful to the country for several miles round; but there not being plenty of horses, people generally brought their corn on their backs many miles. I remember one man had a bull so gentle, that he used to bring his corn on him instead of a horse.

"Being now settled within six or seven miles of Philadelphia, where I left the principal body of Friends together with the chief place of provisions, flesh meat was very scarce with me for some time, of which I found the want. I remember I was once supplied by a particular instance of Providence in the following manner:

"As I was in my meadow mowing grass, a young deer came and looked on me. I continued mowing, and the deer in the same attention to me. I then laid down my scythe and went towards him; upon which he ran off a small distance. I went to my work again, and the deer continued looking on me;

so that several times I left my work to go towards him; but he still kept himself at a distance. A last, as I was going towards him, and he looking on me, did not mind his steps, he ran forcibly against the trunk of a tree, and stunned himself so much that he fell; upon which I ran forward, and getting upon him held him by the legs. After a great struggle, in which I had almost tired him out, and rendered him lifeless, I threw him on my shoulders holding him fast by the legs, and with some difficulty, on account of his fresh struggling, carried him home, about a quarter of a mile to my house; where, by the assistance of a neighbor who happened to be there, and killed him for me, he proved very serviceable to my family. I could relate several other acts of Providence of this kind, but omit them for brevity.

"As people began to spread, and to improve their lands, the country became more fruitfully supplied; and with what we abounded we began a small trade abroad; and as Philadelphia increased, vessels were built, and many employed. Both country and trade have been wonderfully increasing to this day; so that, from a wilderness the Lord, by his good hand of providence, hath made it a fruitful land; on which things to look back, and observe all the steps, would exceed my present purpose. Yet, being now in the eighty-fourth year of my age, and having been in this country near forty-six years, and my memory being pretty clear concerning the rise and progress of the province, I can do no less than return praises to the Almighty, when I look back and consider his beautiful hand, not only in temporals, but in the great increase of our religious meetings, wherein he hath many times manifested his great, loving kindness, in reaching and convincing many persons of the principles of Truth; and those who were already convinced, and who continued faithful, were not only blessed with plenty of the fruits of the earth, but also with the dew of heaven."

From The "British Friend."

Whether are We Tending.

When the solemn unanswered queries are read in our meetings, particularly the 2d, "Are you *individually* giving evidence of true conversion of heart, of love to Christ, and self-denying devotedness to him, and of a growing preparation for the life to come?" as well as the first clause in the 3d query, "Do you maintain a watchful care against conformity to the world?" I often fear that too many amongst us content ourselves with hearing them periodically, with observing a pause after, and recording that such a query "has been read and seriously considered," without their leading to that individual self-examination and prayerfulness which they are designed to produce, and which alone can tend to true profit, inducing us to put away from amongst us the hindering things—all that we feel stands in the way of a "self-denying devotedness to Christ."

It seems to me that there is much in the present day, especially among our female members, to cause serious apprehension, to grieve and burden the hearts of all true Friends—those who in honesty, and from heartfelt conviction have adopted the principles of our Society—not because they happened to have, or not to have, a birthright membership

amongst us, but because they believed them to be the principles of truth. Must it not be saddening to the heart of every self-denying follower of a crucified Lord to watch many of our female Friends take their seats in our meetings for worship, with their hair arranged in the latest fashion, surmounted by the little adorned head-dress of the present day, which it seems ironical to designate a *bonnet*, and often clothed in bright colors, and in grand and costly silks, with long trains sweeping the floor? Might not an outsider well exclaim in witnessing amongst us this growing conformity to the world, Is this the people who profess to hold the principles so nobly promulgated and defended by George Fox and his contemporaries?—they who were raised up to testify against "the customs and fashions of men, however general, or generally approved, which militated in any manner against the letter or the spirit of the gospel?" And where do most if not all of these absurd and extravagant fashions come from? Is it not from Paris, that modern Babylon, which is noted among the nations for her gaiety, her dissipation, and her wickedness?—she whose day of humiliation and deep affliction has now arrived—and can we doubt but that her profligacy, her disregard of the first day of the week, and her slighting of God's commandments, have called down upon her his righteous judgments? What, then, have the members of our dear and highly-favored Society—what have any true followers of the Lord Jesus to do with fashions and follies imported from such a seat of gaiety and vice?

In common, I believe, with many others, it is often the sincere desire and prayer of my heart that I may be enabled to see things amongst us in their *true light*—to look with charity and love upon those things which are different from what we have been accustomed to, and yet in which nevertheless there may be good and blessing—to be preserved from looking with coldness upon, or in any way discouraging anything that may tend to good, and which the Lord approves; and on the other hand not to wink at or encourage those things which are displeasing in his holy sight, which compromise our principles, and which I believe are making us more and more a *superficial* people, and are sapping the foundations of our strength.

I cannot but think that one source of our increased weakness is to be found in music and singing being now so much practised amongst us. From the printed epistle of 1854 I extract the following:—"Amongst those gratifications of sense from which the members of our religious Society by common consent, growing out of what we believe to be a root of Christian principle, have with much unanimity felt themselves restrained, are the study and practice of music. That which is of the character ordinarily designated as sacred music not infrequently stimulates expressions and feelings which are far from being the genuine breathings of a renewed heart, and tends to produce an excitement, often, unhappily mistaken for devotion, and to withdraw the soul from that quiet, humble, and retired frame in which prayer and praise may be truly offered with the spirit and with the understanding also. That music, on the other hand, which does not in any degree partake of the character usually designated sacred, has, we fear, in innumerable

instances allured the feet of the young to lightness, the gaiety, and even dissipation of the world, and thus proved among the snares against which we are enjoined fervently to pray, 'Lead us not into temptation! Has anything occurred since 1854 to le the objections to, or the dangers in, this suit? And I believe many of the above marks will also apply to singing, which is coming so common amongst us, and while some places has been introduced into First-day schools. At this I grieve—first believe our usefulness as a people, whether home or foreign missions, will be found to *not* in our constantly endeavoring meet those of other denominations half or more—not in wishing to hide our lighter a bushel, and appearing ashamed of principles, but in faithfully upholding them and in testifying against all that is so from solid and substantial, even amongst professing Christians. That there is in our more life and more zeal in some respects there was at one time, I am quite willing hope; but yet every true lover of our principles must also feel that the present is a time when there is a great mixture amongst when our position is particularly precarious and dangerous.

Many of our female Friends devote much time and attention to laboring among the poor, and such labors are often doubt greatly blessed, and if pursued in true humility of heart, and in the love of Christ they cannot fail of being acceptable in his sight.

But we cannot shut our eyes to the fact that in many instances this outside work, attachment to our distinctive principles, inducing consistency and usefulness as members of our own Society, seem to be antagonistic forces; that the aim and desire of many our young and middle-aged members appears to be *not* to be simple-hearted Friends, or self-denying followers of a crucified Lord, benevolent "*ladies*." Their wishing to be called, and calling each other "Mrs.:" "Miss," instead of by their plain name another mark of declension from Christ simplicity. And what reader of our most periodicals can fail to be struck with the gaudiness advertisements of late? Those who profess to teach music and sing, almost invariably style themselves "*young ladies*;" and careful observation we shall find that style of address, fondness for music and singing, and the love of dress, generally go together, bringing us to the conclusion that they foster and are of the spirit of the world.

We sometimes hear regret expressed that there are so few amongst our female members coming forward in the work of the ministry. But is there not a cause? and is it to be found in the superficiality and in the cringing conformity to the world in our male Friends? Are even those who questioning how near they can approach without danger to the follies and gaieties of the world—are they likely to submit to the spiritual baptisms, that humiliation of heart that prostration of all that is of the creature which must I believe be experienced, when a true call to the ministry is received?

With fear and anxiety do I often hear "prayer-meetings" being held among those of our members who have no objection to indulge in fashionable dress, &c., and I would commend to their serious personal consideration the subject in the leader of the 1

ber of *The British Friend*, which struck as valuable, and much to the point.

How may we who dearly love the principles of Truth as professed by us, and who desire their spread, and that we as a people may increase in the life, in the root, in the substance of true religion—may endeavor in times of proving and conflict to omit the state of our beloved Society to heavenly Father, and increasingly seek to have our own hearts kept in the love of Him, which is in Christ Jesus our Lord.

A LOVER OF OUR PRINCIPLES.

7th month, 1870.

Causes of Sudden Death.—Very few of the sudden deaths which are said to arise from a seizure of the heart," do really arise from that cause. To ascertain the real origin of sudden deaths, experiments have been tried in Europe, and reported to a scientific congress held at Strasbourg. Sixty-six cases of sudden death were made the subject of a rough post mortem examination; in these cases only two were found who died with a seizure of the heart. Nine out of sixty-six died from apoplexy, while there were twenty-six cases of congestion of the lungs—these, it is, the lungs were so full of blood they could not work, there not being a sufficiency of room for a sufficient quantity of air to enter and support life. The causes that produce congestion of the lungs are cold feet, tight clothes, costive bowels, sitting until chilled, after being warmed with labor or a rapid walk, going to bed suddenly from a close, heated room in the cold air, especially after speaking, or a sudden depressing news operating on the mind. The causes of sudden death being removed, an avoidance of them may serve to prevent many valuable lives, which would otherwise be lost under the verdict of "heart complaint." That disease is supposed to be incurable and incurable; hence many may take the pains they would to avoid sudden death, if they knew it lay in their power. *Record.*

Communicated for "The Friend."

Blissings We Want.

"Ask and ye shall receive."

that the Lord will pour out His Holy Spirit on the members of Philadelphia Yearly Meeting in mighty power and fulness.

that He will convert every unconverted among us.

that He will create in the hearts of all a hunger of soul after perfect holiness.

that He will unite all such, of whatever sects, in self-denying love for the souls of their unwelcome members.

that He will baptize us all together with a baptism of christian love, making us to realize our oneness in the Lord Jesus and with one another in Him, and breaking down all dividing lines of prejudice between us.

that He will cause us to recognise each other's different gifts for service, and all to be united together in loving and true unity for the glory of our common Master, feeling that no one can say to another "I have no need thee."

that He will stir up those of us who have been zealous in advocating the doctrine and principle of justification by faith, to be lively concerned to manifest the blessed fruits of His doctrine in a practical sanctification of our lives and walk, by the Spirit.

That He will make us all willing to learn from one another, and to submit ourselves one to another in the fear of God. And that while one class may come more fully to recognise the blessedness of the truth of the free and full forgiveness of past sins to be consciously realized early in the christian course; the other class may in turn grow in the truth concerning the need and the practicability of personal holiness and christian perfection.

The following promises, among many of like import, invite us to ask for these blessings:

"And this is the confidence that we have in him, that, if we ask anything according to his will, he heareth us."

"This is the will of God, even your sanctification."

"And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."

"Hitherto have ye asked nothing in my name; ask, and ye shall receive, that your joy may be full."

"According to your faith be it unto you."

The Manufacture of Cheese.—No feature of American agricultural development is so noticeable as the rapid and extraordinary increase in the production of cheese. In fact cheese has become a staple product of some of the largest and most flourishing agricultural regions in America. This is owing to the introducing of the factory system into the business, by which many dairies associate together to supply a single large cheese factory. This originated in New York State, where it obtained its full development, and gave a name and a character to the cheese of that region before the custom had made any progress elsewhere. Experience showed that it gave an immense impetus to agriculture in a new direction, the dairy interest being found much more profitable than it ever had been under other arrangements. With the enormous increase in population in all the cities of the State, as well as in Philadelphia and the cities of New Jersey, the markets for this New York cheese increased remarkably, and the capital accumulated in the business was used to extend it on a large scale.

The degree to which this has been carried in New York may be judged by a few figures furnished by the report of the Dairymen's Association. In 1868 there were in the United States 792 cheese factories, of which 660 were in New York, 72 in Ohio, 26 in Illinois, 25 in Vermont, and 8 in Wisconsin, showing how energetically the New Yorkers have followed up their success in this line. It is to be observed that the ample supply of banking capital all over New York State furnishes facilities not enjoyed elsewhere for this business. But in Wisconsin, which is almost totally deficient in this respect, the cheese factories, which numbered only 8 in 1868, have now risen to 62, with 10,817 cows attached, and producing over 5,000,000 pounds of cheese, which, at fourteen cents a pound, would be worth over \$700,000. In Minnesota quite a number of cheese factories have been started, and a large number of additional ones are being organized.

Under the influence of this factory system the cheese product of the country has risen from 105,000,000 pounds in 1860, to 240,000,000 in 1868, and in the latter year, with an increased price, the demand exceeded the

supply some 72,000,000 pounds. In 1869 the dairy product of the United States exceeded our whole wheat crop in value, being worth \$400,000,000, while the wheat crop was valued at \$375,000,000. It also exceeded the value of the cotton crop, which was \$303,000,000.

Selected for "The Friend."

People may talk about regeneration, faith, baptism, sanctification, justification, &c., and may reason concerning the progress of the work of religion in the soul, but if they do not know it, and feel it going on in themselves, they are no more benefited by their head knowledge, than the man who is languishing for want of food, is strengthened by talking of eating. We are to receive these things as little children, waiting in the simplicity of our hearts, and abstractedness of thought, to be fed by the Divine Hand, with food convenient for us. If we trust in the Lord with all our hearts, and lean not to our own understanding, he will lead us on gradually, feed us according to our growth, and inform our understanding in the things of his kingdom, as we shall be able to hear or comprehend them. I wish thee, dear friend, to be still in thy mind, to guard against restlessness and impatience, to employ thyself quietly and cheerfully in thy outward occupation (which will help to prune away a redundancy of unprofitable thoughts) and to be diligent in waiting for, and feeling after that spring of comfort in thy own mind, which is not under thy control, nor at thy command, nor can be come at by the working of any artificial tool of our imagination; but which the great Master sends in his own time, "To revive the spirit of the humble, and to revive the heart of the contrite ones."—*Extract from a letter by Richard Shackleton.*

THE FRIEND.

ELEVENTH MONTH 5, 1870.

To the Editors of "The (Philadelphia) Friend."

Respected Friends,—In a recent number of your paper, kindly sent me by a friend, I find a reprint of a letter of mine which appeared in the Monthly Record of 7th month last, and an article commenting on the same, emanating, I presume, from the editorial pen. With the tenor of your remarks I have no fault to find; but as I learn that one or two passages in my letter, to which you have given wider publicity than I had contemplated, have been misunderstood, I venture to ask you to insert a brief note by way of explanation.

First: I did not intend to imply that either our early Friends, or those who at the present time adhere closely to the system of theology developed in their doctrinal and controversial writings, are chargeable with the Hicksite heresy of denying the efficacy of the propitiatory sacrifice offered upon the cross.

Secondly: while admitting that English Friends generally do not fully endorse those doctrinal and controversial writings, I nevertheless believe the views advocated in the Epistle which called forth my strictures, to be entirely irreconcilable with the earnest christian activity and aggressive spirit of George Fox, and of the noble band of reform

ers associated with him in the establishment of the Society of Friends.

I am respectfully your friend,
FIELDEN THORP.

York, 11th mo. 10th, 1870.

As our object in publishing the letter of Fielden Thorp, in the first number of this volume, was simply to add to that of others, the testimony of one, who, by position and association was supposed to speak advisedly on the point, that those with whom he is actively co-operating do not hold the truths of the gospel as heretofore understood and believed by Friends, we did not then, nor do we now, think it needful to enter into a refutation of the unfounded and uncharitable charges preferred by him against Philadelphia Yearly Meeting and the standard writers of the Society. The testimony for which that letter was published is reiterated in the above.

We are glad he is willing to disavow what his language certainly conveyed, in relation to the doctrine of the atonement; and it would have been well, had he also retracted his equally incorrect allegation, respecting the belief of Philadelphia Yearly Meeting concerning the "gospel."

We may take the opportunity to say there are no "views" in the epistle issued by our last Yearly Meeting, irreconcilable with "earnest christian activity," nor with the "aggressive spirit" of George Fox and his co-laborers. There is but a timely warning given against entering into "activity," without being first prepared by Christ for his work; and a fervent religious concern expressed that our members, older or younger, may avoid every thing, even though in the shape of "good works," which would divert from that obedience of faith to the manifestations of the Light of Christ in the heart, which alone can qualify any rightly to work in the Lord's cause, as did George Fox and his worthy coadjutors.

SUMMARY OF EVENTS.

FOREIGN.—The most important event of the week has been the capitulation of Metz, which surrendered to the Prussian commander, Frederick Charles, on the evening of the 27th inst. This fortified place was considered the strongest in France. It is of great size, having been at one time one of the strongholds of the Germans. Metz has been often besieged, but never before taken by hostile forces. The surrender gave up 173,000 troops, including a large number of sick and wounded, three Marshals of France, and sixty-six generals. The number of guns captured, of all calibres, is reported at 1,000, and a military chest of forty millions of francs is also said to have been among the spoils. The Germans now hold more than 320,000 French prisoners of war. Soon after the surrender, Marshal Bazaine was sent to Wilhelmshof, where the ex-emperor is a prisoner. The news of the surrender seems to have caused great astonishment and indignation at Tours. Cremona, Gladstone, Bezoin and Gambetta, on behalf of the French government, denounce it in their proclamation as an act of the basest treachery, and a crime the authors of which should be outlawed. "Marshal Bazaine," they say, "has betrayed us. He has made himself the agent of the man of Sedan, and an accomplice of the invader; he has regarded us as the enemy of the army of which he had charge, he has surrendered, without even making the least effort, he has humbled and twenty thousand fighting men, twenty thousand wounded, guns, cannon, colors and the strongest citadel of France."

It is natural that the feeling disaster should be received by the French in the manner this has been, but they seem to forget the long, energetic and determined defence of Metz, the many desperate attempts of Bazaine to break through the besieging forces, and his efforts to make better terms by negotiations, all of which failed. The Prussian commander being convinced that it was impossible for the French army to escape from Metz, and that famine must soon compel

the unconditional surrender required. There is little room to doubt it was at last caused by starvation, and was the wise choice of the commander instead of an unavailing sacrifice of life.

After approaching near to Amiens the Prussian army withdrew without venturing an attack. A Prussian force dispatched to cut the railway connections between Amiens and Rouen failed in the attempt, and was repulsed by the national guards. Several dispatches have been received at Tours announcing French successes in different parts of the country; they probably relate to occurrences of no general importance. The balloon post from Paris had ceased for more than a week. So far as is known, there has been no material change in the state of affairs in and around the city. It is expected that the besieging force will soon be strengthened by the arrival of the chief part of the army which has hitherto been occupied with the siege of Metz. The main portion of the Prussian forces around Paris, are grouped in four great columns, the first connected by telegraphs and by good roads, admitting of the rapid movement of forces to any point assailed. The peasants in the neighborhood have quietly submitted to the invaders, and give them very little trouble.

Triers has arrived again in Tours. It is said that he is in favor of immediate peace on such terms as can be obtained.

A division of the Prussian army on the 25th ult., attacked the French at Chateaudun where 40,000 troops were posted. The French were defeated, and many prisoners were taken by the Germans, whose loss was supposed to be 10,000. The Schlieffen has stipulated to the German forces after a severe battle on the 25th. The surrender included 2400 prisoners, and 120 cannon. The Prussians refuse further parols to captured French officers, because it has been ascertained that some thus released have resumed service in the French army.

The French Provisional Government fearing that it will soon be obliged to leave Tours, as it is said, made arrangements for transferring the headquarters to Clermont, in the Puy de Donn. They have issued a decree ordering a loan of two hundred and fifty millions of francs for the national defence.

The King of Algeria has been decreed citizens of France, and that country is divided into three departments, Algeria, Oran and Constantine.

The condition of the inhabitants in many parts of France is most pitiable. In the Ardennes, a region on the Belgian frontier, it is stated that 200,000 persons are in a wretched condition, and without shelter except such as is made of bushes in the ravages of war have spread similar destitution and misery over large areas of territory.

The foreign ministers at Madrid have been advised by the Spanish government of the nomination of the Duke of Aosta as candidate for the throne of Spain, and have communicated the intelligence to their respective capitals. The Duke has signified his acceptance of the crown in case of his elevation, and the approval thereof by the great Powers. The majority of the Cortes have passed a resolution for the assembling of that body on the 1st inst. A Madrid dispatch of the 31st ult. says: "The formal approval of the candidature of the Duke of Aosta for the Spanish crown, by England, Prussia, Italy, Austria and Russia, is officially acknowledged by the Spanish government."

The railway from Chalons to Paris, by way of Soissons, is now restored, and the Prussians are now issuing a new currency, and supplies. A Prussian force of 100,000 men, and a large number of reinforcements of Prussian troops, has reached the investing lines. Prussia and the other German States have, it is stated, furnished 850,000 men for the war. This number has been seriously reduced by deaths, and sickness, and the survivors are nearly all in French soil, and are estimated at nearly 700,000 men.

A Versailles dispatch states that on the 28th ult. the French were dislodged from an outpost near St. Denis, on the northern boundary of Paris, and driven back behind the fortifications. Thirty officers and about 1200 men were taken prisoners. The Prussian losses are acknowledged to be quite heavy, as the French were protected by earthworks.

Dijon, an important city in the S. E. of France, 160 miles from Paris, has been captured by a Prussian force of 12,000 men.

Berlin dispatch says: "Lord Granville's proposition was an armistice to enable elections to be held only, and did not involve peace. The Paris government does not desire an election, but the Prussian government will require one if an armistice is granted, and it will not be granted for any other purpose."

The news of the capitulation of Metz has been sent into Paris under a flag of truce.

of London, 10th mo. 31st. Consols, 92½. U. S. 1862, 81; of 1867, 90½; ten 87½.

Liverpool. Uplands cotton, 8½ a 8¼; Orleans 9½.

UNITED STATES.—*Census Items.*—The population of Philadelphia is returned at 657,179. In 1860 it was 565,000, and as the city records show that upwards of 40,000 souls have since been added, the increase of the number of registered voters has greatly exceeded what was expected the census would show a total population of 750,000 to 800,000. The census of Cincinnati is 218. Beside this there are 33,553 persons who live on the city limits and who do business in Cincinnati. Michigan has 1,191,461 inhabitants, an increase of 142,348 since 1860. Charleston, S. C., has 48,443 inhabitants, 22,758 being whites. San Francisco, California, has 150,361 inhabitants, of whom 12,017 Chinese. Kansas City, Mo., has 32,206 inhabitants, an increase of 27,000 since 1860. Jersey city has 82 in 1860, and 43,884.

Philadelphia.—Mortality last week 235.

Miscellaneous.—Senator Morton has finally consented to decline the mission to England. J. D. Cox, Secretary of the Interior, has tendered his resignation, and has been accepted by the President, and J. Delan pointed to succeed him.

On the 30th of this mo. last, there were 195,739 pensioners, whose yearly pensions amounted to \$27,221. The navy pensions amount to \$488,591. There are fifteen pensioners of 100 years of age and over.

Cotton raising in California has proved profitable. One planter who experimented on 200 acres, called the "Golden Prediction," has a net profit at \$7.

The first heavy snow of the season fell at Manchester, New Hampshire on the 31st ult.

The Markets, &c.—The following were the quotations on the 31st ult. New York.—American gold, U. S. sixes, 1881, 113½; ditto, 50-180, 112½; 10-40, 109½. Superfine flour, 5-10 a 85-10; flour, 10-50, 85-100. Sugar, 100 lbs. 10 a 10½. Coffee, 100 lbs. \$1.30; No. 2, \$1.18 a \$1.15; amber State, \$1.36 a \$1.34; white Michigan, \$1.45 a \$1.53; white Genesee, \$1.70. Western mixed corn, 82 a 84 cts. *Philad.*—Cotton, 17 a 17½ cts. for uplands and New Orleans. Superfine flour, \$4.50 a \$4.75; finer brands, 85 a 90 cts. Sugar, 100 lbs. 10 a 10½. Coffee, 100 lbs. \$1.22 a \$1.24. Rye, 95 a 97 cts. Yellow corn, 78 a 80 cts. Western mixed, 75 a 76 cts. Oats, 51 a 56 cts. C. seed, 56 50 a 56.70. Timothy, \$4.75 a \$5.25. A 3000 beef cattle were sold at the Avenue Drove at 8 a 9 cts. for extra; 7 a 8 cts. for fair to good; 6 a 7 cts. for by, good common, 5 a 6 cts. for sheep at 5 a 6 cts. per lb. hogs, and 5000 head of a 10.75 per 100 lbs. net. *Baltimore.*—Maryland wheat, \$1.70 a \$1.75; yellow prime, \$1.35 a \$1.38; western, \$1.30 a \$1.33; good corn, 70 a 84 cts. for new. Oats, 45 a 48 cts. *Chicago.*—Spring flour, \$4.25 a \$5.75. No. 2 wheat, 97½ cts. No. 2 55 cts. No. 2 oats, 33½ cts. No. 2 rye, 67½ cts.

A Stated Meeting of the "Female Society of Philadelphia for the relief and employment of the Poor" will be held at the House of Industry, No. 112 N. Seventh St., on Seventh-day, 11th mo. 5th, at 3½ o'clock.

JULIANA RANDOLPH, Secy.

FRIENDS' BOARDING SCHOOL FOR IND CHILDREN, TENNESSEE, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected therewith.

Benjamin Worth, Marshalltown, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia. Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE. Near Frankford, (Twenty-third Ward.) Philadelphia Physician and Superintendent—JOSHUA H. WATSON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to JOHN E. CARTER, C. O. of the Board of Managers, No. 1313 Pine Street, Philadelphia, or to any other Member of the Board.

DIED, on the 8th of Ninth month, 1870, MARGARET W. VUW, Walter, aged 82 years, leaving three children and one grandchild. Her speech much impaired by paralysis, but her mind was clear to the close. Her last words may be noted as evidence that through redeeming mercy, she had gathered with the just of all generations an inhabitant of that "glorious city, whose walls are salvation, whose gates are praise."

In a recent number of the *London Quarterly Review*, there is a well written article on "The Police of London," from which the following extracts are offered for "The Friend," hoping they may be interesting to many of our readers that valuable journal, as affording them information on a subject, of which they may know little or nothing.

"The population of London is nearly double that of Paris, four times that of New York, seven times that of Berlin, six times that of St. Petersburg, twelve times that of Amsterdam, and eighteen times that of Rome. The inhabitants of Paris, Berlin, Vienna, and St. Petersburg, added together, fall short of the population of London, which exceeds that of Scotland, is more than equal to two-thirds of the population of all Ireland, and constitutes nearly one-eighth of the whole population of Great Britain. The increase alone in the inhabitants of London during the last thirty years, exceeds the entire population of the Kingdom of Greece, brigands included.

"Indeed, one of the most surprising things about modern London is the rapidity of its growth. Notwithstanding its already enormous size in 1849, not fewer than 225,322 new houses have been added to it since then, forming 69 new squares, and 5831 new streets, the total length of 1030 miles! Nor has the growth of London apparently been checked, notwithstanding adverse times; for 5167 houses were in course of erection in the month of February last. In short, as the French observer said of London, 'it is not so much city, a province covered by houses.'

"But while London thus attracts the most fishing, enterprising, and industrious men in many provinces and countries, it also attracts men of another sort—those who seek to live upon the industry of others. The best rise to London, and the worst men sink to it. For though it is a centre of art, and intellect, and industry, London is also a centre of misery, poverty, and vice. It is the general rendezvous of the criminal classes, some of whom come to hide in it, and others to pursue their vocation of plunder in it.

"The miserable and desperate classes of London are almost equal in number to the

populations of some kingdoms: they would fill a great city by themselves. They include a multitude of beggars, tramps, match-sellers, crossing-sweepers, rag-pickers, organ-grinders, prostitutes, and others hanging on to the outskirts of society, ready at any moment to become criminal. In the second week of June last, there were 31,402 indoor paupers, and 88,992 outdoor paupers in the metropolitan districts, maintained at the public expense; and outside this actual pauper class, there is always a vast number of poor men and women, struggling for subsistence, amidst wretchedness, dirt, drunkenness, and crime.

"It is not easy to form an estimate of the number of persons living by plunder, who look upon society as their daily prey. According to the Judicial Statistics, the criminal classes at large in England and Wales in 1868—excluding from the known thieves and deprecators all who had been living honestly for a year at least subsequent to their discharge from any conviction—numbered as follows:—

	Under 16.	Above 16.	Total.
Known thieves and deprecators, . . .	3,743	19,216	22,959
Recipients of stolen goods, . . .	54	3,411	3,465
Prostitutes, . . .	1,275	23,911	27,189
Suspected persons, . . .	3,753	25,715	29,468
Vagrants and tramps, . . .	6,366	26,572	32,938
	15,191	100,455	115,646

"But this estimate is doubtless very much within the actual number, as only a comparatively small proportion of felonies are detected, for which the offenders are brought to justice. A common pickpocket will steal daily, one day with another, about six pocket-handkerchiefs in order to 'live,' and the chances are that he will commit from three to four hundred thefts of this petty sort before he is caught. Yet such is the vigilance of the police, that in 1868 not fewer than 9759 persons guilty of felonies affecting property were apprehended in the metropolitan district alone, of whom 6145 were tried and convicted.

"When such are the numbers of the criminal classes who are in a state of constant war against society,—who live by plunder, regarding honest people going about their daily business but as so many persons with pockets to be picked, and dwelling houses, shops, and warehouses, only as so many places to be robbed, the wonder is, not that the number of felonies against property should be so great, as that London should, after all, be one of the safest places in the world to live in.

"The wonder, however, ceases when it is considered that scoundrelism has no principle of cohesion. If these thirty thousand persons of the lawless classes had the power of organization, society would be at their mercy. But there is no 'honor among thieves,' notwithstanding the popular maxim. They cannot trust one another, and are usually ready to sell and betray each other. They live in a state of constant fear, and a hand placed sud-

dently on the thief's shoulder from behind, is apt to paralyze the boldest.

"For the same reason that the lawless classes arrayed against society are weak, the constabulary forces arrayed in defence of society are strong. The baton may be a very ineffective weapon of offence, but it is backed by the combined power of the Crown, the Government, and the Constituencies. Armed with it alone, the constable will usually be found ready, in obedience to orders, to face any mob, or brave any danger. The mob quails before the simple baton of the police officer, and flies before it, well knowing the moral as well as physical force of the Nation whose will, as embodied in law, it represents. And take any man from that mob, place a baton in his hand and a blue coat upon his back, put him forward as the representative of the law, and he too will be found equally ready to face the mob from which he was taken, and exhibit the same steadfastness and courage in defence of constituted order.

"The total length of the streets and roads regularly patrolled by the metropolitan police is not less than 6708 miles, or equal to the distance, in a direct line from London across the Atlantic and the continent of North America, to San Francisco! This length is divided into 921 day-beats and 3126 night beats—the average length of the day-beats all over the metropolitan district being about seven and a half miles, and of the night-beats a little over two miles—though they are, of course, much shorter where the population is the most dense.

"Among the more important of such new duties entrusted to the police is the regulation of the traffic of the metropolis. The increase in the number of carriages, cabs, omnibuses, vans, and vehicles of all kinds, has been so great of late years that, without the most careful regulation, the principal thoroughfares would, for the greater part of each day, be the scene of disorder, danger, and inextinguishable confusion. As it is, the principal thoroughfares are crowded with traffic from morning till night, and being for the most part insufficient in width, they can only be kept clear by dint of constant attention on the part of the police.

"As might be expected, the greatest glut of traffic is in the thoroughfares leading to and from the city—not fewer than three quarters of a million of persons entering it daily, mostly for purposes of business. The pressure is greatest towards the centre, and where the thoroughfares are the narrowest—at the Mansion House, in the Poultry, at Temple Bar, in Holborn, at Aldgate, and especially on London Bridge. About 60,000 persons cross the bridge daily on foot, and over 25,000 vehicles; and it is only by the careful separation of the fast from the slow traffic by the constables stationed at the ends of the bridge, by which it is divided into four distinct streams passing in opposite directions, that the thor-

ongfare is kept clear; though, notwithstanding all the care that can be taken, blocks are still of frequent and unavoidable occurrence.

"The most crowded thoroughfares of the West End are, the corner of Hyde Park during the season, Bond Street in the afternoon, the bottom of Park Lane, the Strand on the evening when lines of carriages to and from some ten different theatres require regulation, and especially the crossing to the Houses of Parliament of the stream of traffic over Westminster Bridge. As London Bridge is the greatest thoroughfare of the East of London, so is Westminster Bridge of the West. About 45,000 foot-passengers and 13,000 vehicles cross it daily in the busiest seasons of the year. Upwards of a thousand vehicles cross hourly between ten and twelve in the forenoon, and between two and four in the afternoon; and it is only by the careful and excellent regulations of the police that accidents are not of constant occurrence.

(To be continued.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 82.)

"4th mo. 30th, 1854. To-day our dear friend Martha Jefferis departed this life. She was one who had been engaged to have her day's work done in the day time. Her last illness was of nearly a weeks continuance; in the course of which she said the event was much hidden from her; but she felt that her blessed Saviour was near. Thus in great sweetness, without struggle or apparent pain, she gently ceased to breathe, about noon. She was a useful member of Society, and will be much missed among us. May the Lord of the harvest bring forth laborers into His harvest, is the present breathing of my spirit."

"Same date. "Our valued friend B. H., from Ohio, in the course of his religious visit in these parts, attended our meeting at West Chester. It was a time of renewed favor; and oh! that fruits answerable thereto may be brought forth, that so we may not become as the fruitless fig-tree, of which it was said, 'cut it down, why cumbereth it the ground.'"

"5th mo. I attended our Quarterly Meeting at Concord. At the same time I thought much of Caln and Western Quarters; but not feeling it a duty required, and the infirmities of age pressing upon me, I felt easy to remain at home. Gracious Father! be pleased to be near me, unworthy as I am; and preserve me from going before, or loitering behind the guidance of Thy blessed Spirit: that so I may be made quick of understanding in Thy fear.

"7th mo. 9th. Soon after taking my seat in our meeting to-day, desires were raised that we might be individually benefitted by thus coming together; and that our minds might be turned more and more inward to the gift of grace which teacheth as never man taught. The exercise continuing to press upon me, with a pointing to express it, I ventured to do so, according to my feeble ability; and believing that the spirit of supplication was felt, it was vocally offered in awfulness and holy fear. After which I was favored with peaceful quiet.

"8th mo. 24th. I attended our week-day meeting, after an absence of nearly a month, from indisposition. My heart was early humbled, and brought under exercise with desires for the preservation of the beloved youth;

and believing it right to express a few words for their encouragement, I did so in broken sentences; and was favored the remaining part of the meeting with a comfortable calm. But after returning home, I was beset with doubts and fears, lest there had been a moving in the awful work without sufficient evidence of its being a Divine requiring; under the exercise whereof, I could appeal to the Searcher of hearts, Thou knowest I have never ventured to speak in Thy name without believing it to be required by Thee, unfit and unworthy as I am! After which my mind became more quiet, in believing that these conflicting, searching seasons were designed for my deepening in the root of life. Gracious Father, suffer neither heights nor depths, things present nor things to come, to separate me from Thy love in Christ Jesus our Head."

No doubt all those, who in true fear and trembling, have felt called publicly to advocate the Great Name, have had misgivings at times, lest they were too much acting in their own wills, and without duly experiencing the "who is unto me if I preach not the gospel." Christopher Healy (see this Journal, vol. 41, p. 412) once felt uneasiness so to prevail after an appearance in his own Monthly Meeting, that he requested the ministers and elders to stop at its conclusion, that he might unburden his painfully exercised mind to them. His brethren, far from upbraiding him, so manifested their unity and sympathy with him in his deep baptism, that it fully healed all his wounds, which, through the power of the enemy's temptations, he had felt that day. Afterward, on the subject of the ministry, he thus instructively continues: "O may all that are concerned to appear in the ministry, be careful to know the word of command from the Holy One, and not let a good desire for the people be sufficient to raise them up in the ministry. But remember, O exercised brother or sister, who art called to the work of the ministry, that in order that thy offerings be acceptable to God, or beneficial to the people, thou must feel with the apostle the necessity of the woe. Yea, woe be unto thee if thou preach not the gospel. Then if the enemy of thy soul seeks to discourage thee, and to destroy thy faith, and thou be thereby brought to lasting, thou shalt witness the Holy Hand to be underneath thy head to keep thee from sinking; and when the time of fasting is over, thou shalt witness the company of holy angels to administer to thy hungry soul, and thine heart shall rejoice with songs of praise to thy Heavenly Father, through Jesus Christ. Which, blessed be the Lord, was my happy experience on my way home after this Monthly Meeting."

The Diary continues: "9th mo. 10th. Our meeting to-day was small, and to me it seemed like toiling all night and catching nothing, or at least but little. As to the outward it was a day of favor: being one of rain, after a time of unusual heat and drought, whereby vegetation is much parched and dried up. Oh! I often thought during the dry time, how much we have to remind us of our very great dependence on Him from whom we receive every blessing, both spiritual and temporal.

"11th mo. I attended our Quarterly Meeting at Concord; which seemed to require considerable exertion in my feeble state. Yet while out I was favored, in company with Mary Kite, to get to see Samuel Trimble who

is in declining health. It was to me a satisfactory visit, believing that the mind of that dear young man was preparing for the solemn event which appeared to await him. I heard, afflicted, widowed mother, sat with us to whom tender sympathy and encouragement was felt and expressed. What a mercy it is that though our Heavenly Father pleased to afflict the children of men, yet He does not forsake those who put their trust in Him. After leaving a few tracts at a house on our way home, for a man whom I saw work in the road the day before, whose name I do not know, I was favored to return with a quiet mind, free from condemnation.

"23d. Our dear friend, Mary Kite, attended our week-day meeting, and appeared a solemn supplication. It seemed to me to be a time of renewing of covenant with some perhaps of the dear young people. May the be enabled to keep them by His holy aid; while alone is able to help us to keep our covenant with Him.

"In the latter end of 11th mo., or fore part of 12th month, I attended the funeral of Rebecca W. Lukens. It was a close bereavement to her dear daughters M. P. G. and P. H.; and it seemed to me a solemn time wherein the necessity for us who remain, be ready for the like solemn change, was deeply impressed on my mind. It seemed best for me, I thought, to call the attention of the people, both at the house and while standing about the grave, to this all important concern. Oh! may I on every succeeding occasion, when apprehending myself called upon to speak in the name of the Most High, be the solemn query come close home, is 'unto me if I preach not the gospel.'

"2d mo. 11th, 1855. It has been for some time past a season of much poverty of spirit attended with sadness and mourning on a count of the state of our poor Society; when in the language hath often arisen, 'Spare thine people, O Lord, and give not thine heritage to reproach.' At other times the aspirator of my heart have been, Lord help us, for fail is the help of man; and also that I may be enabled to bear my allotted portion of suffering for the Body's sake; and be more and more concerned to know the will of Him whom I desire to serve, as well as have strength to perform it: and I may add, that it seemed this day in our meeting, as though my mental breathings to the Father of mercies had nearer access to Him, than at many other seasons. May I be thankful for ever gleam of His condescending goodness and mercy.

"4th mo. 8th. In our meeting to-day poverty and heaviness was the clothing of my spirit for a considerable time; and in striving to obtain a little of that wisdom which is profitable to direct aright, my mind was renewed and solemnly impressed with the awfulness of the standing of those who fell upon publicly to proclaim the name of the Lord while in themselves, without Christ Jesus, they are nothing; and while I was exercised in desire to stand acquitted in Thine Divine sight, the following passage of Holy Writ revived: 'I charge you, O ye daughters of Jerusalem, by the roes and by the hinds of the field, that ye stir not up nor awake me love until he please' which renewedly gave me to see the necessity of patient waiting until the evidence of Divine requiring is clear. Holy Father, keep me, I pray Thee, from a

the wives of our unwearied enemy, and preserve me from either going before or lagging behind the pointings of Thy blessed finger. In the prospect of attending our approaching early Meeting, fearfulness covers my mind, an account of the unsettled state of our Society.

"16th our Yearly Meeting commenced; and I attended most of its sittings. Some of them were painful seasons; yet notwithstanding our backslidings and many departures on the simple truth, the last sitting was vored with a comfortable degree of solemnity; furnishing a hope that the Shepherd of Israel is still watching over his church with compassion, and would heal our backslidings we were sufficiently humble. May the Lord be pleased to help us (as a society) out of our present difficulties.

"29th. In our meeting at West Chester to-day, a solemnity seemed spread over us, and after considerable searching of heart, a few words I thought were required to be vocally pressed; which being yielded to, solemn application was afterwards poured forth. It felt to me a time of renewed favor, wherein my heart was made glad, and fresh cause given to trust in Him from whom cometh all our sure mercies."

(To be continued.)

The Chinese Language at the Cornell University.—Professor Rohrig opened his class of thirty members in Chinese with two introductory lectures, of which we can give only a brief outline. He began by alluding to the titles and inducements for studying this important oriental language. He considered these from two points of view—first, as they concerned the scholar, and secondly, as they concerned the practical business man. Chinese is of utility to the philosopher, the historian, the geographer, the antiquarian, the naturalist (an allusion was made here to the anatomist Endlicher), the astronomer (the instance of Biot was cited), the philologist (such as William V. Humboldt, &c.), and the general scholar. For the man of business it is of special value. Western trade with China is enormous, and is certainly increasing. This commerce employs many men. In the Chinese service itself there are a multitude of opportunities for foreigners in such capacities as mining engineers, chemists, agriculturists, civil engineers, builders of bridges, public roads, railroads, &c., telegraph operators, military instructors, teachers, clerks, &c. The Chinese custom-house service has been newly organized, and its higher employes are foreigners, to whom very liberal salaries are paid.

Professor Rohrig cited in this connection emphatically recently published "*Across Asia and America*," and repeated several conversations which he had held with the late Minister Burlingame and the various members of his embassy.

The character of the people of China was never portrayed, their peculiar civilization and mental independence, after which followed a sketch of the antiquity and value of their speech. The language was originally pictorial. As images became gradually words, modified in a variety of ways, changed, compounded and so abbreviated that all resemblance with the object was lost. The spoken language is the poorest in the world, while the written is the richest. There are four principal dialects and a multitude of local varieties, sub-dialects,

patois, jargons. The Chinese is read by the neighboring nations, often with their own words and in their own tongues, with some unavoidable transposition of expressions and change in the order or succession of words. The difficulties of the Chinese are many. It has a multitude of characters; the grammatical relation between the words is omitted, the reader being obliged to supply it; and it forms, in short, a sort of algebraical language, thus affording a species of excellent mental gymnastics. The Chinese intonations form an interesting and important portion of the language.

Professor Rohrig discussed the plans and methods of study. He described the 214 radicals, the phonetic system, the Kwen and Kuan-hou, Canton, Fu-Kiang, Shanghai and other dialects, and gave useful hints to the learner, together with a critical review of the existing text-books. A concise explanation of Chinese penmanship and method of writing was given.

The final question, "How long will it take to learn Chinese?" was met by the Professor by a quotation from Confucius, given first in Chinese and then in English, thus: "There are persons who are unable to accomplish anything. It is because they are lacking earnestness, energy and patience. But they should persevere! Such people require one hundred days to do the work which others do in one. And for what is done by others in ten days, they would need at least one thousand!"—*Cornell Era*.

The Old Paths.

For "The Friend."

"William Penn, speaking of Friends, says: "They came forth low and despised and hated, as the primitive Christians did, and not by the help of worldly wisdom or power, as former reformations in part have done, but in all things, it may be said, this people were brought forth in the cross, in contradiction to the ways, worship, fashions, and customs of this world; yea, against wind and tide, that so no flesh might glory before God."

In the way in which Friends in the beginning are herein represented to have been brought forth—"in the cross, in contradiction to the worship, fashions, and customs of the world, yea against wind and tide"—is the only way, it is believed, by which they can be sustained and preserved. For are not Christ and antichrist, God and the world, as wholly antagonistic now as at any other period? Can things in their nature discordant ever be reconciled? Can such as in any wise allow themselves to become conformed to the world and its spirit be the lowly, faithful disciples of Him who was rejected of men and crucified by the world? Can Christ and Belial be simultaneously served and followed? Until the Society of Friends of to-day become, through obedience to the light of Christ Jesus manifested in the heart, that self-denying, world-renouncing, God-fearing people which they were in the beginning; until they are, after the precept of the apostle, crucified to the world, and the world to them; until they be made followers of the lowly Jesus through the initiatory baptism which thoroughly cleanses the floor of the heart, and makes willing to suffer affliction with the people of God, knowing "that we are appointed thereto;" how can they expect to escape the punishment meted to Israel of old who had

forsaken the God of their fathers, "The Fountain of living waters, and hewed them out cisterns, broken cisterns, that can hold no water;" and "changed their glory for that which doth not profit?" "Yet, saith the Lord, I had planted thee a noble vine, wholly a right seed; how then art thou turned into the degenerate plant of a strange vine unto me?" "Wherefore I will yet plead with you, and with your children's children will I plead. For pass over the isles of Chittim, and see; and send unto Kedar, and consider diligently, and see if there be such a thing; hath a nation changed their gods, which are yet no gods? but my people have changed their glory for that which doth not profit."

From "Good Health."

Gymnastics.

On the subject of Physical Culture very little is known by the people at large; and what is known is far from being rightly appreciated. People in general take little or no interest in any subject which more immediately concerns their health, until once they are conscious of having lost it, when they are only too anxious for its recovery. That a very large number of the disorders of the human system which afflict mankind are due to careless and culpable indifference, or to ignorance of the laws of life, there can be no question. Everywhere the physical laws of our being are violated, and the sufferings incident to such violation most likely charged to *Providence*, while the sufferers, now anxious for restoration to health, but unwilling to follow the laws of nature and await her healing processes, resort to *patents*, the *patent* and *quack remedies* which flood the land, and thereby not unfrequently perpetuate their sufferings and materially shorten their lives; in plain English, *DRUG THEMSELVES TO DEATH*.

No one who has paid any attention to the subject of *Physical Culture*, can doubt that the right use of properly-regulated exercise must have a most beneficial influence, not only upon the due development of the human body, but as a sanitary measure in preventing certain forms of disorder, and in many cases as a curative process.

Walking ought to consist of a succession of steps, not of leaps, which constitute running. Fair walking is generally called "toe and heel," and one foot should always be on the ground. The steps are taken as much as possible from heel to heel, which part of the foot must touch the ground first, and be firmly dug into it. The ball and toe of the foot should not be on the ground for any perceptible space of time; if they are dwelt on, the walker loses a certain amount of time in each stride, besides causing the knee to bend by bringing the weight of the body on the toes, which are unable to bear it. The latter point is one of the great differences between running and walking; in the former all the weight of the body is thrown on the toes and balls of the feet, and in the latter on the heels.

At each stride the loin and hip corresponding to the leg which is being put forward, should be twisted well round the right loin and hip towards the left, and the left loin and hip towards the right. By this means the walker is enabled to put his feet down almost in a geometrical straight line, one in front of the other, and thereby gains additional length of stride. As regards the upper part of the

body, the arms must be kept well up and inclined outwards from the chest, with the elbows slightly bent,—since in fast walking the arms perform almost as important functions as the legs. Each arm must be swung across the chest, and the shoulder well lifted at the same time in unison with each alternate stride. The object of this motion is to raise the weight of the body off the heels, and thereby enable the legs to take a quicker stride. Above all things the shoulders must be kept well back, the chest out, the whole body as upright as possible, and the knees perfectly straight.

As an exercise for bringing into play all the muscles of the body, no single exercise can equal it, since in fast walking, not only the muscles of the feet, legs, and loins are used, but those of the ribs, chest, shoulders, and also arms, while they work across the body. Nevertheless there are acts much more complex, and which require a more prolonged training than mere locomotion.

Many of these movements involve the simultaneous or successive action of various groups of muscles, and each of these groups must be trained to take its appropriate portion of duty. Many of them also require great speed in their performance, others again great force, and sometimes both are necessary, but it may be safely assumed that if such be the case, *i. e.* if both speed and force are necessary, the stage of training requisite for the due and proper performance of the action will become of necessity more important and more lengthy. Herein lies the difference between the labor of a skilled mechanic and a raw apprentice. But, besides special training for special efforts, it is nowadays well recognized that, for the human body to attain its greatest beauty and its greatest power, it is necessary to train not one set of muscles, or even several sets, but all in turn, and it is on this account that gymnastics have of late years received the attention they have, not only as a means of physical or bodily education, but as a sanitary measure, and actually as a method of curing disease. Both of these subjects we shall consider in turn; but we shall first speak of the preparatory process, or that of training.

* * * * *
If a man sets about any unusual exertion, say running a race, he will soon become painfully aware of the efforts required to keep up his circulation and his respiration; his heart will thump against his side, and his breath come thick and fast; whereas a man by his side may be going along as quietly and as easily as possible, but then he has been trained. We have shown how scientific mechanical principles may be brought to bear on human movements, how the muscles act on the bones as levers, how the muscles themselves may be likened to a steam engine. But to enable this engine to do its work, fuel is necessary, and this is supplied by the blood; if, therefore, the engine is called upon to move faster than usual, more fuel will be necessary, and the blood will require to be driven more rapidly through its textures. But as the blood soon becomes fouled with the products of its combustion, it requires renewing, and air must be admitted more rapidly into the lungs to carry off the foul gases produced. Hence increased muscular action implies a more rapid circulation of the blood, and a more frequent breathing than is ordinarily required. This, then,

is the scientific basis on which we have to proceed.

* * * * *
Every one is familiar with the fact that a man's bodily conformation materially depends on his employment; hence the strong sledge-hammer arm of the blacksmith, the horny hand of the shoemaker, and so of a variety of other occupations. For the human body is so constituted, that if any part is called upon for unusual exertion, this exertion implies more rapid change of the blood in its parts, as well as a more liberal supply of that all-necessary fluid, which in its turn insures increased growth and bulk of the part. Thus, therefore, in a healthy individual increased exertion implies increased bulk and increased capacity for exertion. This is the basis of the training system, and the basis applies equally to external and internal organs. If any of a man's muscles be suddenly and unexpectedly called upon to perform some duty to which they are not accustomed, whether raising a heavy weight from the ground, throwing it from one spot to another, running or leaping—in short, any unwonted exertion—they will fail to perform it as satisfactorily as those which have been trained to their work. Further, the exertion will leave behind an uncomfortable soreness, which may last a day or two, indicating that the parts have been strained in performing this novel duty; but should the exertion be persevered in, the sense of soreness will become less and less till it entirely disappears; the exertion required to perform the act will also be less and less, for the muscles will be strengthened by each new exertion, until finally they will perform their duty easily and satisfactorily.

But what applies to the outer parts of the body also applies to the more internal, for the heart, whereby the blood is circulated, is a hollow muscle, and the principal forces whereby respiration is effected are also muscular. Now, a man's heart and his respiratory muscles may be good enough for ordinary purposes, he may have no difficulty of breathing, nor any inconvenience of circulation, and yet if any extraordinary exertion is required, both heart and lungs may fail to do their duty in their usual quiet and imperceptible fashion. The cause of this will be readily intelligible from what we have already said—both the circulatory and the respiratory apparatus require training if they are to be called upon for any special efforts, just as with the more external muscles of the body.

(To be concluded.)

James Parnell.

This youth was one of the earliest of the "Quaker Martyrs." It is related that when George Fox was imprisoned in Carlisle, England, in 1653, Parnell, then in his seventeenth year, visited the great Quaker, in prison, and was converted to his faith. He began at once to preach, and the fame of his eloquence went before him. But persecution set upon him. He was arraigned, charged with blasphemy. Being acquitted of the charge, Judge Hills committed him for contempt of magistracy, and fined him heavily. He was imprisoned in Colchester Castle, and subject to systematic cruelty and outrage inconceivable to us at this day. Denied a bed, he was obliged to lie on the bare stones of the prison, where, in wet weather, the walls were dripping with water, and during the cold of winter he was almost

deprived of clothing, frequently of food, beaten until he was nearly insensible by the jailer and keeper, all his friends denied access to him, and not permitted to relieve his sufferings. He was placed in a "hole in the wall, which was probably the recess of the window quite deep, as the walls are nine feet thick. This "recess" was so high from the stone floor, that he was obliged to reach it part way by a ladder, which, being six feet too short a rope at the upper end aided him to hoist wretched abode. The keeper would not allow him a basket and string, which his friend desired to furnish to draw his food up to him and he was therefore compelled to ascend the rope with one hand and carry his provisions in the other, which he did with great difficulty, being a person of small stature and feeble frame, much weakened by long exposure and privation.

* * * * *
His case was powerfully represented to Cromwell's government, and several Quakers offered to lie in his place, but no mitigation of his punishment could be obtained, nor any concession but the admission of two Friends to see him die, but who were refused permission to remove his body, which was buried in the castle-yard by the jailor's assistants.

He died in the spring of 1656, after incredible suffering, when only *nineteen years old*, exhorting his friends to "keep the faith," saying he had "*seen great things*," and beseeching them in his last moments, "*not to hold him: to let him go!*"

Upon this incident, the author of the "Lays of Quakerdom," has written a beautiful and touching tribute to the memory of Parnell. It is published in the *Knickerbocker* for January. After relating the story of Parnell's life the poem concludes in these words:

"Morning came; it cometh slowly
Through the gloom of prison bars,
Where all night the captive keepeth
His lone vigil of the stars.
Morning came, and over England
Brought the vapors on the breeze,
With a lazy motion rolling
Inward from the circling seas;
Onward, upward, slowly drifting,
Folding round the castle wall;
Swathing massive tower and turret,
Dense and heavy like a pall;
Driving through the prison grating,
Inward from the cutting stall.
Where, amid the shivering dampness
Parnell lay, so weak and still;
While around the heavy vapor,
(Piercing feeble nerve and bone,)
Droop by drop, condensed and trickled
Down the cold and flinty stone.
In the stifling air the martyr
Slower drew his laboring breath;
And upon his pallid forehead
Lay the heavy dews of death.

Then to soothe his pining moments
Loving friends in stillness came,
Whom his cruel foes admitted
To his cell for very shame.
On the old familiar faces
Sweetly fell his drying smile,
And he said: "I linger with you
But a very little while;
Keep the faith, and fight the battle,
For the crown awaits you: lo!
I behold the glory breaking!
DO NOT HOLD ME—LET ME GO!"

Deride not any man's deformities, but bless God they are not yours. Men shall answer at God's bar for their vicious habits, but not for their natural imperfections.

Doing Housework.—There is probably no occupation, which is more distasteful to young men of the present day than housework. One-sixths of the young ladies make no secret of the fact that they "hate housework." One-tenths of them desire and expect to have uses and homes of their own; but most of them seem to have no definite idea of the skill of training which is necessary for the proper execution of the household.

The apostle enjoins upon the aged women "to teach the young women to be sober, to love their husbands, to love their children, to be discreet, chaste, keepers at home, good, obedient to their own husbands, that the word of God be not blasphemed." Titus ii. 4, 5. Glance the other day over the pages of the "Critical-Greek and English Concordance," (p. 275) saw that instead of the word *oikouras*, papers at home," the critical editions of Eschsch, Lachmann, and Tischendorf, with the Sinitic manuscript, give *oikouras*, that *doing housework*; so that the passage, rendered according to the best manuscripts, should read "That they may teach the young men to be discreet, chaste, doers of housework, good, obedient to their own husbands, that the name of God be not blasphemed."

Not only is this emendation sanctioned by the best critical authorities, but the sense which it yields commends itself to the understanding. There is no special reason why men should always be "keepers at home;" indeed there are many instances when their duties do not permit them to be at home, but require them to go about doing duty. But the special requirement enjoined in this expression is, not merely to remain in the house, but to *do the work pertaining to the house*, that which is required to make their homes a place of health, happiness and comfort.

And this work falls especially within the sphere of woman's effort. Not that she is to be a mere household drudge, nor that the tasks which would fit her for other service for

Master should be circumscribed within narrow limits of the kitchen; but situated as she is, it is emphatically her duty to acquaint herself with the concerns of the household; the preparation of wholesome and palatable food, the care of suitable clothing, the diligent and frugal administration of the affairs of the family, the prevention of disease, the nursing of those who may be sick, and all those countless duties upon the correct and faithful performance of which may depend not only the peace and happiness of the home, but also the preservation of the lives committed to her charge.

Mothers train up your daughters to bear the burdens of the home. Daughters, be quick to learn, and studious to acquaint yourselves with all those duties, upon the proper performance of which so much of your future usefulness and happiness may depend. And the aged women be faithful in the duties which are enjoined upon them to "teach the young women to be discreet, chaste, doers of housework, good, obedient to their own husbands, that the word of God be not blasphemed." Titus ii. 5.—Selected from *The Christian*.

Everlasting mercy and help is on the side of the humble and devoted, though they have to pass through many tribulations.—*Mary*
pp. 1.

ONE STEP MORE.

What thought it is dark before,
Too dark for me to see;
I ask but light for one step more;
'Tis quite enough for me.

Each little, humble step I take,
The gloom clears from the next;
So, though 'tis very dark beyond,
I never am perplexed.

And if sometimes the mist hangs close,
So close I fear to stray;
Patient, I wait a little while,
And soon it clears away.

I would not see my further path,
For mercy will it so;
My present steps might harder be
Did I the future know.

It may be that the path is rough,
Thorny and hard and steep;
And, knowing this my strength might fail,
Through fear or sorrow deep.

It may be that it winds along
A smooth and flowery way;
But seeing this, I might despise
The journey of to-day.

Perhaps my path is very short,
My journey nearly done;
And I might tremble at the thought
Of ending it so soon.

Or, if I saw a weary length
Of road that I must wend,
Fainting, I'd think "My feeble powers
Will fail me ere the end."

And so I do not wish to see
My journey, or its length;
Assured, that through my Father's love,
Each step will bring its strength.

Thus, step by step, I onward go,
Not looking far before;
Trusting that I shall always have
Light for just "one step more."

Christian Treasury.

An Appeal of the Executive Committee of the Indian Aid Association of Friends of Philadelphia Yearly Meeting.

It becomes necessary for "The Indian Aid Association of Friends of Philadelphia Yearly Meeting" to present its claims upon our members for support. Our present indebtedness, beyond the means at command, is near \$1000. To defray this and expenses which may be incurred during the next ten months, about \$2500 should be placed in our Treasurer's hands.

These expenses include our contribution to the funds of the Associated Executive Committee of Yearly Meetings for the current year, *i. e.* 8850: the salaries of two or more teachers, supplies of books, &c., for several schools, and the partial support of such of our members as may from religious interest in the work, accept positions under the government of the United States at salaries limited by law, and insufficient for the proper support of their families.

As the law contemplates only the engagement of persons resident near the field of labor, no provision is made for the transportation thither of such as may reside at a distance. It has therefore been judged proper to pay, from the Committee's treasury, the travelling expenses of Friends residing in this neighborhood, going forth under the appointment or sanction of the Committee.

We wish it to be clearly understood that the great expense of the Indian work is borne

Selected.

by the government. At the late session of Congress an appropriation of \$60,000 was made to be expended in a general civilizing work in the Central Superintendency beyond the requirements of treaty stipulations.

In some parts of our field the treaties provide that the government shall pay the salary of a teacher wherever thirty Indian children can be got to attend a school. It has been found that much valuable time may be saved in some cases by guaranteeing the salary of a teacher for a limited period, sending him to the field, and organizing the schools, thus making a proper foundation for his claim of salary under the treaty.

Subscriptions in full to date, \$2600 00

Expenditures.

Quotas of Philada. Indian Aid to treasury of Associated Committee, \$1190 00

Salaries and travelling expenses of Friends engaged in Indian work, 1087 50

Travelling expenses of members of the Com. 53 50

Supplies of books, &c., sent to Indian schools, 262 76

2593 76

Balance in treasury, \$6 24

We are owing, as stated above, about \$1000 for salaries, books, &c.

The Committee would refer Friends to the published Report of the Associated Committee, for more extended information with reference to the work. The Committee find that the press of varied duties upon them makes it impossible for them to call on Friends personally, and hence would request that contributions may be sent direct to the Treasurer,

I. WISTAR EVANS, 410 Race St.,

or to any of the Committee,

Thomas Wistar, Dr. Charles Evans,

Samuel Morris, Francis R. Cope,

James Whitall, John B. Garrett,

John E. Carter, James E. Rhoads,

Richard Cadbury.

Philada., 11th mo. 1st, 1870.

New Discoveries in Mammoth Cave.—Observations made during the past summer have demonstrated some very interesting facts, hitherto unknown, in relation to the course and length of the cave. It is ascertained that the course of the cave is extremely tortuous, the cavern often passing over and beneath itself, something like the fretted coils of a huge serpent. For example, "Bacon Chamber" is directly under "Reverell's Hall"; the "Dead Sea" is but a few hundred yards from the mouth; "Echo River" three and a half good miles, by the route of travel within the cave, flows deep underneath the surface, within half a mile from the entrance, while the "Maelstrom," the end of the "Long Route," nine miles from the entrance, by surface measurement in a direct line, is the matter of a couple of miles and a half. The "Grand Rotunda" is the last point at which sounds from the outward world have been heard within the cave. Here the explorer descends, and it is yet unknown to what depths he reaches in his wanderings among the domes and pits, valleys, mountains, arcades, grottoes, avenues, passages and galleries of this "grand, gloomy and peculiar" formation.—*Nashville Union.*

For "The Friend."

The New Birth and the Nature of True Faith.

These important subjects are brought into view in the following extracts from the "Life of John Griffith." He says: "I returned to Kendal, and went next day to a general meeting at Windermere. The Lord's blessed power was livingly felt at that meeting, whereby I was enabled, from the expressions of our Lord to Nicodemus, to show the necessity of regeneration or the new birth; a doctrine highly necessary to be pressingly recommended to the youth in our Society and carefully weighed by them, lest any should vainly hope for an entrance into the kingdom of God, by succeeding their ancestors in the profession and confession of the Truth. A lamentable error, which many I fear have fallen into, imagining they are God's people, without his nature being brought forth in them; or, as saith the apostle, being made partakers of the divine nature, and escaping the corruptions that are in the world through lust. Great opportunity have such by education, the writings of our predecessors, and also by the Gospel ministry with which the Lord has been pleased to bless our Society, to collect and treasure up a great deal of knowledge in the speculative understanding part, even to profess and confess the Truth in the same words or language made use of by those who are really learned in the school of Christ. This is no more than an image or picture of the thing itself, without life or savor; and where it is trusted to is an abomination to God and his people.

"I have touched the more closely on this head, being apprehensive the danger is very great to which the rising youth are exposed, by dwelling securely and at ease, as it were, in houses they have not built, and enjoying vineyards they never planted; for great are their advantages above others, if rightly improved; otherwise they must increase the weight of their condemnation. I have often looked upon the mournful condition of those who trust in the religion of their education, to be aptly set forth in the Holy Scriptures, by an hungry man dreaming that he eateth, and behold when he awaketh his soul is empty. Oh, that all may deeply and carefully ponder in their hearts, what they have known in deed and in truth, of the new birth, with the sore labor and pangs thereof. I cannot but believe, if they are serious and consider the importance of the case, that they will soon discover how it is with them in this respect, by observing which way their minds are bent and thoughts employed, whether towards earthly or heavenly things. To those who are born from above or risen with Christ, which is the same thing, it is natural to seek those things which are above; their affections being fixed thereon. So on the other hand, that which is born of the flesh, is but flesh, and can rise no higher than what appertains to this transitory world; for flesh and blood cannot inherit God's kingdom; and it is said those who are in the flesh cannot please God. The apostolic advice therefore, is to walk in the Spirit, that is, let the Spirit of Christ be your guide and director, how to order your lives and conversation, in all things; for the children of God are led by his Spirit. I have often greatly feared, lest the descendants of the Lord's worthies, who were full of faith and good works, should take their rest in the outside of things, valuing themselves on being the offspring of such: a sorrowful mistake

which the Jews fell into. May all duly consider that it is impossible to be the children of Abraham, unless they do the works of Abraham."

"The day following I had a large meeting at Colts, near Hawkshead, where I was favored with great openness upon the nature of true faith, and that it must be evidenced by good works; for faith, when only an assent or consent of the mind to principles of religion, true in themselves, being alone, is dead, as a body is, without the spirit. The power of Truth had great dominion, it being a time not easily to be forgotten. The next day I had a meeting at Swarthmore; where also I was led to speak largely of faith, of historical and implicit faith, and to set forth the nature of that faith which was once delivered to the saints, and was their victory over the world and all the corruptions thereof. It works by love to the purifying of the heart, and when the heart is made pure, we can see God. 'Blessed are the pure in heart,' said Christ, 'for they shall see God.' And his apostle said, 'By faith we come to see him that is invisible.' It is plain from the Holy Scripture, that it proceeds from the Holy Spirit in man, for it is the evidence of things not seen, and the substance of things hoped for. No man can possibly please God without it. O that mankind would carefully examine themselves, whether or no they be in this faith. If they be in it, they cannot be strangers to Christ, inwardly revealed; for he dwells in the hearts of true believers by faith; his kingdom being within, where all his laws and ordinances are discerned, clearly understood, and willingly obeyed. When this faith is received and held in a pure conscience, there is no complaint of hard things being required, or his commandments being grievous; but a soul endued with this powerful principle, can say with sincerity, the Lord's ways are ways of pleasantness, and his paths are paths of peace."

A curious anecdote is told of French deism, as some people will call their administrative system, which, with its arrangement of wheels within wheels, has approached so near to absolute perfection that the slightest grain of dust is sufficient to disarrange the whole machine. When the Ministers arrived at Tours, M. Laurier, on taking possession of his offices in the Prefecture, was greatly surprised at finding a sentinel on duty in one of the inner passages.

M. Laurier could see no reason for the man's presence there, and the other entries were not guarded, and his only duty appeared to be to keep every one who passed through in the centre of the hall. Inquiries were made of the local authorities, and although every one knew that the sentry had always been posted there, nobody could tell the reason why. Still more anxious, the Minister directed the archives of the prefecture to be searched, and, after a diligent examination, it was discovered that, three and twenty years before, the corridor had been freshly painted, and a guard had been placed there to keep the public from rubbing against the walls. No order for his removal had ever been issued since that time, and so, since March, 1847, an armed soldier had continued to pace up and down the passage, with orders to keep every one from coming into contact with the paint.—*Late Paper.*

Selected

"Search the Scriptures; for in them ye may truly have eternal life; and they are they which testify of me; and (observe it) ye will not come unto me; that ye might have life." L. is not to be found,—no, not in the scripture (which may comprehend all other duties that kind,) though ever so diligently made use of; *Christ himself* must be come to, that which no where else is to be found. — is well for those that are thus set to seek, — are kept seeking, until they know where to find Him,—even in *their heart and mouth*, (Rom. x. 8.); and thus get grace to give up themselves closely to wait upon and follow his love.—*A. Jaffray.*

The Ventilation of Schools.—Parents will generally take the greatest care in any selection they may have to make of a school for their children—especially their daughters. Their inquiries as to the moral and social tone that prevails, and the means that exist for their girls' instruction, will be minute enough. They generally have the good sense to satisfy themselves on these points; but they rarely possess the knowledge, if even they take the trouble to ascertain whether the internal hygienic arrangements of the school be satisfactory or not. The number of pupils ordinarily occupying the school-room is perhaps too large, and fluctuations in the number of pupils take place without any corresponding alterations in the arrangement of the house. The consequence is that overcrowding ensues; the ventilation is bad, the air becomes stuff in the extreme, and the children lose their appetites and complexions, become pasty, delicate, and liable to contract "colds." The usual run to the seaside has to be anticipated in order to recruit their health. This is not to be considered in any degree as an imaginary picture. It has occurred over and over again in the experience of most physicians that, children suffer from headaches and loss of appetite when attending school. A shrewd and observant man will generally find the symptoms erroneously attributed to overwork are, in reality, due to want of air. The truth is that a majority of houses of ordinary construction are quite unfitted for school purposes; the rooms were never intended for school-rooms. We have ourselves known a number of young ladies to be shut up in rooms in which they were far worse off, as regards air and ventilation, than soldiers in barracks. Let parents make a point of always inspecting the rooms used as school-rooms, and of ascertaining their size and the average number of occupants, and they can easily discover whether the air space is utterly insufficient, as it very often is. Next let them look to the number and position of the windows, doors, and fireplaces, and they will get some idea whether these are so placed as to facilitate the movement and supply of an adequate amount of fresh air. If, however, any doubt exists whether a room be adapted for occupation by a number of growing girls for several hours together, they have only to pay a visit to a school-room after it has been occupied for a couple of hours, and note the difference existing between the external and internal air to convince themselves, by a rough test, of its purity or otherwise.—*Lancet.*

The worst people are most injured by slanders; as we usually find that to be the best fruit which the birds have been pecking at

The Ox Knoweth his Owner.—A traveller in Asia says that at the close of the day the ards are filled with wandering herds and flocks, and droves of donkeys, with one attendant herdsman, all returning home for the night after pasture on the neighboring hills. As soon as they get to the outskirts of the village each separates from the other, and attended, pursues its way to its master's door. "The ox knoweth its owner, and the ass his master's crib."

THE FRIEND.

ELEVENTH MONTH 12, 1870.

There is something animating and encouraging in the belief of the progressiveness of mankind, and if we have a right understanding of that in which progress is made, it will strain rather than foster presumption. Progress in arts and sciences depends not only on the new application of known principles, but on the discovery of new ones; progress in social and religious life, upon the more extended, or the more exact application of principles and truths revealed in and by the gospel. But such are the multitudinous improvements introduced by the discovery and application of the laws of nature; such the extraordinary advances made in knowledge of the material world, and in tracing varied and apparently incongruous effects to a few general causes, that a disposition is more and more early shown, to claim for the human mind powers adequate to the solution, not only of every material phenomenon, but of every intellectual operation, and to analyze and determine the value of the truths of religion; not ceasing "The mystery which—the Apostle hid—had been hid from ages and generations," but was then made known to the ints, by revelation from the Almighty.

The direct denial by many men of science of the claims of the Scriptures to be the product of divine inspiration, and the reluctance shown by others to acknowledge the superhuman origin of christianity, or the need of any other power than that which man possesses in his own, to apply its truths to his condition; coinciding with the notion of the all sufficient capacity of reason, and the natural out of men of the world, have awakened a corresponding tone of doubt and disbelief in the popular mind; producing wide-spread unquietude and uneasiness respecting religious belief, and aiming to modify the theology and character of the professing christian church. One of acute perceptions, of strong and cultivated intellect, but without the light and knowledge derived, by obedience, from Divine Grace, dissatisfied with the accepted truths and recorded experience of former generations, are demanding that, what they cease to treat, as the crust of old opinions, shall be broken up, and the thought and sentiment of the day; be cast in new moulds, and congenial with the "high capacities powers" and independence of man. Something like a feverish spasm is running through the different denominations in the professing church, exciting many of their members to break loose from restrictions and forms, which they think they have outgrown, and by which they suppose their energies have been paralyzed or cramped. From different quarters

there come protestations, in varied language, but to the same effect, against "fixed creeds" and "traditional dogmas," alleged to be taught in incomprehensible terms; and demands for a religion more in accordance with the increased knowledge attained; with the intuitions of right and wrong natural to the human heart, and with the spirit of the age.

With this disposition to abandon, or doubt the correctness of the path, in which christians of all ages, have been obliged to walk by faith, and not by sight, the question is raised whether faith is as real and certain a basis of conviction, as knowledge; and of course the answer to it affects the structure of religious belief. Knowledge, in the ordinary acceptation of the term, is the acceptance of a truth after, through the operation of reason, it has been proven, so as to produce conviction; though we may readily forget the different stages, after the end is reached. There are two kinds of faith: the one a faith that is exercised upon the reception of a truth demonstrated, or believed to have been demonstrated by the correct reasoning of another; the other is a faith exercised in relation to spiritual and divine things; which, though in accordance with right reason, are beyond the sphere of the elements which the powers of reason are able to investigate, and, of course, above the reach of logical deduction; it must rest therefore on the accepted infallibility of the source producing it.

In relation to outward and material things and the laws that govern them, we may feel more certain of what we know from our own research and demonstration, than of what we believe as true, from the testimony of others. But it is evident, that as the discovery of the principles or the supposed facts on which any truth is said to rest, and the deduction by which conviction of its being a truth is arrived at, depend upon the perceptive and reasoning powers of the mind, which are finite and fallible, there is a possibility of our accepting things as true, and according to reason, which subsequent discovery, or experience may show to be altogether false, or only partially correct. Thus the history of natural science abounds with discarded errors, once supposed to be clearly ascertained facts, and exploded systems, based on what was once boasted of as irrefutable reasoning. We must then believe in the intrinsic, unerring power and integrity of the human faculties, before we can be sure of every postulate demonstrated as true by them.

If then a man's religious belief, or his acceptance of spiritual things, is drawn from the deductions of his reason, inasmuch as his natural senses and his intellectual powers often lead him astray in his investigations of material subjects, the elements and laws of which lie open to his discovery and observation, it is evident he must be much more liable to mistakes and erroneous conclusions, respecting things beyond the range of sense or reason; concerning his relations to Him whom no man hath seen or can see; and the saving application to his soul, of the truths made known only through the revelations of Him, who, dwelling in the bosom of the Father, is the mediator between Him and man.

Christianity rests upon a supernatural basis. The high and holy truths contained in it, as well as the mysteries incomprehensible by finite man divulged by it, must have been disclosed by the Father of spirits; and unless

those sacred truths are brought home and applied to the soul by the spirit of their divine Author, belief in them must be merely historical, resting upon nothing better than the evidence furnished and estimated by an intellectual process of our own, or on faith in the same kind of reasoning by some other man. And if the belief springs from no higher source, the saving application of those truths and mysteries is impossible. Hence the indispensable necessity of a faith distinct from belief acquired from any natural source, but which, as the Apostle declares, is "of the operation of God." In those things that belong to the immortality and final destiny of the soul; its relations to the almighty Creator; its knowledge of and conformity to his will, and the means provided for its salvation, though reason unaided must stumble in defining or elucidating their reality, and their bearing, faith, if rightly grounded and exercised, is as certain and satisfying, as knowledge of any material thing can be.

Of the source and nature of this christian faith we know no better description than that of Barclay's, where he says, "We shall not dive into the curious and various notions of the school-men, but stay in the plain and positive words of the Apostle Paul, who, Heb. xi. describes it two ways. 'Faith (saith he) is the substance of things hoped for, and the evidence of things not seen.' which, as the Apostle illustrateth it in the same chapter by many examples, is no other but a firm and certain belief of the mind, whereby it resteth, and in a sense possesseth the substance of some things hoped for, through its confidence in the promise of God; and thus the soul hath a most firm evidence, by its faith, of things not yet seen nor come to pass. The object of this faith is the promise, word, or testimony of God, speaking in the mind. Hence it hath been generally affirmed, that the object of faith is Deus loquens, &c. that is, God speaking, &c. which is also manifest from all those examples deduced by the apostle throughout that whole chapter, whose faith was founded neither upon any outward testimony, nor upon the voice or writing of man, but upon the revelation of God's will, manifest unto them, and in them."

That this faith was the same in the ancients and in us, Barclay shows as follows:

"That the faith is one, is the express words of the Apostle, Eph. iv. 5, who placeth the one faith with the one God; importing no less, than that to affirm two faiths is as absurd as to affirm two Gods.

"Moreover, if the faith of the ancients were not one and the same with ours, *i. e.* agreeing in substance therewith, and receiving the same definition, it had been impertinent for the apostle, Heb. xi. to have illustrated the definition of our faith by the examples of that of the ancients, or to go about to move us by the example of Abraham, if Abraham's faith were different in nature from ours. Nor doth any difference arise hence, because they believed in Christ with respect to his appearance outwardly as future, and we, as already appeared; for neither did they then so believe in him to come, as not to feel him present with them, and witness him near; seeing the apostle saith, 'They all drank of that spiritual rock which followed them, and that rock was Christ'; nor do we so believe concerning his appearance past, as not also to feel and know him present with us, and to

feed upon him; except Christ (saith the apostle) *be in you, ye are reprobrates*; so that both our faith is one, terminating in one and the same thing. And as to the other part of consequence of the antecedent, to wit; That the object is one where the faith is one, the apostle also proveth it in the fore-cited chapter, where he makes all the worthies, of old examples to us. Now wherein are they imitable, but because they believed in God? And what was the object of their faith, but inward and immediate revelation, as we have before proved? Their example can be no ways applicable to us, except we believe in God, as they did; that is by the same object."

This is the faith that in all ages has been the saint's victory, and without it the soul is cut off from any well grounded hope of salvation. It is distinct from belief begotten by mental process, and incompatible with religion of whatever form, that makes virtue dependent upon outward knowledge, and ignorance equivalent to vice; that discards repentance as self-reliant and useless, and satisfies its disciples with resting their hopes of eternal happiness on assent to the truths and promises recorded in the "glad tidings" revealed to holy men eighteen hundred years ago.

"Journal of the Life and Religious Services of WILLIAM EVANS, a Minister of the Gospel in the Society of Friends. Philadelphia, 1870."

A work with the above title has just been issued from the press. The Friend whose life and religious labors are narrated therein, was so generally known throughout the Society of Friends in this country, and the time in which he was actively engaged in the affairs of the church, was so eventful, that his diary was well calculated to interest the members, to whatever meeting they may belong.

The book is a large octavo of 709 pages, well printed and neatly bound. It is for sale at Friends' Book Store, No. 304 Arch Street, Philadelphia.

SUMMARY OF EVENTS.

FOREIGN.—On the 1st inst. Thiers was admitted to an audience with the King of Prussia, and his conference which lasted three hours. On that and several following days he was engaged with Count Bismarck in arranging the terms of an armistice, and it was announced that one had been decided upon to last for twenty-five days, during which elections might be held in the Congress, and afterwards to ratify a treaty of peace. The provisional government at Paris at first accepted the terms of the armistice, but afterwards, yielding to the popular clamor, decided to reject it and break off the negotiations. The French still seem confident of their ability to hold Paris, and it is stated that even the threat of bombardment could not induce the Parisians to consent to a cession of territory. The *London Times* says, the armistice turned on the question of free ingress and egress at Paris during twenty-five days, Thiers insisting and Bismarck refusing. It is said there are now twenty-two hundred guns in position on the various fortifications of Paris, and that the range of the French artillery is such that it will be impossible for the Prussians to establish any effective bombardment of the city. The approaching winter is also expected to embarrass and weaken the besiegers.

Large quantities of provisions are being sent from London for various parts of France. The French loan is in good credit at the London stock board, and commands a premium of two per cent. The French government has ordered the arrest of Marshal Bazaine and the officers of his staff, wherever found.

Up to the 24th inst. the expected Prussian reinforcements from Metz, were not expected to arrive, the weather was stormy. A Tours dispatch says: "It now seems to be the general impression that Prussia

has only sought to gain time by seeming to admit the possibility of an armistice, in order that the troops lately investing Metz could come forward to Paris without danger." An election was recently held in Paris, on the question of sustaining the present government, with the following result: yeas, 557,996; nays, 62,638. Livings from various parts of France announce that the entire population is rising to expel the invaders. The *Paris Monitor* says: "Prussia, as she would neither consent to the revivalling of Paris, nor allow Alsace and Lorraine to vote in the election for delegates to the National Assembly, assumes all the responsibility for the continuance of the war. The Postal Department is organizing a regular service by carrier pigeons between Tours and Paris."

A Madrid dispatch of the 7th states, that five thousand more troops are preparing to leave for Cuba. On the 12th inst. eighty, out of three hundred and forty deputies in the Cortes, voted to favor the duke of Aosta's election to the Spanish throne.

The French have only 2,100 German prisoners in their hands, while the latter hold several hundred thousand French soldiers as prisoners of war. Marshal Canrobert has received a letter in which he indignantly rebukes an English press article on the subject of Bonapartists. He reviews the causes and facts which made the surrender of Metz inevitable, after an unparalleled siege and unlimited suffering.

The Empress Eugenie has made a visit to the ex-empower, at Melchionville. She travelled incognito, and returned there only one day, after which she returned to England.

The German authorities have given orders that the soldiers from Alsace and Lorraine, who were captured at Metz, as well as those who may hereafter be taken, will be separated from other prisoners, as well as be regarded as German, and not French.

General La Marmorata continues the Pope's interdict against a place of Protestant worship in Rome, and the Protestant chapel will remain outside the walls.

London, 11th mo. 7th. Consols, 93½. U. S. 5-20's of 1862, 89½; of 1867, 90½; ten for forty, 87½.

Liverpool, 11th mo. 9th. 91½. Orleans, 91. U. S. 9½. New Milwaukee wheat, 86. 6d. 9d. 9d.; red winter, 10s. 11d. per 100 lbs.

UNITED STATES.—*The Public Debt.*—On the first inst. the debt of the United States, less amount in the Treasury, was \$2,541,574,355, having been reduced \$129,000,000 since the last meeting of the Board. The coin balance in the Treasury was \$108,131,073, and the currency \$26,815,384.

Census Items.—The following are the reported populations of the States named. Alabama, 1,002,000. Arkansas, 486,106. California, 556,208. Florida, 189,095. Georgia, 1,183,000. Illinois, 1,700,000. Indiana, 1,177,515. Kansas, 553,182. Kentucky, 1,232,290. Louisiana, 400,037. Mississippi, 834,190. Ohio, 2,675,488. Tennessee, 1,288,326. Virginia, 1,209,607. West Virginia, 447,943. Wisconsin, 1,052,261.

Philadelphia.—Mortality last week 230. The mean temperature of the 10th mo. according to the record kept at the Pennsylvania Hospital, was 60.12 deg. at the highest during the month being 80°, and the lowest 39.0°. The amount of rain 3.89 inches. The average of the mean temperature of the Tenth month for the past eighty-one years, is stated to have been 54.67 deg., the highest during that entire period occurred in 1745, 62° and the lowest mean temperature was 46.12 deg. of rain in the first ten months of this year, has been 44.69 inches, which is 1.69 inches more than in the corresponding part of 1869. The public buildings commission have decided to locate the new buildings at the intersection of Broad and Market streets, and that they shall be bounded by a street not less than 135 feet wide. The President of the United States has directed that a new census of Philadelphia shall be taken, in consequence of the alleged incompleteness of the one just made public.

Immigration.—From official returns made to the Bureau of Statistics, it appears that the total number of immigrants arriving at the port of New York during the quarter ending Tenth mo. 30, 1870, was 51,197, of whom 29,175 were males, and 22,022 females.

Internal Revenue.—The following is an abstract of the collections on account of the internal revenue in the United States for the first quarter of 1871. The collections given in each case: On spirits, 2,553,441.81; tobacco, 2,313,957.71; fermented liquors, 62,318,326.90; banks and bankers, 24,416,551.47; gross receipts, 2,686,942.05; gross receipts, 21,859,990.61; special taxes not elsewhere enumerated, 59,597,760.81; income tax, 1,145,998.88; articles in schedule A, \$50 on carriage watches, &c., 2905,391.09; passports, 32,275,600; gas,

22,913,250.52; not otherwise herein provided for, \$7,305.43; total penalties collected, \$237,936.65; and \$16,544,046.96; grand total, \$185,058,160.

The Markets, &c.—The following were the quotations on the 7th inst. *New York.*—American gold, 11 U. S. sixes, 1881, 113½; ditto, 5-20's 1867, 109½. Sup. fine flour, \$5 a cask; extra State, \$5.50 a cask; 75 lbs. brands, \$6 a cask; No. 1 Chicago spring wheat, \$1. No. 2, do, and No. 3, red western, \$1.30; same, \$1.3. \$1.40; white Genesee, \$1.60 a cask. West. Can. barley, \$1.03 a cask. 1.13. Oats, 55 a 57 cts. Jersey yell corn, \$4 a 85 cts.; old western, \$7 a 90 cts. Philadelphia Cotton, 17 a 17½ cts. for uplands and New Orleans. Flour, \$4.25 a 85 cts. Red wheat, \$1.67 a \$1.40; old \$1.40 a \$1.45. Rye, 95 cts. Old yellow corn, 82½ cts.; new, 73 a 77 cts. Oats, 53 a 55 cts. Clover-seed \$6.50. Timothy, \$4.75 a \$5.25. The beef cattle market was dull this week, and prices lower. About 3660½ at the Avenue Drove-yard at 8½ a 9½ cts. for extra; at 7½ cts. for fair, and about 81 a 63 cts. per lb. for common. About 12,000 sheep were sold at 50 cts. per lb. gross, and 5000 hogs at \$9 a 10 per 100 net, the latter for corn feed. *Baltimore.*—Maryland amber wheat, \$1.65 a \$1.70; good to prime, \$1.20 \$1.60; Indiana and Ohio, \$1.28 a \$1.30. Old yell corn, 80 a 85 cts.; new, 80 a 82 cts. Oats, 46 a 48 c. *Cincinnati.*—No. 1 red wheat, \$1.13; No. 2, \$1.10. Co. 50 a 60 cts. for old and new. *Chicago.*—No. 2 spring wheat, 95 cts. No. 2 corn, 57 cts. No. 2 oats, 37½ cts. No. 2 rye, 67 cts. No. 2 barley, 80 cts. *Lard,* 13½ cts.

RECEIPTS.

Received from Edw'd Stratton, Agent, for Sarah Binns, Mich., \$2, to No. 11, vol. 45; from Rich'd H. Agent, England, 10 shillings, vol. 44, and for Jose Hall, Martin Lelletter, Josiah Hall, Thomas Willson, Robert Bigland, Sarah Dirkin, John Little, W. Walker, Jane Priestman, William Adair, George Goudry, Robert Jackson, William Wigham, a Richard B. Brockbank, 10 shillings each, vol. 4 through Hannah Evans, Philada., for Reuben Butt, 10 shillings, vol. 44; from Elizabeth Minard, \$2, to No. 11, 45; Geo. Schill and Henry Brockman, \$2 each, vol. 45; McCarty, \$2, to No. 12, vol. 45, Aaron McCarty, 2, to No. 43, vol. 44, and Joseph McCarty, \$2, to 44, vol. 44.

TEACHER WANTED.

A competent Teacher (male or female) is wanted to take charge of Friends' School at Medford. Application may be made to EDWARD REVES CLAYTON HAISES, Medford, N. J.

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch Street Philadelphia, "Journal of the Life and Religious Services of WILLIAM EVANS; a Minister of the Gospel of the Society of Friends." A large octavo of 709 pages. Bound in cloth, \$2.50
do sheep, " 2.75
Half bound in Turkish morocco, " 3.00

FRIENDS' BOARDING SCHOOL FOR INDIAN CHILDREN, TUNNASSA, NEW YORK.

A suitable Friend and his wife are wanted to take charge of this Institution, which manages a Farm connected with it. Application may be made to

Eleazer Worth, Marshalton, Chester Co., P. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morley, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward), Philadelphia Physician and Superintendent—JOSHUA H. WORMEY, M. D.

Application for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the 10th of Ninth month, 1870, ELIZABE S., wife of Thomas Yarnall, in the 50th year of her age, a member of Middleton Particular and Chesnut Street Meetings. Her death was attended by a painful and lingering illness, with patient a resignation to the Divine will; and her friends in the consolation of believing that her end was peace.

The Police of London.

"The police have also of late years been charged with carrying out the Act for abating the smoke nuisance, in which their labors have been attended with marked success. Since the passing of the Act in 1853, 15,335 cases of nuisance have been reported by the police, in 11,405 of which the nuisance was abated when the proprietor was cautioned by order of the Commissioner, or when alterations had been made in the furnaces after examination by the inspecting engineer. It was found necessary to prosecute in 1827 cases, in 25 of which convictions were obtained, and fines levied varying from 1s. and costs to 40l. At that time there were 505 cases still pending at the end of 1869. The nuisance of smoke has thus been very greatly abated not only on the land, but on the river.

"Another howling nuisance as well as a great cause of waste amongst the poorer classes, which the police have of late years been called upon to abate, has been the nuisance of dogs—fighting-dogs, rat-dogs, curs, mongrels. In the course of fifteen months, ending the 28th of February last, they succeeded in seizing no fewer than 20,871 of these animals, 12,257 of which were destroyed, the remainder, 4644 were restored to their owners; 3649 were sold to the Dogs' Home, Holloway, at two pence per head; 270 were sold by auction; and 51 escaped.

"Another duty of the police is to take up lost and missing persons, and restore them to their friends. Of 5195 persons reported as lost or missing in the metropolitan district in 1868, 2805 were so restored. They were also instrumental in the course of last year in regaining lost property to the owners, of the value of 21,924l., independent of stolen property, or property left in stage and hackney-riages, the amount of which was considerably greater. Last year also, the police carried to the hospitals 1347 cases of street and road accidents, besides 732 persons suffering from other causes. And in 1868 they were instrumental in preventing not fewer than 50 suicides.

Next to the thieves, the drunkards occasion the greatest trouble to the police. There

are the helplessly drunk, who are carried to the police station and kept there until sober; and there are the riotously drunk, who are for the time mad, dangerous, and often uncontrollable. These also have to be taken into custody until their delirium has abated. In 1868, there were taken up by the metropolitan police 2430 disorderly characters (more or less under the influence of drink); 1665 disorderly prostitutes (the same); 10,463 drunk and disorderly persons, of whom 5079 were women; and 9169 helplessly drunk, of whom 4336 were women. Of those taken up for drunkenness, whose occupations were known, the most numerous class were laborers, next female servants, then clerks, then sailors; but of the greater number the occupations are not specified. Minute directions are given in the police-book of orders and regulations, and printed instructions are posted in the passages leading to the cells, as to how helplessly drunk persons are to be treated. When carried to the station, 'the handkerchief or stock about their neck is to be undone, and when put into the cell a pillow is to be placed under their head to raise it.' But as mistakes have happened in certain cases of the sort, it is ordered that whenever the person brought in is insensible, whether from drunkenness or not, medical aid is to be immediately called in. Prisoners insensible from illness, drunkenness, or any other cause, are searched in order to take charge of their property and return it to them when recovered from their insensibility; whilst riotously drunk and dangerous persons are searched for arms or weapons by which they might inflict injury on themselves or others.

"The careful supervision of the places where men and women drink and get drunk, is also one of the most difficult and delicate duties of the police. There is the greater reason for this supervision, as the lowest of those houses are the resort of prostitutes and other bad characters, and the harbors and schools of the criminal classes, there being not fewer than 360 in the metropolis (including the city) in 1868, which were the known haunts of thieves and prostitutes. In the same year, informations were laid against 1322 public-houses, beer-shops, and refreshment-shops, for various infringements of the law; and in 1034 of the cases convictions were obtained.

"Next there are the multitudinous idle and lazy persons, whom it is the constant business of the police to watch and keep in check. 'From the moment,' says Frégier, in his work on the Dangerous Classes, 'that the poor man, given over to his bad passions, ceases to work, he puts himself in the position of an enemy to society, because he disregards the supreme law, which is labor.' These dangerous classes include a great variety of idlers, rogues, and reprobates. There are the tramps and beggars, —the match-sellers, rag and bottle-buyers, ballad-singers, fortune-tellers, dog-fanciers,

umbrella-menders, ring-droppers, prigs, arse-sneaks, smashers, card-sharps, clothes-beggars who go about half-naked leaving their ordinary clothes in the lodging-houses, women in white aprons with a crying baby in each arm, burnt-out shopkeepers or farmers carrying about and exhibiting forged begging letters, sham old soldiers 'wounded in the Crimea,' sham shipwrecked sailors who abound after a storm, sham epileptics who live in comfort upon convulsive fits with the aid of a little soap, and a host of idlers, vagabonds, and dissolute persons, from whom the regular thieves and criminals are from time to time recruited.

"The foundation of all these is the common beggar. The beggar is an idler, ready as the opportunity offers to become a thief; and he is often a beggar because he is a thief. The beggar is the enemy of society, and especially of the deserving poor. The French have a true proverb: 'Les mendians volent les pauvres'; for beggars divert the stream of charity from the deserving to the improbate. There are many charitable persons who satisfy their consciences by giving to an importunate beggar, when, if the truth were known, they were only contributing to maintain in comfort an incorrigible thief. Hence, there was good reason in the old law which punished the indiscriminate alms-giver as being not only the patron of idleness but of crime.

"Then there are the ill-disciplined, the idle, the vicious, who hate labor, but love pleasure by whatever means obtained. Labor is toilsome, and its gains are slow. There is another and a shorter road to pleasure—the Devil's. These people determine to live by the labor of others; and from the moment they arrive at that decision they become the enemies of society. It is not often that distress drives men to crime; nor are the poor necessarily the vicious. 'In nine cases out of ten,' says the Ordinary of Newgate, 'it is choice, and not necessity, that leads men to crime.' The main incentive to it is love of sensual gratification, which in the ill-regulated, untrained animal, overpowers all other considerations; and, once entered on this career, the criminal pursues the dismal round of vice, falling from one stage to another, until at last the wretched end is reached.

"The classes who live by plunder are of many kinds. There are prigs or petty thieves, prowlers about areas or back doors, pick-pockets, stealers of goods from counters, robbers of dwelling-houses, and skilled cracksmen, or burglars. These several classes pursue their special branches of thieving as tradesmen do their respective callings. Thus, in the single branch of crime connected with the issue of false money, there are four distinct classes of persons concerned: 1st, the makers of the bad coin; 2nd, the dealers; 3rd, the carriers of the money to those who buy it; 4th, the utters or 'sneyders'; to which even a fifth might be added, the stealers of pewter

pots to be converted into bad half-crowns and shillings.

"The old and experienced thieves are the trainers and teachers of the young ones, whose help they need in carrying on their operations, and whose education they undertake. These old thieves have graduated in many gaols and penitentiaries, and as much time has been devoted to their training as is required to master any of the learned professions. Possessing a treasury of criminal knowledge, they even take a pride in imparting it to the rising generation of thieves. No 'conscience clause' stands in their way. They know nothing of a 'religious difficulty.' In this country the school of criminal knowledge is perfectly free. While good men are higgling about the manner in which destitute children should be taught, the missionaries of crime are busily at work, actively educating the rising generation of thieves. Hundreds of them are turned out of gaol yearly with their tickets of leave, to pursue their respective callings and to serve as so many centres of criminal training and example. The juvenile thieves have even a literature of their own, which flourishes extensively under our famous liberty of the press, emulating in the wideness of its circulation the excellent publications of the Society for the Diffusion of Christian Knowledge.

"London, however, is by no means the exclusive training ground of the criminals that frequent it. As enterprising men come up to London from the country to push their fortunes, so do enterprising thieves. Lancashire business men are distinguished for their energy, and so are Lancashire criminals. Indeed Lancashire is, even more than London, the great nursery of crime. More than half the convicted criminals of England and Wales in 1868 belonged to three counties; Lancashire supplying 23.6 per cent., Middlesex 20.5 per cent., and Yorkshire 10.8 per cent. of the whole number.

(To be continued.)

Edward Chester.

The narrative of the life of this good man, written by his wife, and republished in "Friends' Library," is accompanied by the following observations of the Editors:

"This narrative presents a view of the simplicity and devotedness of the Friends of that day, and the spiritual enjoyment with which they were rewarded. It holds forth an incitement to the few, who now assemble in many places for the same object (divine worship) to double their diligence and their fervor under the conviction that the same happy results would be attained. Do we not believe, that He with whom there is no variableness neither shadow of turning, and from whom every good and perfect gift is derived, continues to grant the aid of his Holy Spirit to the humble, dedicated soul, in his sincere efforts to wait for and draw near to Him? Were this the pre-eminent object of its desire and pursuit, the things of this world would be held in their proper place—the heart would daily expand with living aspirations after God, and that purity which he requires, and when conformed to offer public worship to him, to whom we owe all we have and all we are, he would graciously draw near to us, tender our souls with his Divine presence, and give songs of praise and thanksgiving for the multitude of his mercies and loving-kindnesses which he

bestows upon his unworthy creatures. And we have substantial ground to believe, that enlargement of the number which is now much reduced in some places, would be one of the consequences of a lively daily devotion, as it was in the rise of the Society. It is the spirit of the world, in some or other of its fascinating forms, that is robbing us of these riches, which the key of David only can give access to, the gold tried in the fire, which makes truly rich; the white raiment which can only clothe our nakedness; and the eyesalve that gives clear perception, both of our own states and of the things which pertain to salvation, without which all our possessions and attainments will be lighter than vanity, and avail as nothing."

Narrative.—He was religiously inclined from his youth, having his conversation then mostly among the Baptists. About the seventeenth year of his age, his father died intestate; and his mother, who was a religious woman, committed the care and management of her business to him, which he readily undertook for her, and for twelve years conducted it with so much diligence and faithfulness, that he improved the estate and left her more for her other five children, all younger than himself, than their father could have given them, if he had made a will—a good example to young men thus circumstanced.

When he was about eighteen years of age he joined in communion with the Baptists, and was held in such esteem by the chief of them, that I, who then frequented their meetings, have heard them say, he was likely to be a teacher among them; and they would often be putting him forward to exercise his gift, as their manner of speaking was; but I have heard him say, he waited for a stronger and more powerful impulse on his spirit. Sometimes through their impertunity, he undertook it in their private meetings; but it brought trouble upon him and an exercise of mind, for he was not satisfied with the outside of religion. His spirit travailed after the enjoyment of the substance; an hunger being begotten in him after that bread which comes down from heaven, and a thirsting after that water which springs up to eternal life, and was to be set open as a fountain to wash in, from sin and from uncleanness.

Whilst his mind was thus exercised, with desires after the Lord, he was graciously pleased to manifest himself to him in love and with power, so that I have often heard him say, he was convinced of the blessed Truth by his own freeds, as he sat alone bemoaning his condition, and crying to the Lord for power to overcome those sins which secretly and so easily beset him. Under this exercise, the doctrine of the cross of Christ was opened to him, by the illuminating Spirit of God, by which he clearly saw, and was fully satisfied, that the way to know and witness redemption and salvation from sin, was to take up the daily cross; that which crucifies to the world, and the world to us, and which crucifies the flesh with the affections and lusts; and thus to follow the Lord Jesus Christ.

When the sense of this was imprinted on his mind, he cried within himself, "alas! have I been a professor of religion so long, and have not yet known the power of the cross of Christ? Have I read the Scriptures so often, and have they been to me all this time but

as a sealed book?"

people in the North of England, who profess the light and inward manifestations of the Spirit of Truth, to be their guide and teacher; and he felt a strong desire to know then Providence so ordered it, that John Askew, Friend, of London, brought a young man to his house, whom he has since thought was Richard Farnsworth, with whom he had conference, to his great satisfaction; and expressing a wish to have more acquaintance with this people, then in scorn called Quakers many of them afterwards called upon him. His heart being opened by the Lord, his hope was opened also to receive and entertain servants of the Lord, at a period when he could hardly get entertainment in some place for their money.

Now that he gave up to follow the Lord, pleased the Lord to bless him inwardly and outwardly; he was increased in the things of this world, and grew in knowledge and obedience of the Truth, and was enabled to suffer it, both in the spoiling of his goods at the imprisonment of his body. For he brought before the justices in Oliver Cromwell's time, for bearing his testimony against the oppressive burden of tithes, and not having freedom to put off his hat to them, he was committed to prison for it, and was the first Friend that was sent to Bedford jail on that account.

He has often since been a prisoner, but not long at a time, for being beloved by most who knew him, both justices and others, because of his innocent life and peaceable and loving behaviour, his neighbors were always uneasy when he suffered. One of his persecutors became so much so, that he went from justice to justice to get him discharged, and would not come home without him, so mightily did the Lord work for his deliverance. But I always came forth clear in bearing his testimony, through the Lord's assistance, to who he be the glory.

About a year after his conviction, which was in or near 1654, it pleased the Lord his tender love and great compassion to a poor soul, to beget in me also a sense of a want of the right knowledge of a Saviour save and preserve me from my sins. Through the Lord's mercy to me, I could read the Holy Scriptures, and was a pretty well acquainted with the literal sense; yet I found I wanted the knowledge of that which could give me power and strength to fulfil them, which saw to be my duty, and that without it I did not fit for the kingdom of heaven. This brought a great exercise upon my mind, as I may truly say by night on my bed, I sought Him whom my soul longed after, but I knew not where to find Him. I passed nights sorrow for my mis-spent time, though I had never been addicted to gross evils, having by my education amongst a sober people.

In this state the Lord was gracious pleased to hear the cry and regard the pining of my poor soul, which had breathed after him, even in my tender years. Blessed be his great name, he appeared in the needful time and turned my mind inward to his Holy Spirit, through the powerful and effectual preaching of the then contemptible people called Quakers.

By this time meetings were settled, Market Street, at Sewell, and at Dunstab where my dear husband and I were two about twelve, who for some time met together till the Lord increased our number. But no

ne of those twelve, who first sat down there
wait upon the Lord, now remains but myself
only left, the rest having laid down their
heads, I hope, in peace with the Lord.

After our little company was somewhat in-
creased, we still sat together for the most part
in silence, not having a word spoken amongst
for several months. Sometimes a minis-
tering Friend was sent by the Lord to visit
with a living testimony, whereby we were
encouraged to wait upon the Lord, and di-
cted where and how to wait, so as to find
m and be accepted of him. And the Lord's
essence and power being what we waited
for, blessed be his name, he never sent us al-
gether empty away; though sometimes we
waited long, before he brake forth in his ten-
der power and consoling love; which
then it did break forth, brought into true
unity and tenderness, and begat in us a
strong desire and cry after more of the same.
And I can truly say it was a great day, for
the blessed Truth prevailed and prospered.

After we had thus walked together for
several years in the profession of the blessed
Truth, my dear husband and I took each
in marriage, on the 19th of the Fifth
month, 1663. Being the first who were mar-
ried amongst Friends in our meeting, or in
his county of Bedford, that we had heard of,
I had no track to follow, and that good-
ness which is now established among Friends
is then wanting. Wherefore we took each
in a public meeting, and had a certifi-
cate signed by about seven Friends of that
meeting; and we joined in that which through
the Lord's assistance, caused us to love and
be faithful to each other, until death.

In the year 1665, it pleased the Lord to
send my husband forth in the ministry, de-
siring what he had done for his soul, setting
in the great love of God to man, and ex-
tending all to come unto and persevere in the
blessed way of Truth, that they might inherit
lasting life. And truly his honest, plain
testimony made such impression on the peo-
ple, and produced such tenderness in them,
that the remembrance of it rests upon me
with great satisfaction. From that time for-
ward, as the Lord by his constraining love
wrought in him and gave him utterance, he
labored in the service of Truth, and had great
avail of spirit, more especially for the meet-
ings to which he belonged, Market Street and
well, where his service mostly lay. Some-
times he had drawings to visit Friends in other
places, but always felt a care, that he might
make that little dispensation of the Gos-
pel as he used modestly to call it, which was
mitted to him, chargeable to any. He was
also much concerned for the recovery of
those who professed the holy Truth and yet
lived disorderly, or not according to it.

His tenderness and love to me I want words
to express; but this I can with good assur-
ance say, we were true help meets to one an-
other, and our love increased to the last; for
good not in the natural affections only, but
was grounded in that which endures for-
ever. When the period of our separation drew
near, this made me desire to be thoroughly
loved and kept subject to the Lord's
sovereign will, for therein only could I be
comforted on parting with my dear husband,
considering that my loss, was his greatly de-
sired gain; even that he might be in the full
of Divine love in the heavenly mans-
ions, "where the wicked cease to trouble and

the weary are at rest." Blessed be the name of
the Lord, who now as well as formerly, hath
made in measure, hard things easy, and bitter
things sweet.

In his last sickness he uttered many com-
fortable expressions, though it was often diffi-
cult for him to speak. He would often say,
he felt more of the love of God than he could
express, and he much desired stillness and
retirement, saying, he knew the worth of a
quiet habitation. I felt him in that love of
God, which surpasses the love of all things
here below, in which we were joined together
by the Lord, and in the same love the Lord
was pleased to separate us, by taking him to
himself, on the 23d of the Twelfth month,
1707, in the seventy-fourth year of his age.
And now my desire is, that I and the children
he hath left behind him, may follow him in
that straight and unsway way, which he took
delight to walk in, until we arrive at our jour-
ney's end in true peace with the Lord.

This was upon my mind to write in com-
memoration of the Lord's gracious dealings,
in the remembrance of his goodness to us in
our tender years, how he shed abroad his love
in our hearts when we were but young, which
drew us to love him again, and not to think
any thing too dear to part with for his name
and truth's sake. Surely we had good cause
to say, He remembered the kindness of our
youth, when we followed him in a land that
was not sown, through briars and thorns.
Hitherto he hath been the support of our
youth and the stay of our old age, and hath
helped my dear companion to become more
than a conqueror, through Jesus Christ who
loved him; and that it may be so with me
also, and with all who love the Truth in sin-
cerity, is the earnest desire and fervent breath-
ing of my soul to God.

ELIZABETH CHESTER.

Dunstable, 31st of the First month, 1708.

From "Good Health."

Gymnastics.

(Concluded from page 92.)

A proper system of training must accord-
ingly be one which provides for the due exer-
cise of all the muscles, voluntary, respiratory,
and circulatory, but it should also imply a
diet best suited for the development of the
muscles, that is the formation of hard flesh,
not of fat, for fat is not only useless, but in-
jurious, from a trainer's point of view. * * *

Diet no doubt constitutes an important
portion of any system of training; by it alone,
bodily changes of considerable importance
may be effected, but by it alone we cannot
develop our muscles, or give the frame un-
usual power and endurance. For this exer-
cise is necessary. As we have again and again
said, increased action implies increased waste,
but also more speedy growth as well as greater
development, whereas its value in a system of
training. But exercise to do good should be
systematized, and that nowadays has been
done, the system constituting what is called
Gymnastics. We have said a system, for gym-
nastics, except undertaken systematically, are
useless. Further, we have pointed out that
gymnastics should be employed for three
special objects: as a means of educating the
body; as a sanitary measure to prevent cer-
tain forms of disorder; and as a means of cure
in certain other forms. Then, again, accord-
ing to the end in view, the character of the
exercises should vary, and accordingly we

have two systems to deal with, known re-
spectively as *light* and *heavy* gymnastics.

Exercise, although the fact is too often over-
looked, is really one of the necessities of life.
Man has been condemned to earn his bread
by the sweat of his brow, but in return his
labor has been blessed to him, for thereby his
body is strengthened, his happiness increased,
and his life prolonged. There are, no doubt,
many employments inimical or injurious to
health, but of the fundamental fact that exer-
cise is good for the animal frame there can
not be a question. * * * * *

But in many occupations under our system
of civilized or divided labor, certain parts
of the body are called into play to the exclu-
sion of others; and it should be the special func-
tion of gymnastics to remedy this tendency
to unequal development. No one who, espe-
cially in our large towns, has had occasion to
examine the chests of a number of individuals
—a process the necessity for which in hos-
pitals is painfully frequent—can have failed to
be struck with the multitude of badly formed
busts and undeveloped bodies which come
before him. Now, for these, in many instances,
a process of physical education would be their
[physical] salvation. Unfortunately it is not
always to be had, for *skilled* masters in this
department are much rarer than in those
which relate to mental growth. * * * * *

Muscles are intended for interrupted, not
continuous, action; give them intervals of rest,
and they will go on acting. But, if they be
objected, there is the heart, which you have
told us is really a hollow muscle; were it to
cease to act, we should die. No doubt this is
true in one sense; were it permanently to
cease to act, undoubtedly we should die, but
it is not continually contracting, it alternately
contracts and expands, and action and repose
succeed each other even in the case of the heart,
and still more should this be so with other
muscles. To place a child upright against a
straight board, or even on a music stool, with-
out any support, is not to give the muscles
free play, but rather to confine their effect to
a rigid and unyielding fixation of the body.
Here it is all action and no repose for certain
muscles, all repose and no action for others,
and this is the very thing to be avoided,—
uniform development, the result of uniform
exercise, is that at which we should aim.

One of the most serious features of life in
the present age, is the rate at which men of
action live in the great crowds which consti-
tute our modern cities. The numerous inven-
tions which have enabled us to vanquish time
and space, have entailed on us the necessity
of living fast, to use the word in its plain
sense. He that would win the race of life
must be at least as speedy as his fellow com-
petitors. So much depends nowadays on edu-
cation, both general and special, that parents
are encouraged to force, as it were, the intel-
lects of their children. A boy that is fond
of his books is favored over his rougher and
hardier fellows, who prefer exercise in the
open air to study; perhaps in our modern
civilization this is natural, but there can be
no doubt that when carried to any great ex-
tent it is prejudicial. For a man to fight well
the battle of life, it is essential to have a sound
mind in a healthy body, but to insure a
healthy body nothing is more needful than a
due indulgence in the healthy sports of child-
hood, a due proportion of bodily, as contra-

distinguished from mental, exertion in boyhood and manhood. * * *

For of all these purposes gymnastics is the instrument we propose to employ; gymnastics in the sense of a system of physical education. Now it is quite clear that the exercises which would be calculated to fit a strong and hardy man for the boat race, would be altogether unsuited for a gentle and tender girl who had a tendency to stoop. Hence it is good to speak of light and heavy gymnastics, the former adapted for the weaker class of learners, the other for those of stronger frames and more mature years. * * *

As already pointed out, every judicious series of exercises will imply a training of the organs of respiration and circulation. Walking and running are those which perhaps most readily effect this, as they do not interfere with the upper limbs, and hence they are chiefly employed for improving "the wind," as it is called, for when the arms are brought into play for any powerful effort, say pulling or lifting a heavy weight, if there be great resistance, the looker-on will speedily observe the performer become redder and redder in the face till he is almost purple. The reason of this is, that the muscles of his arms having proved insufficient to effect the removal of the body causing the resistance, he has called a new set of muscles into play by fixing his chest, so that during these powerful efforts no breath can be taken. Consequently, as the blood is rapidly undergoing change in the rigid and contracted muscles, and as the heart continues to drive the blood thus fouled through all parts of the body, it not being aerated by passing through the closed lung, the surface darkens, and the blood which should pass through the lung accumulates outside it, the two together producing the reddening and darkening of the features. This is straining the lung, not exercising it; it is equally injurious to both lungs and heart, for both are alike strained, the lungs to resist, the heart to drive on, the blood current. Hence, for gymnastics of the lungs and heart, exercises which do not involve the upper limbs should be selected.

For "The Friend,"

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 91.)

"5th mo. 13th, 1855. It seemed to me in our meeting to-day, as at other times, that there are a number of seeking individuals that attend with us on First-days, who are not members of our religious Society. For such I have craved, that their minds may not be outward, but that they may be turned inward, where availing prayer is wont to be made; that so they may be taught by our blessed Saviour who descends at seasons to teach his people Himself. Earnest desires were also felt for our poor scattered Society, the church, that through the powerful cleansing operation of the Holy Ghost and fire, she may be brought out of her present wilderness state, clear as the sun, fair as the moon, and terrible as an army with banners.

"7th mo. 25d. Since the foregoing date I have been much afflicted from varied bodily ailments, from which I suffered much acute pain: yet through the goodness of the Lord, my mind was kept in a good degree of quiet resignation; and at seasons an evidence was granted that I was not cast off, but was still

regarded by Him, who careth for the sparrow—an unspcakable mercy. May I be kept humble and grateful in the remembrance of it. I have been at meeting to-day, the third time since my recovery. It seemed to me, the descending goodness of Israel's Shepherd was spread over us, and an invitation went forth to those who may be standing at a distance, to come, taste and see for themselves, through holy submission to the Lord's will, that He is good, and that 'it is better to be a doorkeeper in his house, than a dweller in the tents of wickedness.'

The following letter to William Evans is dated,

"8th mo. 11th, 1854.

"My dear friend and brother in the Truth, William Evans.—My mind has been so much in sympathy with thee, since hearing of thy present prospect of religious service, that, though feeble in body, I do not feel quite satisfied without telling thee of it, with desires for thy encouragement in the line of religious duty, well knowing that is not the path we would choose for ourselves, but is that which leads to a peace far surpassing all mundane enjoyments. There is an oppressed seed within the compass of the Yearly Meeting of Ohio, who I have no doubt often go mourning on their way, when the secret language of their hearts may be, 'Spare thy people, O Lord, and give not thine heritage to reproach.' These I believe will be glad of thy company, the aid of thy spirit, and I trust gospel labors. The silent query has more than once arisen in my mind of latter time, will not William Evans feel drawn to attend the approaching Yearly Meeting of Ohio? And when I heard thou felt an engagement that way, I may say a feeble tribute of thanksgiving arose, in believing that the Lord of the harvest is still mindful of those who are desirous of serving Him in sincerity and faith; and is furnishing fellow helpers in the arduous field of labor. Truly there is strength in unity; and where there is a want of it, how does weakness prevail. Yet I do believe the great I Am will be with those whom he hath anointed and put forth, strengthening them for His work, and feeding them with food convenient for them. Though thou may meet with opposing spirits, dear friend, yet as the clothing of thy mind continues to be that of humility, I trust thou will be enabled from time to time to put the armies of the aliens to flight, and the language of thy heart at seasons be, 'Thanks be to God who hath given us the victory, through our Lord Jesus Christ; and the encouraging promise of Holy Wit now arises, 'Fear thou not; for I am with thee; be not dismayed, for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness.'

"Thy letter of 7th month 25th, was received, and was acceptable and instructive as all thy letters have been. The feeble state of my health at present, being pretty much confined to my chamber, forbids my replying to the particulars mentioned in it. Thy precious wife also has a full share of my sympathy; not doubting but that she will be supported during thy absence by Him whom she desires to serve, and who has occasioned her to say, 'Hitherto the Lord hath helped me.' A letter from thee, or from thy dear wife during thy absence, would be according to my desire.

"In feelings of tenderness and affection, I remain your friend,

HANNAH GIBBONS.

"P.S. You are aware, dear friends, that have not much qualification for letter-writing being often at a loss for language to express my feelings; but the foregoing may serve to let you know that you have the sympathy and unity of a feeble and almost worn out sister."

"Very pleasant and precious are the evidences of heavenly mindedness and deep humiliation of soul, as becometh the follower of the lowly Jesus, that are manifest in the foregoing letter. Truly it must be among the great things to have the spirit of a little child even whole-hearted dependence upon Christ Jesus, as he is pleased to reveal Himself with us in as the hope of glory. Humility is an indispensable requisite of the christian character being the crowning grace of all the other graces, and the soil in which they grow. It is this, that in the songs of Solomon, causes the garments to smell as Lebanon, of myrror and aloes, and spikenard; which invite the Beloved of souls to come into His garden (the renewed soul) and eat His pleasant fruit. Perhaps it is not so much from a lack of knowledge, or a defect in understanding, as from want of simplicity, of littleness, of contrition and humility before the Searcher of heart that causes any to stumble on the dark and barren mountains, being destitute of rain and dew. But where those saving virtues ar through Holy Help, attained and kept to, ho the Lord in His mercy will help such, poor and weak and unworthy as they may feel themselves, to press forward in meekness faith and patience, unto the ever blessed reward, "Enter thou into the joy of thy Lord."

Another lively feature in a correspondence between those now forever gathered around the throne, is the sweet religious fellowship and unity that is so observable in the pourings of their heaven-bond hearts. Whi this doubtless was mutually strengthening them, even as an "iron sharpeneth iron," is their not encouragement in it for every wear often cast down, and struggling travell towards the city of the saints' solemnities, "look," after the precept of the apostle, "do every man on his own things, but every man also on the things of others;" to seek to "bear one another's burdens, and so fulfil the law of Christ," that thus, as we are enjoined, "lowliness of mind, let each esteem other better than themselves," we may, with every aid an blessing within our reach, press towards the mark, for the prize of the high calling of God in Christ Jesus.

The Diary proceeds, "8th mo. 12th. Our beloved friend Sarah Hillman, of Philadelphia attended our meeting, on her way to West town School and Concord Quarterly Meeting. I thought her service with us was attended with a precious feeling.

"19th. It seemed to me we had a good meeting in silence this morning. May all thy praise be given to Him to whom alone it belongs."

(To be continued.)

Redemption.—Perfect redemption consist first, in paying the price of ransom; and second, in bringing out of bondage, and settin the prisoner at liberty. Our Saviour paid th first by his suffering and sacrifice; and He performs the last by the effectual operation of h spirit, in the hearts of those who receive hi and resign wholly to him.—Joseph Phipps.

For "The Friend."

Three Movements.

are grander manifestations of motion in nature, the physical changes apparent to our senses, and familiar to our every-day life, cease to impress us as wonderful. Having accepted from childhood, certain great principles as true—incomprehensible they may be in themselves—we look upon results of the operation of those laws as actually intelligible; as they often are. The action of gravitation taken for granted—theory which it is safe to say, the human mind cannot understand nor explain, except power imparted to matter by the Author of the universe—we cease to wonder at the fall of a stone, or the sweep of a planet. The ebb of evaporation being given, the greater of the waves, the silent picking up of little particles from the surface of the sea; their deposition upon the mountains; their rise back through the rivers to the ocean again, become a matter of course, easily, as we say, explained. Frame a theory for heat; the three states of matter, solid, liquid, gaseous, are explained; and the roaring of the wind, the dashing of the waves, the eruption of the volcano, and the shock of the earthquake are nothing but legitimate results. Heat is the effect of a form of motion—this motion is amenable to certain laws—reflection, action, &c., accept these, and nothing but necessary conditions of situation and nature are needed to produce the rainbow; and we understand it, and it ceases to be wonderful.

"God moves in a mysterious way
His wonders to perform;"

it is not so much in the movements of the storm, that the mystery impresses as in the silent chemic forces which we not see, but whose results are evident all around us, and in the movements which, with aid of a glass, we can see, yet, from having no convenient theory at hand, cannot understand. The record of an evening with the microscope will illustrate this in a manner resting, perhaps, to some of the readers of the Friend."

We have a fine instrument—magnifying more than 1000 diameters. Let us put it to work and see what it can reveal to us. An animal furnishes us with a common tadpole, in full vigor, just arrived at the dignity of itself, yet still bearing the mark of his immaturity about him, in the shape of a large flat tail. Swathing him in wet cloths, for the purpose of keeping him alive and still, lay him carefully upon a slip of glass, and bring one edge of his uncovered tail under lens. Magnifying him 150 diameters, a wonderful sight is discovered. We see the solecition before us, interlaced with small canals, some larger, some smaller, through former of which something is rushing with rapidity truly astonishing, while oval particles are slowly creeping along the others, they meet the stream at the intersections, and are jerked into it and carried on by the current. Those oval, nearly transparent bodies are the blood corpuscles, the smaller vessels are the capillaries; the larger, veins; and that rapid torrent—for so it seems under the glass—is the blood rushing towards the heart, to be again forced through the arteries towards the extremities. Thus we have ocular demonstration of circulation of the blood.

This is the first movement—that seen in the animal kingdom—a motion of the nutritive fluid through tubes, from one centre. In the more highly organized bodies, that centre is a pump; in the lowest orders, the tube itself is the motive power; but that movement back and forth from one end to the other, through tubes, is characteristic of animals.

While our tadpole is quiet, let us make him a martyr to the cause of science, and wound the tail—a penknife does it—causing one flop, after which he is passive as before. Here we have a beautiful illustration of the recuperative powers of nature: at first the blood pours out of the divided veins in a great stream, seeming, as we view it through the glass, to be carrying the life of the animal away with it; but soon, very soon in such a subject, it ceases. The little oval particles come up to the chasm, and wedge themselves in, and pile one on another, until they finally bridge it over and lay the foundations of a new flesh and a new skin, over this the blood begins again to flow, depositing a particle here, and another there, as it goes, until in the course of a very short time, the rent is mended, and everything is as before.

Putting our patient tadpole back into the aquarium, we turn to another kind of motion that the microscope reveals to us. In almost any running stream, we may find a delicate green water plant, beautifully jointed like a cane, the joints sometimes sprouting out in a fan-like shape, and being from $\frac{1}{10}$ of an inch to an inch long, known to botanists by the name *anacharis*.

A fragment of this is placed upon a slide, and a power of 150 diameters turned upon it. Arranging it so that one of the smaller joints is wholly within the field of view, we have another wonderful sight. That cell—looking about the size and shape of a banana—is full of a fluid, suspended in which are little particles of apparently solid matter, and slowly up one side and down the other, this fluid is moving, carrying these particles with it. We move the slide so as to bring several cells, or parts of cells into view, and we find that in all, the same rotating motion is going on—not always in the same direction as to the different cells, though it is constant in any one. Again, the single leaf of another aquatic plant about $\frac{1}{16}$ of an inch long, by half as wide, is slipped under, and a power of 800 diameters brought to bear upon it. The whole field is now full of small cells—long and narrow—and in each one this same motion is seen, it being perfectly evident that the circulation of each cell is independent of that of every other.

This is the second movement—that of the vegetable kingdom: differing entirely from that which we saw in the tadpole; in that the one is a progressive motion through tubes, all having connection with one another; the other a rotary motion in cells, each distinct from the rest. It seems now to be well established that the common idea of the circulation of the sap in plants—that it ascends and descends in vessels for the purpose—is not founded upon fact; but that, on the contrary, the plant consists of an assemblage of cells, placed end to end, and side by side, through the walls of which, by the principle known to philosophers as *osmose*, the thickened and the thinned sap are passing up and down at the same time.

A plant, a part of which is in the open air, and another portion in a warm room, will

sometimes show signs of life in the room, while the lower part is frozen outside. On the theory of the rise of the sap from the root, this is hard to explain, while a simple experiment with our slide seems to make it clear. If we chill it, the motion in the cell becomes sluggish and finally ceases altogether; warm it over the lamp, and it starts again, becoming more and more rapid until the temperature reaches about 100° F.

Thus in organized bodies, under the influence of what we call "vital force," motion is constantly going on—motion of a fluid holding in suspension solid particles; and we have seen the distinction between animals and vegetables as regards this movement. There remains a third kingdom—the mineral. Is it probable or possible, that it too has a motion of its own? Let us see. A small portion of albumen is coagulated by carbonic acid and water, and being of about the same specific gravity as the water, is held in suspension by it, giving it a milky appearance. We are now about to peer into some of Nature's most secret recesses, and for this purpose we use our best power, magnifying the objects beneath it 1200 diameters, or one million four hundred and forty thousand times. The slide containing the prepared albumen, is placed beneath, and the most wonderful view we have had to-night is spread before us. The whole field is covered with little specks and spheres, from the size of a pin's point to half that of its head, and every one is in motion! At first, all appears in confusion, but as we watch, we think we can detect a method there, and the spheres seem to revolve around each other and to interchange places, each with a peculiar tremulous motion, very different from anything we have seen before.

The specimen we are looking at, has been prepared and sealed up for over a month; yet during all that time, whenever it has been examined, the same strange movements have been seen. It is not the effect of the jar in handling, for we pound upon the table, and it makes no difference in the dance of the minute particles, which vary (as is easily told by the micrometer) from the $\frac{1}{30,000}$ to the $\frac{1}{20,000}$ of an inch in diameter.

Other substances act in the same way, the only condition seeming to be, that they should be sub-divided very finely, and suspended in a medium of about their own density. It is now thought that this method enables us to come nearer than any other to the molecules of matter, and that in such a case we are actually looking at molecular motion.

This, I have said, is the most wonderful sight of all. Why, yet? Is it because we cannot understand what causes these particles to move? Do we understand any better what causes the blood to move in an animal? We say the heart is a pump, and forces it through the system; but what makes the heart beat? Is the reason of that strange rotary motion, if it is such, in plants any clearer? Is not this molecular movement more mysterious, in our common conception of that term, because it is occasioned by some power or force with the workings of which we are not familiar, and for which we have not coined a name; and more than all, because we cannot see its end or purpose?

Yet conjecture is busy over that purpose. Can it be that motion is the condition of the atoms of all bodies at all times? and that heat and electricity and all force are but modifica-

cations of that motion? Is this modern theory of the philosophers to receive visible demonstration? Questions connected with this curious subject crowd in upon us almost unbidden, and we know not whether they may lead us. It were wise to stop in time. A.

For "The Friend."

An opportunity is presented to a Christian teacher and philanthropist, for effecting much good to the Freedmen and those surrounding them, a few miles from this place.

In order to effect an engagement soon, the particulars are in part stated, viz., the school of sixty pupils and neighborhood are on a branch of the Holstein river, populous and rather looking up. The feeling towards Freedmen's schools not dangerously antagonistic, but awaiting the results of good management in the training of the colored people. The situation could be most advantageously filled by a man; being rather isolated, and attended with hardships; but with opportunities and extent calculated to bring good abilities to bear on the present critical condition of the Freedmen; which was most pitifully expressed to me by one yesterday, "They gwine to throw us right back again." It is plain that the cause so long labored for, demands very earnest effort, just now, to stay the current of corruption, used to influence the political weight of Freedmen's vote. The spread of intelligence in school training is one of the chief means of doing this; and a teacher with the right spirit, and the necessary experience, prepared to endure privations, and accept very moderate pay, after bearing his expenses down, would do a noble deed by coming. It is almost too much to ask; but if there are any prepared for such a sacrifice, please to address, very soon,

YARDLEY WARNER,
Maryville, Tennessee.

Eleventh mo. 8th, 1870.

For "The Friend."

Our Vineyards.

I once heard a friend remark that he knew of no more fruitful field of labor than the vineyard of our own household. He was alluding to that religious care and labor which it is the duty of the Christian to extend for the help of himself and others. His words were often since been remembered, and I have found them applicable in many instances.

That dignified servant of the Lord, Sarah Lynes Grubb, said that she had known no other religion all her life than the will of God; and truly to have our hearts brought fully into subjection to the Divine will, to know and obey the commands of our Heavenly Father in all things, is the great work of religion. It is His Holy Spirit which accomplishes this, and in view of the glorious and blessed results which follow, we ought to welcome, as our choicest blessing, its operation in the heart, even in those painful experiences, compared in the Scripture to baptism with fire, in which the corruptions of the heart are searched out and consumed. "The perfect discovery of the Day-spring from on high," says David Barclay, "how great a blessing it hath been to me, and to my family." The apostle Paul bears a clear testimony in the language, "For I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." Let none then shrink from full,

unreserved submission to the humbling operations of the Divine hand, bringing them into repentance time after time for their wrong doings; for as they patiently abide under the refining hand of the Lord, they will know the power of evil over them to be weakened, and their desires for holiness and purity to be strengthened; and hope will be raised in their hearts, and their confidence in the Lord's goodness and mercy will increase, and at times, as He sees to be best for them, His sweet, conitring presence will overshadow them, giving them a little foretaste of the good things laid up in store for them that love and serve him.

Let me earnestly press upon the visited ones amongst us, the advice of a deeply experienced servant of former years. "Do not look for great matters to begin with; but, be content to be a child, and let the Father proportion out, daily to thee what light, what power, what exercises, what straits, what fears, what troubles he sees fit for thee; and do thou bow before him continually, in humility of heart, who hath the disposal of thee, whether to life or death forever. Ah! that wisdom which would be choosing, must be confounded, and the low, humble thing raised, which submits, and cries to the Father in every condition. And, in waiting to feel *this*, and in joining to *this*, thou mayest meet with life; but death, destruction, and separation from God, is the portion of the other forever! Oh! that thou mayest be separated from it, and joined to the seed and birth of God; that in it, thy soul may spring up to know, serve, and worship the Lord, and to wait daily to be found by him, until thou become perfectly like Him. But thou must join in with the beginnings of life, and be exercised with the day of small things, before thou meet with the great things, wherein is the clearness and satisfaction of the soul. The rest is at-noon-day; but, the travels begin at the breakings of day, wherein are but glimmerings, or little light, wherein the discovery of good and evil is not so manifest and certain; yet there must the traveller begin and travel; and in his faithful shroud, (in much fear and trembling, lest he should err,) the light will break in upon him, more and more."

As we journey forward in this heavenly path, we will find duties laid upon us which concern others as well as ourselves. We will be drawn in love to watch over the members of our family circle,—to promote their comfort and happiness, to avoid everything which would injure their spiritual welfare, and to do all we can to promote their temporal and eternal interests. I believe that a measure of this concern will be felt at an early stage in the Christian growth; and that it will increase, and become more evident in its fruits, as we become rooted and grounded in the Truth. It will expand beyond our own domestic circle, and embrace, in its widened limits, the household of faith, those united with us in religious profession; and it will recognize as children of our common Father, those of every nation and clime; the household will include, as of kin, all those who were made "of one blood to dwell upon the face of the earth."

While I would encourage all to open their hearts to the influence of that love which permeates the exhortation of the apostle, "Look not every man on his own things, but also on the things of others," and to guard against that selfishness which is natural to

the unregenerate heart; yet it is very needful to bear in mind the language of our Redeemer—"without me ye can do nothing." Therefore in all movements of a religious nature, looking to the welfare of others, ought to know that they are duties laid upon us by our Law-giver, as otherwise we may forward without His blessing, and hurt ourselves without benefiting others. There must be a degree of preparation experienced, and Divine call or opening for labor, to enable to work the works of our Heavenly Father. Yet we should be careful not to stifle right calls to exertion for the benefit of others, a by so doing lose the blessing that would attend the faithful discharge of duty.

We sometimes exert ourselves much to interest and help a stranger. Have we ever considered whether we are equally ready to devote our time and our energies to the benefit of those with whom we are daily associated—our own families, friends and neighbors? Do we properly cultivate our own home vineyards; doing all we can to make them pleasant and attractive, in a social and intellectual way, as well as to exercise a proper religious influence over those who are within their enclosures? There is surely defect in that man, who reserves his amiability of character, his unselfishness, his power of intellect, and his zeal for religion, for exhibition to strangers only, or to the world large; while he allows the domestic vineyard over which he ought to exert so superior an influence, to suffer loss from the want of faithful attention.

Tigers of Java.

D'Almeida in his work descriptive of Java frequently speaks of the tigers with which that island abounds, and on more than one occasion alludes to a superstitious feeling prevalent among the natives, which refers these animals. In one of his excursions I visited an ancient Buddhist temple, then in ruins, consisting of a series of chambers hung out of the solid rock, about twelve or fifteen feet from the ground. After describing these he says—

"In one of the caverns is a large cavity, said to be the opening to a tunnel which extends far into the bowels of the Klotan mountain. I felt a great inclination to penetrate this mysterious place, thinking I might meet some more remains of Buddhism; but the guide persuading me not to attempt it, on the ground of its being considered a tiger haunt, I gave up the idea."

"On our way back I asked the juru coochee, who I found spoke Malay well, if he himself had ever seen a tiger in the temple. His reply was,

"Oh! yes, sir; one morning in particular I remember, I was ascending the steps, when an enormous one suddenly rushed out of the opening to the left, and stood looking at me before, however, I could take a good aim; him he made a speedy retreat down the side a few yards from me, and was soon lost to sight. But," he added, "when the paddy is sown, one always sleeps in this temple the first Tuesday in the month, to propitiate the good spirits for the growth of the grain, and on that day I would on no account kill a tiger seen near the spot, as it might bring a darakh (a curse) upon me."

"A curious story concerning these animals—proving the peculiar veneration in which

are held by the natives—was related to by a gentleman as a fact. A friend of his, said, having bought a large tract of forest land, had a small attap hut built in the middle of it for himself and the men whom he hired to fell the trees. They had not settled many days in their temporary edifice, when one night, as the Dutch gentleman was lying awake, but with closed eyes, felt a warm breath on his face, accompanied by a kind of sniffling sound. Fearing it was some reptile, he dared not move or stir, but by a terrible effort, kept himself foot-still, until the sound of steps retreated from his bedside convinced him that his misgiving was incorrect. Opening his eyes very slowly, he was, however, none the less horrified to see, sitting on his hind-legs, an enormous tiger, with its glaring eyes fixed on the man and its occupant. "Not having any weapon," the Dutchman felt he was defenceless, but had nerve enough to remain quietly where he was, keeping his half-closed eyes directed on the unwelcome visitor. In a few moments, which appeared to him not only the most momentous, but the longest, he had ever experienced, the intruder stood on all-fours, sniffed about a little. "I cannot live it," thought the poor gentleman, "if he comes my bed again," and as he lay he could feel cold perspiration dropping down his face. Fortunately, however, his ordeal was over sooner than he anticipated, for the tiger, finding his way to the opening which served as a door, jumped to the ground.

The astonished and terrified gentleman instantly arose, and calling up his men, asked if they had seen anything of the tiger. In reply being in the negative, he fastened the entrance to his room as securely as possible, again retired to his bed, and, without further interruption, enjoyed his usual repose.

Next morning, summoning all his woodmen, he proposed a hunt for the tiger, as he felt convinced was lurking no great distance off. This proposition the men very respectfully declined, on the ground that the tiger, having done him no injury when it had in its power, must have been a good one, and he might feel assured, would preserve himself from the attacks of other wild animals.

The very breathing of the wild beast's face would, according to their conviction, act as a charm against all dangers by which he might be assailed. The gentleman hesitated incredulously, but, as he was the only person, gave way to them so far as conceded his proposed hunt. Notwithstanding, however, his laborers' good opinion of the tiger, he took care, before nightfall, to have an impenetrable barrier, in the shape of a rough wall, fixed in the opening through which the ferocious animal had made its entrance and exit.

"Little Things of Great Influence."

Amongst other things transpiring in the city of Friends, and calculated rather to disturb the minds of some, there are practices which have hitherto been considered entirely the reverse of the usage, as well as contrary to the principles, of that body; and although they do not appear intrinsically little things, yet I do not accept them as evidence of a healthful and onward progress, but rather as signs of backwardness, and they seem to bear the imprints of a love of variety for its own sake, or

the working out of a spirit of unrest. One practice to which I allude is the utterance of formal or set words before or after meals, and these too, in some cases, by children evidently instructed so to do. By any one at all acquainted with our views on prayer, not to say of divine worship, this practice must be known to be at variance with those views, and calculated to foster not only a meaningless form, but also the custom of *taking the name of the Lord in vain*: which cannot be avoided if the words used spring not from the heart; and it is well known they cannot at all times emanate from this true source. If such be the case with regard to ourselves, what must the *actual* influence be upon our children? and this, it appears to me is a solemn home-inquiry for those standing in the relation of parents.

Again, there are creeping in amongst us certain salutations and modes of address in speaking and writing which are often untruthful and beneath the dignity of a sincere follower of Christ, as also quite exceeding the requirements of true courtesy. These are but a few of those things which may be embraced in the catalogue of declensions from old-established right usage amongst us, and though I might enlarge, I forbear, leaving these few thoughts in love for the serious pondering of those whom they concern.

"Our testimony to plainness of speech, behavior, and apparel," says the Yearly Meeting Epistle, 1842, "rests upon sound unalterable grounds. It was in the hearty reception of the government of Christ, and in love to him, and fidelity to his law, that our forefathers, in the light of that truth which the Lord was pleased so largely to shed upon them, were led to the full testimony which they bore against the flattery, pride, and untruth which had, and still have, so largely insinuated themselves into the established customs and the changing fashions of the world. Our present concern is that we may all be brought to follow Christ in the same faithfulness and devotedness of heart."

I would query whether the adoption of the testimony here spoken of, and a departure from it, can emanate from the same light of truth, and rest upon the same "sound and unalterable grounds?"—*From the British Friend.*

THE FRIEND.

ELEVENTH MONTH 19, 1870.

The accounts daily given in the newspapers of the progress of the war between Prussia and France, are almost uniformly descriptive of wide-spread bloodshed and misery; heart-sickening to every lover of his fellow-man. In estimating the call to, and results from any measure, selfishness prompts men to look little, if at all, beyond the probable effect on their own present interest; too little regarding the demands of christian principles, or the duty of loving our neighbor as ourselves. This is glaringly manifest at the present time in the policy pursued by the neutral governments and people of Europe; for while they properly refrain from exposing themselves to the horrors of war, it is reproachful to christendom, and the profession of Christ's religion made by them, to stand aloof watching the indescribable carnage and suffering inflicted, without demanding, in tones

that would command respect, that the combatants shall cease their ensanguined struggle and submit to rational terms of peace.

Whatever plea may have been plausibly urged by the approvers of war in justification of Prussia accepting the gage of battle thrown down by France, and whatever apology may be made for the dire punishment she has inflicted on the aggressive nation, it must now be apparent to all, that the pride of conquest and the lust of power have poisoned the hearts of those who sway the councils of the conquerors, and in a spirit that, however it may disguise itself in the garb of patriotism, seems almost demoniac, they are committing the most atrocious cruelties on their beaten foe, and desolating the country with vandal ferocity by fire and sword. It seems almost incredible that in this age of boasted civilization, a protestant people, or rather the despotic governors of a protestant people, should so openly set at defiance every sentiment of humanity, and every principle of the Christian religion, as to avow before the world, the determination to go on murdering or torturing their fallen and almost helpless neighbors, unless they will unresistingly submit to just such terms of peace as suit their own views of conquest and aggrandizement. Yet, if we may give credit to the accounts of passing acts and conferences, such is the course remorselessly pursued by King William and his councilors.

While this is going forward, Great Britain and the crowned heads of Europe look on like spectators of a prize fight, each afraid or unwilling to take such peaceable but effective measures, as might stop the combat, and allowing their respective people, as they can seize opportunity, to supply each combatant with means for continuing the gory struggle, and thus put the price of blood into their pockets. What a comment is all this, upon the war policy; the policy that makes the sword the arbiter of national disputes, and virtually declares that might gives right.

Meanwhile language cannot adequately set forth the desolation and suffering pervading France. Not only do those who have entered the military service suffer, but the non-combatants are robbed and spoiled; many of their nearest relatives, and their friends are slain or crippled for life; their homes are sacked and burnt; their cattle and provender seized, and whatever other means of living may be left, levied on to satisfy the demands of their unrelenting enemies. Famine and pestilence are following in the track of the contending armies, and the measure of calamity seems fast filling up, presenting a spectacle of human woe that should move the heart of every friend of man to pity, as well as warn him to shun the awful consequences of giving way to the lusts that war in our members. The call is loud and urgent to those who have the means, to extend a hand of help and promptly supply the food and clothing which must unquestionably be sent from abroad, to keep thousands from perishing by starvation. Though Friends in this country are far removed from the scene of slaughter and misery; yet the question presents, is there not a duty to add our mite towards administering some help to the thousands of our fellow men who are ready to perish? Can we not do something towards feeding the starving and clothing the naked, and if so, will we be guiltless without acting according to our capacity?

Friends in Great Britain are making exertions to send help to the non-combatant sufferers. They have put forth a circular for distribution among their members, from which the following extracts are taken:

The War Victims' Fund for the Relief of the Peasantry and other Non-Combatant Sufferers in France and Germany.

The well-known views of the Society of Friends on all questions relating to war have made it difficult for many of them to co-operate with perfect satisfaction in the efforts now being made for the benefit of "sick and wounded Soldiers."

Nevertheless, the principles they profess, as a Christian body, prompt them without reserve, and with willing hearts, to extend help to the peasantry and other non-combatants who are suffering in person or property from the present destructive war.

The value of the growing crops, farming-stock and implements, consumed or destroyed by the contending armies, is incalculable. It is notorious that thousands of houses, and even some entire villages, have been burned or laid waste; and in many districts the inhabitants have neither shelter nor warm clothing for the winter, seed for their present necessity, nor money wherewith to procure it.

These fearful ravages, inseparable from the presence of large armies in the field, must inevitably entail an amount of suffering on the innocent and helpless, on the aged, the women and the children,—many widowed and orphaned by the war,—which it is fearful to contemplate. Add to these evils the continued want of food and shelter, and the diseases which will surely follow in their train, and it will be manifest that during the coming winter the sufferings of those inhabiting the war-stricken districts must increase in intensity, and call yet more loudly for all the help which those exempt from such horrors have in their power to afford.

After the battle of Leipsic, in 1813, £900,000 raised in the United Kingdom, was dispensed to the distressed peasantry and others in Germany. During and after the war in the United States, American and British philanthropy raised well nigh a million pounds sterling for the benefit of the colored population, and yet this sum failed to avert a fearful amount of mortality.

It will be evident that a war in which nearly a million and a half of soldiers have swept over and devastated so wide an area, must have produced destitution which the very largest funds ever likely to be raised can most inadequately relieve.

We recognize the force of the appeal contained in the following words, issued on behalf of the villagers of North-eastern France: "You, our British brethren, know the comfort and security of a land where every man's house is his castle; you have, for centuries, not felt the ravages of invasion; fancy the destruction of all your means of subsistence, and then refuse—if you can—to help, and help quickly, your neighbors who are perishing."

The committee appointed by the Society of Friends have met several times, and anxiously deliberated on the best course of action, especially with reference to the selection of suitable Friends to proceed immediately to Belgium and the North-east of France, and there organize arrangements for the simulta-

neous investigation and relief of urgent distress. With this object, Henry J. Allen, of Dublin, and William Jones, of Middlesborough, will at once proceed to the frontier districts of France and Germany; these Friends, whose knowledge of the languages and acquaintance with the district, well qualify them for the onerous and important service, have kindly and promptly placed themselves at the disposal of the committee.

The committee hope to be prepared shortly to receive contributions of food, blankets, and other woollen and cotton fabrics, warm clothing and various useful commodities or materials, and intend to open a depot in London for their reception. On this head full information will be circulated as speedily as possible.

SUMMARY OF EVENTS.

FOREIGN.—On the 9th inst., the French army of the Loire, under General D'Armelles de Padlines, attacked the Germans under General Von Tann, in the vicinity of Orleans, and after a series of engagements succeeded in defeating them and obtaining possession of the city. The losses on both sides were considerable, but those of the Germans were much more severe than those of the French. A dispatch from Tours states that the total number of the Germans including sick and wounded who were abandoned, aggregates 10,000 in killed, wounded and prisoners. The French loss is estimated at about 2000. General Palludines is now executing a movement which is designed to outflank General Von Tann's right. The latter has fallen back towards Orlans, and expect a junction with Prince Frederick Charles and his army of about 75,000 men. The moral effect of this French success has been very great, and reinforcements for the army of the Loire are being forwarded with all possible rapidity.

The fortified town of Verdun surrendered to the Prussians on the 8th inst. Two generals, eleven staff officers, and 150 officers were captured. Beside these 136 guns, 23,000 rifles and a large amount of stores and ammunition fell into the hands of the Prussians. The strongly fortified town of New Breischach also capitulated on the 14th inst. Five thousand persons, including one hundred officers, were included in the surrender.

No bombardment of Paris has yet been attempted, and dispatches received at Berlin from Versailles, announce that it is not the intention of the Germans to open fire upon the city, they being satisfied that the supply of provisions will not hold out for more than three or four weeks longer, and that a surrender may be expected in less than a month, from that cause alone. A member of the English Embassy who has just arrived in London with British subjects, who was allowed to leave Paris by the German authorities, reports that the stock of provisions is distressingly short. The allowance of bread for the moment has been reduced to 50 grammes daily to each person. The weather is cold, with frequent light falls of snow. It is probable that the constant and accurate fire from the French forts has been the chief cause in delaying the bombardment. Forts Valerien, Rosny and Nogent in particular, have proved the most dangerous to the Germans, as their siege works within range of their guns. Earthworks are thrown up by the besiegers in the night, but are destroyed by the gunners during the day. Communication between Paris and Tours is constantly maintained by means of carrier pigeons. A sortie in force of the French troops under General Brocha is expected to be imminent. King William has issued an order that hereafter no person whatever will be allowed to enter or leave the city.

Considerable agitation prevails in diplomatic circles in Europe, owing to Prince Gortschakoff, the Russian Prime Minister, having demanded a modification or abolition of the treaty signed in Paris in 1856, forbidding the Russian fleet from entering the Dardanelles and Bosphorus from the Black Sea, and limiting the Russian fleet in the Black Sea to ten small vessels. It is feared that Russia may insist upon a compliance with these demands by force, and that there is danger of a general European war. These fears are strengthened by the increasing sympathy of England with France, awakened by fears of too great a German preponderance, and the opposition shown by Von Beust, the Austrian Prime Minister, to the plans of Germanic unity,

now under discussion at Versailles. In view of political complications, the claims of the United States against Great Britain on account of the Alabama cruelty, have assumed increased importance, and attracting much attention. The danger of the present established is now clearly seen, and is consoling by those well informed, to be so great as to have an important influence in preventing Great Britain rashly engaging in war.

The tunnel through the Alps, at Mont Cenis, is nearly completed and will probably be opened next month.

UNITED STATES.—Census of Kentucky.—The census shows the present population of Kentucky to be 1,695,195; increase in ten years, 277,011, the largest increase Kentucky has ever made in that time since settlement.

Philadelphia.—The following is an abstract assessment of the real estate and personal property of the city of Philadelphia, subject to city tax, estate, \$191,844,096, of which amount, \$23,350, suburban, \$19,773,279 farm land, and \$48,754,681, of real estate; personal property, \$8,592,786; \$566,436,882. Increase over the estimate for \$20,660,239. The result of the re-enumeration census in the Eighth ward on the 10th inst., 1 Committee of Councils, shows that the except the national census of the city were well gross the difference is \$38,818 in favor of the city. The number of wards is twenty-eight.

The Markets, &c.—The following were the quot on the 14th inst. *New York.*—American gold U. S. sixes, 1881, 1133. Superfine flour, \$4.75 a extra State, \$5.70 a \$4.80. No. 1 Chicago spring \$1.33 a \$1.34.

RECEIPTS.

Received from Richard Hall, Agent, England shillings, vol. 44, for Elizabeth Williams, Ireland 5 shillings to No. 27, vol. 44, for Alice Athlam, land.

TEACHER WANTED.

A competent Teacher (male or female) is wanted to take charge of Friends' School, Medford.

Application may be made to EDWARD REXY CLAYTON HAINES, Medford, N. J.

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch St. Philadelphia, "Journal of the Life and Religious Views of WILLIAM EVANS: a Minister of the Gos the Society of Friends." A large octavo of 709 p.

Bound in cloth, \$2.50
Do sheep, 2.00
Half bound in Turkish morocco, . . . 3.75

FRIENDS' BOARDING SCHOOL FOR INFANTS AND CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge this Institution, and manage the Farm connected with it. Application may be made to

Ebenezer Wotr, Marshallton, Chester Co.
Thomas Wistar, Fox Chase P. O., Philadé.
Samuel Morris, Olney P. O., do
Joseph Scattergood, 413 Spruce Street, do

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankford, (Twenty-third Ward), Philadelphia. Physician and Superintendent—JOSHUA H. W. INGTON, M. D.

Application for the Admission of Patients in made to the Superintendent, or to any of the Board Managers.

MARRIED, at Friends' Meeting-house, Barne Belmont Co., Ohio, on Fourth-day, the 26th of month, 1870, BENJAMIN, son of Edmund and Stanton, to ELIZABETH, daughter of Robert and Plummer, all of the former place.

DIED, on the 4th of Fifth month, 1870, at his residence in Marshallton, Chester Co., Pa., ISAAC HIR aged 67 years, a member of Bradford Monthly Meeting, in Topeka, Kansas, Tent Monthly Meeting, S. S. SABAHS S., widow of Mahlon Patton, in the 46th year of his age, a member of Bangor Monthly Meeting, Marshall Co., Iowa.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

VOL. XLIV.

SEVENTH-DAY, ELEVENTH MONTH 29, 1870.

NO. 14.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Three Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

Testimony from Babby Monthly Meeting in the County of York, concerning Thomas Colley, late of Sheffield, deceased.

"The memory of the just is blessed," is a testimony which we believe will long continue to be excited in the minds of many, who have had opportunities of observing the steady perseverance in the work of righteousness, and a devotedness to the service of the Gospel, which more than forty years of the life of our dear deceased friend, Thomas Colley, were an eminent manner distinguished.

He was born in the year 1742, at Smeaton, village near Pontefract, in Yorkshire; was educated in the principles of the Church of England, and when about eleven years of age, came to reside at Sheffield, as an apprentice. Little is known of his character or conduct in his situation, except that in some part of his minority, he was disposed to gratify an inclination for military pursuits; but soon afterwards, his mind being favored with a Divine revelation, he became serious, and joined himself in membership with the Society of Methodists; amongst whom he was zealous, active, and much esteemed.

In the year 1764, he entered into the marriage state. About this time, the observations and performances in which he was religiously engaged, failing to satisfy the travail of his soul, desires were excited after a more perfect discovery of the Day-spring from on high, and, in this seeking state, he attended the Meetings of Friends. Waiting for spiritual revelation, he was made acquainted with the gracious operation of the heavenly gift; enabling the way to Divine life, light, and acceptance. Through the fullness of satisfaction in which was herein experienced, forgetting all things that were behind, to which he had been attached, by custom, and the prepossession of education, he was strengthened to push forward to those things that were before, and became solemnly engaged to press toward the mark for the prize of the high calling of God in Christ Jesus.* His circumstances were then low in the world; yet he attended meetings diligently, not only on Sabbath but other days of the week; until he observed that some who were of account in the Society, could dispense with a constant attend-

ance on week-days. This proved to him an occasion of stumbling, for a season, until he was convinced, that by absenting himself from those religious opportunities, he lost ground in a spiritual sense.

In 1766, he was admitted to membership with Friends; and those who have had frequent opportunities of observing his deep and inward exercise for the arising and spreading of Divine life, in religious meetings, can testify to the awful frame and fervency of his spirit therein.

In 1768, he first appeared in the work of the ministry; and near the close of 1770, commenced travelling in that weighty and arduous service. From this period a large portion of his life was devoted to advocate the cause of truth and righteousness, in which he was a diligent and successful laborer; giving indubitable proof of his mission, and dependence on the holy Head of the Church, the Lord Jesus Christ. He was an example of patient waiting for the quickening virtue of the word of life, under the baptizing influence of which, he proved himself a workman that needed not to be ashamed, rightly dividing the word of Truth; a minister deep in travail, clear in judgment, and sound in doctrine; a man of unaffected gravity, and of few words, though at times innocently cheerful, communicative, and instructive. He was a diligent attendant of meetings, a lover and promoter of unity, and a tender encourager of the appearance of good; careful to keep his whole conversation unspotted; being an example of meekness, patience, temperance, and charity.

His extensive travels in the work of the ministry are generally known. Most parts of this nation have at times partaken of his gospel labors; he paid a religious visit to Ireland once, and to some of the northern parts of it a second time; to Scotland twice, and once to the Islands of Barbadoes, Antigua, Nevis, and Christopher's, also a general visit to North America. From divers places testimonials were received of his labors being acceptable, and of his instructive and exemplary deportment.

In the early part of his travelling in the work of the ministry, and during his extensive labors abroad on that account, the care of his temporal concerns was committed to his wife; and under the Divine blessing, her diligence and faithfulness therein, were attended with considerable success.

We advert more particularly to the travels and services of this our beloved friend, because it does not appear that he kept any account of them, with a view to his meeting the public eye.

On the important subject of silent waiting upon God in religious assemblies, his pen hath been profitably employed; also in a Tender Salutation in Gospel Love.

In 1810, he attended the Yearly Meeting in London, near the close of which he had a dangerous attack of illness; but was restored

to his family and friends. He was afterwards engaged in a few public meetings, and diligently attended those at home, both for worship and discipline, as long as bodily strength was afforded. He experienced some revival of strength previously to the apparent commencement of a gradual decline; which, from a remark to a friend in the Tenth month that year, seemed to be both his prospect and desire: "I have," he observed, "for a considerable time, apprehended I should have a lingering illness; and have never desired it might be otherwise. I do not, as some have, wish for a sudden removal; as I think Divine Providence, as well as Divine Grace, is as much manifested in times of sickness as in times of health; and it now yieldeth me great consolation, that I worked while health and ability were afforded. I now see but little to be done; and it is cause of great satisfaction that I was enabled to perform my last religious visit to London, notwithstanding the evident difference in my health since my return."

At his own meeting, where for some time before his voice had been but seldom heard, he now frequently appeared both in testimony and application, with enlargement, clearness, power, and love; hereby manifesting, as a father in the church, his continued and increasing solicitude for those among whom he had long labored; that they might experience an advancement in the work of religion, under the purifying operations of the Spirit of Truth. The precious feeling and remarkable solemnity accompanying those occasions, we trust will not soon be forgotten.

In the 7th month, 1811, he was seized with violent illness, which he expected to survive only a few days, but being a little revived, he said to a friend that visited him, "I am a poor weak creature, uncertain how this attack may terminate; nor am I anxious about it. For some time past I have been concerned to see the strength afforded, in discharging manifested duties; and, on retrospect, I do not see one religious duty or service left undone. Latterly my labors have been chiefly confined to this meeting, in which I have not spared to deliver the whole counsel of God, and have fully discharged myself; that whether they will hear and obey, or forbear and neglect, it will rest with them; I am clear."

After this he gradually declined; and in the Sixth month, 1812, became very weak. On the 10th of the same, being asked if he had any thing further to communicate to his friends or to the church, after pausing awhile, he replied, "It is now too late," adding, "when I am gone, if friends thought there was any thing in my life and conduct worthy of a testimony, I think the whole or part of the foregoing might be incorporated with it."* The friend having to attend a meeting of ministers

* This alluded to the expressions quoted in the preceding paragraph, which having been put down in writing, were revived at this time.

and elders in the evening, when about to take the final leave, he held his hand, and, under a covering of sweet solemnity, with a calm and expressive countenance, he said, "The Lord bless thee; and may he be with you in all your movements in the promotion of his work! How long the taper may glimmer in the socket, is uncertain; I think it wont be long; my love to friends! Farewell."

After this he spoke but little, appearing in a constant state of patient waiting for the full accomplishment of the Divine will. On Sixth-day, the 12th of Sixth month, 1812, he quietly departed this life, in the 70th year of his age; having been a minister forty-four years; and was interred in the burying-ground adjoining the meeting-house at Sheffield, on the 18th, many friends and others attending.

To his close we believe the declaration to be applicable, "Mark the perfect man and behold the upright; for the end of that man is peace."

Read and approved in our Monthly Meeting held in Sheffield, the 11th of Third month, 1813.

The Police of London.

(Continued from page 96.)

"That criminals pursue their trade as a regular calling is clear from the number of re-committals every year. The thief who has been once in gaol is almost certain to reappear there. He is not deterred by the so-called 'punishment' of the model prison, in which he enjoys food, warmth, and clothing, provided for him at the public expense. So he is no sooner set free than he at once recommences the practice of his vocation. The police had captured him before and handed him over to justice; but after a short term of absence justice restores him to society again. Another round of thefts or burglaries follows; the police catch him again; and again he is handed over to justice, to travel in the same circle of imprisonment, restoration to society, and renewal of burglary and crime.

"The commonest class of thieves are the street thieves, who are of many kinds. Whatever draws a crowd into the streets—a fire, a Lord Mayor's show, the march of a militia regiment, or a Reform procession—brings them together in hundreds. They also attend the May meetings, the Divorce Court, and other places attended by country yokels. A popular preacher 'draws' them largely; and when Mr. Liddon delivered the first of his recent series of sermons at St. James's, Piccadilly, forty purses, and many watches, were abstracted from the owners' pockets. A man who gets into a push amongst the swell mob may be robbed with certainty, unless protected by a cloak, which foils thieves. Two go before the appointed victim and the others close up behind. A push occurs; the person to be robbed is hemmed in, and jostled and hustled about. If he keeps his hands in his pockets, or at his side to guard his property, his hat gets a tip from behind. To right his hat he raises his hands, and in the confusion—with one of the thieves pressing his arms against his chest—his pockets are at once emptied all round. The signal is then given that the robbery has been effected; the push subsides, and the thieves move away in different directions, to re-assemble round another victim and repeat the process.

"A large number of thieves of a different sort prow about spying goods exposed for

sale, and watching for an opportunity of carrying them off. The number of felonies of this sort committed in the metropolitan district in 1868 was 2650; and of the 2084 persons apprehended 1196 were convicted. There are other thieves who break into City warehouses and shops, sometimes contriving to carry off large quantities of goods, which they sell to Jews and pawnbrokers.

"These receivers of stolen goods are among the greatest encouragers of crime. They are not only as bad as the thief but worse. They educate, cherish, and maintain the criminal. The young thief begins by stealing small things from stalls, from shops, from warehouses; or he first picks pockets in a small way, proceeding from handkerchiefs to watches and purses; always finding a ready customer for his articles in the receiver of stolen goods. And when a skilled thief gets out of gaol, without means, the receiver will readily advance him 50*l.* at a time, until he sees his way to an extensive shoplifting, from which he not only gets his advance returned but a great deal more in the value of the stolen goods. The number of detected receivers of stolen goods committed for trial in the metropolitan district for the five years ending December, 1868, was 642; being an increase of 38 on the preceding period.

"The vigilance of the police has probably to a certain extent increased the skill of the thieves, and driven them to new methods of plunder in which detection is more difficult. And they have always been found ready to adapt themselves to new habits, customs, and circumstances. Thus there is a class of ingenious thieves, driven from the streets, who operate upon the pockets of the public through the post-office and the press. Lucrative situations are advertised, and applications are invited from persons prepared to deposit a sum as security; or the remittance of so much in postage stamps is requested in consideration of certain valuable information to be communicated to the applicants.

"Begging letters are of a thousand kinds; sometimes purporting to come from distressed authors, sometimes from distressed beauty and virtue, oftentimes of all from distressed clergyemen. The facilities provided by the post-office are adroitly turned to account by these swindlers. When they remove from one lodging to another, they give directions at the central office, by which the letters of their dupes continue to reach them at their new address. Thus the police are eluded, and the system of plunder is continued. But even when detected, it is very difficult (at least in England, where there is no public prosecutor) to bring the swindlers to justice; as the persons defrauded are mostly of small means, and not likely to be at the trouble or the expense of a journey to London to prosecute the guilty parties.

"The classes who live by plunder have been equally prompt to take advantage of all new methods of travelling. Thus railways have attracted the attention of several distinct classes of thieves. Women respectably dressed, sometimes as widows, haunt the waiting rooms of the railway termini, where they lie in wait for passengers' portmanteaus. No one could suspect any guile on the part of these distressed-looking widows, but on the occurrence of a suitable opportunity, when the owner's attention is called away, or he leaves the room to enquire after a starting

train, the apparently bereaved person suddenly lays hands upon his portmanteau and quietly carries it away.

"Burglars are a distinct order of thieves the greater number of them being liberated convicts and ticket-of-leave men. These, too, are of many classes. Thus, there are breakers into shops and city warehouses, the receivers of stolen goods providing them with a ready vend for the plunder. There are breakers into dwelling-houses, who conduct their depredations on a regular system. Thus on the person of a repeatedly convicted burglar, recently captured and tried at the Old Bailey, there was found a list of dwelling-houses 'put up' for being robbed, on which those which had been 'done' were regularly ticked off! Then there are the breakers in banks, and jewellers' and goldsmiths' shops. These last are the senior wranglers in crime; they are men who will only 'go in for a b'ussing;' and they are spoken of by the profession as 'tip-toppers' and 'first-class crack-men.'

"Two other classes have come up of late 'window-fishers' and 'portico thieves.' The recent attempt on Mr. Attenborough's shop Fleet Street, was made by window-fishers, a it had very nearly succeeded. This ingenious method of robbing-shops has long been known. As long ago as 1833, it formed the subject of the following order issued by the metropolitan police, which clearly describes the means which it is accomplished:—

"The superintendents are to send an inspector to all the jewellers, silversmiths, and others in their respective divisions, who keep chains, &c., in their windows, and explain them the method thieves have adopted of robbing shops of this description, viz. by boring with a large gimlet or centre-bit under the bottom of the window, and drawing chains, &c., through the aperture by means of a hooked wire, the thieves noticing by the time the place in which such property is hidden in the window."

"Two men and one woman, who had been seen hanging about Mr. Attenborough's do were taken into custody as the persons who had cut through the iron shutter and smashed the plate-glass inside; but as the robbery had not been effected, they were only imprisoned for three months with hard labor, under the Habitual Criminals Act. For it is worthy of note that the persons taken were all old thieves. One had been twice before convicted, another four times, and a third five times; and all three are, doubtless by this time at liberty pursuing their vocation, unless again caught and imprisoned.

"There is another class of thieves who enter houses from porticos, thus described a detective in his report to the commissioner:

"Some time ago portico larcenies in the suburbs were very numerous, and of a maraudacious character, being generally committed in the afternoons or evenings, when families were all in or about their houses, the thieves always managing to enter and leave without being seen. This naturally made a most difficult task to trace them. In nearly all cases the thieves committing this class of larceny are well dressed, keeping their clo horses and traps, mostly at livery stables. Some of the carts are made with a box under the seat, the top of which contains cigars, as if travellers, while under this is a bottom containing housebreaking implements."

a this manner they drive about the suburbs without suspicion, sometimes with a very ressy lady."

The Sum of Religion.

Written by Judge Hale, Lord Chief Justice of England, and was found in the closet, amongst his other papers after his decease.

He that fears the Lord of heaven and earth, walks humbly before Him, thankfully lays hold of the message of redemption by Jesus Christ, and strives to express his thankfulness by the sincerity of his obedience. He is sorry with all his soul, when he comes short of his duty. He walks watchfully in the denial of himself, and holds no confederacy with any lust, or known sin: if he falls in the past measure, he is restless till he has made it peace by true repentance. He is true to his promises, just in his dealings, charitable to the poor, sincere in his devotion. He will of deliberately dishonor God, although severe of impunity. He hath his hopes and his conversation in Heaven, and dares not do any thing unjustly, be it ever so much to his advantage; and all this, because he sees Him that is invisible, and fears him because he loves him; fears him as well for his goodness as his greatness. Such a man, whether he be an Episcopalian or a Presbyterian, an Independent or an Anabaptist; whether he hears surplice, or wears none; whether he wears organs, or hears none; whether he kneels at the communion, or for conscience sake stands upright, he hath the life of religion in him; and that life acts in him, and will conform his soul to the image of his Saviour, and go along with him to eternity, notwithstanding his practice or non-practice of things indifferent. On the other side, if a man fears not the eternal God, he can commit sin with presumption, drink excessively, swear vainly or falsely, omit adultery, lye, cozen, cheat, break his promises, live loosely, though at the same time he may be studious to practise every ceremony, even to a scrupulous exactness, or may perhaps as stubbornly oppose them. Though such an one should cry down bishops or presbytery; though he should be rebaptized every day, or declaim against it as a creasy; and though he fast all the lent, or fast out of pretence of avoiding superstition: yet notwithstanding these, and a thousand external conformities, or zealous oppositions of them, he wants the *life of religion*.

How Bank-note Paper is Made.

There are but three mills in America making "bank-note paper," and but one that invariably makes it of the highest standard of excellence. Time was that rigid restrictions were thrown around the production of this material. J. M. Wilcox, Glenn Mills, some distance from Philadelphia city, makes most of the bank-note paper used in this country, and a great deal that is ordered from abroad. He inherits a business that in the time of his grandfather was conducted only under the name of an agent of the government. When an order came for a supply an agent came with it. Of the portion of the mill in which the work was done he took possession. He supervised the entire process, from the maceration of the pulp to the cutting of the sheets. Every sheet was accounted for, and the scraps and cuttings were invariably gathered up and carried away by him. When the amount of

paper required was finished, no more paper could be had except through the authorized source. This caution is now done away with. Any man may make the best or the poorest paper that he can and sell it to whom he pleases. The counterfeiter has a vast trouble with his plates, but with his paper very little.

The American National, the Continental, and the British American engraving companies buy the paper and print notes, charging the parties ordering a fixed price per sheet. The usual size for bank-note paper is fourteen by seventeen inches the sheet, each sheet making just eight notes. The material of the paper is wholly linen. It was once made of silk, not by machinery, as it is now, but by hand. It was not an object to bleach it. This very article is written on a venerable sample of pinkish paper, in which may be seen threads of scarlet pulp, in which the dye had been purposely left undischarged. Machinery now does all this work. The material is linen, imported from Ireland expressly for this purpose, and the paper is therefore white as snow. The material was formerly made expressly for bank-note paper, for the Messrs. Wilcox, direct from the flax; but the linen factories—of course at a high price—keep up the supply from the cuttings of their products. Miscellaneous rags come from continental countries—Italy, Spain, and the neighboring kingdoms chiefly; but these people do not wear linen, and consequently do not have linen ratters to dispose of.

A disclosure of the minutiae of making this precious paper would be a violation of confidence. The mills are situated upon a limpid creek in Swansbury township, Delaware county. They produce all kinds of fine and collar papers; but this special manufacture comes under the head of "curious," and therefore receives our attention. It is interesting all through, for the linen taken into the fourth story of the building by one uninterrupted process, all done by machinery, is delivered in sheets from the cutting machine upon a snow-white table, in front of a girl dressed as carefully as if at a lady's tea party, who packs it into wrappers for delivery. American government and bank paper needs to be good. It is longer in use than any other paper in the world. The bank of England does not a second time issue the same notes; ours go from hand to hand, sometimes until their identity is almost obliterated. Neither English nor French notes are nearly so well-looking as ours. Neither the paper nor the engraving approximates in excellence the work done for our government. The paper from Glenn Mills is always the same, whether the price of materials and skilled labor rises or falls. The Eastern makers (of whom there are two) differ from the Philadelphia mills in furnishing the article in proportion of excellence to the price they agreed to take for it.

J. M. Wilcox recently delivered a lot of paper to the office of the American Bank-Note Company in this city, ordered for the printing of its paper money by the little kingdom of Greece. Every sheet bears in inerasable and uncounterfeitable letters a specific mark, made in the pulp by the delicate wire serving on which it is dried. If this were introduced by banks in general counterfeiting would be virtually impossible. The writer is told that the Treasury Department is reducing to pulp and again working over its worn-out and cancelled paper. To make bank-note

paper three things, or rather four things, are necessary: A considerable capital; absolutely pure water, that must be even then filtered before fit for use; elaborate and especial machinery; and last, but not least, an intimate and perfect knowledge of the business. Hard water, though coming from crystal springs that weep from rocky, moss-clad walls, would do. In these mills the soft, placid water of the creeks is carried to the apex of the building, where a ten thousand gallon tank is never empty, and each drop undergoes filtration that gives it all the purity of the distilled water on the shelf of the apothecary.—*Philadelphia North American*.

Selected for "The Friend."

The Way of Life and Death made manifest and set before men.

The true rule of christianity, or the rule of a christian, which is to direct, guide, and order him in his whole course, was apostatized from, and lost. What is a christian's rule, whereby he is to steer and order his course? A christian is to be a follower of Christ, and consequently must have the same rule to walk by as Christ had. A christian proceeds from Christ, hath the same life in him, and needs the same rule. Christ had the fulness of life, and of His fulness we all receive a measure of the same life. We are members of His body, of His flesh, and of His bones. Ephes. v. 30. Yea, we came out of the same spring of life from whence He came: For both He that sanctifieth, and they who are sanctified, are all of one; for which cause He is not ashamed to call them brethren. Heb. ii. 11. Now what was His rule? Was it not the fulness of life which He received? And what is their rule? Is it not the measure of life which they receive? Was not Christ's rule the law of the Spirit; the law which the Spirit writes in their hearts? How was Christ made a king and a priest? Was it by the law of a carnal commandment? Or by the power of an endless life? And how are they made king's and priests to God? Rev. i. 6. Is it by the law of a carnal commandment? Or is it by the power of the same endless life? Lo, I come, to do thy will, O God, saith Christ, when He cometh into the world. Heb. x. 5, 7. But by what rule? By what law? Thy law is written in my heart. Psa. xi. 8. And the same Spirit who wrote it there, is also to write the new covenant, with all the laws of it, in the heart of every christian, from the least to the greatest. Heb. viii. 9, 10. Yea, the same Spirit that dwells in Christ's heart, is to dwell in their hearts, according to the promise of the covenant. Ezekel. xxxvi. 27. This was Paul's rule, after which he walked, "The law of the Spirit of life in Christ Jesus." Rom. viii. 1, 2. This made him free from the law of sin and death. Where is the law of sin written? Where is the law of death written? Is it not written in the heart? And must not the law of righteousness and life be written there also, if it be able to deal with sin and death? The spirit forms the heart anew, forms Christ in the heart, begets a new creature there, which cannot sin (he that is born of God sins not.) And this is the rule of righteousness, the new creature of the Spirit of life in the new creature. Galla. vi. 15, 16. In Christ Jesus, neither circumcision availeth anything, nor circumcision, but a new creature. And as many as walk according to this rule, peace be on them. Mark; There is the rule; the new crea-

ture, which is begotten in every one that is born of God. If any man be in Christ, he is a new creature; and this new creature is to be his rule. And as any man walks according to this rule, according to the new creature, according to the law of light and life that the Spirit continually breathes into the new creature, he hath peace; but as he transgresses that, and walks not after the Spirit, but after the flesh, he walks out of the light, out of the life, out of the peace, into the sea, into the death, into the trouble, into the condemnation. Here then is the law of the converted man, the new creature; and the law of the new creature is the spirit of life which begat him, which lives, and breathes, and gives forth His law continually in him. Here is a christian; here is his rule; he that hath not the new creature formed in him is not christian; and he that hath the new creature, hath the rule in himself. Ye have an unction from the Holy One, and ye know all things. 1st John ii. 20. How came they to know all things? Doth not John say, it was by the unction? The anointing was in them, a fountain or well-spring of light and life, issuing forth continually such rivers and streams of life within, as they needed no other teacher in the truth and way of life. The Comforter did refresh their hearts sufficiently, and led them into all truth. Search the Apostles' epistles, and ye shall find them testifying of the Lord's sending His Spirit into the hearts of christians; and exhortations to them not to grieve or quench the Spirit, but to follow as they were led. They were to live in the Spirit, and to walk in the Spirit. Gal. v. 25. And the Spirit was to walk, and live, and bring forth His own life and power in them. 2d Cor. vi. 16. And what can be the proper and full rule of God's sons and daughters, but the light of the Spirit of life, which they receive from their Father? Thus God did advance the state of a believer above the state of the Jews under the law; for they had the law, though written with the finger of God, yet but in tables of stone; but these have the law, written by the finger of God in the table of their hearts. There was a law without, at a distance from them, and the priest's lips were to preserve the knowledge of it, and to instruct them in it; but here is a law within, nigh at hand, the immediate light of the Spirit of life shining so immediately in the heart, that they need no man to teach them; but have the spirit of prophecy in themselves, and quick living teachings from Him continually, and are made such kings and priests to God, as the state of the law did but represent. The Gospel is the substance of all the shadows contained in the law. A christian is he that comes into this substance, and lives in this substance, and in whom this substance lives; and his rule is the substance itself, in which he lives, and which lives in him. Christ is the substance, who lives in the christian, and he in Christ; Christ lives in him by His Spirit, and he in Christ by the same Spirit; there he lives, and hath fellowship with the Father and the Son, in the light wherein they live, and not by any outward rule. 1st John i. 6, 7.

But what is the rule now in the apostasy? Among the Papists, the rule is the scripture, interpreted by the church (as they call themselves) with a mixture of their own precepts and traditions. Amongst the Protestants, the rule is the scriptures, according as they can understand them by their study, or ac-

ording as they can receive the understanding of them from such men as they account orthodox. And hence arise continual differences, and heats, and sects, one following this interpretation, another that.

And this is a grievous apostasy, and the root, spring, and foundation of all the rest, for he that miseth in his beginning, he that begins his religion without the true rule, how can he proceed aright in anything afterwards?

(To be continued.)

Superstitions of Egypt.

BY ABBOT E. KITTEDGE.

Egypt is a land whose glory was co-temporaneous with Abraham, but is to-day the thrilling fulfillment of sacred prophecy: "She shall be the basest of nations." On her vast, solemn ruins may be traced the hand of that divine, omnipotent Providence which not only controls governments and nations, but also levels their power and glory to the dust, when "It seemeth good in His sight." His chariots roll over every obstacle. Nothing can stand before his wrath. To one visiting that ancient land, the customs and manners of the people are as interesting as the ruins of temples; for their very superstitions are the ruins of former greatness and power of mind and heart.

No one fact impresses you more than the use of seemingly religious words and phrases in the most ordinary conversation, and from the lips of those who are ignorant, irreligious, and morally corrupt and degraded. The name of God is as familiar as that of mother; and yet is used with [little] conception of its sacred, sublime meaning. I remember many illustrations of this which came under my personal observation. The song of the sailors on the Nile boat, as they rowed or pushed the vessel with poles from the shore, was invariably in words such as "Trust in God," "Pray to God," repeated over and over again. Before commencing a meal, which they eat with their fingers, having formed a circle on the deck, each one exclaims, "God is good, may a blessing follow this meal." One of the sailors, who had been absent from the boat for a few days, was greeted on his return with: "Thank God, you have returned;" "Peace be to you;" "May you be blessed, because you are returned;" "The Lord be with you in peace." The morning call which wakens the sailors from sleep is: "My brothers, come to prayers. Come to prayers." And when they meet or pass other boats, salutations are exchanged like these: "The peace of God be with you;" "May you have peace." Our cook, who was a miserable, dissipated fellow, was particularly earnest in his ejaculations of *religious peace*, his favorite expression, when excited, being: "Oh, repentance! Oh, repentance!"

No Arab ever commenced to write a book or an article of any kind, though it may be of an irreligious and even licentious character, without first writing these words on the title-page; "In the name of God, most compassionate and merciful;" or, if the writer be a Copt, "In the name of God, the Father, the Son, and the Holy Ghost." It is a curious fact that no Egyptian boy or man ever whistles or is willing to make the attempt. They firmly believe that it is one of the peculiar characteristics of the Devil, who whistles in order to entice and entrap the souls of men,

I had an opportunity of testing this one evening, as our boat was anchored at the litt village of Assouan, on the Nile. The sheikh of the village honored us by his presence, accompanied by his principal men, one of who led by the hand his son, a lad of about twenty years of age. Thinking to amuse him, I gave him a small whistle, which he grasped eagerly, but the father snatched it quickly from his hands and returned it to me, saying, "It is not good, it is not good." I took it, and whistled through it myself, supposing that the father had mistaken its character; when the old sheikh interrupted me by placing his hand on my shoulder, saying, "No, no! Ho adj, it is not good. God has given us a mouth to speak with; and to make that noise is not good."—*Independent.*

Javanese Etiquette.—As the lamps were of a very primitive description, they require trimming afresh every two or three hours. On account of the presence of royalty, the simple operation was performed with form the novelty of which afforded us much amusement. Two men, naked to the waist, approached the gay scene, one bearing a shoulder ladder, the other a small lamp. Pausing few yards from the Pringtang, [audience hall] they made obeisance to the royal seat, which at the moment was vacant, its usual occupant being deeply engaged in his rubber. After bowing three times nearly to the ground, they raised their two hands to their face in the manner I have previously described.

Ascending the steps, the same ceremony was gone through a second time. The man bearing the ladder then placed it before the lamp, and his companion put the light on to step. Now, thought I, they will certainly proceed with the business in hand. But no more yet remained to be done. Turning their faces to the empty chair, they knelt, bowed, and elevated their hands. One of them first ascended the ladder, which was held for him by the other, and, while actually trimming the lamp, repeated the same forms which I had been already more than once observed. Descending, they went through a similar series of genuflections, &c., before removing the ladder and light to the next lamp. These obeisances, with all the mechanical patience of automaton, they repeated until the tedious work was done, when they retired backward saluting the unconscious monarch.—*Du Med's Life in Java.*

A Constant Miracle.—The Bible itself is standing and astounding miracle. Written fragment by fragment throughout the course of fifteen centuries, under different states of society, and in different languages, by persons of the most opposite tempers, talent, and editions, learned and unlearned, prince and peasant, bond and free; cast into every form of instructive composition and good writ history, prophecy, poetry, allegory, emblematic representation, judicious interpretative literal statement, precept, example, proverb, disquisition, epistle, sermon, prayer, in such all rational shapes of human discourse, as treating, moreover, on subjects not obvious, but most difficult—its authors are not only like other writers, contradicting one another upon the most ordinary matters of fact and opinion, but are at harmony upon the whole of their sublime and momentous scheme.

transportation of Fresh Meats and Fruits through long distances.

The following account of a newly introduced refrigerator car, designed for the conveyance of the perishable products of the farm to our markets is given by the Editors of the *St. Louis American*, in a late number of that paper.

Having learned that the car had arrived, I visited the Hudson River Railroad Depot examined both the car and its contents, and found, so far as we could judge, that its cargo of grapes, peaches, and pears was in as good a condition as when shipped. The fruit actually exhibited neither mold nor decay to any noticeable extent. The packages were perfectly dry; there was no odor of decay or other indication that the fruit—which we were informed had been twenty-four days in the car—would not keep for as many days as ever.

Several packages selected at random were opened in our presence, and appeared in uniformly good condition, and found of good, full or when tasted.

Our readers will be interested in the construction of this car, which, though strictly in accordance with scientific principles, is extremely simple.

The shell of the car consists exteriorly of ordinary wood casing. A second wooden shell is made smaller than the first, and placed within it, so as to leave an air space or air chamber entirely around the top, bottom, and sides of the car. Within this second shell is added a layer of hair, about two inches in thickness, and this again is lined with an inner wooden shell. This construction makes a non-radiating and non-conducting compound, in the case of great power to resist the action of external heat, and renders the expense of ice quite small to maintain the desired depression of temperature, after the interior of the car and its contents have been cooled down to the proper point, say from 34° to 30° Fahrenheit.

The refrigeration is accomplished in the following manner: along the sides of the car are introduced sheet-metal tanks shaped like the frustrum of a very gradually tapering wedge. These tanks extend from the top to the bottom of the car, and are about five inches thick at the top and one and one-half inches at the bottom. These tanks communicate at the top with the exterior of the car through funnel or hopper-shaped openings, and at the bottom through pipes which convey away the moisture. The funnel-shaped openings at the top are provided with putting in the refrigerating mixture consisting of broken ice and salt, and are provided with air-tight covers. The car is entered through a hatchway at the top through which its freight is also introduced. This hatchway is also provided with a tight fitting door, made non-radiating and non-conducting like the sides of the car.

The store of ice and salt for the trip is contained in a separate department in one end of the car, so that its contents can be reached, the refrigerating tanks supplied without leaving the freight room.

The freight is placed in the car on strips of board, also preventing its coming in contact with the walls of the refrigerating tanks. The packages are also so placed as to leave interstices through, between and under each. During the process of refrigeration the air circulates around the packages

and along the sides of the tanks like water in a steam boiler, the colder air falling, and the warmer air rising to the top, becoming chilled in its passage along the sides of the tanks, and depositing its moisture on the tanks till their sides are covered with a thick stratum of congealed water or hoar frost. Thus the air is not only cooled but dried, no accession of moisture being derived from the external air or from the ice in the tanks, with either of which the interior of the car has no communication so long as the car is kept closed.

The two essentials for the preservation of substances liable to ferment, namely, absence of heat and of moisture, are thus secured in a very perfect manner, and the arrangement of the tanks is such that the space within the car for the storage of freight is not materially reduced. Some addition to the refrigerating mixture in the tanks is made each day, and the temperature is easily regulated and kept at the desired point by the addition of more or less salt in proportion to the charge of ice.

The proprietors express the utmost confidence that they can ship meat or fruit from any part of the continent to any other place, no matter how remote, and not only have it in good condition when taken from the car, but in a state which will guarantee its keeping after removal therefrom as long as it would have done previous to its shipment, under the same conditions. Certainly what we have seen goes far to warrant this confidence, and for the sake of humanity at large, we sincerely trust future experiments will prove as successful as the one we have described, and as others which we have not seen, are represented to have been."

For "The Friend,"

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 100.)

The following letter to William Evans, is dated,

"8th mo. 28th, 1855.

"My dear friend, William Evans,—Although I feel but little ability to use the pen (indeed my ability is small at any time) yet feel inclined to acknowledge the reception of thy welcome letter, wherein a hope was renewed that all is not lost which may seem in danger. I have never been without the hope that our poor Society will not be utterly laid waste, believing there are a few in the different places who may be compared to the remnant of Jacob in the midst of many people as a dew from the Lord. As these are faithful to their Divine Leader, striving through His aid to uphold the excellent testimonies given to us as a people to bear, I trust they in the Lord's time, will be brought to see eye to eye; to walk by the same rule, and to mind the same thing; and to be built up a spiritual house to the praise of His excellent Name. In this day of unsettlement and close proving, the language often arises, Study to be quiet, and mind thine own business. If this concern was more generally prevalent amongst us, a high professing people, there would be less time and inclination to dwell upon the faults of others. Oh how busy the evil one is sowing tares which seem to be springing up abundantly, to the great detriment of the weighty wheat. Will not the Lord arise for the help of His people; they who have none in heaven but Him, nor in the earth in comparison of

Him? Yea, I trust He will in his own time arise for the deliverance of these.

"I unite with thee in believing that if the spirit of supplication was lived in by the members universally—and it is the duty of all—our hearts would be softened towards one another, and that mercy which we crave for ourselves would be sought for others also. How often have I desired that this kind of feeling might more prevail amongst us. It would, I believe, do more for us than any mere instrumental means, or all the separations that can be devised by man. This is a day of suffering to many; and I am sometimes grieved to find so much impatience in some to endure it, accompanied with such a desire for separation, hoping thereby, I suppose, to experience relief, without, it is to be apprehended, sufficiently considering the importance of the step in the first place. It is indeed sorrowful that so much dissuade should prevail as to cause it, whereby sad and heart-rending feelings are experienced, not only in meetings and neighborhoods, but also in some instances it descends to families; very different indeed to the comfort which is at seasons experienced by the disciples of our blessed Saviour, who we profess to be followers of. May patience more and more abound amongst the members of our poor unsettled Society, and may He who can turn the heart of man as a man turneth the water-course in his field, be pleased to take the work into His own hand, and then who shall let it.

"I was glad to hear of your Quarterly Meeting. What a favor it is after a season of desertion and discouragement, to be permitted to feel a little of the breaking of bread amongst us, by which the pure mind is strengthened and encouraged to persevere in the tribulated path, trusting in Him who giveth power to the faint, and to them that have no might he increaseth strength.

"I am sometimes comforted in the belief that there are but few in our Monthly Meeting who are favorable to the new views, and in our own meeting for worship, though sensible of the great need of religious weight, being as to myself often like toiling all night and catching nothing; yet, at other times, a comfortable hope is felt, that there are a number meet with us on First-days, not in membership, who are seeking the blessed Truth for themselves; reviving the language, 'Other sheep have I not of this fold; them also will I bring, and there shall be one fold and one Shepherd.'

"My late indisposition, from which I did not desire nor expect to be restored, was attended with much suffering; but through unmerited mercy my mind was kept for the most part, in quiet resignation, and at seasons I thought an evidence was granted, that I, poor and unworthy as I am, was not cast off by Him who careth for the sparrows—an unspeakable mercy, which I desire to have in grateful and thankful remembrance. My head continues in a weak state, and I am not able to write much at a time, yet there seemed an obligation with me of grateful acknowledgment for our being remembered by you, my beloved brother and sister in the Truth. With much love to dear Elizabeth and thyself, in which my J. unites, I remain your sincere friend,

H. GIBBONS."

Her diary is resumed "9th month 2d." We had the company of our beloved friends W. and E. E. from Philadelphia, at our meeting. Their

gospellabors were acceptable and solemnizing; their company at meeting, and at our house, was strengthening and encouraging, even as a brook by the way to weary travellers. Truly there is strength in unity.

"9th mo. 23rd." After an allusion to a season of strippedness and poverty, she thus continues: "Through the condescendings of our heavenly Shepherd, my mind became impressed early in our meeting this morning with solemnity; and desires were renewedly raised for our spiritual advancement in the straight and narrow way which leads to life and peace. The expression of it seemed required; and also to supplicate the Father of mercies, that He would be pleased to extend the crook of His love, even to those who had strayed from his house: and that He would make them sensible, that in it there is bread enough and to spare. My mind now enjoys a peaceful quiet, for which I desire to be renewedly thankful to Him, who, when he opens none can shut, and when he shuts none can open.

"11th mo. 4th. My dwelling is often in low places; poverty and leanness being much my portion, wherein doubts and fears often arise lest I have offended my gracious Master. But Thou, O Lord! knowest my departures from thy requirements have been more from a fear of going too fast, and that it should be said unto me, Who hath required this at thy hands; than from wilful disobedience.

"12th mo. 16th. I went to meeting in fear and care lest a wandering mind, or a drowsy spirit, should gain the ascendancy: but after a season of close labor, He who can alone help his feeble children, was pleased to afford a little help, and I was given to see renewedly and impressively, that it is only by the aid of our merciful Heavenly Father, that we are enabled to work out our soul's salvation. Oh, then the need of watchfulness unto prayer! Many passages of Scripture were brought to my remembrance for my own instruction I believe, as no command was felt to offer them to others. Gracious Father! be pleased I beseech Thee, to keep me from kindling a fire of my own, and warming myself by the sparks thereof, lest I should have to lie down in sorrow.

"3rd mo. 23d, 1856. For sometime past, I have for the most part, experienced such a state of strippedness and poverty, as has caused much searching of heart, with the query, why is it so? The silent language of my spirit also frequently was to the Father of mercies, 'Cast me not off in the time of old age; forsake me not when my strength faileth.' These seasons of poverty and desertion, I believe, are intended for our instruction in the heavenward journey; giving us to feel our entire dependence; and that without Divine aid we can do nothing. Yet this day my mind was renewed and quickened with desire, early in the meeting, for the welfare and preservation of the youth present, and ability was given I believe, to supplicate for those who were seeking pleasure in their outward enjoyments, that they might be given to see the unsatisfying nature of them, and their hearts be turned unto Him in whom alone there are substantial joys; for those also who had been delaying the important work of the soul's salvation, even until it might be the eleventh hour. Supplication was put up to the Father of mercies that they might be enabled to lay aside every weight,

and every burden, and the sins that so easily beset them, and cleave unto Him who alone is able to strengthen them to walk in the paths of regeneration and newness of life. Afterwards it seemed right for me to stand on my feet and extend a tender invitation to the beloved youth to yield to the visitations of heavenly good; to be willing to take up the cross, and follow their blessed Saviour in the way of His leadings; that so they might be prepared, in the closing moments of time, to enter that city which hath foundations, whose builder and maker is the Lord. My mind this afternoon enjoys a comfortable quiet, for which I desire to be thankful to Him, whose ways are not as our ways, and whose dispensations are all in inscrutable wisdom."

After the perusal of such a memorandum who can but exclaim, O the desirableness of being followers of those who are followers of Christ—those who, through faith and patience, inherit the promises! How desirable to walk worthy of the vocation wherewith we are called, in all lowliness and meekness; and thus fulfil the will of our Father in heaven, as well as the longing solitude concerning us, of those who have watched for our souls as they who must give an account; those who could say, in their measure, with the Apostle, "If there be any consolation in Christ, if any comfort of love, if any fellowship of the Spirit, if any bowels and mercies, fulfil ye my joy." &c. Such as Hannah Gibbons could practically hold out to us the inviting language of one of old: "We are journeying unto the place of which the Lord said, I will give it you: come then with us, and we will do thee good;" &c. Well may the query have place with us, Are we, in the tribulated journey, from the regions of time to a never-ending eternity, walking in the narrow way—the only one to life—with those who are seeking for themselves the chief good, and who will do us good? It is the subjection of the will, and the submission of the heart to the Lord Jesus, who stands at the door and knocks, that He calls for. When this blessed state of resignation and humility is reached, and the government placed upon His shoulders, then He who said, "I am the light of the world," will open our understandings that we may understand the Scriptures, and the things concerning Himself; will discover to us our duty, and in what our salvation consists; and will enable with fear and trembling to work it out. And, as was the case with the beloved subject of these memoirs, the pace would quicken as we approached the journey's end, even as the power of spiritual attraction increases as the distance lessens. For, "the path of the just is as the shining light, that shineth more and more unto the perfect day."

May our dear young friends by the example before us, be also afresh animated to diligence and faithfulness in dedicating themselves wholly, body, soul, and spirit, to the Lord of life and glory who has bought them, so as with full purpose of heart to walk as he enjoins, in the narrow way of self-denial and the daily cross, unto holiness of life and conversation. Such He will then acknowledge and honor; make His yoke easy to, and his burden light; cause His face to shine upon them and give them peace. Surely there are no joys at all to be compared to those which the dear Redeemer, in whom are hid all the treasures of wisdom and knowledge, and who hath all power in heaven and in earth, gives

to those, who, as little children, are willing to yield themselves to the precious influence of His Spirit, and in self-renunciation, to sit quietly at His feet to hear His word. Then He will sweetly gather, as a hen doth brood under her wing; will carry in His arm; will preserve from evil that it may not get them; and enable to grow in grace, and in the knowledge that is of, and to, and thro' Him, unto eternal life. These, through His only kindness, will experience His ways of peace; and that, "In His presence there is fullness of joy; at His right hand there are pleasures forevermore." Would that this with fixedness of purpose and holy resolution might choose, with a wise ruler in and Israel, "rather to suffer affliction with people of God, than to enjoy the pleasure sin for a season; esteeming the reproach of Christ greater riches than the treasure of Egypt: for he had respect unto the recompense of the reward!"

May the following impressive testimony from a letter of our dear friend Thomas Estlin about two weeks before the close of his valuable life, have due place with us all, and especially with the very interesting younger generation of our members, to whom it most allude: "We are not forsaken of the Lord in our religious assemblies, and I trust there is good store for this people. He has evidently cast us off, and I have a hope He will yet eminently turn His hand on us, purge dross, and the tin, and the reprobator, and by the effectual, cleansing operation of His Spirit, qualify and raise us up from the younger classes, judges and counsellors under His guidance, will nobly lift the banner which He has given our souls to be displayed in behalf of His Truth that we could see the dear children and young people making a full surrender—not half-half—but bowing and submitting to the and cross of their dear Redeemer, and putting the government of themselves in the word, and action, on His shoulder. Peace would often flow as a river, and older friends would have the cheering joy that instead of the fathers there would be sons; and daughters would come up holy magnanimity and firmness, to fill the places of the mothers in Israel."

(To be continued.)

Bunyan was right when he gave it a conviction that, that religion is not much, which does not begin more or less heaviness of mind. To set out in the way of God, and dance along the heavenly road the tripping tune, "Religion never was designed to make our pleasures less;" and all to make sport of a broken heart and a brittle spirit; to laugh at doubts and sorrows which arise from the application of the word in its spirituality, and the lack of the application of the blood and righteousness of Christ belongs to those who have a name that they live, and are dead. It is better long to endure the smarting of the wound, than to be deceived slightly by the cry of "peace, peace, there is no peace." It is better to mourn, covered with sackcloth and ashes, than have any other hand, save that of the Lord the Spirit, "turn the mourning into dancing; take off the sackcloth, and gird you with gladness." (Psalm xxx. 11.)

rinting in the Chinese Language.—The editor of the New York Observer in "The Tour and the World," gives the following description of the difficulties of book-making in a:

One of the first places that I visited on my tour of Shanghai, was the Mission Press of the Presbyterian Church of the United States, wisely founded institution, which has been doing a great work. It is the most extensive printing establishment in China, and has been sending its light into Japan as well. The work of Dr. Hepburn, of Yokohama—quarto Japanese Dictionary—was printed in his press; and during the last year, the 1st edition, 2,400 copies, of another Japanese Dictionary, the first two editions of which were printed at Yeddo, has been printed. It is a type foundry as well as a printing house, with judicious and liberal management, it has made an important engine for good to come as it has been in the past. In the year 1868, 25,000,000 pages were printed at this press; and in the present year the whole of the New Testament and of the Christian's Progress has been admirably electrotyped. I have before me a copy of the Pilgrim's Progress in Chinese, illustrated with drawings drawn and executed there, and a copy of the Peep of Day, in Chinese, printed at the same press.

On entering this extensive printing establishment, I was confronted with a series of lithographers, in the interior of each of which I saw a compositor; and I saw at a glance the immensity of the work which every one learns to read or speak or print the Chinese language has to encounter. Each of these amphitheatres was what printers call a galley, containing, not twenty-six letters as in English printing offices, but more than six and six different characters of types, and, combinations that are made, more than thirteen thousand. I do not much wonder that the Chinese adhere to their old mode of engraving everything on wood when they print, for I should be very loath to hunt up many letters or words out of six thousand boxes that I saw before me. And yet this mode of printing is a great improvement on the old.

How different would things be amongst us were people, if all those who wish to be conformed to under the divine, forming hand, and are ready to step into service, were but employed, and their beauty stained in their own eyes! Many spacious buildings on a good foundation would then be thrown up, and there would be more exercise and search in the immovable Rock of which really in many places seems grossly neglected.—Sarah Grubb, 1786.

THE FRIEND.

ELEVENTH MONTH 26, 1870.

der the editorial head in the last number of the (London) Friend we find the following: "It does not surprise us that a fellow in Dr. Ash's article on the Beacon Convent in our number for the Ninth month, 'originally suggested to me by J. J. Gurney,'—should have been promptly laid off by the editor of the (Philadelphia) Friend, and reproduced in italics. We would

only observe, in reference to what seems the obvious design of our contemporary, that it can have little success with those who have carefully, and without prejudice, perused the writings, whether published or otherwise, of the able author referred to. Those who have not yet done so, we have only to refer to J. J. Gurney's "Essays on the distinguishing Views and Practices of Friends," especially to the "Addendum" on Universal Lights, made to the first chapter, and to the third chapter "On the perceptible influence and guidance of the Spirit of Truth." The early pages of his "Chalmeriana" may also be referred to, as elucidatory of what were his real sentiments."

We know of no reason why our fellow editor should have been surprised. Our "design" in quoting Dr. Ash's assertion was, as he says, "obvious"; viz., to show that the suggestion to the Doctor, of Barclay's doctrine of the Inward Light not being, as a whole, warranted by Scripture, originally came from J. J. Gurney; and it is not clear to us yet, why it should be necessary to read the works referred to, in order to make this obvious design have "little success." The assertion is Dr. Ash's, not ours. It is either true or false, and with or without prejudice, we do not see how those works can invalidate it. We observe that a writer in the last number of the *British Friend*, quotes the same passage and italicises the same words that we did, to account for "the mischievous tendency of the labors of the committee" in the Beacon case. The reiterated caution against "prejudice," to those who read the works of J. J. Gurney, and the charge of "prejudice" made against those who differ from some of the sentiments in those works, have become almost ludicrous, exciting a smile at the uniformity of this peculiar mode of defence. In regard to ourselves we have said before, and we now repeat it, that we had no such feeling towards J. J. Gurney, while living, nor do we entertain such feeling for his memory. We have never doubted that he possessed those traits of character his friends ascribe to him, and that those traits drew his friends to him in tender affection. But he placed himself before the world as a teacher of religion, as an exponent of Quakerism; but as he himself acknowledged, not the Quakerism of Penn, Pennington and Barclay, and (we hope our London contemporary will not, as he has done, mistake our *animus*), we think it savors of weakness, to hold up the idea of *prejudice*, whenever those who conscientiously believe them to be errors, point out the differences between views inculcated in some parts of his published works, and those heretofore held by the Society, and promulgated by its founders. It would be just as reasonable to charge J. J. Gurney with prejudice, because he declared that Penn's, Pennington's and Barclay's delineation of Quakerism have their defects, which he labored to change. The principles inculcated in his writings are open to fair criticism; and it is with some of them we have a controversy, and not with their author.

In the letters addressed to Friends, Ralph Wardlaw, a Presbyterian Minister, expresses the views produced on his mind by the published doctrinal expositions of J. J. Gurney, in more sweeping language than we would be willing to use. We think he thus writes: "The terms in which Mr. Gurney invariably speaks of the holy Scriptures, and which it is my delight to see him using, are such, as to

convert those employed by him, respecting the independent influence and guidance of the Holy Spirit, into little more than words without meaning." This conviction could not have been the result of *prejudice*.

We have received the 10th month number of "The Monthly Record, A Journal of Home and Foreign Missions, First-day Schools, Temperance, and other Christian work in the Society of Friends," printed at Birmingham, England. In it is an article, written apparently by the editors,—under the heading of "The Bible Reading and Mission Meeting of Friends," which has been marked, we suppose by whoever sent the papers, to draw attention to its assertions and tone. We apprehend if we give our readers one or two short extracts from this article, they will see it does not require comment from us. Alluding to the departures from the testimonies of Friends mentioned in a communication which was copied from the "British Friend" into the 11th number of this journal, headed "Whither are we tending," we have the following, (the italicising is ours). "These and many other things to be found among our members have not been the result of the Bible reading and Mission meeting movement, but have been the direct result of the principles of the Philadelphia Epistle—how many of the children of Friends in Philadelphia have been driven into the gay world, let others tell." To this the following note is attached. "We understand that the principles of Philadelphia Yearly Meeting have been the ruin of the numerical position of the Society of Friends in America. It is said that it is understating the case to say, that half the children of Friends eventually leave the Society in that Yearly Meeting."

Speaking of those who it is said "Fairly represent every section of religious opinion in our Society, except it be that which is opposed on principle to the progress of the gospel of our adorable Lord and Saviour," we are told "They believe that the sophisms of the Philadelphia Epistle would have had to encounter the wit and eloquence of Penn, and the logic of Barclay, who would have shown that their 'Principle' did not lead to such conclusions."

We may observe that it is not correct to say the "principles" of Philadelphia Yearly Meeting have been the cause of many who were its members, leaving it; but it is true that many have left, because it would not sacrifice its principles. Thus, it endured a great fight of affliction because it would not give up the doctrines of the divinity, atonement and mediation of our Lord and Saviour Jesus Christ; and thousands separated from it, who might have been retained by letting the principles go; and we doubt not many have left, since that day, because the Yearly Meeting and its branches were unwilling to compromise the principles of Friends. But this is no test of the truth or error of the principles themselves. When our blessed Saviour declared the mysterious doctrine, "Except ye eat the flesh of the Son of Man and drink his blood, ye have no life in you," many of his disciples murmured, went back, and walked no more with him; but He did not retract or change the doctrine in order to bring them back. Although He told his disciples that "wide is the gate and broad is the way, that leadeth to destruction, and many there be which go in thereat; because strait is the gate and narrow is the way which leadeth unto

life, and few there be that find it." He gave no intimation that he would, at any future time, change the entrance or widen the way, in order to induce the multitude to flock into it.

In the list given in this "Record" of "Bible reading meetings, and mission efforts," which is said to be imperfect, we note a few, as affording our readers some idea how things are progressing.

Hitching. "In the regular meeting for worship on First-day morning. The bible read five minutes after the time for assembling." Scarborough. "The bible read at the commencement of the meeting; five Friends appointed to select the chapters and to read." Salford Walden, Mission meeting. "Bible reading, teaching address, hymns sung." Nantwich. "On First-day, in lieu of the usual meeting, a bible reading meeting." Doncaster. "First-day afternoon, in lieu of the usual afternoon meeting, a bible reading meeting; two Friends appointed by the Preparative Meeting to take charge of it." London, Bedford Institute. "Morning mission meeting; bible read, teaching address, hymns sung." Westminster Mission meeting. "Held every First-day evening in Friends' Meeting-house. Bible read, hymns sung, teaching address." Settle. "A scripture reading meeting instead of the usual meeting for worship on First-day afternoon." Taunton. "Scripture read at the commencement of the First-day evening meeting." At Bristol, a mission meeting is held under the care of a Friend holding a minute from the Monthly Meeting, wherein the scriptures are read, teaching address; free prayers for members of the congregation, hymns sung."

We suppose we may, ere long, have a similar record of "christian work" going on among members here; when our meetings for worship will be turned into bible reading meetings, and our meeting houses resound with "hymns sung." How sadly is our Society exemplifying the truth of the proverb: "He that despiseth the day of small things, shall fall by little and little." May we be more and more joined together, with one heart and one mind, to cleave to the faith of the gospel as held by our forefathers, which made them, and can yet make us, as a city set upon a hill that cannot be hid.

SUMMARY OF EVENTS.

FOREIGN.—On the 17th inst., the Spanish Cortes, by a vote of 191 against 120, elected the duke of Asta, second son of Victor Emmanuel, king of Italy, to be king of Spain. The duke is generally well received throughout Spain. A committee consisting of fifteen members of the Cortes, has proceeded to France to present the crown to the duke of Asta.

Treaties have been concluded admitting Bavaria, Hesse Darmstadt, Baden and Hesse into the North German Confederation. A treaty with Wurtemberg has been concluded but is not yet signed.

The circular of Prince Gortschakoff concerning the treaty of Paris in 1856, rectifies the successive alterations and violations of European treaties; among them that of 1856; and he is unable to see why Russia should observe the latter as it has been disregarded by others, and therefore Russia disavows its obligation to the limited enjoyment of the Ezine sea, and invites the Sultan to enjoy equal rights with her. Earl Granville's reply to the Russian circular denounces the right of Russia to recognize the European situation as releasing her from the obligations of a solemn treaty. It also denies that, assuming as true that one of the contracting powers considers itself released from a treaty, the others are at liberty to disregard it. Instead of any such announcement, Russia should have invited the powers to consider the subject. Turkey protests strongly against the action of Russia, and calls upon the great powers, parties to the treaty, to enforce its provisions. A warlike feel-

ing prevails all over England. The Cabinet, however, is divided, some of the members opposing themselves against a war on the present issue. It is stated that five ministers, including John Bright, will resign if England proceeds to hostilities. A Berlin dispatch says: "In official circles here a peaceful solution of the Black sea question is looked for. It is freely admitted that an understanding exists between Prussia and Russia, that in case of war they will co-operate. The Italian government has declined to join in the diplomatic move against Russia." The reply of the Russian government to Earl Granville's letter was promptly forwarded to London. It is conciliatory in its tone, but remains firm in the position already adopted. Russia would deeply regret the interruption of friendly relations with Great Britain, but repeats her intention to act upon the previous notification in regard to the Black sea.

The operations of the Prussians do not seem to have been very important. The French army of the Loire has been increased, it is said, to 150,000 men. After the defeat of the Germans near Orleans, the French army was advanced considerably nearer to Paris. A Versailles dispatch of the 18th says, "The king and queen returned to Paris on the 17th inst. Duke of Mecklenburg yesterday repulsed the enemy along the whole line near Dreux. Dreux at the same time was captured. A communication from Favre to Gambetta has fallen into Prussian hands, from which it appears that the supply of fresh meat in Paris has been cut off. Telegrams there is no doubt are working hard. Advice from Paris by way Belgium, represent citizens as tired of war. They condemn the government for rejecting the armistice, and demand the convocation of the National Assembly.

The Prussians now occupy all the strongholds along the line of the Jura mountains. The French appear to be preparing for a last great effort to relieve their besieged capital. Armies are to move upon it from the north as well as south of France, and aid the contemplated sortie from the city.

The Tours government has published a statement to the effect that the American shipping had been nearly driven from the Pacific ocean, as well as the South sea, by French cruisers.

It was reported on the 20th, that the army of Prince Frederick Charles advancing from Metz, through Chalons and Troyes, has effected a junction at Rambouillet, seventeen miles S. W. of Versailles, with the army of General Vissers, from Tann and Mecklenburg, nearer Paris. The French army of the Loire under General D'Aureilles, is said to occupy an interior line, and at the last accounts was still moving towards Versailles. The whole number of German soldiers in the immediate vicinity of Paris, is now computed at 457,000 men. The entire French forces outside the walls probably number 350,000.

Preparations are making at Rome for the reception of the King of Italy. By order of the Pope, every church will be closed during the king's presence in the city. The States of the Church have been placed under an interdiction, prohibiting the clergy from performing divine service, administering the sacrament and the rites of burial.

London. Consols, 92½. U. S. 5-20's of 1862, 88; of 1865, 87; ten fortiens, 86½.

Liverpool.—Uplands cotton, 9d.; Orleans, 9½d. Breadstuffs quiet.

STATISTICS.—*Census Return.*—New York is said to have a population of 4,367,703, an increase of 180,986 since 1860. Corrected returns of the census of Maine show the whole number of inhabitants to be 628,719, a gain only 119 from 1860. The population of Missouri is 1,690,716, an increase of 508,094. The census of Kansas amounts up 353,478, not including Forts Riley and Larned with about 1400 persons.

The Crops.—The report of the department of agriculture for the Tenth month, states that the wheat crop of 1870 is about fourteen per cent. less than that of 1869, which was very large. The corn crop is believed to be the best of the past ten years. The total yield is estimated at 1,200,000,000 bushels. Potatoes present less than the average yield in all the Atlantic States, and in the Western States the crop is still more deficient. The cotton crop will be no larger than that of last year, possibly lighter. The total is estimated at between 5,000,000 and 3,500,000 bales. The sugar crop promises an increase.

American Iron.—The product of anthracite pig iron in the year 1869, according to the American Iron and Steel Association, was 971,150 tons. In the same period the bituminous coal furnaces made 553,341 tons, and the charcoal furnaces 392,150 tons, a total of 1,916,641 tons.

The National Receipts and Expenditures.—From 34

no. 4th, 1789 to 6th mo. 30th, 1870, the receipts customs were \$2,774,990,382. Internal revenue 488,722,308. Direct tax, \$26,659,317. Public 1 \$189,324,825. Miscellaneous, \$196,373,496. Divid \$2,730,136. Premiums, \$132,118,950. Interest, \$22,224—total receipts, \$4,847,349,642. The cost of army has been, \$3,826,888,822. Navy, \$816,222, Indians, \$122,616,573. Pensions, \$22,153,156. Miscellaneous, \$858,154,938. Premiums, \$43,096,939 interest, \$1,046,628,756.

Mortality.—Mortality last week 246. In the ending 11th mo. 12th, 249.

The Markets, &c.—The following were the quotations on the 21st inst. New York.—American gold U. S. 5-20's, 118½; ditto, 5-20's, 1868, 109½; 10-40 five per cents, 106½. Superfine State flour, a 85½; finer brands, 87-87½. Mixed S. W. wheat, \$1.23 to \$1.31. No. 1 Chicago spring, \$1.36; No. 1 red western, \$1.38 a 1.40; amber State, white Kentucky, \$1.65. Oats, 61 a 63 cts. W. re, \$1.02. Western mixed corn, 89 a 91 cts. J. delphia.—Cotton, 16½ a 16½ cts, for uplands and Orleans, Flour, \$5 a \$8 per bbl. Red wheat, \$1.43; amber, \$1.45. Hogs, \$10 a \$10.25 per 100 net, for corn fed. Baltimore.—Maryland amber v \$1.70 a \$1.80; good to prime, \$1.54 a \$1.65; and Indiana, \$1.35 a 1.40. White corn, 80 a 8 yellow, 83 a 84 cts. Oats, 50 a 52 cts. Chickens, 2 spring wheat, \$1.06 cts. No. 2 corn, 64 a 65 cts. oats, 41 cts. No. 2 rye, 73 cts. No. 2 barley, 81 cts. Lard, 12½ a 12½ cts.

ERRATUM.

1854, in the 16th line of the middle column 100, last issue, should be "1855."

MEETING ON BEHALF OF THE FREED

A public meeting of Friends' Freedmen Relief Association, will be held in Arch Street Meeting-Philadelphia, on Fifth-day, 12th mo. 1st, 1870, at 7 P. M. Friends generally are invited to attend.

JOHN B. GARRETT,

TEACHER WANTED.

A competent Teacher (male or female) is wanted to take charge of Friends' School at Medford.

Application may be made to EDWARD REE CLAYTON HAINES, Medford, N. J.

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch Philadelphia, "Journal of the Life and Religious Vices of WILLIAM EVANS; a Minister of the Gospel of Friends." A large octavo of 799 pages, bound in cloth, 75

Half bound in Turkish morocco, 3.

FRIENDS' BOARDING SCHOOL FOR IN CHILDREN, TENNESSEE, NEW YORK

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached to it. Application may be made to Ebenezer Worth, Marshalltown, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., Joseph Scattergood, 415 Spruce Street, d

FRIENDS' ASYLUM FOR THE INSANE

Near Frankford, (Twenty-third Ward.) Philadelphia Physician and Superintendent.—JOSHUA H. V. INGROS, M. D. Application for Admission of Patients is made to the Superintendent, or to any of the Board Managers.

DIED, at Rahway, N. J., on the 5th of the 1st month, 1870, MARTHA STROTVEL, in the 87th year of her age, an elder of Rahway and Plainfield Meetings.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

THE FRIEND.

VOL. XLIV.

SEVENTH-DAY, TWELFTH MONTH 3, 1870.

NO. 15.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

stage, when paid quarterly in advance, five cents.

For "The Friend,"
Extracts from the Diary of Hannah Gibbons; a
Minister deceased.

(Continued from page 310.)

"5th mo. 4th, 1856. Our dear friend Sarah, and her companion, attend our meeting in the course of their religious life. I could not hear dear Sarah's commendation to us, but I thought it was attended with a precious feeling; and her humble deportment, with that of her companions, was so encouraging.

"11th. To-day when it seemed almost time for meeting to close, supplication was put up to the Father of mercies for continued favors. I thought the meeting ended under a canopy covering. Gracious Father! be pleased keep those who are endeavoring, though by, to espouse Thy precious cause, as in a hollow of Thy holy hand, seeing our standing is as on a sea of glass.

"6th mo. 8th. I thought we had a good meeting in silence. It seemed to me the solemnity was more generally felt than is often the case; wherein the language sweetly arose, 'I'll guide thee with mine eye.' May my dependence be ever on Him who doeth all things well: who knoweth our frame and remembereth that we are dust.'

"8th mo. 27th. The day of our Monthly meeting at West Chester. The forepart of it was favored with a solemn covering in silence. At the close of that discipline, after a few words were spoken by way of testimony, dear M. Kite appeared in solemn supplication. The acknowledgment of my guilt was, when Thou opens there is none shut, and when Thou shuts, none can be shut. Thankfulness was the clothing of my spirit.

"1st mo. 4th, 1857. Poverty and mourning have been much the clothing of my spirit of late; partly perhaps because of the afflictions in our poor Society, which are much lamented. Wilt thou be pleased, O Lord, undertake for us? for vain is the help of man. I thought I was enabled in meeting day to labor for a portion of that bread which nourisheth the inner man, being never sensible that it is not at our command; and though not permitted to partake of

much, yet my trust in Thee, O Father, is not shaken! Be pleased to enable me to hold fast my confidence in Thee, even unto the end of my pilgrimage.

"8th mo. 2d. Since the foregoing date, it hath pleased Divine wisdom to afflict me with a severe spell of sickness, from which I do not expect to recover. Notwithstanding poverty was often the clothing of my spirit, there were seasons of sweet consolation, wherein a hope was afforded that I was still under the notice of Him who regards the workmanship of his own Almighty Hand with tender compassion: which feeling I desire to have in grateful remembrance. Being now so recovered as to be able to sit up most of the day, the frequent breathing of my spirit is to the Father of Mercies, that He would be pleased to keep me from evil, in thought, word, or deed; feeling increasingly the need of watchfulness unto prayer, that I may be preserved from bringing dishonor on the blessed Truth. I am now in the 57th year of my age.

"A week ago our beloved friend W. G., from Ireland, in the course of his religious visit to this land, had an appointed meeting at West Chester; which I, with considerable assistance, was enabled to attend. A degree of thankfulness was felt in being permitted again to assemble with my friends in order for Divine worship; and though I could bear but very little of what was communicated, I thought we had a good meeting; and dear W.'s company at our house afterwards was strengthening to my often drooping mind. Oh that men would praise the Lord for His goodness, and for his wonderful works to the children of men.'

"11th mo. 8th. For several successive ones past, I have been able to attend our meeting regularly, which I esteem a favor. I was more comforted in that held to-day than at many other times, in silently endeavoring to keep near to Divine counsel, and free from intruding thoughts which often beset me; and the prevailing desire of my mind was for myself and those assembled, that we might be increasingly concerned to look to the High and Holy One for strength to live the life of the righteous, that so our latter end might be like unto theirs; being renewedly sensible that any efforts in our creaturely wisdom would be unavailing."

Hannah Gibbons often commemorates the goodness of her Heavenly Father in overshadowing the silent meeting with His sweet, consoling presence. It is this heavenly canopy, whether it be of the two or the three, or the larger assembly, whether it be the silent sitting together, or that wherein the command is given "speak to my people," that constitutes the christian's joy; that binds up his wounds; and enables to rejoice in the Lord and to joy in the God of his salvation. Unless the Minister of ministers presides in a religious gathering, poor must they be, despite every

unsanctified effort to make them interesting or instructive. It is the power from on High that is to be sought and waited for: while He, who alone can give it, will forever make good His promises to the wrestling, longing, patient soul: "They that wait upon the Lord shall renew their strength." "Ye shall seek me and shall find me, when ye shall search for me with all your hearts."

The following are extracts from a letter to her friend William Evans:

"1st mo. 1858.

"My dear friend and brother,—My mind is often turned towards thee and dear Elizabeth, in desire that neither heights nor depths, things present nor to come, may be able to separate us from the love of God in Christ Jesus our Lord. These are days of tribulation and sorrow; yet it is a comfort to remember that the Lord's arm is not shortened that it cannot save, neither is His ear grown heavy that it cannot hear the cries of the poor, and the sighings of the needy soul. I am a little encouraged at times in the hope, that the work is on the wheel. Is there not cause to hope that some things which are developing may have a tendency to raise serious reflections in the minds of those who seem so desirous of having their own way adopted, seeming to feel so little regard to the feeling and judgment of their brethren. Oh how much there is which has a tendency to divide and scatter, instead of healing and binding up! * * * The desire of my poor feeble mind at times is, that each one may do with their might what their hands find to do, in order for the repairing of the walls which are so lamentably broken down; and as these honestly endeavor to go forth in humility and godly fear, I trust the work will prosper, though they may have as it were, to work with one hand, while they hold a weapon of defence in the other. I trust there are in different places a tribulated, suffering remnant, who as they endeavor to keep the faith and the patience, will in the Lord's time know Him to arise for their help, remembering the encouraging language, 'Fear not, little flock, it is your Father's good pleasure to give you the kingdom.'

"Yesterday our little select Preparative Meeting was held. As we sat together, the saying of our blessed Saviour revived in my mind: 'Where two or three are gathered together in my name, there am I in the midst of them.' It did feel to me that there was a little of the heavenly influence felt amongst us; which is cause of humble gratitude to the Author of all good, and encouraging to the traveller Zionward."

The selections from her memoranda continue: "24 mo. 7th. Being favored to get to meeting to-day, the language early revived in my mind, 'I will bear the indignation of the Lord, because I have sinned against him,' which continued to impress my mind, attended with desires that those who had departed from

the right way of the Lord, might patiently bear His chastenings, in order for their purification, until He was pleased to say, It is enough: and through all, experience that repentance which is the gift of God. I feared to omit endeavoring to express my exercise, lest I might fall into condemnation: but Oh! the weightiness of speaking in the name of the Lord; it has felt increasingly awful to me of later time.

"8th. This day I have entered my 88th year; and desires have been raised that increasing watchfulness unto prayer may be sought after; and in the remembrance of many favors which I have received, a degree of thankfulness arose in my mind, attended with solicitude for a continuance of the Lord's mercies, if it be His blessed will, the few remaining days allotted me.

"6th mo. 20th. I went to meeting under some sense of the importance of attending our meetings in a right manner, being sometimes tried with unprofitable thoughts, and at others with heaviness and dullness; feeling sensible also of our entire inability to worship the Father aright, without His holy assistance. I had not sat long, before my mind was impressed with the desires for the encouragement of those who feel their own nothingness, and the encouraging language arose: For the oppression of the poor, and the sighing of the needy soul, I will arise, saith the Lord. Supplication was put up for those, and also for such as were delaying the important work of the soul's salvation; and a few words being afterwards expressed in testimony, though feeble in body, my mind was favored with an holy quiet, which I desire to have in grateful remembrance."

No date. "I attended the funeral of my beloved cousin R. A. It seemed to me a solemn time at the grave; a season I trust wherein renewed visitation was extended to some, who were earnestly entreated not again to put by the offers of Divine mercy, remembering the awful declaration of the Most High, 'My spirit shall not always strive with man.' I returned peaceful and thankful. Dear Hannah Rhoads was in attendance, and was favored in testimony."

(To be continued.)

From the "American Naturalist."

Indian Stone Implements.

BY J. J. H. GREGORY.

The stone selected for arrowheads and tomahawk points, was as a rule, very hard in its nature, compact in structure, and fine grained, presenting a conchoidal fracture when broken. In the valley of the Connecticut these conditions were satisfied by a variety of hornstone, along the sea coast in the porphyry. In each of these localities I have found some arrowheads made of jasper, some of white granular quartz, and occasionally one from slate, but the greater proportion of these are collectively small, though it is evident that beauty in the material had attractions. One great source of supply for the jasper and quartz implements, was in part or wholly scattered boulders, while the porphyry came from the ledges on Marblehead Neck, and the small boulders washed up along the coast. That boulders were frequently used is proved from many half formed implements which show some of the rounded surface yet remaining. That the porphyry ledges on Marblehead Neck were an extensive source of supply

is proved by the cart loads of chippings of stone around and in the vicinity of them. That these pieces and fragments were artificially broken is proved by the many conchoidal surfaces, the fresh appearance of the surfaces, and the rough design which some of these present.

That the practice of the aborigines was to cut out but rough designs at the quarry, and work out these designs at their camping grounds, is proved by the large size of the fragments chipped off near these ledges, and the scarcity of even rough designs; while in the town of Marblehead, about a mile from the porphyry ledges on the Neck, the chippings are smaller, and the designs are nearer to completion. In the township of Marblehead I have found a multitude of implements, over a thousand in number, that were broken in every stage of the process of manufacture, while I have rarely found in the Connecticut valley fragments of unfinished implements; such as I have found are usually those of finished implements. The chippings of stone on Marblehead Neck, as I have shown, average quite large; those in the township considerably smaller, and the chippings found in the Connecticut valley are yet smaller.

The hornstones so commonly used for arrowheads and other implements that I have never found in Marblehead, and I have never found among implements of the Connecticut valley any manufactured from the porphyry of Marblehead. In one of the Reports of the Smithsonian Institution is an account of the finding of a mass of half finished implements buried in the ground; such deposits simply prove that the aborigines having cut out rough outlines of implements, at times carried these to their camping ground, and there buried them, to be finished at leisure. I exhibit specimens of a lot that I dug up in Marblehead, on the Fretto farm, about a foot below the surface; such deposits are called "Indian pockets." There were over forty pieces in the lot.

The quantity in every case appeared in each instance to be about equal, apparently limited by the weight one person might conveniently carry. From a study of the breakage we learn that in making their arrowheads and tomahawk points they chipped the stone from the edge towards the centre, which, while it gave a sharp edge, left a central ridge that gave strength to the weapon. In finishing arrowheads there was a great deal of slow, careful work, which finally consisted in breaking off particles almost as fine as dust, by gentle pressure against stone. I had one arrowhead brought to me by a friend from California, made from the bottom of a glass bottle; it was very sharp and exquisitely finished. It was mostly made in his presence by an Indian squaw and nearly three days were spent in its manufacture. It can be safely stated that with the same tools a white man can make an Indian arrowhead.

The rocks used by the Indians on the coast in the manufacture of their larger implements, such as axes, gongs, skin dressers and grain pestles, were greenstone and syenite, and in the Connecticut valley a large portion were made from trap rock. These large implements appear to have had their forms first roughly hewn out, then to have been worked into shape by picking with sharp pointed stones after which they were sometimes polished. The axes as a rule were not polished,

while the implements used in the dressing of skins were, almost uniformly. Sometimes when the natural form of the material favored, such as fragments of trap rock for pestle and for hoes, but little additional work was put upon it, and the implement was but rough affair.

Of the large implements, as would be presumed from their character, it is rare to find any that were broken in the process of manufacture, while such as have been marred or broken, after having been manufactured, are very common. It is stated by those who have made a comparison between the large implements of this country and of Europe, that those manufactured by the aborigines of the country are hewn, picked and sometimes polished; those of Europe are simply hewn. The marked difference, if it is a fact, is not so singular as appears at first sight; the material to a large extent, of the European implement is flint, which, while it cannot be surpassed as a material for hewing, yet for picking and polishing, would prove very refractory, and it is probable that the same motives that led our own aborigines to avoid the porphyry of those of Europe to be content with simple hewing, having to deal with a still more stubborn material in their flint. The skin dressers, gongs and some other implements were made as sharp at the working edges as such stones were capable of, and this was done by rubbing them on fine grained stones. On the sea coast pieces of the finest grained greenstone were mostly used, some of which, when found, were as much worn as any modern carpenter's hone.

I have never seen among the relics on the sea coast any resembling the scalping knife of the West, or of Europe, or any whose peculiar shape suggested that it might have been used as a scalping knife. I infer from that on the sea coast the large chippings of stone, having a sharp edge, were used as scaling knives. Among some fifteen hundred specimens of Indian implements, collected on the sea coast, I have never seen more than one, that, from its shape and size could possibly have been used as the conventional tomahawk, an axe shaped weapon to be thrown from the hand. The illustrations in some of our modern school books are more correct where the tomahawk is shown to have been a wooden club terminating in a hard wood knob, in which had been inserted a large stone point.

The form of the metallic axe was doubtless copied from the same implement used by the inhabitants of the stone age. From time to time the metallic axe has varied in form, and all the several forms of stone axes I have in my possession have been represented in some of the forms of the metallic axe, and as that of the standard axe of to-day is precisely that of one of these forms, I cannot doubt but that the stone implement supplied the model.

Christ the Light of Life.—If any thing fiercer to the Spirit of the Redeemer effectually improves for sin, "Satan is divided against himself." It is only the Spirit of Christ that "convinces the world of sin, of righteousness, and of judgment." Sound therefore, and consistent with the analysis of gospel faith, were the testimonies of George Fox and Robert Barclay to the Lord Jesus Christ, as "the light of life and only "true light, which lighteth every man that cometh into the world."—S. Scot.

Selected for "The Friend."

the Way of Life and Death made manifest and set before men.

(Continued from page 208.)

Objection. But are not the scriptures the Word of God? And is not the Word of God to be a christian's rule? If every one should be left to his own spirit, what confusion and uncertainty would this produce!

Answer. The scriptures are not the Living Word, which is appointed by God to be the rule of a christian; but they contain words spoken by the Spirit of God, testifying of that Word, and pointing to that Word which is to be the rule. Search the scriptures, for in them you think to have eternal life, and they are they which testify of me, and ye will not come to me that ye may have life. John v. 39, 40. The scriptures are to be searched for the testimony which they give of Christ; and when that testimony is received, Christ is to be come, and life received from Him. But the heresies formerly, and Christians since (I mean christians in name) search the scriptures; but do not come to Christ for the life, sit stuck in the letter of the scriptures, and oppose the life with the letter, keeping themselves from the life by their wisdom and knowledge in the letter. Thus they put the scriptures into the place of Christ, and so honor neither Christ nor the scriptures. It had been no honor to John to have been taken for the light; his honor was to point to it; or is it any honor to the scriptures to be called the Word of God; but their honor is to discover and testify of the Word. Now hear that the scriptures call the Word. In the beginning was the Word, and the Word was with God, and the Word was God. John i. 1. And the Word was made flesh, 14th. This as the name of Christ, when He came into the world in the flesh, to sow His life in the world. And when He comes again into the world, out of a far country, to fight with the east and false prophet, and to cleanse the earth of the whore's fornication and idols, herewith she had corrupted it, He shall have the same name again; His name is called the Word of God. Rev. xix. 13. So Peter calleth that the Word of God, which liveth and abideth forever. 1st Peter i. 23. And this Word that liveth and abideth forever, was the Word that they preached, 25th. And they that believed did not cry up the words that the apostles spake for the Word; but received the thing they spake of, the ingrafted Word; which being received with a meek, quiet, and submissive spirit, is able to save the soul. James i. 21. This is the word of faith that is high, in the heart and in the mouth. Rom. x. 10. This is the word that stands at the door of the heart, and speaks to be let in (Behold, stand at the door and knock); and when it is let in, it speaks in the heart what is to be heard and done. It is high; it is in the heart, and in the mouth; to what end? That thou mightest hear it, and do it. The living Word, which is quick and powerful, and sharper than any two edged sword, divides in the mouth, and divides in the heart, the vile from the precious; yea, it reacheth to the very inmost of the heart, and cuts between the roots, (Heb. iii. 11th,) and this thou art to hear and do. Thou art to part with all vile words, the vile conversation, the vile course and worship of the world outwardly, and the vile thoughts and course of sin inwardly, as fast as the Word discovers them to thee, and to exercise thy-

self in that which is folly and madness to the eye of the world, and a grievous cross to thine own worldly nature; yea, when the word reaches to the very nature, life, and spirit within, from whence all that comes, that strong, wise root of the fleshly life in the heart must not be spared, nor that foolish, weak thing (to man's wise eye) which is brought instead thereof, be rejected; which, when it is received, is but like a little seed, even the least of seeds; and when it grows up, it is a long while but like a child, and yet keeping in that childishness, out of the wisdom, it enters into that kingdom which the greatest wisdom of man (in all his zealous ways and forms of religion) falls short, and is shut out of. This is the Word of life; this is the true living rule, and way to eternal life; and this is the obedience; this is the hearing and doing of the Word. He that hath an ear, let him hear. Examine yourselves, whether ye be in the faith; prove your own selves. Know ye not your own selves, how that Jesus Christ is in you, except ye be reprobates? 2d Corin. xiii. 5. Are ye in the faith? Then Christ is in you. Is not Christ in you? Then ye are in the reprobate state, out of the faith. Is Christ in you, and shall He not hold the reins, and rule? Shall the living Word be in the heart, and not the rule of the heart? Shall He speak in the heart, and man or woman in whom He speaks run to the words of scripture formerly spoken, to know whether these be His words or no? Nay, nay, His sheep know His voice better than so. Did the apostle John, who had seen, and tasted, and handled, and preached the Word of Life, send christians to his epistles, or any other part of scripture, to be their rule? Nay, he directed them to the anointing as a sufficient teacher. 1st John ii. 17. He that believeth on me, as the scripture hath said, out of his belly shall flow rivers of living water. John vii. 38. He that hath the fountain of life in him, issuing out rivers of living water continually, hath he need to go forth to fetch in water? The kingdom of heaven is within you, saith Christ; and he bids seek the kingdom. Light the candle, sweep thine own house, seek diligently for the kingdom; there it is, if thou canst find it. Now he that hath found the kingdom within, shall he look without, into words spoken concerning the kingdom, to find the laws of the kingdom? Are not the laws of the kingdom to be found within the kingdom? Shall the kingdom be in the heart, and the laws of the kingdom written without in a book? Is not the gospel the ministration of the Spirit? And shall he who hath received the Spirit run back to the letter to be his guide? Shall the living Spirit, that gave forth the scriptures, be present, and not have pre-eminence above His own words? What is the proper intent of the letter? Is it not to testify of the Spirit, and to end in the Spirit? The law, the prophets, John, led to Christ in the flesh; and He was to be the increasing light, when they should decrease. Christ's words in the flesh, the apostles' words afterwards, and all words since, are but to lead to Christ in the Spirit, to the eternal living substance; and when the words of Christ, of the apostles, or any words spoken from the same Spirit in those days, have brought to the Spirit, to the feeling and settling of the soul in the living foundation, and to the building and perfecting of the man of God therein, they have attained their end and glory. But

to cry up these not understanding their voice, but keeping at a distance from the thing that they invite to; the words hereby are put out of their place, out of their proper use and service, and so attain neither their end nor their glory. And though man put that upon them which seems to be a greater glory, namely, to make them his rule and guide; yet, it being not a true glory, it is no glory, but a dishonor both to them and to the Spirit, who gave them to another end.

(To be continued.)

The Value of the Honey Bee in Agriculture.

Honey and wax have ever been two most useful articles in domestic economy, and, from the earliest times, the honey bee has been the companion of man. What an addition to a farmer's house is a beehive, nestling among the apple trees with its hundreds of busy inhabitants, some settling about the door, or flying lightly above the roof, others darting off in quest of new supplies of food, and still others returning on laboring wings laden down with their "baskets" filled with crude pollen. What a scene of industry and system is bee life! This is an every-day picture. But honey and wax are not indispensable. The hunting of the sperm whale and the discovery of petroleum have done away with the need of wax, and the sugar cane and beets give us sweets in new and more convenient forms. What use then, is the bee? our reader will ask. The answer will recur to but a few. The grand use in nature of the bee is the securing to the farmer or fruit raiser a good crop and the permanence of the best varieties of fruit.

Gardeners have always known that bees fertilize squash, melon, and cucumber flowers by conveying the pollen from one plant to another, thus insuring not only the complete fertilization of the seed by the male pollen and thus improving the fruit, but actually causing the production of more squashes, melons, and cucumbers by causing certain flowers to set that otherwise would have dropped to the ground sterile and useless. This has been proved by fertilizing the flowers by hand; a very large, indeed an unnaturally abundant crop being thus obtained. It has been noticed by a few, though the many have not appreciated the fact, that fruit trees are more productive when a swarm of bees is placed among them, for when the bees have been removed by disease or other means, the fruit crop has diminished.

"At the Apianian General Convention, held at Stuttgart, Württemberg, in 1858, the subject of honey-yielding crops being under discussion, the celebrated pomologist, Professor Lucas, one of the directors of the Hohenheim Institute, went on to say: 'Of more importance, however, is the improved management of our fruit trees. Here the interests of the horticulturists and the bee-keeper combine and run parallel. A judicious pruning of our fruit trees will cause them to blossom more freely, and yield honey more plentifully. I would urge attention to this on those particularly who are both fruit growers and bee-keepers. A careful and observant bee-keeper at Potsdam writes to me that his trees yield decidedly larger crops since he has established an apiary in his orchard, and the annual crop is now more certain and regular than before, though his trees had always received due attention.'

"Some years ago a wealthy lady in Germany established a green house, at considerable cost, and stocked it with a great variety of choice native and exotic fruit trees—expecting in due time to have remunerating crops. Time passed, and annually there was a superabundance of blossoms, with only very little fruit. Various plans were devised and adopted to bring the trees to bearing, but without success, till it was suggested that the blossoms needed fertilization, and that by means of bees, the fertilization could be effected. A hive of busy honey gatherers was introduced next season; the remedy was effectual—there was no longer any difficulty in producing crops there. The bees distributed the pollen, and the setting of the fruit followed naturally."

From these convincing facts we learn the value of the honey bee to agriculture. Blot them out and we must go almost entirely without fruit and vegetables. Besides being a source of profit for their honey and wax, the bee actually brings to our doors loads of fruits and vegetables and other products of the farm.—*Annals of Bee Culture*, 1870.

For "The Friend."

Extracts from a Sermon preached at Grace Church Street, England, 24th 5th mo. 1688, by Stephen Crisp: "No True Worship without the right knowledge of God."

"My Friends,—There is no man who can truly worship God, till he comes in a measure of certain knowledge of Him; for all the worship in the world, where the veil of ignorance still prevails on the mind, is all abominable; there is no acceptance with God. There must be a knowledge of God before there can be a true worshipping of him; for they that worship before they know God, *worship they know not what*; they worship a God they have heard of, but do not know; so every one that worshippeth, must first come to that which giveth a true knowledge; that raiseth up a certainty in the mind, 'This is the Lord, we will trust in him; this is our God, and we will serve him.' And that all people might come to this certainty of knowledge, *God hath sent forth his Spirit*, that the things of God might be communicated by the Spirit of God, for without the assistance of the Spirit, men seek after the knowledge of God in vain; for if they seek after the knowledge, worship and acceptance with God, they cannot find it; so that all religion, and religious performances people are exercised in, where they begin without the Spirit, will all prove fruitless in the end. The wise men of the world, have used their wisdom to find out the true God; but God in wisdom hath ordained that the world by all their wisdom shall not know him; so there is an end of their labor. Then how shall they know him? 'As none can know the things of a man save the spirit of man that is in him, so none can know the things of God, but the Spirit of God.' So they that resist the guidance, direction and counsels of the Spirit of God, are like those that would enter a house or palace, and remember not the door that leads into it. People would come into the divine knowledge, and the understanding of divine mysteries, but they desire another way; by study and by arts and sciences, they would attain it by their own industry, and herein they strive to excel each other. If one comes among them and tells them, Friends you are all out of the way,

then they are angry, and instead of inquiring the way, they are angry that their way must be rejected. Friends, you will never come to the knowledge of God but by the Spirit of God; then they mock, scoff and scorn the doctrine of the Spirit, for the teaching of the Spirit hath been the scorn of the age. * * Can any come to the knowledge of Christ, unless *he that sent him reveals him*? Where are people's bibles? their rule as they call it, that all their endeavors have proved fruitless in respect of the knowledge of God. But not come to say, make it appear that we have not some to this true worship and knowledge and true religion? I will tell you, all that have attained to this true knowledge, have been *made partakers of his divine nature* and his divine qualities; they have brought forth in their lives and conversations, of the same nature, viz., holy and divine: They have known the sanctifier and are a sanctified people, so that they are one with him, and show forth the beauty of holiness in their lives, that is a demonstration that may show the knowledge of God, for without it they live a corrupt, unholily life, a life of self-love, a *life of pride*, vanity and enmity, and that they never had from God, but from another root, a life of iniquity and sin; so that they are still without the knowledge of God. And again, all that have come to the knowledge of God, have trusted in him; that people cannot do now; except a few that so know him, the generality of the age cannot trust God; they must have something else to trust to and rely upon, for on him they cannot trust. Now the Lord said by the prophet, 'They that know my name will trust in me,' that is enough if people know God, whom to know is life eternal, even to know thee the only true God and Jesus Christ whom thou hast sent. This is life eternal. If people were to come to this divine knowledge, they would not take care and study for any refuge, or set up this, that, or the other thing to lean upon. A rich man trusteth in his riches, and some on one thing and some on another, but they should trust on the living God, and he would be their God and their Rock, and they would venture their concerns upon him, both in this world and that which is to come, if they did only know him. People may say as they will, but he can never properly be said to be my God or mine, until we cast our care and concerns wholly upon him, and can say he is our God, and our reliance and dependance is upon him.

"There was never any man upon earth that had the true knowledge of God, that needed to be put upon worshipping him; for the knowledge that is given of God through Christ, brings forth naturally an adoration of the invisible power, which men put their trust in; it produceth an adoration which is true worship; it causeth an humble reverence of that power; it brings the soul upon its knees, as it were; it brings the soul to stoop and to bend and bow upon all occasions to God as his God. It nurseth his expectations to receive counsel, and judgment, and understanding from him, as the fountain of wisdom, and hereby people are taught to worship in the right, divine knowledge. But to tell men of the worship of God before they know him; though you make as many laws as you will to force them to worship that God they do not know, yet you can never do them any good, nor make their worship acceptable, nor make them devout; you can never bring de-

votion nor divine adoration into their heart by all the laws you can make. * * * There are those that say unto God, depart from us we desire not the knowledge of thy ways these are dark and ignorant, and have not the true knowledge of God, although the have abundance of notions, hearsay knowledge, learning and speculations. These people mock and scoff at a light within. What say they, is there a light within. Hath ever one a light within? Yes, I believe so, and you must believe so too, if you will believe scriptures. Christ is the true Light, and hath lighted every man that cometh into the world. If he did light them, how did he do it? I will tell you, say they, He spake great many gracious words, and somehow hath wrote them down. What, will this prove the Light within? because we have got a New Testament and Christ hath spoken a great many gracious words; doth this prove the light within? No, people might have been darkness still, for all the books of the New Testament, and the Old Testament too, are for all the books of the world, for they never have conveyed light into the hearts and consciences of men, if God had not placed there. Indeed these books may be instrumental, and God doth make use of them as means for conveying light, and grace, and a working of true conversion; but the Holy Scriptures cannot do it of themselves, unless there be a cooperation of the spirit with it without this spirit they cannot convey saving light to us; How prove you then, a light within? The apostle tells you, if you believe him, (2 Cor. iv. 6,) "God who commanded the light to shine out of darkness, hath shined our hearts, to give us the light of the knowledge of the glory of God in the face of Jesus Christ;" so that every one that retireth in himself, will know quickly and understand his error, and confess that there is a light within, and that by this rule, because that is something in the heart that makes manifest that which is reproveable, if they do so anything reproveable; that which manifest dark words or works is *light*. The next question is, Whether this light is sufficient for true knowledge of God, and to bring a man to life and salvation? I am of that judgment that it is sufficient, and I believe it heartily; preach it boldly in the name of the Lord, the light that shines in your hearts is to the knowledge of God in the face of Jesus Christ the mediator." S. C.

Millville, 7th 4th mo. 1870.

For "The Friend"

To the Editors:—As the readers of your journal have not, of latter time, been supplied with information of the proceedings of our Yearly Meetings, I have thought they might be interested in the following extracts from an account of the late Indiana Yearly Meeting, published in the last number of "The Friend." It appears to have been written by a member of that meeting have italicised two or three sentences, which struck me as conveying peculiar views. *

9th month 29th.—Meeting opened after few minutes of silent waiting, when a Friend from Philadelphia in recurring to the epithet read the day before, expressed regret that the Yearly Meeting was not in correspondence with ours. He spoke of the *bondage of Friends there, but believed a living seed ex-*

ing them, and asked the sympathy and aid of this meeting for the church there. Joseph Cox, an esteemed and well known man, now in his ninety-third year, reverted to epistolary correspondence, and said he would be glad if the meeting would instruct an epistle committee to prepare an epistle to Philadelphia; this called forth much expression of unity and sympathy for the small band of us in bonds. A minister thought there was a radical difference on some points between the two Yearly Meetings, and Philadelphia was now controlled it was a disgrace to Society, &c. After some further remarks the subject was dropped, no one being deemed prudent to present.

The committee declined last year to visit these meetings on their request to have a Yearly Meeting, reported favorably, and after full expression of approval, and subject to concurrence of other Yearly Meetings, the Yearly Meeting is to be opened at Lawrence in that State in 10th month, 1872.

A long discussion occurred after the receipt of a report of the Freedmen's Missionary Board, who asked for authority to establish meetings, receive members, recognize the gifts of preachers, elders, &c., and have the control of work in the South; the persons received, not to be in full membership until recognized as such by the Yearly Meeting. Several eminent Friends objected to this extraordinary assumption of power, believing it would produce disorder and complications, lose the spirit and letter of discipline, tend to disunity, and otherwise be of hurtful tendency. A majority, including many of the younger class, took a different view; some objections were adopted, and the report was about to pass, when, at the suggestion of a friend, supported by many others, the subject was placed in the hands of a committee to confer with the Missionary Board. This protracted discussion elicited very judicious and cautionary remarks. It appeared that nine new meetings had been established, while owing to the annual statistics not being complete this year, the average approximates pretty nearly to the last, viz: number of births, 477; received membership by their own request, 777; by request of parents, 404; by certificate, 839; whole number of members, 16,447; number of males, 8026; number of females, 8421; number dissolved, 35; number resigned, removed by certificate, 558; deaths, 232; average age at time of death, 31½ years; deaths under 1 year, 51; deaths from 1 to 10 years, 47; average age of deaths over 10 years, number of families, 2934; parts of families, 12; established meetings, 123; recorded preachers, 144; meetings without recorded preachers, 46; ministers recorded during the year, 13.

At the General Meetings were reported as during the year, one in Ohio and one in Indiana.

A Friend (minister) made a proposal to a General Meeting, in which all the other Yearly Meetings on this continent should be invited to participate, to meet in Philadelphia, with a difficulty and inexpediency of holding a meeting was discussed, and the proposal was not agreed to. Another proposition was to hold a similar meeting in East Tennessee, which also declined.

The trustees of White's Manual Labor Institute offered their annual report. The chil-

dren placed there are instructed in household and farm duties, receive scriptural and other instruction. In reference to an incident embodied in the report, a Friend inquired if singing was taught, or was a part of the exercise of the children. The clerk replied that the singing of hymns there did not come under the control of the trustees. Several Friends thought it a very objectionable feature, and should not be sanctioned in any schools under the care of Society; others thought it of very little moment; but on taking the sense of the meeting it was decided to have that part of the report expunged.

It was stated by a Friend that our Society in this country had lost about 100,000 members by marriage, or attending the marriages of others, recommending the subject to the thoughtful consideration of the Yearly Meeting. A few others thought the care and sympathy of the Society should be extended over such, that many might be redeemed from the world, not feeling easy to join any other society.

The annual report of Committee on Education was found to be so incomplete, that no accurate results could be arrived at, only forty-two of the forty-five Monthly Meetings reporting. From this it appears there are of children between the ages of 6 and 21, 4467; attending schools and colleges, 4065; over 21 years of age attending school, 120; teachers, 277; two academies and three graded schools within the Yearly Meeting limits; number of students attending Earlham College during the year, 212.

A recommendation from the Missionary Board that Daniel Drew (colored) of Southland Meeting, Arkansas, be recorded a minister (under the new rule) by the Yearly Meeting was fully assented to.

The report of the Peace Committee was read; the payment of lecturers and agents, as therein referred to, gave uneasiness to a number of Friends, partly from the difficulty of raising the proportions of money in some meetings for this specific purpose; but after some explanations, and a defence of the plan by a prominent member of the Committee, and a short discussion, it was united with, and the usual appropriations passed.

In consequence of the sale of land in Kansas owned by this Yearly Meeting, the Shawnee Mission, after years of patient labor, and a large expenditure of money, has at last been abandoned, and the proceeds of improvements, stock, &c., five thousand dollars, was recommended to be applied in assisting Kansas Friends building their new Yearly Meeting-house. This gave rise, however, to much opposition, and under all the circumstances it was concluded not to divert this fund from its original channel, as other Yearly Meetings had originally united in the Indian concern and contributed liberally towards their support. The proposed appropriation for Kansas Friends was referred to a committee. A desire having been expressed by a Friend (himself a minister) during a former sitting that we should have a better educated ministry, and if possible a college preparation, &c., a Friend, also a minister, and one of our foremost scholars, very feelingly and pertinently unburdened his mind on this subject, saying, in substance, he believed this gift proceeded from God alone—man had nothing to do with it. Our early Friends, many of them unlearned save in the school of Christ, powerfully

preached the gospel to the tendering, edifying, and convincing of large numbers; and our present annual assembly bore fresh evidence of the qualifying work of the Holy Spirit through chosen instruments, who, debarred of the advantages of education, had touched his heart by the fervency and reaching power of their messages under the divine anointing. These remarks found a response in many hearts, as the testimony of one alike distinguished for his learning and a clear logical mind. The Friend who had introduced this subject made some qualifying explanations, which proved somewhat satisfactory.

The payment of lecturers on peace again came up, was protested against and defended, many Friends thinking we bear a constant testimony against war, and that the payment of one hundred dollars per month to each lecturer might be curtailed by the distribution of documents bearing on this subject at an annual cost of about five hundred dollars. No definite action, however, was taken by the meeting on this question, as it was concluded to try the present plan another year.

A minute of Western Yearly Meeting was introduced, suggesting the holding of a General Meeting of Friends in America, to meet in New York city on the second day succeeding Canada Yearly Meeting in 1872; it was referred to a committee to report next year. The reading of epistles addressed to the different Yearly Meetings closed the proceedings, a few minutes of silent waiting followed, and the Yearly Meeting of 1870 passed away.

Selected.

KINDRED HEARTS.

Oh! ask not, hope thou not too much
Of sympathy below;

Few are the hearts who love the same one touch
Bids the sweet fountain flow.

Few—and by still conflicting powers
Forbidden here to meet—
Such ties would make this life of ours
Too fair for aught so fleet.

It may be that thy brother's eye
Sees not as thine, which turns
In such deep reverence to the sky,
When the rich sun-set burns:
It may be that the breath of spring,
Born amidst violets lone,
A rapture o'er thy soul can bring—
A dream, to his unknown.

The tune that speaks of other times,
A sorrowful delight,
The melody of distant chimes,
The sound of waves by night;
The wind that, with so many a tone,
Some chord within can thrill,—
These may have language all thine own,
To him a mystery still.

Yet scorn thou not for this, the true
And steadfast love of years;
The kindly, that from childhood grew,
The faithful to thy tears!
If there be one that o'er the dead
Hath in thy griefs a warmer part,
Or watch'd through sleep by thy bed,—
Call his a kindred heart!

But for those bonds all perfect made,
Wherein bright spirits blend,
Like sister flowers of one sweet shade,
With the same breeze that bend,
For that full bliss of thought allied,
Never to mortals given,—
Oh! lay thy lonely dreamer aside,
Or lift them unto heaven.

Felicia Howland.

Ministry.—No matter how few words or how simple, if it be but the Lord speaking by and through us. The rest is vanity.—John Barclay.

From "Good Health."

Dynamite.

One recognizes with something of a feeling of horror that many of the terrible means in vogue for the slaughter of the human race have their origin in investigations undertaken by scientific men with the view of increasing the knowledge of ameliorating the condition of mankind in general. This is essentially the case with the substance whose name heads this article. Invented originally for the purpose of assisting the peaceful labors of the miner and the engineer, it is now employed as the explosive agent of the torpedoes which defend the rivers and harbors of Germany against the aggressions of the French fleet.

Every one knows what glycerine is,—a clear, syrupy liquid, sweet to the taste, and somewhat greasy to the touch. Its scope of employment ranges from the surgeon's dispensary to the lady's boudoir. Chemists term it a triatomic alcohol, and it may be derived from fat or tallow by the action of lime and sulphuric acid. Its properties are many and various, but as they have no bearing upon the present subject, we shall abstain from noticing them. If a quantity of nitric acid be added to twice its weight of sulphuric acid, and glycerine be poured into this, and carefully stirred—the whole being surrounded by a freezing mixture—we obtain that wonderful substance known as nitro-glycerine, which has more than ten times the explosive force of gunpowder. It forms on the surface as an oily-looking liquid of a pale yellow color, is perfectly odorless, and has a sweet, aromatic taste. It is poisonous, whether taken internally or absorbed through the skin, and small doses of it produce distressing headaches. Although practically insoluble in water, it dissolves readily in ether, alcohol, or wood-spirit.

Nitro-glycerine was discovered in the year 1847, by an Italian, named Ascareto Sobrero; but its practical application is entirely due to the researches of Alfred Nobel, a Swedish mining engineer. It does not explode when brought into contact with fire, and remains unchanged even when raised to the temperature of boiling water; but at about forty degrees Fahrenheit, it becomes converted into an icy mass, which merely requires friction to develop all its explosive qualities. This peculiarity has been the cause of many lamentable accidents, when A. Nobel commenced a series of experiments with the view of rendering its employment comparatively safe. After some time, he found that mixing it with about ten per cent. of wood-spirit rendered it practically harmless, and this method is now generally adopted. When required for use, the wood-spirit can be removed, and all the properties of the nitro-glycerine restored by the simple addition of water, which, mixing with the spirit, sets free, as it were, the nitro-glycerine. The only drawback to this plan is, that when the nitro-glycerine is reconverted into its original state, it is of course quite as dangerous as ever.

To obviate this, A. Nobel has invented a new mixture, which he terms "dynamite." It consists of seventy-five per cent. of nitro-glycerine, and twenty-five per cent. of very fine sand, and is a brownish-looking powder, something like sawdust, only greasy to the touch. It burns without explosion when placed in a fire, or brought into contact with

a lighted match. If struck with a hammer, on an anvil, the portion struck takes fire without inflaming the dynamite around it. As a proof of the perfect security with which it may be handled, we may mention that M. Nobel has placed a case containing about eight pounds of it (equal to nearly eighty pounds of ordinary powder) on a brick fire, and that the dynamite was consumed without noise or shock; while a similar case was flung from a height of sixty-five feet on to a hard rock without producing the slightest explosion. A weight of over two hundred pounds was then let fall from a height of twenty feet upon a box of dynamite; the box was smashed, but again there was no explosion.

The usual method of firing dynamite is by means of a copper capsule containing fulminate of silver,—the latter being inflamed either by the ordinary slow-match, or by the electric spark. The employment of this capsule and detoning composition is absolutely essential for the explosion of dynamite. In order to give some idea of the force developed by such an explosion, it may be mentioned that a spoonful of it placed upon a block of quartz, covered with bricks, and fired, caused the quartz to be broken up into pieces about the size of a pea, and reduced the bricks to powder. Like nitro-glycerine, dynamite congeals at a comparatively high temperature; but to restore it to its proper condition, it is only necessary to put it in a warm place, or, if it is contained in closed cartridges, to plunge it into warm water.

In mining operations, dynamite possesses many advantages over nitro-glycerine, besides those already mentioned. It has been usual, for instance, to pour the nitro-glycerine in a liquid state into the holes bored in the rock for its reception; and running from these into some unknown crevice, it has frequently, when fired, produced an explosion under the very feet of the miners, causing, of course, a disastrous loss of life. To obviate this, it has been necessary to employ cartridges which do not completely fill up the bore-holes, so that a portion of the explosive force is wasted. Dynamite, on the other hand, being of a pasty consistence, yields to the least pressure, and completely fills up the holes, so that a given weight of this substance is almost as effective as a given weight of nitro-glycerine, while at the same time it is safer even than gunpowder.

It remains to be seen whether the anticipated advantages will be derived from its employment as a munition of war.

For "The Friend."

Accountability of Parents.

Interested in a late essay in "The Friend," entitled "Our Vineyards," it seemed to lead the mind inward to the recognition of the acceptableness of parents and heads of families in the Divine sight, according to that written for our learning concerning the obedience, which is of faith, of the good old Patriarch: "I know Abraham, that he will command his children and his household after him, and that they shall keep the way of the Lord, to do justice and judgment," &c.

A fear has often been felt lest parents, members of our Society, perhaps too neglectful themselves of the indispensable duty of submission of the heart to Christ Jesus, or Saviour, with the want also of watchfulness unto

prayer on their own accounts, are thence in the state to be ended with the "pardon on high," which was the necessary well as promised qualification of old for vice in the name of the Lord. A qualification less needed now to teach and lead the pious and very responsible charge committed to parents unto Christ Jesus; or in other words, to call down Abraham's blessing-ability to command our children and he holds after us, that they "keep the way of the Lord to do justice and judgment," not this—pressing the solemn query home to some—one fruitful cause of the relations which now prevail in the church that so few are coming up to the help of the Lord against the mighty? Even that parents, for want of giving themselves in first place to Christ Jesus, and thence being qualified, through the riches of the deemer's grace, to labor to train up their children in His fear, have so far subjected themselves to the complaint preferred against Israel of old: "The fathers have eaten grapes, and the children's teeth are set edge." Would, as this is the case with that they might turn unto the Healer, Restorer and Restorer of paths to dwell and "do justice and judgment" in a discharge of the very responsible duty entrusted to them; whereby they might truly rich; even the blessing conferred Abraham, to be known and accepted of Most High, and thus avoid the fearful sentence pronounced upon Eli, who neglecting to himself in the fear of the Lord, and being mindful of His covenant, restrained notions: because of which it is written iniquity of Eli's house shall not be purged sacrifice nor offering forever."

O! that the solemn and responsible of this life, with the patient working every part of our precious soul's salvation the true fear of the Searcher of hearts, so rest upon the minds of parents, that could do no less than watch over the plants entrusted to them, to train them admonition and fear of our Father who heaven. That thus the precious ointment in the case of Aaron, might extend skirts of the garment; and that Nazareth whose polishing is of sapphire, may be raised up to replenish the ways and places of our Zion, that joy and thanks, from both parents and children, may be heard in our borders to the praise and of Him, whose kingdom is an everlasting dominion, and whose dominion endureth throughout all generations. It is the opening hand from whom are all our blessings can alone enable any to yield fruits of love and where parents are livingly concerned, walk themselves in, and to train up under their direction in a faithful manner of the doctrines and testimonies of it is believed that a rich reward will be upon the heritage of such, like the blessing the house of Obededom aforetime, who wereark rested. The dear children also, to the consistent example of such father-mothers, with the wholesome watchfulness and restraint, as well as the frequent pleadings with the Father of mercies, account, will be helped to grow up in liking before Him; and thus, if through enabled, with the family of the Patriarch, keep the way of the Lord," they will be

strengthened to walk worthy of the vocation wherewith they are called, in all lowliness and meekness, and hereby to be fitted equally to a life of dedication to their Heavenly Father, or prepared for an early death.

A filial relation is well defined by the Apostle: "Children obey your parents in the Lord: for this is right." May the dear young people, as is written of the ever blessed Son of God, the High Priest of our profession, be subject to their parents (Luke ii. 21) the true fear of Him. Then will His Holy Spirit rest upon them. He will make them to grow in grace, and in the experimental knowledge of Him, which is life eternal, and will enable, through the successive steps of religious growth—the little steps of faith and obedience—to increase with the increase of Him, from babes in Christ to the stature of strong men in faith and holiness; by the church will be edited, and its glory glorified.

When I was seven years of age, the Spirit of the Lord began to work in my mind, and to draw me to Him, and to bring me off from childishness and vanities. This holy light in my soul, as I soon after found it to be, comforted me, that I ought not to give way to sin, or to this, or the other thing which pleased me; and when, at any time, I did what I ought not to have done, it brought upon me the rebuke and condemnation, even in those days, as it hath *always since*, when I did that which offended the Lord.—*Joseph*

Human devices to add to our numbers, or to give us a name among men, for our benevolent and philanthropic doings, will not spread the blessed Truth, or gather souls to God, but the effectual workings of the Divine power that puts down sin, and cleanses the soul, and causes it to bring forth the fruits of the Spirit, will draw seeking souls to us, and make us instrumental in extending and spreading the Redeemer's kingdom on earth.

THE FRIEND.

TWELFTH MONTH 3, 1870.

do not share in the surprise that has been expressed by some Friends, at the innovations made and being made in Friends' meetings of worship in England, or, more properly speaking, the substitution of Scripture reading for worship in their meetings; and the sanction given by them to hymn singing, exhibited in the few extracts from the *Record*, "published in our last number." The cases cited cannot be considered exceptional, if we may give credence to the opening paragraph of an article in the no. number of the (London) "*Friend*,"

Henry S. Newman, and intended to illustrate the propriety of having the Scriptures read in the meetings of Friends. His words are: "We cannot shut our eyes to the fact that one meeting after another is making provision for the public reading of the Scriptures, until the great question of worship has become—what is the right position of the Scriptures in regard to our meetings of worship?"

our mind, and we should suppose to the

mind of every one capable of tracing the links between effects and their original causes, this change, like the many others that have so altered the character of the Society, is the legitimate fruit of the principles promulgated of latter years amongst us, as being more enlightened deductions from the Scriptures, than those previously held by Friends, and set forth by Penn, Penington, Barclay and other standard authors.

If, as has been taught, the Scriptures are "*the principal means employed by Divine Providence for the illumination, conversion, and Spiritual edification of man*;" if they are "*the divinely appointed means of conversion*;" if "*the moral law, as revealed in Scripture*" * * * applies to all circumstances, comprehends all conditions, regulates all motives, and controls all overt acts;" if "*the Bible alone reveals the nature and character of sin*;" if the gospel is nothing more than the "*glad tidings*" recorded in the New Testament, the Scriptures must be the primary rule of faith and practice, and it becomes indispensable to salvation, to acquire a knowledge of the truths contained in them. With these views, Scripture schools, Scripture teaching and expounding, become highly important, and their wide extension, and constant operation, offer to their advocates the confident expectation of a sufficient reformation. Then, according to this same system of theology—having obtained the knowledge of, and a belief in the sacred truths recorded in the Scriptures, man possesses the faculties—reason and faith—by which he is able to accept and apply them availingly. "Faith is that principle in the human mind by which alone, according to the known constitution of our nature, this plan [of divine mercy and wisdom for our redemption] can be accepted and applied. Since then, the believer accepts the mercy of God in Christ Jesus, and applies it to his own condition, it follows in reason that the believer is saved." Have we not in these easy terms, an explanation of the numerous and sudden conversions we now so frequently hear of, and of the confident assertion often made by persons whom we would not have supposed had made many steps in the strait and narrow way, that they are perfectly justified, and their salvation assured!

Again: If it is accepted that the Scriptures are "*the means provided for instructing the Church in divine truth*;" and that they are to be "*distinctly regarded as the appointed source from which ministers are to derive the knowledge of the truths they declare*," it seems no more than reasonable that they should be read in our meetings for divine worship, rather than to take them, at second hand, from those who undertake to expound them by the knowledge gathered through study, and by practice in their Scripture Schools.

The principles of the Society led them in the beginning out of such doctrines, and preserved it from the practices naturally flowing from them, and Friends were a spiritually-minded people, an inward, a peculiar people; and they held up a light that others acknowledged to be clear and powerful. Now we are making much show of First-day Schools, of Scripture teaching, and of abundant activity in what is called "Christian work," and many are rejoicing in the notion that there is a great revival, and that they have seen beyond the contracted views of their predeces-

sors. But can we say that the life and power of religion abounds with us as it did with them? In what do we give proof, as a Society, that we are advancing beyond them in a knowledge of the truth, and in the spirituality of the gospel? Is it in abandoning—as is the case in Great Britain and in many places in this country—the plain garb that has hitherto distinguished the true Friend (and does yet), and the plain language of the Bible; in adopting the fashions and the complimentary address of the world, and the heathen names of days and seasons; in cultivating the study and practice of music; in adorning our houses with statuary and paintings; in considering these things as too small for a Christian to notice; in countenancing mixed marriages; in establishing missionary societies independent of the Society's organization; in amalgamating with other professors in "mission schools" and uniting in their mode of worship; in adopting, under some circumstances, singing of hymns as part of worship; in setting up "prayer meetings;" in introducing the reading of the Scriptures into our meetings for worship? And we might further query, is it in permitting members to submit to the rite of water baptism, and to partake of bread and wine as the Lord's Supper, without testifying against them? as is stated to be the case in some places. Are these, which are the fruits of the "new life" transfused throughout the Society within the last twenty-five or thirty years, satisfying evidences that the new religion is better than the old? or do they, if properly interpreted, verify Isaiah's, on our poor Society?

We would ask those who are thus metamorphosing the Society, where will be the end of the changes? If they have done these things in the green tree, what shall be done in the dry? When custom has reconciled to the innovations already made, is it likely that increased liberty and broken down barriers, will weaken or lessen the determination to be like other professors around us. Having overstepped the testimony of Truth so widely, as to introduce the reading of the Scriptures into our meetings for worship, how long will it be before the proposition made and urged, to have men learned in the languages, appointed to expound them to attenders of such meetings, supposed to be ignorant and unlearned, will be acceded to? Having sanctioned the singing of hymns in our meetings, why not practise it in our regular meetings. Alas! none are so blind as those who will not see.

We think there is much suggested that is worthy of deep consideration in the following, which we take from a communication, signed R. Doeg, in the last number of the (London) "*Friend*," written in opposition to the introduction of Scripture reading in meetings for worship:

"I remember a speech of that esteemed elder of the Church, Josiah Forster, at a Yearly Meeting a few years ago, when some alteration in our rules or practice had been advocated. He observed that Friends would do well to bear in mind that many of their elder brethren had already given up a great deal for the sake of harmony; and he thought it would be wiser and better to stop and watch the effect of what had been done, before we went further. I trust there is at the present time more vitality in our little community than there was thirty or forty years ago. On the

other hand, some are disposed to attribute various inconsistencies that now appear in some of our members to what they think was, at the time alluded to, a want of Christian firmness on the part of the Yearly Meeting. Certainly this meeting had no intention of encouraging such, though the idea that more latitude was allowable may, in some cases, have given occasion to advantage being so taken. I refrain from expressing an opinion on this point, and only allude to it to draw attention to the sage remarks of our departed friend, and to introduce a view which it seems wise to take on the present question. There may be grounds for the apprehension that the introduction of the practice H. S. N. proposes may pave the way for further steps in a wrong direction. The desire to be like others, not to run counter to the maxims and customs of those around us, is a striking propensity of human nature. The Israelites fell into the idolatries of the heathen, and afterwards desired a king, that they might be like all the nations.* The early Christians first attempted to Judaize, then to adopt the philosophy of Plato and others, then to blend heathen practices with Christianity; and some of these things seem to have been done under the specious view of drawing the heathen to forsake their false worship. In our days, Protestants are imitating Roman Catholics in ritualistic practices, some of them apparently with sincere, however mistaken, motives; and, in more ways than one, the Society of Friends has shown a similar tendency to assimilate to others.

"In all these cases it is to be observed that the modes adopted have been, and are such, as are more agreeable to human nature than that deep heart-work—that laboring, wrestling, striving, that patient waiting in entire dependence, that worshipping God in spirit—which true Christianity enjoins. Hitherto we have, in this country at least, remained a united, though a diminished people. Let us beware of any element of disunion. Let us remember our Lord's words, "A house divided against itself cannot stand." Let us beware lest, while professing a spiritual life, and non-conformity to the spirit of the world, our actions should belie our profession, and thus in this, or in any other respect, the trumpet give an uncertain sound."

SUMMARY OF EVENTS.

FOREIGN.—The pope has issued an encyclical bill concerning the spoliation of the church. He declares that it is impossible for him to make any surrender of property belonging not to him, and only placed in his hands as trustee, and if taken from him must be by hands he cannot have any thing to do with robbers, nor accept any thing from their hands. All who order, commit or assist in the robbery are formally excommunicated.

It is noticed with more surprise, that Earl Granville sent his note to Russia without waiting for the approval of his colleagues, who are divided in sentiment on the question. The queen, it is asserted, is utterly opposed to war, and so are a great part of the English people. Prince Gortschakoff's reply to Earl Granville's note, has been read in cabinet session. It is conciliatory in its tone, and has a specific meaning in its previous declarations, and affirms that Russia craves peace generally, and in the east especially. He does not withdraw Russia's claim to a modification of the treaty of Paris, and repeats the reference to a violation of the treaty by other European powers.

A Berlin dispatch says, that the late elections in Schleswig generally resulted in favor of the candidates who support the proposition for annexation to Denmark. Wurttemberg has signed the treaty negotiated at Versailles for a German confederation. The North

German Parliament have passed the bill granting a credit of 100,000,000 thalers for war purposes, with only a few dissenting votes.

The situation of Paris, so far as is known, has not materially changed. It is still closely besieged, and all persons, foreigners included, have been forbidden to leave the city. The Prussians refuse to permit them to pass their lines. The New York Tribune's correspondent, writing on the 13th inst., says the news of their privations well so far. Charcoal is now eight times the usual price, and the consumption of gas is forbidden. Since the 15th, the flesh of horses, mules and asses has been regulated by tariff like beef, and rations thereof were issued by the government. Cats are sold at six francs a pound. The number of deaths in two weeks had been 3640, including 758 from small pox. The *Temps* on the 15th said, "Beef will wholly fail in a week, horse-flesh in a fortnight, and salt meat in a week longer; vegetables and flour in three weeks longer." A telegram of more recent date declares that there is subsistence in the city for two months, and bread for a still longer period. The weather all over France has been stormy, with a heavy fall of rain and snow, making all military operations very difficult.

Thionville, the last stronghold of the French in Lorraine, has capitulated after a long siege and bombardment.

Tours dispatches of the 27th, state that 50,000 French troops had arrived at that place from Brittany. Several engagements between detached bodies of the German and French forces, both east and west of Orleans, and nearly on a line with that city, are reported, in all of which the French were successful. At Vendome they repulsed the Prussians and took 500 prisoners. A Tours dispatch of the 28th states, that a battle occurred on the day previous, near Amiens, which lasted until near evening, when the French abandoned their position before superior numbers and the artillery of the Prussians.

The London Times of the 25th says, that no collision between Russia and England is now probable. It has been definitely settled that a meeting of foreign ministers of the Powers interested in the treaty of 1856, shall take place in England in the First month next.

London. Com's, 42 $\frac{1}{2}$. U. S. 5-20's of 1862, 88; of 1861, 92; 4's, 84 $\frac{1}{2}$.

Liverpool.—Middling upland cotton, 91 $\frac{1}{4}$; Orleans, 92 $\frac{1}{2}$.

UNITED STATES.—Philadelphia.—Mortality last week 240. Old age, 16; consumption, 45. The city authorities have had a careful census of the population of inhabitants one of the wards, in order to test the accuracy of the census taken by the United States Marshal. The ward chosen was the Eighth, which the U. States Marshal's census gave a population of 20,306. The actual number at this time was found to be 22,831, and as near as could be ascertained, it was 22,570 on the first of Sixth mo. last, being 2,010 more than the census. The average number of inhabitants in each dwelling was found to be seven. The whole number of dwellings in the city is 115,132, with a probable population of 800,000.

Patents.—During the year ending 9th mo. 50th, 1870, there were filed in the Patent Office 19,411 applications for patents, including reissues and designs. The number of patents issued was 13,622, 101 extended, and 1089 allowed but not issued.

Public Lands.—During the last fiscal year, public lands were disposed of as follows:

Cash sales,	2,159,516.81
Located with military warrants,	512,360.00
Taken for homesteads,	3,698,910.05
Located with college scrip,	192,848.21
Grants to railroads,	996,655.91
Grants to wagon roads,	66,876.91
Approved to States as swamp,	481,628.31
Indian scrip locations,	16,627.33
Total,	8,065,413.00

A quantity greater by 429,261.03 acres than that disposed of the previous year.

Switzerland.—New England shows by the present census a total population of 3,482,001, against 3,135,283 in 1860. This increase is mostly in Massachusetts, Connecticut and Rhode Island. The population of New Hampshire has decreased 8,077, and the increase in Maryland is 10,000.

The census of the Cherokee Indians, just completed, shows a population of 15,388, of whom 7787 are males, and 7601 are females. The census of Salt Lake City, just completed, shows the population to be 13,545, against 8,236 ten years ago. The great bulk of this population is Mormon.

According to the latest returns the regular army of the United States is composed of 2188 officers & 54,870 enlisted men.

The San Francisco Bulletin states that one of the largest wheat growers in Alameda county, Cal. in this year, shipped his crop direct to Liverpool with the intervention of middlemen and commission merchants. This enterprising farmer chartered a large ship, which he loaded at the end of the Central Pacific road wharf, at Oakland, and 1,200 tons of wheat was brought alongside the ship's tackle, and in a few hours was stowed in the hold.

The census returns of New Jersey are complete, with the exception of four townships. During the year the number of inhabitants in the State is 895,672. In it was 672,953.

The Markets, &c.—The following were the quotations on the 28th inst. New York.—American 80th, H. Five-twenty's, 1807; ditto, 1868, 1000; ditto, 40, 100; Cotton, 16 $\frac{1}{2}$ cts. Mixed western corn, 86 cts. Oats, 62 $\frac{1}{2}$ a 64 cts. Philadelphia.—Clovers, 56.25 a 56.56. Superfine flour, 45.50 a 48.57; 1 brands, 85 a 87.25. Red wheat, 81.40 a 81.42. F. 93 cts. New corn, 77 a 79 cts; old, 87 a 88 cts. O. 54 a 56 cts. Choice beef cattle sold at 81 a 9 cts., and 45 cts.; fat to good, 41 a 8 cts., and common 40 cts. per lb. gross. Sheep sold at 65 $\frac{1}{2}$ per gross, and hogs at 9 a 9.50 per 100 lbs. net. Baltimore.—Choice white wheat, 81.70 a 81.75; good to pri 81.40 a 81.45; prime to choice red, 81.55 a 81.70; to good, 81.20 a 81.30. White corn, 77 a 80 cts; yell 85 cts. Oats, 50 a 52 cts.

TEACHER WANTED.

A competent Teacher (male or female) is wanted to take charge of Friends' school at Medford. Application may be made to EDWARD REEVE, CLAYTON HAINES, Medford, N. J.

FRIENDS' BOARDING SCHOOL FOR IND. CHILDREN, TEXASSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Marshalltown, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia, extra 90 cts. per do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch St Philadelphia, "Journal of the Life and Religious views of WILLIAM EVANS: a Minister of the Gospel the Society of Friends." A large octavo of 709 pp. Bound in cloth, \$2.50 Do sheep, 2.75 Half bound in Turkish morocco, 3.00

FRIENDS' ASYLUM FOR THE INSANE

New Frankford, (Twenty-third Ward,) Philadelphia Physician and Superintendent—JOSHUA H. WINTON, M.D.

Application for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, at Cropwell Meeting, Tenth month 1870, JOHN B. JONES, of Philadelphia, to HANNA daughter of Amos Evens, of Marlton, New Jersey.

DIED, on the 8th of Tenth month, 1870, at her residence in this city, PIERRE ANS, daughter of the Jacob Justice, a member of the Western District Monthly Meeting.

On the evening of the 9th of Tenth month, MARY ANN, wife of Wm. W. Smedley, in the 52d of her age, a member of Frankford Monthly Meeting was favored to endure a protracted illness Christian patience and resignation, and we have consoling evidence, that through redeeming love mercy, she has been received into everlasting rest.

On the 28th of Tenth month, 1870, MARY PERCE, in the 84th year of her age, a member of W. District Monthly Meeting, Philadelphia.

WILLIAM H. PILE, PRINTER.
No. 422 Walnut Street.

Single Copies, when paid quarterly in advance, five cents.

The Mont Cenis Tunnel.

Professor Anstons furnishes the *Gentleman's Magazine* with an interesting article on "The Passage of the Mont Cenis," a portion of which we extract.

After speaking of the road constructed by Napoleon 1st, and the remarkable railway of the mountain built by an American engineer, the following account is given of the great tunnel:

"It is evident that for a long time to come a tunnel through the Alps near the Mont Cenis pass is likely to supersede all other roads, and convey a vast number of passengers and goods through, instead of across, the great natural barrier which the Alps present between northern and southern Europe. Much has been recently said about other Alpine tunnels, but none has been seriously undertaken; nor in the present state of political affairs in Europe is any likely to be commenced some time to come. Meanwhile, the works we are referring to is on the very point of completion, all the possible or real difficulties being either been avoided or overcome; and may be predicted, with a confidence approaching to certainty, that the present year will witness the actual piercing of the mountain, and the opening of a way between the valleys that carry water to the Gulf of Lyons and those that drain into the Adriatic. The reader who has followed the official returns on the progress of the tunnel may think that, as there still remains nearly half a mile to be done through, this statement is premature, and that accidents and delays may still occur. Doubt, if by any sad complexity of political affairs, the war that is now raging should involve Italy as well as the northern powers, requisite human labor might cease to be available; but without such a crisis there is no probability of interruption. Provided only that the machinery, which has been so well adapted, and which is now in admirable working order, should continue to hold out another six months, there cannot be much doubt that the two ends will meet. One more year will, perhaps, be sufficient to complete, not only the tunnel but the approaches, and connect the valleys of France and Italy by a continuous railway liable to interruption.

"A recent visit to the immediate neighborhood of the tunnel, and to the resident engineers at both ends, and a study of the collections of rocks that have been made during the progress of the works, has enabled me to appreciate fully this state of approximate certainty as to the further progress and completion of the work, and also the causes of the difference in progress at the two ends. What may be called the physical history of the tunnel, as distinguished from its history as a work of engineering and mechanics, is now nearly complete, and possesses considerable interest.

"The great tunnel through the Alps passes under the Mont Frejus about 16 miles west of the Mont Cenis and the pass known by that name. It is therefore very incorrectly termed the Mont Cenis tunnel. It cuts through the watershed of the Rhone and the Po, which in this part of the Alps is a crest varying from seven to ten thousand feet above the sea. Mont Tabor, the highest part of this crest, is a few miles to the west of the tunnel, and is 10,430 feet above the sea, while the Mont Cenis pass, the lowest point, is about the same distance to the east, and is 6,890 feet above the sea. The height of the observatory on the summit of the ridge over the tunnel is 9,676 feet. The levels of the valleys to the north and south of this crest or watershed are respectively 3,612 and 4,380 feet. This difference of level, upwards of 750 feet, by which the valley on the south, or Italian side, exceeds the northern or French side, would seem at first sight to offer some difficulties in constructing the tunnel, especially if much water had been met with. By taking advantage, however, of the form of the valley, the railway will be carried by a zigzag on the mountain side to some hundred feet higher level before entering the mountain on the French side, reaching the entrance of the tunnel at 1,046 feet. There thus remains a difference of 334 feet, which when distributed over the seven and a half miles, is found to be equivalent to a gradient of 44 feet in a mile, or one in 120.

"The tunnel has not been in course of actual construction more than twelve years, but it had been suggested as long ago as in 1841, in a pamphlet published at Lyons by Signor Medail of Bardoneche. This pamphlet was brought under the notice of Charles Albert, at that time King of Sardinia, in whose dominions were included the whole valley of the Arie as well as both sides of the mountain crest. The work was thus from the first exclusively Italian, and France only became interested in it when it took possession of Savoy. The work has been carried on throughout from both sides by Italian engineers, according to the terms of the treaty by which Savoy was ceded to France. The king referred the matter to the Minister of the Interior to make due inquiries, and the engineering and physical questions involved were submitted to the

consideration and judgment of M. Maus, a Belgian, who was engineer-in-chief of the Turin and Genoa railway, then in course of construction, and Professor Sismonda, a very eminent geologist employed in the preparation of a geological map of Sardinia, since published. These two gentlemen, after visiting and carefully examining the whole of the chain between Mont Cenis and Monte Genevra, reported favorably of the line selected by M. Medail, which was ultimately adopted. The matter then went into the hands of other engineers (who have now undertaken the work for the government,) but as on further investigation and calculation, based on the rate of progress of similar works already undertaken, it was estimated that at least thirty-five years would be required for the tunneling, even if no unexpected difficulties and no accidents supervened, it was natural enough that the government should pause before deciding on a work of such magnitude entirely for the benefit of a future generation. Then came the question whether by some mechanical contrivance it might not be possible to accelerate the progress. It was soon found altogether out of the question to attack the tunnel at any point between the two extremities. In most cases when railway tunnels are required, a shaft or many shafts are sunk from the surface, and the work goes on from each shaft towards both ends, at the same time that the two ends are being driven. In this way, by means of two shafts a tunnel of three miles might be divided into six sections of half a mile each, and so in proportion. But in the case before us the height of rock above the tunnel would be as much as 1,500 feet at a distance of less than half a mile on the Piedmont side, and almost as much on the Savoy side. To sink two shafts to a depth of 1,500 feet in an Alpine country, and after all leave an interval of more than six miles, was not to be considered for a moment. The whole distance (7 1/2 miles,) must therefore be pierced from the two ends. A machine was contrived by M. Maus which, taking advantage of the water power abundantly available on both sides of the mountain, was expected to reduce the time required for the work by one-fourth, but owing to the political events of 1848 this machine was never actually put together and used. After the disturbed times had passed, and when Italy became a kingdom, the engineers charged with the execution of the work had perfected the ingenious and most effective machinery that has since been used for perforating the rocks. Some time, of course, elapsed before operations could be carried on with steadiness and vigor; but for many years past the tunneling has been going on, not only steadily but with gradually increasing certainty and facility, and the work is now, as we have already seen, almost in a complete state.

"A visit to the tunnel works in their present state is interesting and instructive, and

is well worthy of the time and trouble involved. Leaving Turin by the evening train the journey to Susa in summer time is full of interest, the road passing first across the plain with the mountains at a distance, but soon entering the valley and shut in by the lower flanking chain of the Alps on each side, with ruins of mediæval castles occasionally crowning the hills. The counterforts of the chain consist of serpentine, which is almost immediately succeeded by gneissic rocks and mica schist, and then by altered schists of the oolitic period altogether changed so as to resemble the oldest rocks of the Alps. These continue across the mountain axes and reach to St. Michel. Picturesque old castles and equally picturesque villages succeed each other equally rapidly; the valley is moderately wide and cultivated, and after passing the small town of Bussoleno the mountains close in and soon the little town of Susa is reached. Here the main line of railway ends, and when the tunnel is completed it will avoid the town and present station altogether. The works are seen in passing, and are well advanced.

"The view of the valley from Susa is very striking. Looking from the town there is a vast amphitheatre, almost closed except towards the east, where the torrent of the Dora makes its way to join the Po at Turin. The narrow gorge up whose sides the mountain road rises to reach the pass of the Mont Cenis, seems to be shut in entirely behind, and the upper valley of the Dora, turning towards the south, is concealed from view. The result something resembles those curious *cirques* common in the Pyrenees, and the effect is grand. Susa itself does not contain much beyond a number of hotels, but near it are the remains of an old triumphal arch, built in honor of Augustus a little before the christian era. There is also a cathedral of the 12th century, but not much of it remains.

(To be continued.)

Selected for "The Friend."

The Way of Life and Death made manifest and set before men.

(Concluded from page 118.)

Now for the other part of the objection, that if men should be left to their own spirits, and should follow the guidance of their own spirits, it would produce confusion and uncertainty; I do acknowledge it; it would do so. But here is no leaving of a man to his own spirit spoken of or intended, but the directing and guiding of a man to the Word and Spirit of Life, to know and hear the voice of Christ, which gathers and translates man out of his own spirit into His Spirit; and here is no confusion or uncertainty; but order, certainty, and stability. The light of God's Spirit is a certain and infallible rule, and the eye that sees that, (is a true eye); whereas man's understanding of the scriptures is uncertain and fallible; he not having the true eye, receiveth such a literal, uncertain knowledge of things into his uncertain understanding, as deceives his soul. And here man, in the midst of his wisdom and knowledge of the scriptures, is lost in his own erring and uncertain mind, and his soul deceived, for want of a true root and foundation of certainty in himself. But he that is come to the true Shepherd, and knows His voice he cannot be deceived. Yea, he can read the scriptures safely, and taste the true sweetness of the words that came from the life; but man who is out of the life

feeds on the husks, and can receive no more. He hath gathered a dead, dry, literal, husky knowledge out of the scriptures, and that he can relish; but should the life of the words and things there spoken of be opened to him, he could not receive them, he himself being out of that wherein they were written, and wherein alone they can be understood. But poor man having lost the life, what should he do? He can do no other but cry up the letter, and make as good shift with it as he can, though his soul the mean while be starved, and lies in famine and death, for want of the bread of life, and a wrong thing is fed.

The scribes and Pharisees made a great noise about the law and ordinances of Moses, exclaiming against Christ and His disciples as breakers and profaners of them; yet they themselves did not truly honor the law and ordinances of Moses, but their own doctrines, commandments and traditions. So those now who make a great noise about the scriptures, and about the institutions of the apostles, do not honor the scriptures, or the institutions of the apostles; but their own meanings, their own conceivings, their own inventions and imaginations thereupon. They run to the scriptures with that understanding which is out of the truth, and which shall never be let into the truth; and so being not able to reach and comprehend the truth as it is, they study, they invent, they imagine a meaning; they form a likeness, a similitude of the truth as near as they can, and this must go for the truth; and this they honor and bow before as the will of God; which being not the will of God, but a likeness of their own inventing and forming, they worship not God, they honor not the scriptures, but they honor and worship the works of their own brain. And every scripture which man hath thus formed a meaning out of, and hath not read in the true and living light of God's eternal Spirit, he hath made an image by, he hath made an idol of; and the respect and honor he gives this meaning, is not a respect and honor given to God, but to his own image, to his own idol. Oh how many are your idols, ye christians of England, as ye think yourselves to be! How many are your idols, ye gathered churches! How full of images and idols are ye, ye spiritual notionists, who have run from one thing to another with the same mind and spirit wherewith ye began at first! But the founder of images has never been discovered and destroyed in you, and so he is still at work among you all; and great will your sorrow and distress be, when the Lord's quick eye searcheth him out, and revealeth His just wrath against him. In my heart and soul I honor the scriptures, and long to read them throughout with the pure eye, and in the pure light of the living Spirit of God; but the Lord preserve me from reading one line of them in my own will, or interpreting any part of them according to my own understanding, but only as I am guided, led, and enlightened by Him, in the will and understanding which comes from Him. And here all scripture, every writing of God's Spirit, which is from the breath of His life, is profitable to build up and perfect the man of God; but the instructions, the proofs, the observations, the rules, the grounds of hope and comfort, or whatever else which man gathers out of the scriptures (he himself being out of the life,) have not the true profit, nor build up the true thing; but both the gatherings and the gatherer are for

destruction. And the Lord will ease the scripture of the burden of man's fornings and invention from it, and recover its honor again by the living presence and power of the spirit that wrote it; and then it shall be no longer abused and wrested by man's earth and unlearned mind, but in the hands of the Spirit, come to its true use and service to the Seed, and to the world.

ISAAC PENNINGTON.

Educational Principles.

Words, instead of ideas, are worshippe. The teaching of science, if properly done, the reverse of this, and will go far to remedy its defects. Books in this case ought only be accessories, not principals. The pupil must be brought in face of the facts through experiment and demonstration. He should pull the plant to pieces and see how it is constructed. He must vex the electric cylinder till it yields him its sparks. He must apply with his own hand the magnet to the needle. He must see water broken up into its constituent parts, and witness the violence with which its elements unite. Unless he is brought into actual contact with the facts, and taught to observe and bring them into relation with the science evolved from them, it were better that instruction in science should be left alone. For one of the first lessons he must learn for science is not to trust in authority, but to demand proof for each assertion. All that is true education, for it draws out faculties of observation, connects observed facts with the conceptions deduced from them in the course of ages, gives discipline and courage of thought, and teaches a knowledge of scientific method which will serve a lifetime. No such education be begun too early. The whole yearnings of a child are for the natural phenomena around, until they are smothered by the ignorance of the parent or teacher. He is a young Linnaeus roaming over the fields in search of flowers. He is a young conchologist, or mineralogist, gathering shells or pebbles on the sea-shore. He is an ornithologist, and goes bird-nesting—an ichthyologist, and catches fish. Glorious education in nature, all this, if the teacher knew how direct and utilize it. But as soon as the children comes into the school-room, all natural instincts are crushed out of him; he is restrained out of all natural sympathies and affections, pruned, trimmed and cramped, and young intellect bound, as gardeners in old times bound trees and shrubs, till they are summed monstrous and grotesque forms, altogether different from the wide-spreading foliage and clustering buds which God him gave to them, and which man is idiot enough to think he can improve. Do not suppose that we wish the primary school to be a lecture theatre for all or any of the "ologies." All the science which would be necessary give a boy a taste of the principles involved in his calling, and an incitement to pursue them in his future life, might be given in illustration of other subjects. Instead of mere descriptive geography drearily taught a drowsily learned, you might make it illustrative of history, and illustrated by physics, geography, which, in the hands of a real master, might be made to embrace most of what is desirable to teach. The properties of air and water, illustrations of natural history, varieties of the human race, the properties of the atmosphere as a whole—is life-giving

rtues when pure, and its death dealings
ben fouled by man's impurities—the natural
oducts of different climes, these and such
e teachings are what could be introduced
ith telling and useful effect. Far better this
an over-lading geography with dry details
ources and mouths of rivers, of isothermal
es, latitudes and longitudes, tracks of ocean
rents, and other tendencies towards the
d verbalism and memory-cramming. The
ecious hours should be regarded as the train-
ing for a whole lifetime, and should be used
for the purpose of giving living and in-
elligent learning, not obsolete and parrot in-
struction.—From an article by Dr. Lyon Play-
fair.

For "The Friend."

Special Provisions.

When we remember that the Most High is
ancient, omnipresent and omnipotent, how
n any of us doubt of His wisdom, know-
ledge and strength, or of His ability to bring
pass many things beyond our finite cap-
acity to comprehend, and which we may be
tempted almost to disbelieve, because they
are in variance with the common laws of na-
ture, and conflict with the refined views of
science. The Holy Scriptures are fraught
with circumstances that are calculated to
confirm the true believer in their faith in His
power and ability to fulfil His own desig-
ned plans for their good, their preservation,
their conviction; and in His boundless
love to His poor dependent creature, man,
as the bush consumed that Moses saw on
Sinai? and was there not a ram caught in the
thicket, when of Abraham's obedience was fully
tested? and did not the children of Israel
travel through the channel of the Red Sea, as
a dry land, because an east wind drove the
waters back? And did not the Prophet Elijah
awake from his sleep, a cake baked
under a cruise of water at his head, after lying
down with the discouraging petition to have
his life taken away, for what better am I
than my fathers? The same special Provi-
dence was displayed for Joshua, so that the
riests who "bare the Ark, stood firm on dry
ground until all the people were passed clean
over Jordan;" also, "the sun stood still upon
Gibeon, and the moon in the valley of Ajalon."
And from the Apostle's arm, the venomous
serpent fell into the fire, unharmed him.
And more recent date, when an enemy's vessel
was chasing the one in whose berth that emi-
nent servant, George Fox, was reclining, and
he was enquired of "what course to pursue?"
he replied, "it was a trial of faith, and there-
fore the Lord was to be waited on for coun-
sel." "So retiring in spirit, the Lord showed
me that His life and power was placed be-
tween us and the ship that pursued," which
he told the master and the rest; and when the
enemy was close upon them, his faith was
strengthened upon the remembrance of the
"omise, the moon went down, a fresh gale
rose, and they saw them no more." And at
time of great distress on board of Thomas
halkley's vessel, when "their provisions had
led, some maimed, but he told them they
led not cast lots, "for I would freely offer
my life to do them good," and as I was
sailing over the side of the vessel, thought-
fully considering my proposal to the company,
and looking in my mind to Him who made
me, a very large dolphin came up towards
the surface of the water, and looked me in

the face. I called the people to put a hook
into the sea and take him, "for here is one
come to redeem me," which they did, and it
lasted for provision until they saw land; and
he adds, "Blessed be His great and glorious
name, through Christ for ever." Therefore,
let none harden their hearts by endeavoring
to persuade themselves that the passage through
the bed of the Red Sea was effected by the tide
running out; or that the awful and solemn
scenes presented at the time, when the sun
was darkened from the sixth until the ninth
hour, and the veil of the temple rent from
the top to the bottom, was (from scientific
calculation) an eclipse; but in humility and
abasedness of self, seek to have that eye
opened, that can believe that which they cannot
comprehend."

Hand-made Cheese—A New Industry.

A German hand-cheese factory has been
established in the southern section of Phila-
delphia, by Mende Brothers, which is now
carried on with much success. The *Practical
Farmer* says:

"It was to us an entirely new industry,
illustrating what we have often had to re-
mark, that if farmers would give their busi-
ness more thought and study, it will be found
to embrace many subdivisions, and much
greater variety than the old stereotyped rota-
tion of corn, oats, and wheat.

"The business which Mende Brothers have
established is that of purchasing from the
farmers of Chester and Delaware, Bucks and
Montgomery counties, curdled milk, com-
monly known as cottage cheese—"smear-
case." It is brought to them twice a week in
cans, for which they pay about twenty cents
per gallon, and by weight in winter three to
three and a half cents per pound. They con-
sume in this way the milk of about 2,000 cows
annually. Their factory is a massive brick
building, 40 by 100 feet, five stories high, with
basement, and has a variety of very ingenious
machinery, all of which is propelled by steam
power, and is capable of making 50,000 of the
hand cheeses per day of ten hours, or fifteen
millions per year, and does the work of at
least fifty hands. The curds, on being received
at the factory, fresh from the dairy, are placed
in bags holding perhaps a couple of bushels
and are allowed to drain entirely dry. They
are then emptied into large wooden troughs,
and manipulated with wooden shovels, a cer-
tain amount of salt and some caraway seed
being mixed through the mass. It is then
thoroughly ground up by machinery, before
passing into their principal machine, which
is a wonderful piece of mechanism. This
machine and delivers the cheese on sliding
shelves, in three straight rows, automatically
pressed into the shape of small cakes, about
two inches wide by half an inch thick, which
is found the most convenient size and shape
for sale and shipment. This is done with
the regularity of clock-work, and continues six
days in every week in the year, at all seasons.
"The after processes consist simply of these
sliding shelves passing and repassing each
other, through the hatchways up to the large
and well-ventilated drying-rooms above, where
they are arranged on racks.

"The temperature of these rooms is auto-
matically regulated by a thermometer; in cold
weather, hot air or hot steam conveyed in
iron pipes being used according to circum-

stances. The whole process of making the
"German hand cheese," from the time the
curds are received till finally packed in boxes
for shipment, occupies about twelve days.
The most scrupulous cleanliness and neatness
is observed about the establishment in every
part, and to secure entirely against danger
from dust and flies, the cakes before final ship-
ment all go to the basement, where they are
washed in great tubs of water, and again
dried.

"The supply of curd comes in winter from
Bucks and Montgomery, and in summer from
Chester and Delaware counties, for the reason
that farmers in the latter do not generally
have winter dairies.

"Mende Brothers commenced on a small
scale six years ago, and the process by which
they now manufacture the hand cheese is one
of their own invention and improvement, for
which they hold several patents. The main
difference between theirs and the old mode
of making this cheese is that they produce in
twelve days an article which will keep and
bear transportation all over the United States,
whereas the old process requires two or three
months, with very uncertain results, and even
under the most favorable circumstances is
hardly a merchantable article."

For "The Friend."

Tennessee Freedmen's School.

The opening for right minded and able
persons here is enlarging, and very encouraging.
Though money is by no means plenty, it is
pretty freely offered by Freedmen for books,
fixtures and good teachers. They are very
worthy communities generally; and great re-
ward, in peace of mind, would be the portion
of such teachers as rightly engage in self-
sustaining schools, and other reform work
here.

Y. WARNER,

Maryville, Tennessee.

Eleventh mo. 15th, 1870.

Immigration.—The total number of immi-
grants into the United States during the fiscal
year ending 6th mo. 30th last, appears from
the report of the Bureau of Statistics to have
been 357,097, classed as follows:

	Males.	Females.	Total.
Great Britain,	63,369	40,316	103,685
Ireland,	31,414	25,582	56,996
German States,	73,027	49,621	122,648
Sweden and Norway,	16,309	10,350	26,659
Denmark,	2,519	1,964	4,483
Holland,	663	403	1,066
Belgium,	718	284	1,002
Switzerland,	2,012	1,073	3,085
France,	2,669	1,316	4,065
Spain and Portugal,	655	256	911
Italy,	2,132	739	2,871
Russia and Poland,	690	440	1,130
Other countries of Europe,	28	2	30
China,	14,624	1,116	15,740
Africa,	26	5	31
British North American Possessions,	22,729	17,683	40,403
Mexico,	352	101	453
South America,	59	10	69
Cuba,	816	357	1,173
West Indies,	315	98	413
Azores,	275	167	442
All other countries not stated,	139	43	182
Total,	235,551	151,546	387,097

Social Intercourse.—I believe that friend-
ship would be truly valuable, and our mutual
intercourse instructive, did we speak to,
rather than of, one another.—*Mary Capper.*

AUTUMN WOODS.

Selected.

For "The Friend."

Ere in the northern gale
The summer roses of the trees are gone,
The woods of autumn all around our vale,
Have put their glory on.

The mountains that enfold
In their wide sweep, the colored landscape round,
Seem groups of giant kings in purple and in gold,
That guard enchanted ground.

I roam the woods that crown
The upland, where the mingled splendours glow;
Where the gay company of trees look down
On the green field below.

My steps are not alone
In these bright walks; the sweet south-west at play,
Flies, nestling, where the painted leaves are strewn,
Along the winding way.

And far in heaven, the while,
The sun that sends the gale to wander here,
Pours out on the fair earth his quiet smile—
The sweetest of the year.

Let in through all the trees
Come the strains of the finest depths are bright;
Their sunny colored foliage, in the breeze,
Twinkles like beams of light.

The rivulet, late unseen,
Where flickering through the shrubs its waters run,
Shines with the image of its golden screen,
And glimmerings of the sun.

* * * * *
Oh Autumn! why so soon
Depart the hues that make the forests glad;
Thy gentle wind and thy fair sunny noon,
And leave thee wild and sad?

Ah! 'twere a lot too blest
Forever in thy colored shades to stray;
Amid the kisses of the soft sweet east
To roam and dream for aye!

And leave the vain, low strife
That makes men mad—the tug for wealth and power;
The passions and the cares that wither life,
And waste its little hour.

Little's Living Age.

NIAGARA.

Original.

Suggested while standing on "Termination Rock,"
under the sheet of water that runs over "Table Rock."

I am alone amid thy tone,
Bold streams of might and pride!
I hear thy roar around me pour
Its echo's far and wide.
Above me thy rude crags are piled
In savage grandeur stern and wild,
While o'er thy bed, dark, deep, and broad,
The rainbow bends—the smile of God.

Ages have rolled, and Time grown old,
And empires passed away,
Since thou didst burst from chaos first
Into the light of day;
Yet 'mid the wreck that's wrought by time
Thou, mighty, absolute, sublime,
In flowing majesty dost tower,
Dread emblem of the Almighty's power.

I have no fear of danger here
Above thy foaming bed;
I do not shrink the trembling brink
Of these old rocks, to tread,
Away! all trivial things of earth,
Far nobler thoughts now spring to birth,
I feel a holier presence near!
Be strong my spirit, God is here!

His cunning hand, the whole hath planned,
His strength these rocks have piled,
His fiat hurled this watery world
Forth in its beauty wild.
His finger stretched that bow above,
That graceful arch—His smile of love,—
His voice, the thunder of this roar—
His presence speak they, evermore.

H. C. T.

Selections from the Diary of Hannah Gibbons; a
Minister deceased.

(Continued from page 114.)

To her friend William Evans, she again
writes,

"10th mo. 2d and 3d, 1858.

"My dear friend William Evans,—I feel inclined to write thee a few lines, though as usual have but little ability for it, more than to acknowledge thy kind remembrance of me, dated the first of last month. Communications of that kind, from those who love the Lord Jesus, seem to me comparable to iron sharpening iron to the weary traveller; such as have often to adopt the language, 'Surely I am a worm and no man.' These humiliating seasons are no doubt designed for our deepening in the root of life, whereby we are brought to feel the verity of the declaration, 'Of yourselves, without Me, ye can do nothing. I would that feelings of this kind did more generally prevail amongst us as a Society; causing us to study to be quiet, and to do our own business, each one endeavoring in humility and godly fear to build over against his own house, in order for the rebuilding of the walls which are so lamentably broken down. If this was our individual concern there would be less of an inclination to find fault with one another, which tends to increase strife, disunity, and to the casting stumbling blocks in the way of the beloved youth, and other honest enquirers after Truth. Truly the saying of our blessed Lord is applicable: 'He that is not with me is against me; and he that gathereth not with me scattereth abroad.' * * * The breathing of my heart often is, Lord help us, for vain is the help of man. What a mercy it is that through all the shaking permitted, 'the foundation of God standeth sure; having this seal, the Lord knoweth them that are his;' yea, he knoweth them, and will tenderly regard these, I surely believe, who are endeavoring to follow Him in the obedience of faith, not leaning to their own understanding. What better can we do, dear friend, than to commit the cause unto the Lord, whose power is above every other power, hoping and trusting that in his own time He will take it into His own hands, and then who shall let it.

"Thy information of dear Elizabeth's improved health was very agreeable, as also to find you had a prospect of visiting us, which I hope you may be able to do ere very long. In the feeling of very tender love to you both, which I trust is of that kind which waxeth not old, I remain your sincere friend
HANNAH GIBBONS."

The following letter to ———, of Concord, was written about this time:

"Esteemed friend,—Although I am but very little acquainted with thee, yet I have felt my mind drawn towards thee in very tender solicitude for thy best welfare; and not knowing that I shall have an opportunity of speaking to thee verbally, I feel inclined to take this way; and my desire is that thou mayest not suffer any of the perishing things of this life so to engross thy mind as to retard thy progress heavenward. We have frequent evidences that here we have no continuing city, and to seek one which hath foundation whose builder and maker is the Lord, ought to be our first and greatest concern. We may please ourselves with the things of time and

sense, and experience some enjoyment in them, yet these will all fail to satisfy the longings of an immortal soul, in a time which sooner or later will overtake us all. A solemn season no doubt it will be (if time is mercifully granted for reflection) when the world and all its enjoyments are receding from our view, with an awful eternity before us; O thee to feel that we are in a state of acceptance with our Heavenly Father, will far transcend any thing we can possibly attain to in the present life. I am well aware that we do not attain to this desirable state in our own will and wisdom, nay verily; but it is in yielding to the redeeming, sanctifying power of our blessed Saviour who said, 'Whosoever doth not bear his cross and come after me cannot be my disciple.' This remains to be the way to blessedness and peace.

"I know not why my mind is thus drawn toward thee, my younger friend, in desire fitly increasing willingness to be found walking in the strait and narrow way which lead to life and peace. We may maintain a fast standing amongst men, yea, even have our lines squared as by a line of moral rectitude and this to a certain extent is commendable if we do not experience a yielding of ourselves in obedience to the dictates of Divine grace in the secret of the heart, we shall not know an advancement in the high and holy way cast up for the ransomed and redeemed of the Lord to walk in.

"While writing, thy worthy parents have been brought to my remembrance. Thy dear mother I was agreeably acquainted with, as thou thyself both could say with one former: 'I have no greater joy than to hear that my children walk in Truth.' I feel my mind clothed with desires for thy encouragement not so much with a view to draw thee to our religious Society, though that also would be highly satisfactory, as to endeavor to encourage thee to increasing diligence in attention to the monitions of Divine grace in thy own mind, and to a seeking more and more to our Heavenly Father for strength to do His blessed will.

"I write in much tenderness of mind towards thee, often feeling myself the necessity of watching unto prayer; having nothing in view but thy best welfare, and the relief of my own mind; therefore hope thou will excuse the freedom I have taken in thus addressing thee.

Thy sincere and well-wishing friend,
HANNAH GIBBONS."

We extract again from her Diary: "10 mo. 12th, 1858. My beloved brother-in-law Abraham Gibbons, departed this life in the 68th year of his age. He will be much missed in his bereaved family, by his friends, and also in our poor scattered Society; in the welfare of which he was much concerned, and continued to be so. Not many days before he closed he said, it is a great mercy to be quiet passing away.

"12th mo. 5th. My mind for some time past has been exercised on account of a poor colored man, confined in prison at New Chester: who, from reports, has long been walking in the broad way. It seemed to me as though it might be right for me to see him though many discouragements, such as bodily infirmities, and a fear lest the blessed Truth might suffer by me, stood as a lion in the way. But feeling as though my peace of mind would

cerned in it, I was enabled to be resigned; accordingly went the 29th of last month, accompanied by cousin James Emlen and my sister J. The poor erring man sat soliloquy like that which arose was communicated to me; and I was thankful in believing that the mercy and goodness of our compassionate Father, was still extended to him. And O how my heart craved that the poor prisoner should yield to the purifying, cleansing operation of the Holy Spirit, before it is too late; remembering the solemn declaration of our Saviour, 'How often would I have gathered thee, but thou wouldest not.' My mind afterwards favoured with a precious feeling; wherein a desire arose, that all the poor, erring, straying sheep from our Heavenly Father's house, might through His adorable mercy, be brought back to it, where there is ad enough and to spare."

After the simple statement that they had given communications at their meeting, G. thus proceeds: "My hearing is so gone I scarcely knew what was said. It was a long time with me, being renewedly made sensible of my nothingness and unworthiness; and that truly the solemnizing presence of the High and Holy One is not at our command. Yet He is at times pleased in mercy favor with it, when words are not spoken. Precious Father! be pleased to keep me in a dependent state."

The above allusion to silent meetings by our dear Father, reminds of an expression of one of her contemporaries, likewise passed away, and also a minister of Christ, to the effect that she had never been ashamed of a silent meeting; while she had not unfrequently been ashamed of those not so. To meetings with or without words the precept applies, "There is no power but of God." Friends need not decide beforehand to hold them either in silence or not in silence. It is only as the natural Word, the source and centre of all life, sought unto and obeyed, that good can be done, or the souls of those gathered can be edified. Perhaps there is not an individual member of our religious Society, who has attained to depth and experience in the mystery of godliness, that has not, after the injunction, 'commune with thine own heart and be still,' the preciousness and excellence of silent meetings, and their especial adaptation to our condition, and to the true spiritual worship, which in its nature must ever be in spirit and in truth. The worship of our Father who is in heaven is an exercise of the soul. He who looks on the heart, and hath respect to the intents of it, will not be satisfied with a substitution, or anything short of the only acceptable sacrifice of a broken heart and a contrite spirit. "The worship will pleasing to me," writes Jonathan Dymond, "is the sincere aspiration of a dependent and grateful creature to One who has all power in heaven and earth." "To the real prostration of the soul in the Divine presence," continues the same writer, "it is necessary that the mind should be still: 'Be still and know that I am God,' such devotion is sufficient for the whole mind; needs not, perhaps in its purest state it admits not—the intrusion of external things. And when the soul is thus permitted to enter into the sanctuary of God; when he is humbled in his presence; when all desires are involved in the one desire of devotedness to him; then is the hour of acceptable worship—then the petition of the soul is prayer

—then is its gratitude *thanksgiving*—then is its oblation *praise*." Robert Barclay on this very important subject, and with direct reference to a fundamental principle of Quakerism—the inward life and power of Christ—and by which he was secretly reached says: "When I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart; and as I gave way unto it, I found the evil weakening in me, and the good raised up; and so I became knit and united unto them, hungering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed. And indeed this is the surest way to become a christian; to whom afterwards the knowledge and understanding of principles will not be wanting, but will grow up so much as is needful, as the natural fruit of this good root; and such a knowledge will not be barren nor unfruitful. After this manner, we desire therefore, all that come among us to be proselyted; knowing that though thousands should be convinced in their understandings, of all the truths we maintain, yet if they were not sensible of this inward life, and their souls not changed from unrighteousness to righteousness, they could add nothing to us."

Is there not danger in this day of outwardness of observation, when with too many the wise and knowing head seeks to be pleased and filled, rather than through submission to the grace of Christ Jesus, the honest and good heart may receive the little seed or word of the kingdom; is there not danger of forgetting the Saviour's teaching, that the kingdom of God cometh not with observation, but is within; or being, by the same Holy Lawgiver, compared to a grain of mustard seed: "which indeed is the least of all seeds; but when it is grown, it is the greatest among herbs," &c. Is there not danger of forgetting the inwardness and spirituality of christian worship under the gospel dispensation; and that be it in solemn reverential silence, or with the help of words, all is from the Lord, without whom our own efforts will be but as the sounding brass or the tinkling cymbal.

(To be continued.)

The Deep Sea.

BY ROBERT PATTERSON, D. D.*

During the progress of the deep sea soundings, which have been carried on ever since a trans-atlantic cable was proposed, quite a number of facts were incidentally observed, of such a character as to excite the most profound interest among scientific men; since they seemed to conflict with the accepted zoological and geological theories. It was desirable to collect more facts and to observe them more carefully. A dredging expedition was therefore fitted out under the charge of Messrs. Thompson and Carpenter, and H. B. M.'s ship, the Porcupine, was placed at their disposal, with the most improved apparatus for reaching the bottom of the deep sea, and bringing up considerable quantities of whatever might be found on its bottom. This apparatus has been so successful as to bring up some hundred weights of mud at a single haul from a very great depth. Registering thermometers, protected from pressure, were liberally furnished, and constantly, and generally successfully used, and their results registered. The observations and experiments were detailed before the Royal Geographical Society, and the specimens of the tenants of

the sea bottom were exhibited. The facts were so inexplicable according to the current theory of geology, indeed so contrary to many of its assumptions, that it was deemed necessary to doubt the correctness of the observations, or at least to hold them in suspense, until another expedition had either disproved or confirmed them. Philosophers moreover, had taught that all life must cease at three hundred or four hundred fathoms, from the immense pressure; and experiments with the hydrostatic press had crushed the life out of all kinds of shell fish and crustacea submitted to a much lower pressure; but here were thousands of such beings, fat and flourishing, from a depth of two thousand fathoms.

The Council of the Royal Society, therefore, requested the Admiralty for the use of The Porcupine again, for another expedition, under charge of Captain Calver, R. N., and Guyn Jeffreys, and the ship was accordingly put in commission for this and other hydrographic service. She sailed westward on the 18th of May, 1868, carrying on explorations until she reached Porcupine Creek, so named in one of her former voyages. She then went on sounding towards Rockall, a desolate rock in the North Atlantic, thence toward Donegal Bay.

In July she started on a second voyage under the scientific charge of Dr. Wyville Thompson, in a southwesterly course, for the purpose of deeper soundings at the northern extremity of the Bay of Biscay. Dr. Thompson was successful in making the dredge here at the extraordinary depth of 2,435 fathoms, a depth nearly equal to the height of Mont Blanc, and the greatest depth from which any considerable specimen of sea-bottom has yet been elevated—being 14,610 feet.

In August she started from Belfast for a third cruise, under the scientific charge of Dr. Carpenter, accompanied by Dr. Wyville Thompson, making a more detailed survey and re-examination of the ground previously examined by the Lightning, visiting the Faeroe Isles, and remaining out till September 15th.

These three expeditions under the charge of Captain Calver, whose previous experience was invaluable, and of three scientific men of the greatest eminence, are accordingly regarded as decisive of the questions at issue. They confirm, and in many respects enlarge, the former observations.

These explorers record *first*, the temperature of the sea at great depths; *second*, bring up specimens of the animals found at the deep sea-bottom; *third*, and specimens of the sea-bottom itself—of the mud and sand scooped up in the dredge.

First: The record of temperature. Some previous explorers had reported temperatures of 8° and 10° Fahrenheit, off the coast of Florida; these, however, were regarded as erroneous registerings. But the former Admiralty soundings discovered at the deep sea-bottom in the tropics, water below the freezing point; and the Porcupine soundings discovered that while the surface temperature was uniformly 52° over a large extent, there would be below it, at the bottom, one tract of ice-cold water, and then, within ten miles, another tract of bottom-water at 47°. It is discovered also that the sea-bottom, at the tropics, is always colder than in the North Atlantic.

Second: The Inhabitants. These, contra-

ry to the received opinions, are found to be various, well developed and numerous in the most profound depths. Among them we may mention that Dr. E. P. Wight brought up sharks from 3,000 feet. Dr. Walleih brought up thirteen star-fish, from two to five inches in diameter, to the tips of the rays, eight hundred miles from land, from a depth of 7,500 feet in Lat. 59-27 N. Long. 26-41 W.; and at the same time quantities of Globigerina deposit, showing that the star-fish could find plenty of food down there. A Norwegian naturalist also has obtained live echinoderms of a beautiful red color, from a depth of 8,400 feet, where the temperature was only above the freezing point.

But the most wonderful fact of all is, that in the greatest depths yet discovered the bottom teems with life, of various kinds, and with animals having perfect eyes. At a depth of 15,000 feet of sea water it has been generally supposed no light could penetrate; but the presence of eyes attests the existence of light. The very mud of the deep sea-bottom consists largely of organic matter, more or less decomposed, and quite sticky from the presence of minute pellets of jelly-like animalcula. Imbedded in this mud are multitudes of minute shells, and minute round bodies like watch glasses, called coco-spheres. A single haul brought up 23,000 specimens of a single form of echini. In short the bottom of the deep sea is much more populous than the land; and the most fragile shells, and the most delicate jellies are found beneath a water-pressure of a ton to the square inch.

Third: The sea-bottom itself. This was found to vary very much in character, and apparently in consequence of the variation of temperature before referred to. Where the temperature was down to near the freezing point, the character of the deposits was quite different from that of the closely neighboring region of warmer water. Thus within a space of ten miles the explorers discovered a cold and comparatively barren tract of sand, and beside it a warm tract covered with chalk, mud, and swarming with life. Abundant specimens of both have been raised and exhibited, and the fact is now universally admitted.

The ice-cold temperature of the earth's crust at a depth of 14,600 feet is a startling contradiction of the theory of geologists—that the interior of the earth is a lake of fire and molten minerals, and that the temperature increases as we sink towards it, one degree for every fifty feet. They alleged in support of this dogma some phenomena of mines, where chemical action and atmospheric pressure combine to raise the temperature. But they scornfully ignored the undeniable contradictory facts of the artesian wells of the Mississippi Valley, of which there are now some scores, and which send up water from great depths—that of Chicago 711 feet, temperature 58 degrees F.—colder than the average surface temperature.

But they cannot refuse to consider this series of authoritative observations, nor afford to ignore their bearing on the question of the earth's internal temperature. At the depth of these soundings, an excavation of 14,600 feet below the level of the ocean, according to geologists, the temperature of the earth's crust must be 292° F. above the surface temperature, or 344° F.; and as they say the earth has always been warmer than at pre-

sent, it could never have been lower than that. Now with such a bottom heat for even the six thousand years man has known it, or, as they put it, for six thousand millions of years, the ocean ought to have been long ago at the boiling point, and indeed should have been long ago evaporated. Instead, however, of any such temperature, we find ice-cold water at the bottom, and water at 52 degrees F. at the top, proving conclusively the absence of any such internal sea of fire as geologists assume and describe.

The discovery of the contemporaneous formation of widely different geological strata, is equally important for its destruction of the basis of geological chronology. We prefer to present this antagonism in the words of a competent and impartial literary journal. *The Eclectic Magazine* thus regards this discovery:

Philosophers had imagined that all life would cease at an ocean depth of three hundred fathoms; and that the temperature of the deep sea was every where thirty-nine degrees. It was found, on the contrary, that abundant life existed at far greater depths, and that the deep sea temperature varied within somewhat wide limits. More remarkable still, it was found that a difference in bottom temperature between thirty-two degrees and forty-seven degrees existed at points only eight or ten miles from each other, beneath an uniform surface temperature of about fifty-two degrees; and that where this was the case, in the cold area the bottom was formed of barren sandstone, mingled with fragments of older rock, and inhabited by a comparatively scanty fauna, of an arctic or borcal character, while in the adjacent warm area the bottom surface was cretaceous, and the more abundant fauna presented characteristics due to the more temperate climate. Hence an upheaval of a few miles of the sea-bottom subject to these conditions would present to the geologist of the future two portions of surface totally different in their structure, the one exhibiting traces of a depressed, the other of an elevated temperature; and yet these formations would have been contemporaneous and continuous. Wherever similar conditions are found upon the dry land of the present day, it had been supposed that the high and the low temperature, the formation of chalk and the formation of sandstone, must have been separated from each other by long periods; and the discovery that they may actually co-exist upon adjacent surfaces has done no less than strike at the very root of many of the customary assumptions with regard to geological time.

We have, in a former article, seen Sir Wm. Thompson from the ascertained facts of astronomy, demonstrating the erroneous character of the geological chronology of the earlier period of our earth's history. Here we have the physical geographers demonstrating the equally erroneous character of the chronology of the very latest formations—of those on whose alleged antiquity we have seen such vast calculations based of the antiquity of man. First and last geological chronology would seem to be a blundering business.

I am cheerfully confident, that if those, to whom we somewhat look as watchers, as seers, as standard-bearers, as counsellors, are removed, (and they are removing) to their rest—or if any of those that remain, should

not keep their habitations firm and undented, but turn aside in *any respect* from ancient testimony—that He, who raised such a people as we were at the first, y never cease to raise up others, and put fo some in the fore-ground, into the very se of the unfaithful. I have seen it wonderf in my short day; I have read it of those w have gone before; and therefore let none e throw away their shield, and weakly com mise the trust devolving on them.—*J. Barcl*

For "The Friend"

The Journal of William Evans.

On page 67 of this deeply interesting well as instructive volume, occur the following remarks on detraction:

"Within the last two months I have passed through several close trials which I hope I mentioned to my advantage. The enemy of righteousness seeks to destroy the precious birth which is of Divine begetting. It utters not to him by what means; and all those who are the disciples of Christ look steadily on the watch, he may even delude them under the pretext of religious concern for the preservation of an individual, to spot his defects, or to represent actions which has done innocently, in such a manner to another, as to create an unfavorable prejudice against him, and thereby block up his way for the exercise of his gift. What mischief would be prevented, if the Divine exhortation was complying with under the clothing of restoring spirit, 'If thy brother shall trespass against thee, go and tell him his fault between thee and him alone.' Many surmises respecting actions and motives would prove unfounded, and the precious unity of the spirit preserved and strengthened."

"Oh! this precious unity of the spirit; how it would be felt to increase and flow, as it were, to vessel, if the forgoing admonition was truly dwelt under and observed, and how much happier should we be as a people as individuals."

The writer feels desirous of calling the attention of our younger members to the *Journal* of our late beloved friend Wm. Evans, feeling satisfied they will derive both entertainment and instruction from its perusal. Differing in some respects from many journals, it gives very frequently the subject of his exercises and communications on different occasions, and not infrequently, when on a journey, an allusion is made to the beauties of outward scenes through which he is passing.

Chester county.

"*Leather Paper in Japan.*"—One of most interesting and peculiar productions of paper is that which is made to imitate leather. The surface has every appearance of finished skin, with extraordinary firmness, elasticity, and it can be subjected to wash without any injury from the water. The peculiarities are not so much due to the poor quality of the material as to the mode of manufacture, the surfaces remaining in even when the paper is very thick, while y paper of this kind soon loses its firmness and the grain is impaired.

Japanese "leather" paper is made extensively at Flangawa, near Yeddo. It is made of sheets of 60 centimetres in length and centimetres in width. The paper out of which it is prepared is not dissimilar to

king-paper, and is made in Southern Japan, near Nagasaki, and thence taken to other provinces, where it is manufactured into the several forms for various uses. The "leather-paper" is made in the following manner:—It is dampened and laid in pairs between two suitably prepared forms, made of paper also, very more highly varnished than ordinary paper; they have a very strong surface coating, but running only in one direction.

Before putting the paper in these forms, the sheets are stretched a little in the direction of their width. If there are several sheets they are rolled on a cylindrical piece of wood, the grain of the paper running in an opposite direction from that of the wood; they are then unrolled from this on a cloth kept them in shape, and put into a form, with a hole in the top large enough to admit the end of the wooden cylinder. The roll of paper is then subjected to a pressure of 200 or 300 pounds. After the roll has been reduced to three-quarters of its original length, this pressure, it is taken out of the press it is turned, the folds flattening out, and again pressed to remove the deep marks.

After passing the paper through rollers several times, the upper surface acquires the appearance of leather; it is then colored, oiled with a kind of rape-seed oil, varnished, and pressed more in the press, which completes it, with the exception of drying. By means of rollers and cross lines on the rollers, the upper surface of the paper is made to resemble paper exactly in all its varieties. The paper being pressed to one-third, or even to one-fourth, of its original thickness, and the passage through the rollers giving it a fine-grained appearance, makes it valuable to picture-makers, as the surface has the appearance of pe silk.

There is another variety of "leather" paper, which is smooth and transparent, resembling hog-skin very much. This is manufactured by a process of hammering, and is the highest priced, costing 27 cents per sheet, the other grades from 8 to 14 cents, and is very fine selling at 8 cents per sheet.—*Journal of Applied Chemistry.*

For "The Friend."

Our Religious Society.

"Though it is my lot often to dwell under a false sense of my own unworthiness and profitability towards the great Lord of harvest, yet it does seem to me that if varied, cumulative, and alarming changes and innovations, noted in the last two numbers of "The Friend" by its worthy Editors, to have place and to be carried out among our separate organization as a distinct republic, will be but little more than a lie. But how humiliating and sorrowful is such a picture! For has not the Lord set His name among this people? Did not carry our forefathers as on eagles' wings? And was not He exalted through our greater faithfulness to the manifestations of His grace and power unto the establishment of the inward and spiritual kingdom (is dear Son in the hearts of the people?) and shall the thirst for change, the desire for earthly ease and liberty, the dread of the Lord's wrath, with the temptations of the great enemy, induce us to go back to that from which our fathers came out through so much suffering and temporal loss, even in some cases of

life itself? No! rather let us rally wholeheartedly to the standard of ancient Quakerism, which proved so effective in the early days—and Truth altho' not—towards the change of heart and life whereby regeneration and holiness are witnessed. How lamentable to us would be the plaintive appeal to a people formerly, "bent to backsliding from the Lord." "How shall I give thee up, Ephraim? how shall I deliver thee, Israel? how shall I make thee as Admah? how shall I set thee as Zeboiim? (cities which the Lord overthrew as in a moment) mine heart is turned within me, my repentings are kindled together." Truly of stirring application is the subsequent language: "Therefore turn thou to thy God; keep mercy and judgment, and wait on thy God continually." lest that ever to be dreaded judgment of the Most High to any person or people be visited upon this Society—a being given up to walk after the imaginations of our own hearts, and after our own counsels.

But notwithstanding all the causes for mourning and lamentation amongst us, there is good cheer in the following from the pen of our late beloved friend William Evans:

"1861, Eleventh month. In contemplating the trials and overturnings to which our religious Society has been subjected for many years in this country, I was made to believe a few days since, that the gracious Shepherd was still near to us, and that the time was not very far off, when He would go through his flock, and renew the visitations of His love to the younger members. That He would bestow gifts upon them, to be occupied in his church; and prepare and send forth servants to proclaim and spread the doctrines of the gospel, and his blessed cause, from sea to sea; and from the rivers to the ends of the earth. Hereby the beauty, and strength, and influence of our Society, in this Yearly Meeting, and in this city, will be restored; and a body of solid and deeply experienced men and women, it appeared to me, would be again raised up as standard bearers, and watchmen upon the walls of Zion. May the Lord hasten it in his time and way; and enable us to continue to bear patiently the sufferings that remain for us to endure; for our own sakes, and for one another, whatever they may be."

War Costs to France.

Leoni Levi, the naturalized Italian, who is professor in King's College, London, of the Practice and Principles of Commerce, is held in high repute in his adopted country for the accuracy of his statistical statements. He has published an estimate of the particular losses to France of the present war.

First, the direct military and naval expenditure of France. On the 15th of July, when war was declared, a majority of the present Provisional Government voting for it, two votes for \$10,000,000 were voted, almost by acclamation. Three days later other votes for more than \$100,000,000 were readily passed. In August, other \$200,000,000 were voted. After this came a National Loan for \$175,000,000, and since then another loan of \$50,000,000 was negotiated in London and Paris. This makes a total of \$485,000,000. In addition, the city of Paris raised \$10,000,000, and many departments and cities of

*—*Journal of William Evans, p. 682—a work of rare interest and value.*

France borrowed considerable sums for local defences, to say nothing of what was taken from the treasure vaults of the Bank of France. There should also be included all the expenditure for war armaments from 1868 to 1870, estimated at \$200,000,000. In short, if the war were to end to-day, the direct expenditure of France would far exceed \$730,000,000.

The next item of direct losses is the waste and destruction caused by war. Two French papers—the *Journal d'Agriculture* and the *Paye*—have estimated this at \$1,000,000,000 more, but Professor Levi more moderately estimates it another \$750,000,000.

The indirect losses consist of two distinct items—loss of men and loss of industry. Thus there is the capitalized loss of 150,000 men killed and wounded, with loss of productive power, estimated at \$1,350,000,000, and the loss of national production and trade of \$150,000,000. Thus France may be set down as having lost \$3,000,000,000 besides the \$1,500,000,000 which she may have to pay Prussia for indemnity—a total of \$4,500,000,000, in a war which has lasted little more than four months. It may seem incredible, but it is nevertheless very true.

War has always been costly, and particularly so in modern times. The rough calculation is that the Crimean war cost \$1,700,000,000; the American civil war \$6,500,000,000; the Italian war \$300,000,000; the Prusso-Austrian war \$330,000,000, besides loss of life, amounting in these four great contests to not less than 1,700,000 men, including those slain in battle and those who died through wounds or disease. It may be thought an excessive calculation to estimate the cost of war by adding the money value of the property destroyed, and the capitalized value of the men killed or dead. This, however, Professor Levi contends "is the truer aspect of the question, since the development of national resources is dependent on the extent of the productive forces available. Elasticity of character and variety of resources may enable France to recover more speedily than another country could from the effect of this great national misfortune, but nothing can make up for the destruction of the productive forces of the nation." France, at the close of the war, even should that speedily occur, will be much worse off than this country was at the termination of the civil war, and is deficient in our recuperative power, which is greatly maintained by means of emigration, bringing increase of population and of productive labor. In the last fifty years the population of the United States has more than quadrupled, while that of France, not fed by emigration, has remained much as it was in 1820.—*Press.*

THE FRIEND.

TWELFTH MONTH 10, 1870.

Our attention has been called to that part of the concluding paragraph of the editorial remarks in the fourteenth number of our journal, which says, "We suppose we may ere long have a similar record of 'christian work' going on among members here; when our meetings for worship will be turned into bible-reading meetings, and our meeting-houses resound with 'hymns sung.'"

It was not our intention to convey the idea that such changes are now likely to take place within the limits of Philadelphia Yearly Meeting. We have long thought that many among the members of that Yearly Meeting, who have approved or given countenance to the numerous innovations on the practices of the Society, were not aware how far they were thereby sacrificing the principles of Friends, and we accord full credit to the opinion that most of them are unprepared to follow the example set, of introducing the reading of Scripture into meetings held professedly for public worship. How far or how long such would be able to bear testimony against this innovation, should it become general, time will make manifest.

But this, as well as hymn singing, is already practised within some other Yearly Meetings, and as there is reason to fear that very many among the hundreds that are taken into membership, annually, in some places, have never known what it is to understand and to be convinced of the doctrines and testimonies of the gospel as held by Friends, and as so many birthright members show themselves prepared to copy other religious professors, in their forms and exercises, there is reason to fear these practices may continue to spread. It was to this we alluded in the above recited extract.

That Philadelphia Yearly Meeting, stripped and weak as it is, may be enabled, through Divine assistance, to continue to bear a consistent testimony, in meekness and love, against these and all other departures from the faith and practices of Friends, is of great importance, not only to its own members, but it may be to the whole Society. It may thus incur the charge brought against it in Indiana Yearly Meeting, of being an "hindrance to Society;" but if the trials it has to bear, have the effect to bring the members individually, into nearer communion with Him who walks in the midst of the golden candlesticks, by listening to and obeying his Spirit in their hearts, they will receive wisdom and strength from Him to fight the good fight of faith, to lay hold on eternal life; and its candlestick will not be removed out of its place. It is a satisfaction to know that Ohio Yearly Meeting feels bound to bear the same testimony with Philadelphia.

SUMMARY OF EVENTS.

FOREIGN.—The Atlantic cable laid in 1855, as well as that of the following year has given out, and the only communication with Europe for a week past has been through the French line. If the Tours dispatches may be relied on, the position around Paris has undergone a material change in favor of the French, and strong hopes were entertained that the Prussians would be obliged to raise the siege of that city. It appears that the army of the Loire, under General Paladines, advanced from Artois between the camps of Prince Frederick Charles and the Duke of Mecklenburg, and after severe fighting won material success. On the 4th, the Tours Government announced that the army of the Loire had discontinued its forward movement owing to resistance. It occupied strongly entrenched positions, in which it will remain for the present, postponing its advance until a better opportunity offers. Simultaneously with the movement of Gen. Paladines, the French forces in Paris made great progress, and the army of invasion under Gen. Ducrot, with a force of 120,000 men, is said to have succeeded. At one time he reached a point fifteen miles south-east of Paris, aiming at a junction with the army of the Loire, but encountering a strong Prussian force he withdrew with him to the Seine. The operations on both sides in this contest are said to be very heavy. A Tours dispatch of the 4th says, Gambetta has gone to Orleans to consult with

the officers of the army of the Loire. On the 2d it was engaged in a protracted and sanguinary battle, and there were great losses on both sides, the Prussians having received 10,000 killed.

Not many dispatches from German sources have been received, and they differ in some respects from the French accounts, still there is no doubt that General Ducrot with a large army is now outside of Paris. A Versailles dispatch of the 30th says, that immense quantities of arms of all kinds have been collected there by the Germans for the use of the Parisians when they surrender. A severe engagement is reported to have occurred on the 28th ult., between the 10th Prussian corps and a large part of the army of the Loire, in which the French were defeated. The French loss is estimated at 5,000 killed and wounded and 1,700 prisoners. The German loss about 1,000.

A Versailles dispatch of the 29th, announces the defeat of the French, near Amiens, and the capture of that city. It was occupied by 70,000 Prussians, but since the successful sortie of the French, the Prussians have been withdrawn to the vicinity of Paris.

A Berlin dispatch of the 4th says, there was no fighting of any moment yesterday at Paris. The French are massing troops for Vincennes.

The Prussian government has sent the Strasburg savings bank a million thalers in aid of the poor. The French Council has ratified a convention providing for the union of Bavaria with the confederation.

The Austrian government has congratulated Prussia on the accomplishment of the union of Bavaria, Baden, Hesse and Wurttemberg with the North German Confederation.

The provisions of the new North German constitution, Prussia has only seventeen out of fifty-seven votes to be cast by the confederation.

A committee of English bankers offer to take the entire loan of one hundred million thalers just authorized by the North German Parliament.

The English Council is to put hands, or at least come under English control. The duke of Sutherland will probably be chairman of the company.

On the 5th inst, the intelligence was more unfavorable for the French. Tours dispatches admit that in the recent engagements the army of the Loire had been defeated, and expelled to the south side of the river. Orleans had been abandoned, and is again occupied by the Prussians. It is stated that the army, 200,000 strong, fell back in good order.

Versailles dispatches of the same date show that Gen. Ducrot's army still hold the peninsula of the Marne, outside of the fortifications of Paris, to the south side of the river, in positions to which it first advanced, and was massed near the neck of the peninsula. The cold is intense, and the troops suffer severely. In the battles near Paris the Germans took 3,000 prisoners. In the battle of the 2d, 848 of the Wurttemberg troops were killed and wounded, and about 1,800 Saxons.

The Duke of Aosta has announced his intention to accept the Spanish throne, and to return to Madrid with the Spanish detachment.

London, 12th mo. 5th. Consols, 92. U. S. 5-20's of 1852, 88; of 1857, 90; ten forties, 87.

Liverpool.—Middling uplands cotton, 8 $\frac{1}{2}$ a 9d.; Orleans 9 $\frac{1}{2}$ a 10d.

Captain General De Rodas has been recalled from Cuba. On the 5th he liberated the remaining 4,000 negroes, leaving no blacks on whom the government has a claim. They are now all free.

UNITED STATES.—The Public Debt on the first instance of the Treasury, was \$2,343,308,495, having been reduced \$7,475,860 during the previous month. It has been reduced \$191,134,764 since the 30th mo. 4th, 1859.

Miscellaneous.—The total number of letters exchanged with foreign countries during the last fiscal year, was 18,359,378, an increase of 2,839,978 over the number of the year before.

The census gives Utah a population of 86,864. At the last State election in New York, the Democratic candidate for Governor received 399,272 votes, and the Republican 396,467—total 795,739.

Philadelphia.—The mortality last week was 256. 24; cholera, 12; consumption, 42; inflammation of the lungs, 24; old age, 12. The mean temperature of the 11th month, according to the Pennsylvania Hospital record, was 46.25 deg., the highest during the month was 67 $\frac{1}{2}$, and the lowest 32 $\frac{1}{2}$. The amount of rain 21.10 inches. The average of the mean temperature of the Eleventh month of the past 81 years, has been 43.41 deg., the highest mean during that entire period was 50.50 deg., and the lowest 38 deg. The mean temperature of the three fall months has been 58.95 deg., and is the highest for the last 81 years.

The President's Message, which was sent in to Congress on the 5th inst., is an interesting and valuable document. He says our government was asked to give the Republican authorities to join with the rest of Europe in an effort to secure peace, which was declined on the ground that it was opposed to our policy to interfere in European questions in any such manner. He repeats his recommendation of the ratified treaty of 1846, for the settlement of the boundary between the United States, and argues at length favor of the annexation as a question of great importance to our material and commercial interests. In regard to the Alabama claims the President proposes Congress shall authorize the appointment of a commission to take proof of the amounts and ownership of the claims, and to the British envoy, among such arrangements he made that the ownership must with the national government. As regards the President says that there is no reason, if we do in our present course, why in a few years the debt taxes may not be abolished, except the revenue and the taxes on liquors and tobacco.

Congress.—The 31st session of the Forty-first Congress convened in Washington on the 5th inst. All the Senators were in their seats, and 173 men of the House of Representatives. The President's Message and resolutions were introduced in both Houses. **The Markets, &c.**—The following were the quotations on the 5th inst. *New York*—American gold, 111 $\frac{1}{2}$. U. S. sixes, 1881, 113 $\frac{1}{2}$. U. S. 5-20's, 1867, 107 $\frac{1}{2}$, ditto 10-40 sixes, 106 $\frac{1}{2}$. Extra \$3 a \$4 cts.; fair to good, 6 $\frac{1}{2}$ a 7 cts. **Wool.**—Wool, 100 a 100 cts. per lb. Superfine, 100 a 100 cts. per lb. Gross, and 5,300 hogs at \$9 a \$9.50 per 100 lb. *New Orleans*—Flour, \$3 a \$5.50 for superfine extra. Lard, 75 cts.; yellow, 85 cts. Oats, 52 cts. Wire, 13 $\frac{1}{2}$ a 14 cts. Prime molasses, 55 cts.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TENNESSEE, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to

Ebenezer Wister, Marshallton, Chester Co.
 Thomas Wister, Mechanics Chase, P. O., Philad.
 Mrs. Mary Morris, Olney P. O., do
 John Scattergood, 413 Spruce Street, do

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch St. Philadelphia, "Journal of the Life and Religious Views of WILLIAM EVANS; a Minister of the Society of Friends;" A large octavo of 700 pages. Bound in cloth, . . . \$2.
 Do sheep, 2.
 Half bound in Turkish morocco, . . . 3.

TEACHER WANTED.

A competent Teacher (male or female) is wanted to take charge of Friends' School at Medford. Application may be made to EDWARD REE, CLAYTON HAINES, Medford, N. J.

FRIENDS' ASYLUM FOR THE INSANE.

New Franklin, (Twenty-third Ward), Philad^a. Physician and Superintendent—JOSIAH H. W. BREVIN, M. D.

Application for the Admission of Patients is made to the Superintendent, or to any of the Board Managers.

DIED, on the 23d of Eleventh month, 1870, H. STICKHOUSE, widow of James Stickhouse, in the 74th year of her age, at Mechanics' Milltown Farm, at Chester Monthly Meeting, Pa.

WILLIAM H. PILE, PRINTER.
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TWELFTH MONTH 17, 1870.

NO. 17.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

The Mont Cenis Tunnel.

(Continued from page 122.)

"From Susa a diligence takes you to Bardoneche, the point where the tunnel works commence on the Piedmont side. The road first rises considerably by zigzags to a terrace about 170 feet above the valley, up to which level there is a large quantity of river gravel at through here and there. The views of Susa and the cirque behind it are very fine. The road continues to rise for a long distance, passing the village of Chamfont, a little beyond which is a strong fortress destroyed by the French. The valley is generally well cultivated, and yields corn and fruit, besides a vast amount of chestnuts, but it continues to rise steadily, and where the road descends and crosses the river at a distance of about eight miles from Susa, the aneroid barometer shows a difference of level of 680 feet.

"The road continues to rise with the valley and the vegetation changes. The vine ceases to ripen a little below 3 000 feet above the sea, and the chestnuts remain. The wood, however, on the mountain side loses by degree its forest character, and the river becomes a torrent meandering over a wide, rocky and stony bed. The scenery is fine and characteristic without being strictly mountainous in its aspect, and the railroad is seen from time to time, now emerging from a tunnel, now creeping along the hill side, and occasionally running on a bank in the valley. It is evident that little fear is felt from accident from the torrent, and yet it is equally certain that within a short time there has been river action at some distance above the river valley on the hill side. A little further on is Oulx, one of the principal places in the Dora Valley, and here the road branches. The main valley runs to the south, and the road continues to small town (Cesanne), where there is a pass over the Mont Genève to Briançon on the Italian frontier. The height of the top of the pass is 6,560 feet, and the watershed of the Alps is here perhaps reduced to the narrowest breadth. The other valley is that of Bardoneche. It is comparatively open, and lends itself readily enough to the construction of a railroad, but the elevation above the sea continues to increase rapidly. At Oulx it is

already 3,340 feet, and at Bardoneche 4,380 feet.

"These Alpine valleys are memorable as the scene of the contest between the Vaudois Protestants and their Catholic persecutors, but little now remains of these exploits. The sites of the battle fields are covered with wheat crops. But the Bardoneche Valley, unlike most of the subordinate valleys, which are mere mountain gorges, is wide and very convenient, and the rise, though considerable, is spread over a distance of seven miles. At the end of this the mountains are reached and rise almost abruptly to a considerable elevation. The valley diverges to the right and left and retains afterwards a direction almost at right angles to that observed lower down.

"It is precisely at this point, where an abrupt barrier rises boldly at the end of a valley of moderate width, that the works of the tunnel commence. In front of, and at some little distance from the works, a hamlet has risen up for the supply of such entertainment as man and beast may require in such a place. The accommodation is not first rate, and the beds are better supplied with fleas than the kitchen with meat. As may be supposed also, there is not much choice in the way of food, but the traveller does not come to Bardoneche to feast, and there is no danger of starvation. The buildings connected with the works are on a scale proportionate to the magnitude of the work and the length of time it was certain to take. They include a capital house and offices for the resident engineer, another large house including private apartments for several persons, and also a casino or club for the principal employes. There are several other buildings affording excellent accommodation. The club is provided with a billiard room and news room, and is well supplied with everything needful.

"Besides the dwelling houses and offices there are workshops of various kinds, and a very large shop supplied with numerous lathes and everything required for constructing and repairing all the details of machinery used in the works. The perforating machines are made and repaired here, and everything needed in the way of metal work, not involving extra dimensions, is constructed on the spot. Immediately outside and also within this shop one is struck by the odd appearance of gigantic blocks of stone riddled through and through with large holes. The stones are the hardest and toughest that could be found. The holes were bored with the steel chisels of the perforating machine. Entering the shop and looking around among the scores of machines at work, the visitor sees in a corner a similar gigantic block of extremely hard quartz in which comparatively few perforations have been made. This block is ready for further experiment. The slender framework of iron supporting two instruments like small cannon, and working a long mining chisel placed before it, is one of the machines

used for boring and intended to illustrate the process for the benefit of visitors. Nothing can apparently be more simple than this ingenious contrivance to perforate the rock. The power made use of is air greatly condensed by a set of large and powerful machines, worked by water power, and arranged in a series of four on the hill side, one below another. The same water, falling from one to another, works all the machines, and the condensed air, retained for a time in vast iron cylinders in each machine house, is distributed by long iron tubes to a convenient spot within the works, whence it is conveyed to the perforating machines by elastic tubes, without losing power by the distance to which it is conveyed.

"It is a curious and instructive sight to see a workman connect an elastic tube of about half an inch diameter with one of these machines and watch the result when a small tap is turned. A piston-rod, working in an exceedingly small and short cylinder, immediately flies backwards and forwards with wonderful rapidity, regulated by a small but rather heavy fly wheel. Immediately a ponderous chisel, six or seven feet long, and more than an inch in diameter, is set in motion, and having been previously placed in position strikes a succession of heavy blows against the stone. Fragments begin to fly in all directions. Each time that the chisel strikes it is withdrawn a little way, very slightly turned, and immediately strikes again in the same hole. The stone experimented upon being of the hardest and toughest kind the effect is not seen for several strokes; but within two minutes, during which the writer watched the experiment, a steel chisel was completely blunted and rendered useless, and there was a hole made about two inches deep in the mass of quartzite placed to operate upon. It is evident that nothing can resist such an attack; and, indeed, holes are bored in this way in an hour that would formerly have taken a day. The machines occupy very little space, and are by no means cumbersome. They can very easily be moved when and where they are needed. As many as seventeen are at work together in the end of the tunnel where the advance is being made. As the power is compressed air, they not only add no heat to the interior, but render it cooler by the absorption of heat during expansion. The air, when it escapes, is available for ventilation. It would be quite impossible to carry steam at a high pressure through pipes four miles long, but little diminution of force is experienced in working with the air, although all the engines and condensers, as well as the cylinders for storing the air, are outside the mouth of the tunnel. The length of pipe at present on the Piedmont side is about four miles and a quarter. The pressure of air commonly employed is about six and a half atmospheres, or nearly a hundred pounds on the square inch.

"The entrances of the tunnel at each end are not far from the hydraulic machines for compressing the air. These, as already stated, are arranged in a series rising one above another on the mountain side, but all communicate with the great reservoirs of air and power at the lowest level, which is that of the tunnel at its entrance. The machines are very fine. They were constructed at Liège, at the works of the John Cockerill Company, and are kept in repair on the spot. The water-wheels are magnificent, and hardly involve the waste of more than a few gallons of water in each revolution, so steady is the work, and so well balanced the supply and rate of motion. The contrivances for ventilation are not less interesting, and have hitherto been perfectly efficacious; but the temperature of the interior is very high and the air foul—partly from the naturally increased heat due to the depth beneath the surface, and partly to the large number of human beings and horses and the repeated firing of blasts. The actual temperature is about 80° Fahr., and has varied little for some time. The works are carried on incessantly, day and night, summer and winter, week-day and Sunday; the only intervals being at the great festivals of the Church. The number of hours of idleness is thus very small.

"The work-people appear well cared for and active. The number at present employed at each end, including those completing the railway communications, amounts to nearly a thousand; but they are widely distributed, and you do not see many in any one place. They lodge in the hamlets that have arisen close to the works at each end, at some distance from the old villages of Bardoneche and Modana, which preserve their primitive simplicity."

(To be continued.)

For "The Friend,"

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 125.)

The following letter is thus endorsed by H. G.:—"The within is the latter part of a letter sent to W. and E. Evans, dated 4th mo. 4th, 1859."

"Yearly Meeting is fast approaching, and I doubt not brings an increase of exercise to thy mind, and also to dear Elizabeth, in which you have my tender sympathy. But how consoling is it that you can say from heartfelt experience, 'Hitherto the Lord hath helped us; and I trust He will help you even unto the end of the tribulated path. The encouraging language unsought for, sweetly arises in my mind as applicable to you: 'Fear thou not; for I am with thee; be not dismayed, for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness.'" How excellent are the promises of the High and Holy One; and not any of them fail to those who put their trust in Him alone. I sometimes, when in my better way, feel a desire once more to sit with my friends in Yearly Meeting; and, according to my small ability, endeavor to bear a portion of suffering with my brethren and sisters, which I have no doubt will be experienced there: but my infirmities, which seem to increase, soon remind me that home is the most suitable place for me, except some smaller exertion of getting

to our own meeting; which I have mostly been favored to do; and though they are often sat through in poverty of spirit, yet at other times I feel comforted and refreshed, I trust I may say with a little of that bread which comforteth the soul, and strengthens the poor weary traveller to take fresh courage, to trust, and hope, and struggle on, not doubting that He who careth for the sparrows, will continue to care for his humble, depending children. I sometimes marvel, considering the state of our Society, that our meetings on First-days are so largely attended; and I think we are at times favored in silence to feel a solemnity, not at our command, spread over us; upon which the language has arisen: 'Lord, what is man that thou art mindful of him, or the son of man that thou visitest him.'

"Your late visit we have in pleasant remembrance; and if we were so situated that we could frequently step in and commune with each other, it would indeed be grateful to me. 'They who feared the Lord spoke often one to another,' &c. There is often strength and comfort derived from it to those who see eye to eye, and who are endeavoring to walk by the same rule, and mind the same thing. We miss dear brother A.'s company very much, not only at meeting, but in our little family. Yet we mourn not as those who have no hope. Though the dear sufferer said but little during his illness, yet it seemed to me each time I sat by him, that his mind was centered in quiet confiding trust; and we have the consoling hope that his end was crowned with peace.

"Thy letter of Twelfth month last was acceptable and instructive to me, as all things have been: only I fear thou hast too high an opinion of my religious experience; for truly I often feel myself to be a poor worm, not worthy of the least of all His favors. Often do I desire, and hope I may say with increasing fervency, that I may be preserved from bringing dishonor on the blessed Truth, which I think I feel at seasons to be exceedingly precious. And now in conclusion, I may express the desire which I feel in sincerity, that when you, dear friends, are favored to approach the mercy seat, that myself and dear daughter may be remembered; and preservation asked for us in the strait and narrow way, watching unto prayer even unto the end.

"The foregoing has been written at several times, and is scarcely worth sending, only as an assurance that you are held in tender affection; and, according to the ability afforded, in gospel fellowship, by your unworthy aged friend,

HANNAH GIBBONS."

"5th mo. 1859. I was favored to attend our Quarterly Meeting at Concord, though in much feebleness. In the select meeting, my mind was impressed with the need we have of more inwardness, more weightiness of spirit, and more self-abatement. In the meeting for discipline next day, I was concerned to endeavor to impress the minds of the beloved youth with the beauty there is in holiness, and the excellence there is in a possession in the unchangeable Truth. Fervent were my desires, that they might early embrace the offers of heavenly love, and thereby become as a city set on an hill which cannot be hid; that others seeing their good works may glorify our Father who is in Heaven.

"6th mo. 19th. Having been absent several meeting-days on account of indisposition, was enabled to get there to-day; being likewise impressed with the importance of attending in a suitable disposition of mind. No long after taking my seat the language arose: 'Who are they that are fit for the Lord's work and service? Surely they only who feel the own unfitness. Man in his finite wisdom can not find out God: spiritual things are on spiritually known, &c. Though the babe seemed in much weakness, yet am favored this afternoon with a portion of peaceful joy for which I desire to be thankful.

"9th mo. 5th. For some time past I have felt much poverty of spirit, and often deep discouragement and mourning on account of our poor Society in its unsettled situation. And my mind being frequently impressed with desires for the preservation and welfare of beloved youth, and this recently with increasing weight, attended with a prospect of having a meeting appointed principally for the class, I could not feel easy to omit mentioning the subject to some Friends of experience at weight; and accordingly did so at the close of our meeting last Fourth-day, though in the feeling of great weakness and inability. The uniting with the prospect, a meeting was held in our meeting-house, W. C., yesterday afternoon, which was pretty largely attended: and I thought a good meeting, wherein I was enabled to relieve my mind of an exercise which at times had long attended it. Our valued friend P. R. was also engaged in testimony. And now, after all the discouragements, my poor mind has passed through, to feel peaceful and quiet, I trust I may say an holy quiet is cause for reverent thankfulness to Him who, when He putteth forth, condescends to go before those who desire faithfully to serve Him.

"12th mo. 9th. Though weak in body went to see our afflicted friend and neighbor A. E. I thought there was a feeling of solemnity spread over us not at our command; and by endeavoring to keep near to Divine counsel in expressing what arose, both in testimony and on bended knee, I was favored to return somewhat refreshed, even as a brook by the way to the weary traveller.

"11th. I was enabled to get to meeting where it seemed to me we had a solemnity in silence; reviving the hope that we are not forsaken people. Many seasons of this kind had in grateful remembrance, seeing that we are no more at our command than the showe which fall from the clouds on the thirs ground.

"12th. Owing to the state of things, not only in our poor unsettled Society, but in the world at large; there being much excitement in the minds of many on the subject of slavery, my mind has been humbled and exercised seasons; and the secret breathing of it has been, 'Lord preserve me from evil; being circumsious of studying to be quiet, and doing my own business, and of committing the cause which is, according to my ability for feeling I trust near my heart, unto Him, who return the heart of man as a man turneth water course in his field.

"27th. I think I can adopt the language: 'Verily there is a reward for the righteous; verily he is a God that judgeth in the cart. Be pleased, O holy Father, to make me pure! And, if consistent with Thy blessing will, anoint my spiritual eye with the ey

alvo of thy kingdom, that so I may see more clearly the things which belong to Thine honor and my soul's peace: and wilt thou enable me to do them. And now in my feeble and tottering state of body, be pleased to keep my mind more free from the mixture of self, and near unto Thee: and enable me, a poor worm of the dust, to continue to have my confidence fixed in Thee the Rock of ages, against which the gates of hell shall not be able to prevail."

How sweetly is the humbled, chastened christian character, even that of a little child, manifested in the foregoing memorandum. How self-distrustful was she; and with what feelings of unworthiness as "a poor worm of the dust," does she look towards the termination of all things here. Yet how earnest were her breathings to the Lord of life and glory who have the eye re-anointed, and as the one thing needful, be kept near to Him, the only Physician of value and Saviour of sinners, and Rock of ages, against which no divination or enchantment shall be able to prevail. Strongly in contrast is this with a profession of religion built upon the assumption that we are regenerated, justified, and saved by the propitiatory sacrifice and imputed righteousness of Christ without us, while we may have never witnessed Him within, in His second coming, and spiritual manifestation of light, and life, and power, to illuminate the soul, and to cleanse it from all sin. The apostle declares, "By the one offering, he (the dear Saviour) hath perfected forever them that are sanctified." It is this state of perfection or holiness, experienced through the washing of regeneration and the renewing of the Holy Ghost, with the new heart and the new spirit consequent upon it, that our Father in heaven hath promised to all those who shall abide His saving baptism, and coming as "a refiner's fire and like fuller's soap." These also He will try in the furnace of adversity as gold is tried in the fire; will bring through many tribulations; will wash, sanctify, and justify in the name of the Lord Jesus, and by the Spirit of our God; and finally present faultless before the throne of His glory with exceeding joy.

The new feature of doctrine alluded to, at least new among us, finds no encouragement from the memoranda and example of Hannah Ribbons; whose whole life was one of self-distrust, of self-denial, humility, and watchful restraint. We remember also, in this connexion, an expression of the wise and good John Woolman, when near the close of his remarkable life: "My dependence is in the Lord Jesus, who, I trust, will forgive my sins, which as I hope for." Daniel Wheeler's testimony, when also on the bed of death, is of like significance, viz: "During the operation of bleeding, D. W. remarked to his medical attendant, without blood there is no cleansing." Doct. V. replied, "it is the blood of Jesus that cleanse us from all our sins." "Yes," said his patient, "but not in our natural, unregenerate state: when we are in the light, as He is in the light, then I believe it will cleanse us from all our sins." Yes," he added with much emphasis, "I know it."

Christ Jesus is the unchangeable Way to be kingdom of heaven: and the breaking down of our own will, through the obedience of faith, and the submission of our hearts unto Him, must ever remain the self-denying and ever narrow path which all His must walk in.

May we not only choose, but like best that path which is well beaten by the footsteps of the flock, though it be not one of smoothness and ease; neither always pleasant and without mortifications and tribulations. There are many easy roads that seem plausible, and streams smooth and wide in which the "galley with oars" may go, and the "gallant ship" can pass; but it is the part of wisdom carefully and prayerfully to enquire if they be safe ways—leading to peace.

(To be continued.)

Ancient Roman Cement.—The hardness of the Roman cement discovered in modern times is attributed to several circumstances. The Romans built their walls of great thickness, and thick walls constructed of materials which are bad conductors of the atmospheric fluids always preserve a latent humidity, more or less sensible according as the distance between the faces of the wall is more or less great. It is well known that the temperature of a block of building, in consequence of the conductivity of its elements, varies but little. Here we have the secret of the hardness of Roman cement or mortar; it is a hydrate of lime, and thus, instead of being destroyed by humidity, as plaster or common lime would be, it benefits by it just as aquatic plants thrive on water; moreover, an uniform temperature is peculiarly suited to its preservation.

The scrupulous care which the Romans took in the selection of their materials is a grand element in the duration of their constructions. Stone was not employed until it had been exposed to the effects of the air for two years, and if, at the end of that time, it did not appear sound, it was broken up and used for filling the foundation walls. When the cement was used for covering surfaces, the Romans were accustomed to lay it on thick, sometimes to the depth of four or five inches, and it is evident that such a solid coating would last much longer than a thinner one, and have a great effect on the preservation of the walls themselves.

Another cause of the hardness and durability of the Roman mortar and cements was the very careful manner in which they were made and used. This arose probably out of the gigantic nature of their constructions and the demands of a luxurious people, revelling in wealth and knowing no limits to their enjoyments. Another cause still was the employment of artificial means, at great cost, to harden the surface of their coating of cement; one of the substances used for this end is described by Pliny; it was called *maltha*, and consisted of quick lime slaked in wine, and then ground up with figs and lard; this made the surface on which the mixture was spread, after an application of oil, harder than stone. If *maltha* was used to indurate the surface of the great tanks and conduits of old Rome, that people must have dared expenses which, even with the aid of slave labor, throw all our material extravagance into the shade.—*Technologist.*

Encouragement for the Young.—"All the sacrifices made in obedience to gentle requirements, in the early part of my spiritual warfare of faith, O! they have been abundantly repaid; yea, sevenfold! * * so, I would encourage a rising generation to obey the 'still small voice' manifested within, the Word nigh in the heart."—*Mary Copper.*

For "The Friend."

Be not Discouraged.

The present is no doubt a time in which the burthen-bearers in our church are greatly discouraged, seeing in many of their fellow-members a departure from our primitive principles and a corresponding defect in the practices which ought to flow from them. There is no doubt ample cause for those who are rightly concerned, to mourn over these evidences of what seems to be an increasing weakness; for as Samson was shorn of his strength when he suffered Delilah to clip the locks of his head, so our Society will lose the power which it has exercised in the christian world, if it should unhappily depart from its doctrines and testimonies. Yet of latter times some considerations have presented, which have tended to strengthen the faith, that the Lord still regards our portion of His militant church with an eye of compassion, and that in due season He will more eminently manifest, that His preserving care is still round about us.

Those who have attended the different Quarterly Meetings which have occurred throughout our Yearly Meeting of latter times, have observed that they were generally favored with the merciful extensions of Heavenly goodness. This has been more fully and prevalently the case, than has been usual. May it not be regarded as an evidence that a renewed visitation is being extended to the children of this people? If there is a humble yielding to the power of Divine Grace, the fruits of it will in time become apparent; the hidden leaven will leave the whole lump, the grain of mustard seed will take root and grow till it overshadows the whole man; and we may reasonably look for an increase of spiritual gifts, to the comfort and edification of the church.

Some of the testimonies which at one time were upheld almost alone by the Society of Friends, have now widely spread, and their truth and importance are recognized by many in other denominations of Christians. The peaceable character of Christ's kingdom, and its opposition to the whole spirit and practice of war, which springs from the corrupt passions of the heart, is extensively advocated, and will continue to spread as mankind become wiser and better. Go to our courts of law, and we find a large proportion of the jurors and witnesses obeying the plain command of our Saviour, "Swear not at all," and substituting an affirmation for the oath. The wrongfulness of slavery is now generally admitted through a large portion of the civilized world, and that remnant of barbarism seems likely ere long to cease from among all who profess christianity. It cannot be doubted that in all these particulars the steady and consistent testimony upheld by Friends has had a powerful influence for good.

Has then the mission, for which Friends were raised up to be a people and gathered from among other professors, been fulfilled? And is the present unsettled condition of some portions of the Society, as shown by the evidences of departure from its doctrines which have appeared in several of the recent numbers of "The Friend," but the natural accompaniment of a fore-ordained destination? We doubt not that such queries have often been suggested to other minds than those of the writer. He who loves the Truth, and desires its prosperity, must often have felt sadness, even some degree of dismay, in viewing

the rapid increase within our borders of views and feelings destructive to our very existence as a distinct body of christians. Yet I believe we may take courage in the reflection, that there is yet much to be done in the church at large, before our mission is accomplished. The christian testimony to plainness and simplicity enforced by prophets and apostles of old, seems to be practically ignored among most of the professed followers of Him who wore the seamless garment. It is still upheld by the Mennonites and some other communities, whose quiet and retired mode of living prevents their influence from being felt much beyond their own immediate neighborhoods. Even the Methodists, who, in our younger days, were known to be professors of religion by the simplicity of their dress, seem to have become ashamed of thus bearing a public testimony to their allegiance to the cause of religion, and are now hardly to be distinguished in this respect from those who make no profession of bearing the daily cross. This increasing tendency to show and extravagance has so spread among them, that even their houses of worship are now often costly and splendid edifices. This is a sad change, as its tendency is to foster pride under a show of doing homage to the cause of religion, and as it inevitably weakens that hold upon the laboring classes, on which so much of their usefulness depended.

Surely the time is coming, when the christian churches must be awakened to the necessity of bearing a clear and decided testimony in reference to this subject, as well as to other matters connected with our every day life and conduct.

I think we may consider the distinguishing feature in the views and teachings of the early members of our Society, to be their earnest attention to the life, substance and spirituality of religion, as distinguished from mere profession, on the one hand, or from a performance of outward observances on the other. With what fulness and frequency and unction did they press upon their hearers, and still, by their writings press upon us, their successors, the necessity of knowing the Holy Spirit to work upon our hearts, and of our fully and unreservedly submitting to its operations. It was in the recesses of the heart that they taught us to look for that effectual baptism of the Holy Ghost and fire which in its powerful operations consumes and removes the corruption which abounds there. Here, too, they believed, was to be experienced that true communion, in which the humble and faithful disciple is often made to partake of the rich bounties of the Lord's spiritual table, agreeably to the language of revelation, "Behold I stand at the door and knock: If any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." They knew the strong tendency of the human mind to substitute the form for the substance; to rest satisfied in the practice of rites and ceremonies without coming to experience the heart-changing realities of which they are but symbols; and hence they were mainly concerned to seek after the inward and living experience of the truths of religion. They felt the force of the apostle's counsel to the Galatians, who was afraid lest he had bestowed upon them labor in vain, because after they had known God, they still showed a tendency to turn again to "the weak and beggarly elements."

There are some symptoms of increased attention, in different parts of the christian world, to this inner work of religion, to the need of practical holiness; and in many quarters the acknowledgment will freely be made, that without this experience, all else is as empty as the sounding brass and tinkling cymbal. On the other hand there are also to be seen a greater regard for the mere external performances—music, vestments, incense, &c., calculated to amuse the mind, but at the same time to divert its attention from a reverent waiting upon God, and from that inwardness of spirit in which the soul is solemnized by a sense of the Divine presence, and bowed in humble worship before its Creator. There is therefore abundant need for the continued existence of a body of christians, who by a rejection of all forms and ceremonies in religious worship, show their dependence on God alone for the ability to worship Him in spirit and in truth; and who by their simple, and self-denying lives, exemplify a practical obedience to the injunction of our blessed Redeemer, "If any man will come after me let him deny himself, and take up his cross daily and follow me."

It is greatly to be lamented that the brightness of the light which we are thus called upon to uphold to the world, should be dimmed by want of more faithfulness on the part of many who profess to be Friends. This is indeed the most discouraging feature of the present time. The influence which our Society has exerted, is not to be measured by its numbers, and we ought therefore to be more concerned to watch carefully that our lamp be kept trimmed and burning brightly, than that the number of our members should be increased. If we lower the standard in order to render our profession more acceptable to others, and open wide the door for the admission of those who are not convinced of the truths we profess, we shall be doing little real good to them, while we shall be deserting that place in his militant church assigned to us by the Head thereof, and preparing the way for the removal out of his place of the candlestick, from which light no longer issues. J.

From "Good Health."

The Kitchen Range.

Amongst all the fittings of a domestic residence, it may fairly be asserted that none are so important to the comfort of the inmates, or at times more conducive to their discomfort, than the means and appliances employed for warming the building. What more delightful than the winter fireside of a country house? or more miserable than a smoky chimney? The whole subject of fireplaces, chimneys, and fuel, is indeed, so far as the householder is concerned, all one, though it requires to be considered under several heads; we shall also show, in due course, that economy and the healthiness of a household are intimately connected with the same question. As, however, it would be impossible to treat on the several heads enumerated above in one article, we propose, first of all, after a few introductory remarks on chimneys, to devote our attention to the Kitchen Range, as being unquestionably the most important fireplace in any house.

It is, we believe, nowhere recorded when and where chimneys were first invented. They were evidently common in Venice before the middle of the fourteenth century, for an in-

scription over the gate of the school of Saint Maria della Carita states that in 1347 a great many chimneys were thrown down by an earthquake, a fact confirmed by John Villan who refers the event to the evening of the 25th of January. In the year 1368, also, Galeaz Gataro relates that Francisco da Carraro, lord of Padua, came to Rome, and finding no chimneys in the inn where he lodged, because, that time fire was kindled in a hole in the middle of the floor, he caused two chimneys like those that had been long used in Padua to be constructed by the work-people he brought with him. From the foregoing fact we may, perhaps, with some degree of exactness, fix the fourteenth century as the date of the first introduction of chimneys.

Now the use of chimneys being, primarily to carry away the products of combustion and, secondarily, for purposes of ventilation the subject must be considered in both the lights. With the huge wood fires of our ancestors, the large hearth recess and the capacious flue did not interfere with the accomplishment of the object proposed; but when fireplaces were introduced into small rooms and coal was substituted for wood, the arrangements which were suited to the large hall-kitchen did not apply. Five hundred years of experience in chimney construction do not appear to have resulted in the deduction of scientific rules for their appointment, so far as houses are concerned. In this respect Architects have unquestionably been left behind by Engineers, who, when they desire to erect a chimney shaft for a factory or steam engine, carefully apportion the dimensions of the structure for the work which it has to perform; it is, however, too often the case that flues in houses are constructed of the same sectional area, whether they be ten or fifty feet in height; whereas dimensions that may be suited for the one height are perfectly inappropriate for the other. One consequence of this is the disfigurement of buildings by the addition of chimney-pots, for the purpose of contracting the orifice of a flue which has been constructed too large for its duty that it has to perform. Defects arising from this cause are too often attributed to the position of doors or windows; whereas the real reason of their existence is assignable solely to the entire absence of any calculation for determining their proper proportion. Something, it is true, may be said with regard to the setting of fireplaces, as well as to the construction; but we do not propose to enter into this question in the present article.

Perhaps one of the greatest treats that cook could enjoy is to be served with a dinner cooked by some one else. The reason for this is that the constant smell of the cooking nauseates the stomach, making it, by its sympathetic action of the several nerves of the system, disinclined to receive what it has so long anticipated through the action of its senses. Similarly, also, the mistress of a household enjoys nothing better than to get some one else to superintend the ordering of her several meals. But if this is caused, to a certain extent, by a mere knowledge of what cooking, how much more must it be the case when the smell of cooking—as too often occurs—pervades the house as well as the kitchen; and in some instances the smell of dinner will be perceivable in other parts of the house to a greater extent than in the kitchen. To a delicate person this is sufficient

entirely destroy the appetite, and it is due to defective construction. The cook is often blamed when the architect is in error; and, while few know where to assign a fault, fewer still know how to remedy it; it may be taken for granted that the evil will not disappear from amongst us, until the art of house construction is based upon a more scientific principle than it has hitherto attained. Art and decoration, and the convenient arrangement of accommodation, occupy, the present day, far too much of the consideration of the architect; whilst sanitary arrangements are neglected, and the healthfulness of buildings suffers in consequence.

In order to arrive at a true appreciation of the causes that lead to the kitchen being a nuisance in a house, instead of, as it should be, the means of imparting pleasure and comfort, we must consider, first, what is a smell, and how it is conveyed. A smell, then—and we are referring it, will be understood, a smell that ought not to exist—is matter in a wrong place, and, consequently, it is dirt; and not only is the smell of cooking, which intrudes a house, dirt in a scientific sense, but is so absolutely. The smells arising from cooking consists of minute particles given out from food of all kinds, owing to the partial chemical decomposition which takes place during the application of heat, and which are carried off and mixed with the surrounding air by the steam or other vapors arising therefrom. With a properly constructed kitchen range or cooking stove, and flue, these will be conveyed up the chimney, and carried away into the atmosphere above the house, in such case they are harmless, and become immediately, so to say, deodorized, by admixture with a preponderating amount of atmospheric air. When, however, they are permitted to escape into the house, they do not get with a sufficient quantity of air to render them innocuous; and, upon condensation of the vapors by which they are conveyed, they will settle upon the interior walls and gradually cover them with a coating of greasy or vegetable matter. These, if not constantly moved, will accumulate, and in time decompose, giving off still more objectionable and unhealthy smells, but which are not so noticeable, in consequence of the more powerful vapors arising from a continuance of that evil upon which they first had their origin.

It will repeatedly be found that the smell of cooking is strong in other parts of the house, and especially upon the floor immediately above the kitchen, whilst the kitchen itself is apparently free—or almost so—from inconvenience; and the reason of this is, on a little consideration, made perfectly clear and intelligible.

The cause of this annoyance is an absence of any proper regulation of the currents of air through the kitchen, or, in other words, defective ventilation.

The chimney being, as we have already said, to some extent intended as a means of ventilation, if it do not carry off all the fumes arising from the combustion of fuel; as well in the case of a kitchen range, all the vapors consequent upon cooking, there must be something wrong in its arrangement or formation for a moment trace the air currents of the room. By an old experiment of applying a lighted paper to the edge of a room door when it is closed, or partially so, it will be found, by the direction given to the flame,

that there is constantly an inward current of air at the lower part of the door, and an outward current at the top.

This arises from the fact that, heated air being lighter than cold air, it rises to the top of the room, and, escaping through the cavity between the upper part of the door and the door frame, its place is supplied by a current of cooler air, which, being heavier, enters from below. This lower current will be found to be much more powerful when there is a fire in the room, as then, besides supplying the air necessary to replace the escaping heated atmosphere, a considerable additional quantity is required to support the combustion of fuel in the grate, and the air thus supplied escapes up the chimney; whereas, when there is no fire there is a downward current in the chimney itself, which assists in supplying fresh air to the room. Bearing this principle of ventilation in mind, let us now trace the course of those vapors, or smells, which at times escape from the kitchen into the other apartments while cooking is going on. In the first place, were the ventilation of the kitchen perfect, all these fumes would escape up the chimney; but, in the absence of proper arrangements for this purpose, a portion of them escape into the kitchen, in the first place, and, rising with the heated vapors of the apartment, ascend until they fill the entire space between the ceiling and the top of the floor; and it will be found by practical test that whilst the lower part of the room is almost free from smell, the upper stratum of air is strongly impregnated with the odors arising from cooking. If the top of the door leading into the outer air be above that of the inner door, a certain portion of these will escape into the atmosphere; but, as both doors are usually of the same height, they will by preference escape over the inner door, and so get into the other part of the house. This arises from the fact that the house itself acts as a huge chimney to the lower apartments, and the outward current of air is consequently stronger in the direction of the house than towards the atmosphere. The fumes, therefore, which are unable to ascend the chimney will escape into the house, and be carried by the ascending atmosphere into the passages and rooms on the lower floors above. It may, however, not unreasonably be asked why, under these conditions, the smell is not strongest in the top story, rather than on the floor immediately above the kitchen? A moment's reflection will explain this. If the heated air thus impregnated retained its initial temperature, we should undoubtedly find it most conspicuous on the topmost floor; but meeting, as it rises, with cooler currents, it not only becomes condensed, and so freed to a certain extent from its impurities, but by the admixture of a larger quantity of air the impurities become diluted; and, ultimately, as the air rises, all sense of their existence becomes lost.

There can be no doubt that the inconvenience to which we are referring exists to a much greater extent where the closed top ranges are employed than with an open range, in consequence of the draughts of combustion being conveyed up close flues; whilst a small register only furnishes the means of escape for the other vapors, and through which the draught is not sufficiently strong to carry them off. For this reason close-topped ranges are more likely to be offensive than those with open fires; but for convenience of cooking,

the former are certainly more advantageous, in consequence of the whole top of the range being a hot-plate. A combination of the close and open range, whilst they possess, to some extent, the convenience of the hot plate, do not obstruct the proper current of draught up the chimney, and are, therefore, not to the same extent liable to the defects of which we have been speaking.

In making these remarks we desire especially to avoid giving any opinion decidedly adverse to close ranges. We have known them to act admirably, and to be free from the causes of complaint to which we are referring. From what we have already said, it will be understood that the smell of cooking in a house arises, not generally in consequence of a defective stove, but from a faulty chimney, or the bad setting of a stove.

It would be impossible to lay down any golden rule for the avoidance of the inconvenience, as each case must depend upon local circumstances. Every builder or professed chimney doctor will have his own remedy, consisting, probably, of some patent in which he is personally interested; but whilst all may be good under certain circumstances, each one will probably be found to fail in nine cases out of ten. The only scientific way of getting over the difficulty is either to increase the draught of the chimney through the orifice up which the fumes of cooking should ascend; or else to draw those fumes off from the upper stratum of air in the kitchen, as near the ceiling as may be convenient, either by means of a ventilator in the chimney, or by one communicating with the outer air from some part in the wall, as high as possible above the top of the kitchen door.

A simple yet effective way of accomplishing the former object is by contracting the orifice of the register where necessary, and decreasing the open space round the front of the range, thus inducing a stronger current from the kitchen up the flue. This is quite practicable with a kitchen range, although it could not be applied as a remedy for any evils attendant on the fireplace of a sitting or sleeping apartment, because one of the consequences would necessarily be the shutting out of a portion of the heat of the fire from the room. This in the case of a kitchen would be no immediate drawback, as the fire would still be equally available for culinary purposes; but, under circumstances where the fire is merely required to heat an apartment, any contraction of the chimney-piece front would tend immediately to detract from the very benefits the fire was designed to contribute.

For "The Friend."

"Train up a child in the way in which he should go, and when he is old he will not depart from it." Prov. xxiii. 6.

Viewing with uneasiness the want of proper discipline in many of the families in our Society, I have felt like endeavoring to stimulate some of us to greater faithfulness herein, by a few suggestions in "The Friend." I believe, by common consent, in all enlightened nations, the parent is held responsible for the conduct of the child until he arrives at an age at which most children are thought to be capable of thinking and acting for themselves; and this custom was sanctioned by the example of our Saviour when on earth, for it is said of him: "And he went down with them, and came to Nazareth, and was subject unto them."

By the laws of most countries, the parent is only held responsible so far as good citizenship is concerned; but religion makes him responsible for his moral and religious training, as is evident by Paul's charge to Timothy in the selection of bishops, who, amongst other evidences of fitness must be "One that ruleth well his own house, having his children in subjection with all gravity." And also the deacons: "Let the deacons be the husbands of one wife, ruling their children and their own houses well." And a curse was pronounced against Eli and his house for not restraining his sons. He does not appear to have been wanting in reproof: for he reproved them sharply, not sparing them, but that did not clear him in the Divine sight of the responsibility of their wicked deeds. "For I have told him that I will judge his house forever for the iniquity which he knoweth, because his sons made themselves vile, and he restrained them not. It is evident, I think, from what I have quoted, and the quotations might be extended, that it is our duty to establish and maintain authority over our children. It need not and ought not to be arbitrary. It can, and should be done in such a way as to secure obedience, and yet retain the confidence and respect of the child. It may sometimes be needful to resort to punishment, which should never be cruel, and need not often be severe. I think the efficacy of punishment depends more on the spirit and manner in which it is administered, than its frequency or severity. And this training, education, "Breaking the will," or whatever name we may give it, should begin with the first effort of the infant to obtain any desired object by crying, or any other improper conduct. The child has then learned to associate cause and effect. It is exercising its reasoning faculties, and its education should begin with the use of these. We should endeavor to convince the child's judgment by an appeal to its reason and conscience on all proper occasions; but if this fail, we should insist on obedience in all we think the child's welfare requires. I say on all proper occasions, for I think there are times when unconditional obedience is right. And perhaps it is right for the child to know that the parent's wish or command is sufficient reason for him to act; and this I think is consistent with our Heavenly Father's dealings with his children; for he requires us to walk by faith, and not by sight alone. And this simple lesson, taught in infancy, may prepare the way for a ready compliance with manifested duty in after life, even when we cannot at the time see a reason for it. We need not seek opportunities to establish or test our authority: enough occasions will unavoidably present for this.

Neither will we need to withhold any innocent or proper gratification to teach them self-restraint. They will ask for enough that ought to be withheld. But it is to be feared that with too many of us there is not enough devotedness, and earnestness in seeking the one "thing needful" for ourselves. Were we thus concerned, we would at times be brought to that state of mind which constrained Solomon to ask, "Give, therefore, thy servant an understanding heart to judge thy people, that I may discern between good and bad." We would more often be found wrestling for a blessing, not only for ourselves but also for our dear children. As this becomes prevalent, fruits of it may appear in the altered garb

and more scriptural speech of many who bear our name.

Ohio, 12th mo. 1870.

From "McMillan's Magazine."

The Suez Canal.

BY F. A. EATON.

This work, the most costly and magnificent enterprise of modern times, is now completed, and one may speak of it as *de facto* accomplished. The formal opening, as our readers are aware, took place on the 17th of November, 1869, in the presence of the Emperor of Austria, the Empress of the French, the Crown Prince of Prussia, and a host of other exalted personages.

It will be unnecessary here to enumerate the attempts which have at various periods of Egypt's history been made to establish a water-communication between the Mediterranean and Red Sea; but it is worth while to note a difference between the present canal and all the other projected and accomplished ones, viz., that their Mediterranean point of departure was the Nile, and they were consequently part fresh water and part salt, while the present one goes direct from sea to sea—the seas themselves furnishing its waters. Hence the appropriateness of the name, "Maritime Canal," serving to distinguish it from the small Fresh-water Canal which the Company made a few years ago from near Zagazig, the then limit of cultivation at that part of the east of Egypt, to Suez, following the course, and in many places actually employing the bed, of the old Pharaonic canal. The history of this company, "La Compagnie Universelle du Canal Maritime de Suez," is now pretty well known.

It owes its existence to M. Ferdinand de Lesseps. In 1851 he obtained a concession for the making of a canal across the Isthmus of Suez from the then Viceroy of Egypt, Said Pasha. As the Sultan, however, withheld his assent, and various other hindrances occurred, nothing further was done till 1855, when subscriptions were first opened, and the company started with a paid-up capital of £8,000,000. In 1859 the work was first begun, and was carried on until 1863 under the terms of the original concession, chiefly by means of the fellahen,—Egyptian peasants,—whom Said Pasha had agreed to furnish as laborers at the rate of 20,000 monthly. On the accession of Ismail Pasha, in the spring of 1863, the work suddenly came to a stand-still, as that Prince refused to continue to supply the laborers; and, indeed, referred to the Sultan for revision of all the terms of the concession granted by his predecessor. By the consent of all parties the Emperor of the French was named arbitrator, and he decided that the Company should give up some important clauses, and that the Viceroy should pay them for so doing. Accordingly 78,000,000 francs, more than £3,000,000, were awarded to them for the withdrawal of the fellahen, and the resumption of the lands originally granted; the Company retaining only two hundred metres on each side of the line of the canal, for the erection of workshops, deposit of soil excavated, &c. A further sum of 16,000,000 francs was to be paid for the purchase of the Fresh-water Canal mentioned above, and of the tolls levied on it; making in all a sum of nearly £4,000,000. At the beginning of these difficulties the Company were disposed to consider them-

selves badly treated, but in the end they every reason to be satisfied with the result. They got what they stood most in need of—money; and they were forced into replacing the manual labor of the fellahen, who, notwithstanding their numbers, made comparatively slow progress, by a system of machinery which, when one looks at the ingenuity displayed in its invention, and the enormous scale on which it has been applied, must certainly be considered as one of the chief glories of the enterprise. In 1867, £4,000,000 were raised, partly by means of a loan. Since 1864 the work has been going on rapidly and without interruption.

The present short account of the history and actual state of the canal is the result of two fortnights spent along its banks in 1867 and 1869. From the mouth of the Nubia branch of the Nile to the Gulf of Pelusium, there stretches a low belt of sand, varying in width from 200 to 300 yards, serving to separate the Mediterranean from the waters of the Lake Menzaleh; though often when the lake is full, and the waves of the Mediterranean are high, the two meet across this slight boundary-line. In the month of April, 1859, a small body of men who might well be called the pioneers of the Suez Canal, headed by M. Laroche, landed at that spot of this narrow sandy slip which had been chosen as the starting point of the canal from the Mediterranean, and the site of the city and port intended ultimately to rival Alexandria. It owed its selection to its being the spot from which the shortest line across the Isthmus could be drawn—it would have been from the Gulf of Pelusium; but to its being that point of the coast, which deep water approached the nearest. Here eight metres of water, equal to about 26 feet, the contemplated depth of the canal were found at a distance of less than five miles; at the Gulf of Pelusium that depth only existed at more than five miles from the coast. The spot was called Port Said in honor of the Viceroy, and a few wooden shacks soon took the place of the tents first put up. Hard indeed must have been the life of the first workers on this desolate strip of sand. The nearest place from which fresh water could be procured was Damietta, a distance of thirty miles. It was brought thence across the Lake Menzaleh in Arab boats, but earthquakes or storms often delayed the arrival of a looked-for store; sometimes indeed it altogether lost, and the powers of endurance of the little band were sadly tried. All-time distilling machines were put up, and in 1863 water was received through a pipe from the Fresh-water Canal, which had been completed to the centre of the Isthmus.

(To be continued.)

THE FRIEND.

TWELFTH MONTH 17, 1870.

Extracts from the Minutes of Ohio Yearly Meeting of Friends, 1870.

At Ohio Yearly Meeting of Friends, held at Mount Pleasant, by adjournments from the 26th of the 9th month to the 28th of the same inclusive, 1870.

Reports have been received from all Quarterly Meetings. The representatives

* * * * *

Who were all present except one, for whose absence a satisfactory reason was given.

The Clerk of the Yearly Meeting of ministers and elders produced a minute of united concurrence for our beloved friend, Phebe

Roberts, a minister from Goshen Monthly Meeting, Pa., dated 9th month 1st, 1870, setting her at liberty to attend this meeting, and a few of the meetings belonging thereto; also for our beloved friend, Deborah C. Hatton, elder, (companion for our dear friend, Phebe W. Werts), from same Monthly Meeting, and bringing same date. They are acceptably in evidence.

Salem Quarterly Meeting proposes a change the time of holding that meeting from the 10th to the 10th hour, which was united with this meeting, and that meeting is left at liberty to make the change of the time proposed, in the 5th month next.

Hickory Grove Quarterly Meeting informs, that there are within their limits, "a number of persons who claim a right of membership our Society, but who, owing to divisions and separations that have occurred, are unable to produce certificates;" it is referred to this meeting for its advice and direction. Therefore, the following Friends are appointed (in conjunction with a like committee of men Friends), to take the subject into consideration and report thereon to a future sitting, viz: * * * * *

The following Friends are appointed to set with the Treasurer, report the state of the treasury to a future sitting, propose a sum necessary to be raised the ensuing year, and name of a Friend for Treasurer, viz: * * * * *

The former concern and interest of this early Meeting by the Indian natives, (which is interrupted by Indiana Yearly Meeting acknowledging those who separated from us in 1854,) being brought before it, a desire prevailed in the meeting that any right opportunity might be embraced to benefit these deeply erring people; but as no way presented at present for action therein, it is left under consideration until another year.

The representatives are desired to confer together, and propose to next sitting a Friend clerk the present year, and one for assent; also the names of two Friends for messengers to the women's meeting.

Then adjourned to half-past ten o'clock tomorrow.

Third day of the week, and 27th of the month. The meeting gathered near the time to which it was adjourned. Joseph Wilson, on behalf of the representatives, reported that they had conferred together, and were united in offering the name of Asa Eranson for Clerk.

Edward Stratton for Assistant, which was satisfactory to the meeting, and they were appointed to the service. He also reported that they were united in offering the names of Aaron Frame and John W. Smith messengers to the women's meeting, which was united with, and they accordingly appointed.

The Queries have all been read and answers returned from the Quarterly Meetings. The following is a summary thereof: All our meetings for worship and discipline have been attended, and generally by greater part of our members, though some remiss in this important duty, especially in the middle of the week; unbecoming behavior therein nearly avoided, except some

instances of sleeping; in some of which cases of deficiency care is reported to have been extended. The hour of meeting pretty well observed.

2nd. Most Friends maintain love towards each other, in a good degree becoming our christian profession. Tale-bearing and detraction discouraged by most, but not so fully avoided as would be best; when differences arise, endeavors are used to end them.

3rd. Most Friends endeavor, by example and precept, to educate their children, and those under their care, in plainness of speech, deportment, and apparel, to guard them against reading pernicious books, and from the corrupt conversation of the world, and they are encouraged to read the Holy Scriptures; but more faithfulness in these respects is wanting amongst us.

4th. As far as appears, Friends are clear of importing, vending, distilling, or the unnecessary use of spirituous liquors, and of frequenting taverns; except that one report says: Not quite clear of the unnecessary use of spirituous liquors, and of frequenting taverns; and all make exceptions with regard to attending places of diversion; moderation and temperance in a good degree observed.

5th. The necessities of the poor, and the circumstances of those who have appeared likely to require aid, have been inspected and relief afforded. They are advised and assisted in such employments as they are capable of, and care is taken to promote the school education of their children.

6th. As far as appears, Friends maintain a faithful testimony against a hiring ministry, oaths, military services, clandestine trade, prize goods and lotteries, except that some of our members occasionally attend the meetings of those who support a hiring ministry, and one report says a few have not maintained a faithful testimony against military services.

7th. Friends appear careful to live within the bounds of their circumstances, and to avoid involving themselves in business beyond their ability to manage; generally are just in their dealings, and mostly punctual in complying with their engagements; and where any have given reasonable ground for fear in these respects, care has been extended to them.

8th. A good degree of care is taken to deal with offenders seasonably and impartially, and to evince to those who will not be reclaimed, the spirit of meekness and love before judgment is placed upon them.

Summary to the Annual Queries.

1st. A meeting for worship known as Ridge Meeting, held on first and fifth days, a branch of Hickory Grove Monthly Meeting.

2nd. Encouragement has been given to schools for the education of our youth, under the tuition of teachers in membership with us.

3rd. Endeavors are used to read and answer the Queries as directed.

The Quarterly Meetings report 926 children of a suitable age to go to school; 350 have attended Friends' schools exclusively; 434 have attended district schools exclusively; 48 have attended schools of mixed character; 74 have not been going to school the past year, most of whom have been receiving instruction at home. There have been twenty schools taught the past year under the care of Monthly Meetings, varying from three to eight and a half months, and four family schools.

The subject is again recommended to the

care of Subordinate Meetings and members individually; desiring that they may increase their efforts in endeavoring to sustain schools under the care of committees of the Monthly Meetings; satisfied, as we are, that the concern is a right one, we hope that there may be a withdrawal from sending to the district schools, believing that a sacrifice in this respect, will tend to promote the best interest of both parents and children. Quarterly Meetings are desired to report thereon next year.

Then adjourned to half-past two o'clock tomorrow afternoon.

Fourth-day afternoon, and 28th of the month. — The meeting again assembled.

The committee having charge of our Boarding School made the following report, which was satisfactory to the meeting:*

Boarding School Report.—From the minutes of the Acting Committee, it appears that the amount charged for board, tuition, &c., for session ending 3d month 16th, 1870, was

Expenditures,	\$5,470 89
Balance in favor of school for session,	5,065 72
Amount charged for board, tuition, &c., for session ending 9th month 7th, 1870,	83,608 08

Showing a deficiency for the session of 35 83 And a balance in favor for the year of 369 25

By the preceding account it will be seen there has been a larger sum than usual expended for repairs and improvements. A new cooking-range has been procured, the bake oven rebuilt, a new fence around the front yard, and many other smaller items which were indispensable to the proper carrying on of the school, and the creditable appearance of the premises.

* The patronage of the school, the increasing interest manifested in its welfare in the different neighborhoods, together with the evident care on the part of the pupils in promoting the best interest of this Institution, have encouraged the committee and officers in believing their labors have not proved altogether unavailing. And we desire that the interest of Friends may not abate, but that they may more generally co-operate with us in carrying it on in accordance with the original design, thus affording an opportunity for our beloved youth to obtain an education without being brought into connection with many of the hurtful influences that have a tendency to lead them away from the Society.

Signed on behalf of the committee.

ISAAC HUERTIS, Clerk.

The committee appointed last year to visit Springfield Quarterly Meeting, and the Meetings constituting it, made the following report which was satisfactory to the Meeting, and the committee is continued to visit and assist those Meetings, and the following Friends are added to it, and they are at liberty to consult with Friends of Salem Quarter relative to any change in those Meetings as mentioned last year, viz: * * * * *

Report.—The Committee appointed to visit Springfield Quarterly Meeting, and the meetings constituting it, report: That most of our number have attended to the appointment, and after an interchange of sentiment, are united in proposing that Springfield

Quarterly, and the Monthly Meetings composing it, be continued another year under the care of a Committee.

On behalf of the Committee.

ASA GARRETSON,
ELIZABETH W. SMITH.

The Joint Committee on the reference from Hickory Grove Quarterly Meeting, made the following report, which was united with and adopted:

Report.—The Committee on the reference from Hickory Grove Quarterly Meeting having nearly all met, a free and full interchange of sentiment resulted in the conclusion, that a person requesting to become a member of a Monthly Meeting, upon the grounds of having a right in our religious Society, but unable to produce a certificate, as not belonging to any Monthly Meeting in correspondence with ours, such person shall make request to the overseers, when, if in the judgment of said overseers, such applicant's previous conduct has been consistent, and he or she is properly entitled to the rights of membership, they are to report the same to the Monthly Meeting for its judgment and action in the case.

Signed on behalf of the committee.

Ninth month, 1870. ISAAC HUESTIS, Clerk.

The Committee to settle with the Treasurer, &c., made the following report, which was united with, and the Friend therein named continued Treasurer; and the Quarterly Meetings are directed to raise their respective proportions of the sum named and forward to the Treasurer in the ninth month next.

* * * * *
Samuel Street and Richard B. Fawcett are appointed to have seven hundred copies of the minutes of this meeting printed, divide them among the Quarters, and call on the Treasurer for the amount of expense.

SUMMARY OF EVENTS.

FOREIGN.—The breaks in the English cables are located, one only ten miles and the other about sixty-five miles from the American shore, one of which is and it is hoped will soon be repaired. The French cable cannot convey all the messages offered, and the charges for transmission have therefore been advanced to twice the former rates. U. S. Minister Washburne's secretary wrote from London on the 10th inst., according to his information, the French have been beaten at all points, and the end is apparently near at hand. No cases of starvation have been reported in Paris, although provisions are scarce and dear. Capitalization before the close of the year was looked for.

The latest advices General Duroi's army still held its position in the peninsula, near Creteil, protected by the guns of Fort Charenton. On the 4th he issued an address to the troops, in which he acknowledged that all their efforts were fruitless. He was opposed by the troops from Saxony and Wurtemberg, who had about 3,900 men killed and wounded in this action.

A Versailles dispatch of the 6th says: "The French were utterly defeated at Orleans, 10,000 were captured, and seventy-seven guns, including several ironclads, and four gun boats on the Loire, were also captured. Lyons. In the battle 160,000 French were opposed to 150,000 Germans, but the latter were stronger in artillery and cavalry. After retreating across the Loire the defeated army was divided into two corps, the first under the command of Gen. Bourbaki, and the second under Gen. Chanzy. General Chanzy refused the offer of the command of the military camp at Cherbourg, which was offered him. The second corps retreated in the direction of Tours, and was pursued by the Germans under Prince Frederick Charles and the Duke of Mecklenburg. On the 8th a severe engagement took place near Meung between Orleans and Tours, the results of which

are differently stated. The French say the attack was repulsed, but the Prussian dispatch by way of Versailles says they were again defeated. The German loss was heavy, but that of the French was greater. The Germans took six guns and 1,000 prisoners.

In consequence of the near approach of the invaders, it has been concluded to remove the French government from Tours to Bordeaux. A London dispatch of the 9th, to the *New York Tribune*, says: "The German from Gambetta asks Laurier to announce that he (Gambetta) has asked for an armistice, to enable the National Assembly to be elected, and requests that Favre be permitted to leave Paris to consult his colleagues and conduct the negotiations."

On the 4th inst. the French forces were defeated near Rouen, and the city was occupied by the Germans. Havre is also threatened by them.

The purchase of provisions for the use of Paris has, it is stated, been entrusted to the officers of the commissariat, who have made contracts for such houses, having ascertained that the export of provisions would produce inconvenience if the supply was taken from Germany.

The several sovereigns of Germany having invited King William of Prussia to assume the title of Emperor of Germany, the king has accepted of the honor, and has ordered the minting of a new coin recently authorized by the North German Parliament, will be allotted to subscription in London.

The *London Times* of the 8th, has a conciliatory editorial on the subject of the Alabama claims. It craves a settlement of them not merely because they are just, but on the ground of insuring an era of amicable feeling and closer unity between the United States and Great Britain. Gladstone's note, announcing that the government has taken care to make the necessary provision for the protection of the person of the pope, and adequate support of his dignity and personal freedom, and the neutrality of his spiritual functions, excites surprise and criticism in some quarters. It is attributed to anxiety to conciliate the Catholic feeling in Ireland.

A telegram from Luxembourg states that the Prussian government has informed the government of the Duchy that in consequence of its having allowed a violation of the neutrality of the territory by the French, Prussia is no longer bound to respect its neutrality.

A terrible explosion occurred at a cartridge factory in Birmingham, England, on the 9th, by which twenty persons were killed, and thirty to forty wounded, most of them fatally. The weather in England has been stormy, and much damage is reported to shipping. A large meeting of the Liberal League was held in London on the 11th, at which a protest was adopted against giving a dowry from the national treasury to the Princess Louise. Bitter speeches were made, contrasting the enormous parsimony of the country, 137,000 persons in this home of the poor, with the extravagance and the fact that people die in England every hour of starvation, with the fact that the queen draws four hundred thousand pounds a year from the treasury, besides the large sums paid to other members of the royal family.

An influential committee has been formed in London which includes many members of Parliament, for the purpose of obtaining all possible security for the maintenance of peace with America.

London, 12th mo, 10th. Consols, 92. U. S. 5-20's of 1862, 88 1/2; of 1867, 90 1/2; ten forty, 87 1/2.

London, 13th mo, 10th. Consols, 92. U. S. 5-20's of 1862, 88 1/2; of 1867, 90 1/2; ten forty, 87 1/2.

A dispatch of the 10th says: The German advance on Havre has turned aside to Dieppe, which post was probably occupied to-day. The Duke of Mecklenburg announced on the 10th, that Vierzion, fifty miles south of Orleans, had been occupied by the Germans. Beaugency, twenty miles S. E. of Orleans, was occupied by the French army under Gen. Chanzy, continued to resist the Prussian advance. Tours dispatches say it has inflicted heavy losses on the Prussians. Over 1,000 German prisoners had been brought to Tours.

UNITED STATES.—Congress.—In the first week of the session not much business was done beyond the introduction of bills and resolutions. Among these were the following, by Senator Wilson, to prevent the assessments of money upon government employes for political or other purposes; by Senator Conkling of N. Y., to encourage and promote telegraphic communication between America, Asia and Europe; to give authority to the President to employ telegraphic lines to construct and maintain lines of telegraph on the Pacific coasts of the United States, to connect America and Asia; bills by several parties to encourage ship-building and the foreign commerce of the United States; one to provide that all elections for President, Vice President, and members of Congress, shall be by ballot (in Kentucky

and other States, the people vote viva voce and by ballot.) Other bills to repeal the income tax and to amend a former assumption of specie payments, were brought before Congress. When the postage bill of session came up in due course, the House of Representatives, by a vote of 98 to 79, struck out certain sections relating to the franking privilege, being equivalent to its abolition. The House has rejected the bill of session of office acts, and passed a bill abolishing grade of admiral in the navy. A resolution to alter the internal revenue system, except so much as relate to distilled spirits, tobacco and malt liquors, passed with only five negative votes.

Joseph H. Rainey, of North Carolina, is the colored man who has taken his seat in the House of Representatives.

Miscellaneous.—The total returns of the census of Georgia make the population of the State 1,222,464, an increase in the last ten years has been very small. The Postmaster General asks an appropriation of \$2,436,698 for the service in the year ending 6th, 90, 1872. The receipts for that year are estimated at \$2,467,315, leaving a deficiency of near four million to be provided for.

The New York Canal Commissioners have directed that the canals of the State shall be closed on the 1st of the next month.

Last weeks mortality in Philadelphia was 241. A U. S. Marshal has revised the late census of the city and increases the number of inhabitants on the first sixteenth month last to 673,720. This is 16,567 more than the first return, but still it is believed, far short of true numbers.

The Markets, &c.—The following were the quotations on the 10th inst. *New York*.—American gold, 110 1/2. U. S. sixes, 1881, 113 1/2; do, 1868, 110 1/2; 10-40 five per cents, 106 1/2. *Superfine* flour, 85, 85-40 fine brands, 85-50, 83-75. No. 1. *Chipping* wheat, \$1.32; No. 2, do, \$1.28; amber seed, 1.43; \$1.46; white Genesee, \$1.65; \$1.50. *Boys* 33 a 88 cts. *Oats*, 59 a 61 cts. *Rye*, 95 cts. *Yellow corn*, 80 a 83 cts. *Wheat*, 64 a 71 cts. *Philadelphia*.—Cotton, 15 1/2 a 16 cts. for uplands and New Orleans. *Superfine* flour, \$1.50 a \$1.75; Indiana brand, 85 cts. *Pennsylvania* red wheat, \$1.37; Indiana do, \$1.30; white, \$1.50. *Rye*, 95 cts. *Western and Pennsylvania* new corn, 70 a 73 cts. *Oats*, 54 a 56 cts. *Lard* cts. *Clover-seed*, 11 cts per lb. *Timothy*, 55 a 58 per bushel. The arrivals and sales of beef cattle at Avenue Drove-yard reached 2287 head. Extra stock, 1000; fair to good, 1000; inferior, 1000; and common, 5 a 6 cts per lb. gross. About 1 sheep sold at 5 a 6 cts. per lb. gross, and 4,000 head sold at \$9.50 per 100 lb. net. *Chicago*.—No. 2 wheat, 1.05. No. 2 new corn, 43 1/2 cts. No. 2 oats, 35 1/2 cts. *Barley*, 65 cts. *Barley*, 73 cts. *Lard*, 11 1/2 cts. *White wheat*, \$1.70; \$1.85; choice red, \$1.55 a \$1.70; fair to good, \$1.30 a \$1.50. *Ohio and Indiana* wheat, \$1.38 a \$1.40. *Corn*, yellow and white, 75 cts. 50 a 53 cts.

FRIENDS' BOARDING SCHOOL FOR INFANT CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Marshallton, Chester Co., Pa.; Thomas Wistar, Fox Chase P. O., Philadelphia; or Joseph Sattergood, 413 Spruce Street, do.

FRIENDS' BOOK STORE.

Just published and for sale, No. 304 Arch St. Philadelphia, "A Journal of the Life and Religious Services of WILLIAM PAXS; a Minister of the Gospel among the Friends." Large octavo of 709 pp. the Society of Friends. Price, one dollar.

Bound in cloth, 2 1/2
Do sheep, 2 5/8
Half bound in Turkish morocco, 3 00

FRIENDS' ASYLUM FOR THE INSANE.

New Franklin, (Twenty-third Ward), Philadelphia. Physician and Superintendent—JUSTICE H. W. NEWELL.

Application for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TWELFTH MONTH 24, 1870.

NO. 18.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

The Suez Canal.

BY F. A. EATON.

(Continued from page 134.)

The first thing to be done at Port Said as to make the ground on which to build the future town. This was done by dredging in the shallows of the lake close to the bank of sand; the same operation serving also to form an inner port, and to extend the sea, and raise the height of the dry land. Then the Fellahcen were withdrawn, and recourse was had to machinery for supplying their place, a great impetus was given to Port Said. It soon became perhaps the largest workshop in the world. The huge machines, which were to do the work hitherto done by hands and baskets, were brought piece by piece from France, and put together in long ranges of sheds erected along the inner port. Another part sprang up the works where Messrs. Dussaud were to make the huge concrete blocks for the construction of the piers of the outer harbor. At the same time the dredging of this harbor was commenced, and the sand taken up near the shore was utilized in making these blocks, which are composed entirely of this sand and of lime brought from Le Havre, in France. The first block of the piers was laid in August, 1865, and both were completed in January, 1869, the western to a length of more than two miles, and the eastern more than a mile and a half. At their commencement from the shore they are nearly a mile distant from one another, but they gradually converge till at the mouth of the harbor there is not more than a quarter of a mile between them. It is more than probable that it will be necessary to lengthen these piers, so as to render the entrance to the harbor narrower and less exposed. Great fears were very entertained that the sand which is continually drifting eastward from the mouths of the Nile, would gradually fill up the harbor, notwithstanding the shelter afforded by the pier. The piers were thus constructed: concrete blocks were placed side by side, then were two more, and on this substratum others were dropped irregularly till the requisite height was reached. Between these regularly-laid blocks there are of course

large interstices, but it was supposed that these would be quickly closed up by different marine substances, which, adhering to the blocks, would, in conjunction with the drifting sand, form a sort of mortar sufficient to stop effectually every aperture. This has not proved to be the case, and in the spring of this year a sloping bank of sand extended some 150 feet into the harbor. One remedy proposed for this most serious evil, which, if it does not threaten the existence of the harbor, will much increase the expense of its maintenance, is to build up the apertures with small stones, but there can be no doubt that it will tax all the energies of the conductors of the enterprise.

Port Said now numbers more than 10,000 inhabitants. The piers being finished, and the dredges and other machines all put together and dispatched to different parts of the canal, it lost for a time its busy aspect, but its increasing capabilities as a port soon brought fresh life and animation. Three inner basins have been dredged out, and the sandy mud raised forms the basis for quays and warehouses. Fresh water is still supplied from Ismailia, but another larger pipe has been added, and a big reservoir, called the Chateau d'Eau, holding sufficient for three days' consumption, provides against the improbable accident of both pipes being out of order at the same time. The dredging of the vast area of the outer harbor is carried on unceasingly; the method being the same as that employed so successfully, to take one among many instances, in the port of Glasgow.

Let us leave now this "Rendezvous maritime de l'Occident et de l'Orient," to use the words of its enthusiastic founder, and passing through the harbor, with the town and principal docks on the right hand, reach the point at which the canal proper may be said to begin. It commences with a wide sweep southwards—the town and harbor facing nearly north-east—and runs in a straight line due north and south for forty-five kilometres (28½ miles) through the Lake Menzaleh to Kantara, passing by the stations of Ras el-Ech and the Cape. As far as Ras el-Ech there are always a few feet of water in the lake; but beyond this point, excepting for a short time after the inundation of the Nile, it is little better than a morass, the upper surface consisting of a thin coating of clay, and the bottom of sand or mud, or a mixture of both. Great fears were entertained as to the possibility of ever cutting a permanent channel through this unstable material, more especially at that point where the old Pelusiac branch of the Nile had to be crossed, and the mud was even more liquid than elsewhere. And for some time it certainly did seem as if the attempt would only furnish a converse parallel to the story of the Danaides and their tub. As fast as the mud was taken up by the dredges, and put out on either side to form banks, it sunk again by its own weight. The

engineers were in despair, and the work threatened to come to a standstill; when a Dalmatian peasant, a second Brindley, employed on one of the dredging machines, came forward and offered, if they would give him the use of all the *matériel*, to solve the difficulty. His offer was accepted, and a sort of contract for a few hundred yards was given him. He set the dredging machines again to work; but as soon as they had put out on the line of the bank just so much mud as would stay above the surface of the water, he stopped them to allow this small nucleus to harden, which it quickly did under an Egyptian sun. He then put on a little more mud, and let it harden again; and so on, bit by bit, till a good hard bank was made. The success of his simple expedient was complete, and the whole line of bank in this part was made in the same way. It is now being strengthened with loose stones, brought from quarries near Ismailia. Kantara is one of the principal stations on the canal, numbering about 2,000 inhabitants. It is situated on a chain of low sandhills, which divide Lake Menzaleh from Lake Ballah, and lies in the direct route between Egypt and Syria: that route which was once one of the greatest highways of the Old World, and served as the causeway to succeeding armies of Egyptians, Assyrians, Persians, Greeks, Romans, Arabs, and French, all bent on war and plunder. The new highway that traverses it, will, it is hoped, be devoted to peace and money-making.

Soon after leaving Kantara, the canal quits the straight line it has hitherto pursued, and, with a few gradual turns, passes through several shallow lakes, the principal of which is Lake Ballah, dotted here and there with tamarisk-tufted islets, to El Ferdane; and a short distance farther on enters the heights of El-Guisr. Up to this point the whole of the country traversed, with the exception of the slight clay elevation of Ras el-Ech, and the three sandy knolls of the Cape, Kantara, and El Ferdane, lies either at, or below, the level of the Mediterranean; consequently, these slight eminences removed, and the difficulty of making the banks overcome, the channel was easily excavated by dredging, and there would be nothing particular to mention about it, were it not for the ingenious apparatus invented by M. Lavalley for enabling the dredges to discharge their material at once upon the banks, and so to help to form them. This consists in a long iron spout of semi-elliptical form, 230 feet long, 5½ feet wide from edge to edge, and 2 feet deep. It is supported by an iron framework, resting partly on the dredge and partly on a floating lighter. The dredge-buckets discharge their contents into this spout at a height of thirty-five feet above the water, and the stuff flows easily down the slight incline at which the spout rests, and is deposited at a sufficient distance from the edge of the water to prevent all chance of its falling back into the canal. It

is aided in this process by a constant flow of water pumped into the spout by a rotary engine, and by an endless chain with large pieces of wood attached to it, working along the whole length of the spout, and pushing on stones or heavy lumps of clay that might cause obstruction.

The amount of soil excavated and deposited on the banks by one of these long spotted dredges is enormous—87, 200 cubic metres a month is the average in soft soil; but the dredge which in the month of April this year had the blue flag flying, indicative of its having obtained the prize for the most work done the month previous, had gained that distinction by no less a figure than 130,850 cubic metres. When the banks are too high to admit of the employment of the spouts, another method, hardly less ingenious is used for disposing of the stuff. It is shot into a barge fitted with huge boxes. The barge as soon as filled is towed off, and placed underneath what is called a *eleveur*. This is an inclined tramway supported on an open iron framework, resting partly on a lighter and partly on a platform moving on rails along the bank. Up and down this tramway runs a wagon worked by an engine placed on the lighter. Hooks hanging from the wagon are fixed to one of the boxes, and the engine being set going, the box is hoisted up, and carried swinging below the wagon to the top of the tramway, where it tilts over, and having discharged itself, is run down again and dropped into the barge.

(To be continued.)

Selected for "The Friend"

The Fundamental Principle of the Gospel.

1st John i. 5: This then is the message which we have heard of Him, and declare unto you, that God is light, and in Him is no darkness at all.

This was the message which Christ gave His apostles, to make way into men's hearts by; this is the first thing that is proper for the mind to receive, which lies in darkness; namely, that there is no darkness in God, nothing but light. Darkness is excluded from Him, and the mind that lies in darkness cannot have union or fellowship with Him. Therefore he that will be one with God, and partake of His life, must come out of the darkness, which hath no place with God, into the light where God is, and in which He dwells.

The work of the Son is to reveal the Father, and to draw to the Father. He reveals Him as light, as the spring of light, as the fountain of light, and He draws to Him as light. When He gave to His apostles the standing message, whereby they were to make Him known to the world, and whereby men were to come into fellowship and acquaintance with Him; this is it, that God is light, and in Him is no darkness at all.

Christ Jesus, the Son of God, He is the image of His substance, the exact image of this light, the light of the world, who is to light the world into this substance. So that as God the Father is to be known as light, so Christ the Son also is to be known as light. He is the only begotten of the Father of lights, the only image wherein the eternal substance is revealed and made known. And he that receives this image, receives the substance; and he that receives not this image, receives not the substance.

Now there is a breath or spirit from this substance, in this image, which draws to the

image; thus the Father draws to the Son; and the image again draws to the substance; thus the Son draws to the Father. And so hearkening to this breath, the mind and soul is led out of the darkness, into the image of light (which is the Son), and by the image into the substance; and here is the fellowship which the Gospel invites to. Joining to this breath, being transformed by this breath, living in this breath, walking in this holy inspiration, there is an unity with the Father and the Son, who themselves dwell in this breath, from whom the breath comes, in whom the breath is, and in whom all are, who are one with this breath. This breath purgeth out the dark breath, the dark air, the dark power, the mystery of death and darkness; and fills with the breath of light, with the breath of life, with the living power, with the holy pure mystery.

Now as the Father is light, and the Son light; so this breath, this Spirit which proceeds from them both, is light also. And as the Father, who is light, can alone be revealed by the Son, who is light; so the Son, who is light, can alone be revealed by the Spirit, who is light.

He then who hears this message, that God is light; and feeleth himself darkness, and in darkness, and is willing to be drawn out of the darkness into fellowship with God, who is light; this is requisite for him to know; namely, how he may be drawn out, who is it that draws, and which are the drawings; that he may not resist or neglect them (waiting for another thing) and so miss of the true and only passage unto life. Wherefore observe this heedfully. None can draw to the Father, but the Son; none can draw to the Son, but the Father; and both of these alone draw by the Spirit. The Father, by His Spirit, draws to the Son; the Son, by the same Spirit, draws to the Father; and they both draw by the Spirit as He is light, as He is their light lighted to that end. For as the Father is light; and the Son is light; so that Spirit which draws them, must be light also. He is, indeed, the breath of light, eternally lighted, to draw to the eternal image of light, and then to the eternal substance, which eternally dwells in that eternal image.

Question. But how may I know the Spirit, and its operations; that I may follow Him, and be led by them, both to the Son and to the Father; and so come into the everlasting fellowship?

Answer. The Spirit is to be known by those motions and operations which are proper to Him, which flow alone from Him, and from nothing else.

Question. What are they?

Answer. Convincing of sin, and reproving for sin; which nothing can truly discover and reprove, but the light of the Spirit. Darkness cannot make manifest darkness, but whatsoever maketh manifest is light. All the discoveries of darkness, in the hidden world of the heart, are from Christ the Son of righteousness, by His Spirit, what name soever men may give it, who know not the Son, nor His light, nor the true names of things in the light; but have named even the things of God in the dark, and according to the dark apprehensions and conceptions of their own imaginary mind. But this I say to such, who are so ready to beat their brains and dispute, leave contending about names; come to the thing, come to that which reproves thee in secret, follow the light that thus checks and draws;

be diligent, be faithful, be obedient; thou shalt find this lead to that, which all thy knowledge out of this (even all that which thou call spiritual light) will never be able to lead thee to.

And when thou art joined to this light, will show thee Him whom thou hast perceived (even so as never yet thou sawest Him), an open a fresh vein of blood, and grief in the blood and mourn over Him; and work thy repentance in thee, which thou never wert acquainted with before; and teach thee to have faith, to which yet thou art a stranger; teach thee that self-denial, which will reach to the very root of that nature which y liveth; even under that, and by means of which thou callest spiritual light; and will be such a yoke on thy neck, as the unrighteous one is not able to bear; yea, such an one the hypocrite (which is able to hide it and confessions of sin, and forms of zeal, knowledge, devotion, and worship) shall be distressed and wasted with. And then thou shalt know what it is to wait upon God in a way of His judgments, and find the powers life and death striving for thy soul, and deluge floods and storms encompassing and attending thee, under which thou wilt assuredly fall and perish, unless the everlasting arm of God power be stretched out for thee, and be continually redeeming thee. And then thou wilt feel and see how sin is pardoned, and how is bound; how death brake in upon Adam and how it daily breaks in upon mankind and what that standard is, which the Spirit of the Lord lieth up against the powers darkness. And then thou wilt come clean to perceive, how that which thou hast call religion formerly (which flowed not from the principle) hath but the invention of thine own imaginary mind (though thou fatheredst upon the scriptures, as most men do most their inventions about doctrine and worship wherein thou hast been in a dream of belief changed, and yet remainest still the same nature; and hast had a name that thou hast lived, but art still dead; a name of being satisfied, but still unclean; a name of being justified, but still condemned by the light in thine own conscience; which is one with Him is thy Judge; and who will judge according to it, as that which is real taketh place in thee so that which hath been but imaginary will pass away.

ISAAC PENNINGTON.

The Mont Cenis Tunnel.

(Continued from page 120.)

Having visited the works on the Italian side, Professor Ansted and his companion proceeded to cross the mountain pass of St. Roux, in order to inspect those on the Savoy or French side of the mountain. He remarked—

The path rises steadily and rapidly; but there is nothing worthy of special remark except indeed the study of the rocks, which being the same as those cut through in the tunnel, were very interesting to the geologist. We reached the top of the pass in about three hours, having risen 3,400 feet. The village Bardonecche at the bottom of the ascent bet 4,340 feet above the sea, the pass is therefore 7,740 feet. As high up as 5,240 feet we pass a miserable village, and there was feeding ground almost to the summit. A few patches of snow remained from the winter on both sides of the pass, though chiefly on the northern side; but there was a good deal of snow on the mountains opposite.

At the top of the pass the view is extremely grand, as the mountains of the east, including Mont Frejus—masked during the ascent—are very well seen, and to the west is the Mont Tabor, the loftiest point of the chain, sitting between France, Piedmont and Savoy, the height of more than 10,000 feet above the sea. This mountain is surrounded by glaciers. Towards the north the view is equally fine, including the chain on the other side of the Arc valley, but not reaching any of the Mont Blanc chain. Seen in the early morning, with a mist hovering over the summits, forming occasionally into cloud and drifting away into space, the effect was particularly fine. The descent towards Modana through a valley at first wide and terminating upwards in one of the peculiar semicircular valleys that appear to prevail in this part of the Alps. The valley, however, narrows rapidly and becomes a mere ravine. A number of chalets are seen in the upper part of this gorge; and there is a village, or at least group of permanent habitations, in the first valley. When the valley closes in it becomes thickly clothed with tree vegetation, and here indeed there are narrow defiles through which water falls in broken cascades. The rocks—some places hard quartzite, in others soft gneiss—either project in naked jagged fragments, or recede and are weathered into heaps of rotten earth. The descent takes almost as long as the ascent, and fully six hours must be calculated on as the time that will elapse between leaving Bardoneche and arriving at Modana. The latter part of the descent is a steep road, and passes a curious little chapel set out of the rock, full of votive offerings, where there is a pleasant seat for those desirous of resting or preparing to mount. Near it is a cave of the narrow gorges already alluded to, the scenery is pretty throughout, even romantic in some places.

The level of the tunnel at Modana has been already alluded to as being considerably above that of the valley of the Arc. To equalize as far as possible the levels at the two ends of the tunnel, the entrance on the north or French side, as has been already explained, has been placed at a considerable height above the river, and therefore much higher than the level of the road at St. Michel. In other respects there is little difference in the arrangements, and the constructions both for the works and the employes are nearly the same here as at Bardoneche.

So much has now been effected, that the actual completion of this great work is as much a certainty as any engineering operation in progress can well be. It has been carried through from the beginning with great steadiness, and not one of the numerous drawbacks that might have interfered to delay its progress has been experienced. The machinery has been so far perfected during the construction, that in spite of the enormous distance of the power from its application, the rate of progress has rather increased than diminished. There have been no breakages of machinery, no falling in of the roof, no rush of water. There appear to have been no strikes or workmen and no failures in the supply of money and material. It remains only that the two ends should be happily brought together without divergence, to complete the good fortune that has hitherto never failed. Every precaution has been taken for this purpose that could be suggested. There are ob-

servatories at each end, and one on the mountain top immediately above the tunnel; but there are great practical difficulties in observing, and a very small error would become serious when carried so great a distance as three or four miles of underground work. The approach is now so near, that it is no doubt possible for sounds to be heard through the intervening rocks. This has not yet been attempted, but it is the intention of the engineers to try the experiment on this first occasion when the works are stopped. This will afford an additional illustration of the very near accomplishment of the undertaking. In conducting the work there is a small heading or gallery always carried on in advance of the great tunnel, and the interval between the actual end of the tunnel and the part bricked in and completed, is two or three hundred yards. It is in this last space that the work is of course being carried on.*

Such then is the state and such the history of the great tunnel under the Alps. It is a work altogether exceptional, being the first instance of the perforation of a great mountain axis; the first in which an important tunnel has been attempted exclusively from the two ends without shafts; the first in which the ingenious machinery for boring the rock preparatory to blasting has been carried into effect. It will probably be completed within the time originally contemplated. It has been carried on throughout by Italians; the original selection of the site and the suggestion and perfecting of the machinery by which it has been possible to carry it through in reasonable time, are also Italian. The countrymen of Galileo and of a host of ingenious inventors known to fame, have shown that they are no unworthy descendants of these great men.

For "The Friend's"
Sympathy.

I have sometimes looked upon a wheat field, waving and rustling in its summer beauty, and fancied it the type of what we need from each other in this world. Those slender, individual stems,—alone so feeble that the slightest blast would bring them to the ground—backed by each other, so buoyant, active and mutually helpful, that the sweeping blast only moves them to sing together a louder chorus of universal confidence; how erect and gracefully they stand, supporting and supported; their heads now raised, now gently

* The following figures concerning the length of the tunnel, the rate of progress, and the depth of the central part, will be interesting:—

Portion completed from the north end, 15th July, 1870,	Feet. 15,624
Portion completed from the south end, 15th July, 1870,	21,790
Uncompleted portion,	2,674
Total length of tunnel,	40,094
Progress of excavation, July 1-15, 1870, north side,	Feet. 125
Progress of excavation, July 1-15, 1870, south side,	130
Total excavation in a fortnight's work,	255
Maximum month's work was in May, 1867, on the Italian or south side, and amounted to 297 feet.	
The average month's work from both ends together is now about 500 feet.	
The central part of the tunnel is about 5,546 feet below the observatory on the summit, and 4,120 feet above the sea level. It has been passed on the Italian side.	

bowed, the cloud and sun, the dew and rain, the night and day, bring to them only health and beauty. Oh, I have thought, there is nothing in common troubles that would hurt us much, if we stood together in the sight of God, with our friendly arms supported by and supporting each other. And how have I longed that the living Spirit would breathe upon the churches in our land, that the plants which live might stand firmly as a support and a back to the feeble plants around them, that all might grow and ripen together till the great Reaper comes forth with His sickle to gather them, one by one, into the heavenly garner. I am conscious and thankful that many, very many are thus standing in their places; but, oh! how many feeble stems are broken and piteously trodden down by the roadside, because there is no back—no friendly human arm—to stay them.

THY POOR BROTHER.

Joseph John Gurney and Barelay's Apology.

I learn from the *Editorial Remarks* in the last number of *The Friend*, that some words in my recent article on *The Beacon Controversy* have been quoted in another periodical in a way evidently intended to serve the purpose of disparaging the memory of my late beloved friend, J. J. Gurney, as regarded in a theological point of view. The passage in which they occur stands thus:—"I had some time before arrived at the conclusion (originally suggested to me by J. J. Gurney) that Robert Barelay's doctrine of *The Inward Light* was not, as a whole, warranted by the teaching of Scripture." The parenthetical clause alludes to a circumstance which occurred some years prior to the Beacon controversy. I was accompanying J. J. Gurney, on a First-day morning, to a meeting in the vicinity of Norwich, when something (I know not what) brought up the above subject; and in reply to some (long-since forgotten) remark of mine, he intimated, in a general way, and without going into any particulars, his dissent from some things in R. B.'s two Theses concerning "The Universal and Saving Light." In after years, when this and other matters had become subjects of controversy in our Society, I had ample opportunity of learning, in our frequent intercourse, that he objected both to some of the terms in which R. B. states the above doctrine, and to some of the Scripture evidence which he adduces in its support.

I have said in the article before alluded to, and now repeat more emphatically, that I had no reason whatever for thinking that an avowal which I once made to my fellow-members of the Yearly Meeting's Committee of my own thoughts about the apologist's treatment of the subject in question, had interrupted their feelings of unity and brotherly confidence towards me. Now assuming the case to have been really so, there cannot be even the smallest reason to suppose that, had J. J. G. felt it to be his duty fully to express his thoughts about the same matter, his standing as a true Friend would have been in any degree lowered in the estimation of his colleagues. Strong as the feelings of (to say the least) the greater majority of them were well known to be in favor of the Society's more peculiar doctrinal views, I do not believe that any one of them, had he been asked to do so, would have committed himself to a full concurrence with all R. B.'s statements and arguments in the two Theses above referred to.

How far any of those now living Friends who deservedly hold a specially high place in the esteem and confidence of the body at large, would be willing to do so, I leave the readers of *The Friend* to judge for themselves.

As regards my beloved friend J. J. G.'s views of Christian truth generally, and of the above-mentioned subject in particular, his own published writings so fully exhibit them that it would be impertinent in me to say any thing further about them here than that my own knowledge of them, derived not only from that source, but also from very often listening to his ministry, and holding long and intimate personal intercourse with him, entitle me to confirm, in the fullest way, the editorial conclusion in the last number of *The Friend*, that to whatever part of Barclay's teaching he may have demurred, it most certainly was not to "the precious doctrine of the immediate teaching, guidance, and government of the Holy Spirit." EDWARD ASH.

Bristol, Eleventh month 15th, 1870.

[We have taken the above from the last (12th mo.) number of the (London) Friend, in order that our readers may hear from Dr. Ash himself, the explanation he has thought proper to give, of his assertion respecting the origin of his objections to Barclay's doctrine of Universal Saving Light. With much that is irrelevant he leaves the subject just where he first placed it.

J. J. Gurney's opinions are to be derived from his writings, but as regards the doctor's endorsement of the soundness of his views on this fundamental doctrine of the gospel as held by Friends, we apprehend it must rather damage than substantiate a belief in that soundness, when it is remembered that he (the doctor) has published an unsparing attack upon the standard writers of the Society, especially the earlier promulgators of its doctrines, as being ignorant of the true meaning of many of the texts of scripture quoted by them in support of the truths they believed, and consequently mistaking error for truth. It will be seen, by the extracts from this work as given in the "Appeal for the Ancient Doctrines of Friends," issued by Philadelphia Yearly Meeting, that his views on "the precious doctrine of the immediate teaching, guidance and government of the Holy Spirit," are altogether different from those ever held by Friends.]—EDDORS.

Carrier-Pigeons.

In a late number of *All the Year Round*, there is a very interesting account of carrier-pigeons and their uses. A quotation is made from the ornithologist, Rennie, who says:

"We have not a doubt that it is by the eye alone that the carrier-pigeon performs those extraordinary aerial journeys which have from the earliest ages excited astonishment. We have frequently witnessed the experiment made with other pigeons of taking them to a distance from the dove-cot, expressly to observe their manner of finding their way back; and we feel satisfied that their proceedings are uniformly the same. On being let go from the bag in which they have been carried in order to conceal the objects on the road, they dart off on an irregular excursion, as if it were more to ascertain the reality of their freedom than to make an effort to return. When they find themselves at full liberty, they direct their flight in circles round the spot whence

they have been liberated, not only increasing the diameter of the circle at every round, but rising at the same time gradually higher. This is continued as long as the eye can discern the birds; and hence we conclude that it is also continued after we lose sight of them—constantly increasing circle being made till they ascertain some known object enabling them to shape a direct course.

"A spiral directly the reverse in character is made by a pigeon let down from the car of a balloon; the bird drops perpendicularly for some distance, and then begins to wheel round in a descending spiral, increasing in diameter until some previously-known object is described by which the flight home may be regulated. Their vision is undoubtedly very keen. In their wild state, as seen in America, they fly in amazingly large flocks over wide ranges of country, keeping high in the air, and flying with extended front, so as to enable them to survey hundreds of acres at once. They can desecrate a fertile field at a wonderful distance, and will descend with unerring accuracy to enjoy the meal of which they are in search.

"Whatever may be said about the instinct that is at work, a good deal of training is necessary to make the pigeons trustworthy in their flight. The Turks have paid much attention to this matter. When a young pigeon arrives at full strength of wing, it is hood-winked, or else put into a basket, and taken to a distance of half a mile or so from home; being set at liberty, it soars aloft, looks keenly around, selects a course, and flies home. It is then tried a mile, two miles, four, eight miles, until at length it will traverse the whole length or breadth of a kingdom. If the pigeon falls in the first journey or two, it is discarded, as not being fitted for this kind of work. These Turkey pigeons were regularly used as media of communication in past years. Russell, in his History of Aleppo, tells us that the Turkey company's establishment at that city employed carrier-pigeons to bring news from Scanderoon, the nearest Mediterranean port. When any of the company's ships arrived there, the name of the ship, the hour of her arrival, and other particulars, were written on a slip of paper, and fastened under a pigeon's wing; and the bird, set loose, flew back to Aleppo (its home) in two and a half to three hours, the distance being about seventy miles. The pigeon's feet were dipped in vinegar to keep them cool, and to avoid the delay which would occur if the bird were tempted to descend at the sight of water. The best pigeons always had a brood of their own at Aleppo; and it was anxiety that hurried the parents back. It was found that if the pigeons were kept at Scanderoon more than a fortnight, they could not be relied upon for returning to Aleppo. There are lofty hills between Scanderoon and Aleppo; the birds, instead of ascending gradually to the summit of those hills, used to dart up vertically to an amazing height, where they could look right over them. It is recorded that on one occasion an Aleppo merchant got hold of one of these pigeons, read the letter or packet, and thereby ascertained the news that there was a great scarcity of Aleppo galls in England; he kept the news to himself, bought up all the galls in the market before the company to whom the bird belonged knew anything about the matter, and made a rare profit by the immediate rise in price.

"There was a great deal of this kind of

pigeon-expressing in old days. When Moder was besieged by the Romans, correspondence was maintained by pigeons between Decimus Brutus and Hirtius; and Pliny was so much struck with the plan that he said, 'Of what avail are sentinels, circumvallations, or obstructing rivers, when intelligence can be conveyed by aerial messengers?' In late days, in the time of the Crusades, carrier-pigeons were extensively employed. Instances are recorded in which birds sent out by besieged were captured by the besiegers, and set loose again with a message calculated to deceive those to whom they were sent; hawks were trained to the work of bringing down the pigeons without injuring them. This one of the drawbacks to the use of such messengers when secrecy is intended. When the Christians were besieging Acre, Saladin at distance for some time maintained communication with the besieged by means of carrier-pigeons; but one day a winged messenger was shot down by an arrow; the message it conveyed was intercepted; and such use was made of the information as to secure the surrender of the place before Saladin could arrive with success.

"When Tyburn was a place for executing many criminals, after arriving at the foot of the gibbet, had a pardon or reprieve sent them. The uncertainty in which the relatives and friends of the condemned persons were kept on this point made it a time of great anxiety; especially in days when persons wealth and family were not unfrequently sentenced to execution. Carrier-pigeons were therefore sent to Tyburn before the time the expected execution, and were set flying soon as one of two events had taken place—the hanging or the reprieving. Politics at crime have been alike brought within the knowledge (or under the wing) of the carrier-pigeon. The pashas of the various Turkish provinces used to be supplied with pigeons reared at the Sultan's palace at Constantinople. When news of an insurrection or other emergency had to be transmitted, a pigeon was sent with a letter. However far distant the province, the bird found its way back; but to prevent mischief five or six were sent once, the safe journey of any one of which would suffice. At one period slight towers were built thirty or forty miles apart, a sentinel sent on by a second pigeon the news received by the first, and so on from tower to tower, thereby bringing each bird's journey within an hour's flight, and lessening the risk of mishaps.

"Narratives are plentiful concerning peculiar flights of pigeons. In the last century a gentleman in London sent a pigeon by stage-coach to a friend at Bury St. Edmunds, with a note directing the friend to let the pigeon loose at nine in the morning on the second day afterwards. This was done, and the pigeon arrived at Bishopsgate street at half past eleven, having done the distance of seventy-two miles in two hours and a half. In 1819 thirty-two pigeons which had been reared at Antwerp and brought to London were set loose on a particular day; eight pigeons bore the words 'Antwerp,' and 'London' marked on the wings for identification. They started at seven in the morning. One arrived at Antwerp at noon, another a quarter of an hour afterwards, twelve others the following day; but what became of the remaining eighteen was not known. In 18

Liskcard pigeons were brought to London and let fly. They reached Liskcard—two hundred and twenty miles distant—in about four hours. One gained upon the other a quarter of an hour, equivalent to about nine miles, during the flight. Some of the recorded instances of speed seem hardly credible. Anon says that wild pigeons have appeared from New York with their crops full of rice, and that they could only have gathered in Virginia or Carolina; and he calculated from the time in which pigeons digest food that speed of flight must have been a mile a minute.

For "The Friend."

Reading the Journal of our late beloved friend and minister, William Evans, we find following entry under date of 11th mo. 1841: "While attending Carolina Yearly Meeting, a hope was entertained that the Sunday School would continue to be supported, and its benefits be extended amongst the youth of this Yearly Meeting. Making home at the schoolhouse, gave us an opportunity of mingling with the Committees; being invited to sit with one appointed to consider the expediency of continuing the Society to children not members to enter the school, all the strangers with one voice, gave our judgment against it, both because it was the original design, and would tend to exclude our youth to the principles of others, but in our opinion, would diminish eventually the number of scholars, and consequently, destroy the institution, instead of contributing to its support. The committee adopted this sentiment, and it received the sanction of the Yearly Meeting." This so accords with the wishes of those who are travelling for the welfare and growth in the truth of our dear young people, and is so in unison with the feelings those who are endeavoring to keep the Society select, that are under the care of the Society, that we hope it may find a place in the columns of "The Friend;" and that the work, though removed from us, may yet be carried on. If it was needful then to hold these meetings, it is as much so, if not more, in the present day; for the way to the kingdom of God is less strait, neither is the gate widened, and it is a day of much liberty and extravagance in dress, not only in our own Society, but in the community at large, we hope the brethren and watchwomen on this part of the wall, may not slacken their diligence in guarding the precious children of a religious and devoted education." None of us can bestow it, but it is in our power and it is our duty, to ward all the avenues to temptation, that within our reach. If we open the doors of our schools to all, we allow our beloved brethren to mix and associate with those whose parents may, and do attend churches, and any other amusements, which require parents, as well as our wholesome discipline, have a testimony against. If any of our members are in these practices, we make themselves amenable to the Discipline; but where is the remedy for those who are not members? As for polish and refinement, let this be obtained at home, under the cognizance and government of a religious father, and the endearing, persuasive manner of a well-concerned mother: and then the discipline of school will be less irksome and more easily sustained under the direction of conscientious teachers, and thus laboring har-

moniously together, we trust a blessing would rest upon select schools.

From "Good Health."

Ventilation.

It argues a serious defect in our present system of education, that it should be necessary to explain the reasons why ventilation is essential to health. Such an explanation would be altogether out of place if people in general possessed even an elementary knowledge of the laws of life,—in other words, of the conditions upon which health and life itself are preserved. One of our aims has been, as far as circumstances will allow, to educate those who labor under deficiencies in this respect.

Every one knows that fish cannot live out of water; while land animals, for whose existence air is necessary, speedily perish if immersed in water. But if we ask the explanation of these simple facts, we believe we are not wrong in saying that the majority of persons would be unable to reply. Let it be remembered, then, that both fish and men, when they change places with each other, as regards the element in which they live, die from the same cause. That cause is the want of oxygen, the universal and indispensable agent of animal life. The fish dies in air because its breathing organs or gills are only adapted for purifying its blood with the oxygen with which water is saturated. Boil the water, and thus expel from it a great part of its oxygen, and, when cooled down to its ordinary temperature, place the fish in this water, and death speedily follows. A man, on the other hand, dies in water because his lungs are only adapted for contact with the oxygen contained in air.

The atmosphere which surrounds our planet, and forms for it a gaseous envelope of the thickness of about forty miles, has a definite and very uniform composition. Every hundred parts of it consist of 21 volumes of oxygen, and 79 volumes of nitrogen; or, if we estimate its composition by weight, of 23 parts of oxygen and 77 of nitrogen. Practically, we may say that a fifth part of the atmosphere consists of oxygen. It also contains about one part in 10,000 of carbonic acid,—a gas which, except it be highly diluted, is destructive to animal life.

Oxygen is, as has been said, a necessity of life, and the pure gas will sustain life for a short time; but it is of too stimulating a nature to do this long. Nitrogen, on the other hand, cannot sustain life at all: it would be deadly from its negative qualities, because it cannot, like oxygen, effect the indispensable changes in blood. It seems that the use of nitrogen in respiration is merely to dilute the oxygen, so as to render it capable of being respired.

Carbonic acid gas is about one-half heavier than common air, and owing to this circumstance it is possible to pour it as one would a liquid from one vessel into another. From the same cause it forms a layer at the bottom of wells, or even in a more open situation, as in the case of the celebrated Grotto del Cano, near Naples, where, as happens in some places, it emanates from the earth. Every now and then we hear of sad accidents occurring to miners and others who ignorantly place themselves in situations where they inhale this gas. The result is stupor, followed by loss of

consciousness, and unless help is speedily given, by death.

This is the subtle enemy we have constantly to deal with in our dwellings, and against which we should be constantly on our guard. It is given off by animals in considerable quantities, in the process of respiration, especially when they are in a state of exertion. A man produces about one-third less carbonic acid when sleeping than when awake.

Some persons are much more susceptible of the effects of carbonic acid than others; but, as a general rule, whenever the proportion which exists naturally in the atmosphere is slightly exceeded, bad results begin to be felt. A sense of oppression, languor, headache, and other nervous symptoms are produced. Nor are the evil effects of re-breathed air merely transient. No cause tends more to excite a latent tendency to pulmonary consumption, if it does not really produce the disease itself, than the air of unventilated bed-rooms. Air containing one per cent. of carbonic acid is highly injurious, but even half that quantity cannot be long breathed with impunity. Respiration can be continued only with difficulty in an atmosphere containing five per cent. of the gas, while thirty per cent. speedily destroys life.

Besides carbonic acid, the atmosphere contains in much more minute quantities another still more deadly compound, carbonic oxide. This gas is chiefly produced in our houses from the imperfect combustion of carbon in fuel. Carbonic acid, on the other hand, is given off when the combustion is more complete. Warming by artificial heat is also another great source of this last gas. The method of heating apartments so that the proper escape of injurious gases produced by combustion be effected, would itself require an article. The combustion of some kinds of fuel is accompanied by the evolution of so much carbonic acid, that if ventilation be very defective, immediately fatal consequences are apt to ensue. Every one has heard of deaths occurring from burning charcoal in unventilated rooms, tents, or cabins of ships.

Other gases more or less contaminate the atmosphere of houses. Sulphuretted and carbonated hydrogen, &c., emanate from sewers, and are most injurious to health. It seems to be impossible, even with the most perfect system of sewage, altogether to prevent the escape of these gases.

Another reason for the necessity of ventilation is, that respired air is always charged with vapor; we see the vapor out of doors when in cold weather made visible by condensation. About six grains of water are given off by the lungs per minute. This in the form of vapor, mixed with rarefied air from the lungs, ascends, because the combination is lighter than common air. It shows that in all methods of ventilation means should be employed to remove the upper strata of air; for although carbonic acid is so much heavier than the atmosphere, carbonic acid also ascends in consequence of its dilution, and because it is carried up with respired air, which is lighter than unrespired air. This is because the proportion of oxygen, which is heavier than nitrogen, is lessened by respiration.

Amongst the innumerable laws which go to make up the perfect code of Nature, by which the forces she employs are directed and restrained, there is one by which the mixture

of gases with each other is regulated. By the law of the diffusion of gases, carbonic acid, which escapes into the atmosphere, although so much heavier, soon becomes so diffused that the open air always preserves sufficient purity for the purposes of respiration. But notwithstanding the great bulk of the atmosphere, it is plain that in the course of ages its relative proportion of carbonic acid would be increased. Mark here again the beneficent provision which the Omniscient Mind has devised. It is the function of the plant to absorb carbonic acid and to give out oxygen. Thus it happens, by means of the enormous mass of vegetation with which the land is clothed, that the purity of the atmosphere is sustained.

That water is purified on precisely the same principles as air, a few words will suffice to show. It is not long since the true theory of keeping fish in an aquarium came to be understood. Many will remember that the primitive aquarium consisted simply of a vessel containing water, in which fish were placed. It was then always necessary to change the water very frequently, in order to keep the inmates alive. This was, of course, owing to the consumption by the fish of the oxygen contained in the water, and the production of carbonic acid. The modern aquarium, however, contains not fish only, but growing plants. The plants restore the balance which the fish tend to disturb, and thus such an aquarium never requires to have its water changed. All that becomes necessary is to make up at long intervals for the losses caused by evaporation. Since men as well as fish, then, depend for their existence upon this self-same oxygen, and the sea, with its interminable beds and groves of its peculiar vegetation, may be regarded as an immense aquarium, so may the atmosphere be regarded as a deep ocean consisting of a different medium, at the bottom of which live men and other land animals.

What, then, must be the case with people who, neglecting one of the most essential laws of life, shut themselves up in tightly-closed rooms, in which during the night at least one-third of their lives is spent? They are plainly sapping the foundations of health. They do not die speedily, like fish in the unchanged bowl of water, because they are not equally confined to their rooms, and because, in spite of all their ignorant precautions, some fresh air gains access to them through crevices. But they languish and feel unrefreshed by sleep, they become consumptive and die early, and their offspring is sickly and without vigor.

(To be continued.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 131.)

"1st mo. 27th, 1860. Feeling poorly in body, which is often my experience, yet not quite easy to omit going to meeting, I went with the assistance of my dear daughter, being very poor in spirit. I had not sat long before my mind was engaged for our spiritual welfare; that we might trust in the Lord, with all our hearts, and not lean to our own understanding; and that some present might be prevailed upon to cease from their own selfish reasoning, because man in his finite wisdom, cannot find out God; that spiritual

things were only to be spiritually known. The exercise so remained with me as to induce me to express something of it. It felt to me a time of solemnity, and renewed invitation to some; and the silent breathing of my spirit in the latter part of the meeting was, that these might unreservedly yield to the offers of continued mercy, remembering the solemn declaration of the Redeemer, 'The night cometh wherein no man can work.'

"2d mo. 8th. This day I have entered my nineteenth year. I went to meeting in much feebleness of body, and poverty of spirit, yet was enabled to breathe in secret for more purity of heart, with more freedom from the mixture of self; and that we as a Society might shine with more clearness.

"25th. My dear grand-daughter, Jane G. Rhoads, departed this life in the twentieth year of her age: a close bereavement to her parents, and more so to me than I expected. She was a promising young woman, but we have the consolation of believing her end was crowned with peace, and she taken from the evil to come—a great mercy.

"4th mo. 15th. Being poorly in body, I did not get to meeting. I am often led to reflect on the uncertainty of time, to which the many deaths that have occurred within the circle of our acquaintance in the course of a few months, has contributed. 'Be ye also ready, for at such an hour as ye think not, the Son of man cometh.' A week ago I went to meeting impressed with considerations similar to the foregoing. I had not sat long before my mind became weightily engaged in desire that we might be earnestly concerned to the making preparation for a never-ending and blessed eternity; with the impression there were those present who were favored with a renewed visitation from the high and holy One, and who were under his chastening hand. It seemed best for me to endeavor to express something of my exercise in testimony: after which supplication was offered to the Father of mercies, that He might be pleased to be with us, and not forsake us, and for those who were under His preparing hand, that they might keep their eye single unto Him all the appointed season. In the afternoon I was favored with a comfortable quiet. Indeed, if we are enabled to get along through our religious exercises without experiencing condemnation, it is of the Lord's mercy; especially such poor creatures as myself."

The following letter to —, belongs to about this period:

"Esteemed young friend.—It may be altogether unexpected to thee to receive a letter from me, being unacquainted with thee, yet I may say my mind has for a considerable time past, been frequently turned towards thee in desire for thy best welfare, seeing that here we have no continuing city; and to seek one which hath foundations, whose builder and maker is the Lord, ought to be our first and greatest concern. When we seriously reflect on our very dependent state, that in Him who created us, we live, and move, and have our being, and that without His holy assistance we cannot even think one good thought, how very needful it is that we should seek Him morning by morning, and more often than the morning, that He may be pleased to guide our steps aright through this changing scene. Uncertainty is marked on all these lower enjoyments, and how liable they are to waste and decay. I feel a very tender solicitude for

thee, my friend, that while thou art desirous of obtaining worldly knowledge, and per- I may say distinction amongst men, mayst not be regardless of that which is so much more important, that of laying heavenly treasure, by attending to the notions of Divine grace in the secret of thy mind; remembering that the visitation our Heavenly Father's love are not at command; and ought to be cherished, obeyed, yea, regarded with reverence and holy fear. I now remember a circumstance which I heard related many years ago, of a person who had been favored with the visitations of heavenly love from time to time in early life, who endeavored to satisfy himself with the resolution that after he had accomplished such and such objects, he would give up to be more religious. But when time arrived, though he found those tender visitations with which he had been favored were not at his command, yet he realized to be no easier to yield to them, and still off the great work to a more convenient son. Truly they are not at our command. It is therefore of great importance to us we accept the offers of Divine mercy, they are graciously afforded, lest we should be left to ourselves, and in the close of our lives have to utter the lamentable language, 'My harvest is past, the summer is ended, and I am not saved.' I hope better things for my friend, yea I may say, my beloved young friend, feeling I trust a measure of that which would, if obedience kept pace with heavenly wisdom, gather all into its blessed inclosure. May this be more than thy experience, and may thy faith be strengthened in the all-sufficiency of power whom the winds and waves obey. 'Blessed is the man that trusteth in the Lord, and whose hope the Lord is.'

"I trust thou wilt excuse the freedom I taken in thus addressing thee, as not short of a desire for thy preservation, and relief of my own mind, would have induced me to do it. Knowing also the feelings of a parent, I think I may safely say, on behalf of thy dear parents, that they would have greater joy than to see their children was the Truth; and I believe it is well pleased in the sight of our Heavenly Father, children should tenderly regard the exertions of pious parents. I write as things reveal my mind, and now remember that we are in Holy Scripture, that the steps of a man are ordered by the Lord. May thy dear young friend, through obedience to holy law written in the heart, be so ordered by Him that thou may be favored with peace which passeth all understanding, in fervent solicitude of thy sincere friend,

HANNAH GIBBON

"7th mo. 1st. In our meeting I was solemnly impressed with the language of the Lord to a people formerly: 'Oh, Jerusalem, Jerusalem, thou that killest the prophets, stonest them that are sent unto thee, and thus my mind was clothed with desires, those who I feared might be in a lukewarm or rebellious state, that such might be aroused to diligence in the Christian warfare. My time was mercifully afforded, lest the language should be uttered 'let him that is filthy be filthy still.' It was a time of exercise; yet as I endeavored to express what I thought was required, my mind favored with, I trust, an holy quiet.

th mo. 8th. After having been absent than five weeks from meeting, through position, I was favored to sit again with you. My mind was more than usually eased with a sense of the greatness, goodness and mercy of our Heavenly Shepherd, adorned with desires that all might be gathered into the fold of His flock and family; that I myself might never distrust His love, but be kept steadfast unto the end, and I frequently think cannot be far distant. Oh, Lord! be pleased to prepare me for the solemn event.

10th. The present is a day of close trial searching of heart to those who are conformed for the welfare of our religious Society, nevertheless, a hope at times arises, that as we who are concerned to maintain it on its own foundation, keep, through holy help, steadfast, there will in the Lord's time be a coming unto them, and our poor Society avowed with increasing settlement, and an arising as in ancient beauty."

The conditions upon which the cheering news, contained in this record, are based, lead each one of us to the diligent heed inquiry: Are we concerned faithfully to maintain the doctrines and testimonies of this Society, as transmitted to us by the Friends, on "its ancient foundation?" so, agreeably to the testimony of II. G., "increasing settlement" and "an arising ancient beauty," shall be witnessed, the Father of mercies hasten this good.

But will there not have to be a searching of the camp first; it may be family by family, and man by man, that "the accursed idol"—the idol of the heart,—in whatever guise and wherever found, be brought to light? That so purged, as in the valley of Jehoshaphat, which meaneth trouble, the Lord once more pity and forgive, and enable stand before our enemies; that the shouting be again heard to the praise and glory of the unchangeable God of Israel; and manner of holiness be unfurled with the shout, "O, house of Jacob, come ye and walk in the light of the Lord." Let us see to it that the testimonies entrusted to us bear before the world, but not impugned taken from us through slackness or unfaithfulness, and given to a nation bringing forth the fruits thereof."

(To be continued.)

THE FRIEND.

TWELFTH MONTH 24, 1870.

How often we hear or read the expressions, "Come to Christ; come now; come just as you are." What an evidence of continued love and mercy is the invitation when extended by Christ's servants, under his authority, though the immediate prompting of his Spirit. How blessed, if it is accepted through the drawings of the Father's love, revealed in the same Holy Spirit in the heart of the hearer. How marvellous and how total is the work it invites the unregenerate soul to perform. Upon. To nothing less than to submit to heart-searching scrutiny of the Light; to conviction of sin and its exceeding unfitness; to repentance, contrition and humiliation; to acceptance, through the living, of Christ Jesus as the Redeemer and Savior; whose blood alone blots out past

transgressions, and whose Spirit alone can apply the washing of regeneration; creating the soul anew as a member of his mystical body; to confessing that "All that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but of the world," and therefore must be given up, and testified against in life and conversation. How momentous is the theme! how holy the ground on which we tread, when we speak or write upon it!

To the weary and heavy laden, to the true penitent, the language of Christ is heart-cheering, "I am the door; by me if any man enter in, he shall be saved, and shall go in and out and find pasture;" and it is equally encouraging to hold fast their hope, to all those who, like Simeon of old, can reverently bless the Lord that their eyes have been opened to see his salvation. It is these who realize that they have indeed been bought at an infinite price, and that they must no longer live unto themselves, but through the transforming power of Divine Grace, live unto Him who died for them and rose again. These know that in unsearchable wisdom Jesus Christ is the only foundation on which his spiritual temple can be built, and that every stone in that temple must be hewn, squared and polished by Him, the great master-builder, according to His will.

These truths of the gospel should incite every one who professes to be seeking for salvation, to serious thoughtfulness, and examination of the ground and origin of his hope and trust. There is great danger of, and in being deceived. Christ as the Redeemer, the Sanctifier, can be savingly known only as He reveals himself in the heart by His Spirit. It is there we must individually know the breaking forth of the glorious gospel day to us, wherein we come to experience that "The darkness is past, and the true light now shineth," whereby we see how to take up the cross and follow the Captain of salvation, step by step, in the strait and narrow way, so as to be crucified to the world, and the world unto us.

But there is that in the human heart, which, as it rules, makes Christ thus revealed, "a stone of stumbling and a rock of offence," which our carnal wisdom and self-righteousness induce us to reject and despise; while we may in imagination array Him in gorgeous robes, put a reed in his hand, and hail Him insincerely as our king. However we may refuse to submit to the convicting, restraining requisitions of Divine Grace, or allow ourselves to be deceived as to the manner in which we must enter the door into the true fold, the truths of the gospel are immutable, the terms of salvation remain unchanged. "Except ye be converted and become as little children, ye shall not enter into the kingdom of heaven." "Whosoever doth not bear his cross and come after me cannot be my disciple." The apostle told the believers in his day, "That we must through much tribulation enter the kingdom of God," and every true believer since, has found his declaration to be true.

Let us all, then, give diligent heed to make our calling and election sure, by working out the soul's salvation, through the mighty power of the Holy Spirit, with fear and trembling; bearing in remembrance the doom of those who, though they could say to the Master of the house, "We have eaten and drunk in thy presence, and thou hast taught in our streets," found the door shut, and were answered, "I

tell you I know you not, whence ye are, depart from me all ye workers of iniquity." Oh! the awfulness of having thus deceived ourselves, and of being the means of thus deceiving others.

The Book Committee of the Meeting for Sufferings of Philadelphia Yearly Meeting, has just published a cheap edition of Barclay's Apology. It is printed on good paper and bound in cloth, the price, single copy, 50 cents, and 45 cents by the dozen. The committee has also issued a cheap edition of "Pitts on the Original and Present State of Man," and of "Scott's Diary." These books can be procured at the Book Store, No. 304 Arch Street; where is constantly kept on hand the various Journals and other approved writings of Friends.

It is very desirable that wide circulation in the community, should be given to these valuable works; and especially that Barclay's Apology should be distributed largely, as it is an exposition and defence of the plain, spiritual doctrines of the gospel, recorded in the New Testament, as they have ever been held by Friends, and which they do yet most surely believe.

An advanced copy of a handsome duodecimo volume, entitled "Biographical Sketches and Anecdotes of Members of the religious Society of Friends," has been placed in our hands; the perusal of which has afforded us much gratification. It is published by the Tract Association of Friends in Philadelphia, and is compiled from the series of articles that appeared in this Journal, many years ago, under the caption of "Thomas Scattergood and his Times," there being some new matter added. The work contains short sketches of the lives of eighteen Friends who, in their day, were more or less conspicuous for eminent gifts conferred on them by the Head of the Church, and for devotion to the promotion of the cause of truth and righteousness amongst men. Many striking incidents, and highly interesting anecdotes are interspersed throughout the four hundred and fifteen pages, and the whole work, we think, is well calculated to attract and rivet the attention of intelligent readers, and especially our younger members; who will find therein many of the doctrines and testimonies of the Gospel as held by Friends, exemplified in various ways, and confirmed by the experience of men and women, whose eyes had seen and whose hands had handled of the word of life. We trust it will be widely circulated. The Association, with a view to this, have put the price nearly at cost.

By the time this notice meets the eyes of our readers, the book will be for sale at Friends' Book Store, No. 304 Arch St. Price, single copy, \$1.25, by the dozen \$11, bound in cloth.

As there are occasionally orders received from a distance for single copies of the Journal of William Evans, accompanied with the money to pay for the volume, but without the amount charged for postage, we have been requested to state that the latter is forty-eight cents. Where several copies are wanted in a neighborhood, it is better to have them forwarded in one package or box, by Express.

SUMMARY OF EVENTS.

FOREIGN.—THE SITUATION OF PARIS.—In latest dates has undergone no material change. The Prussians had made no attempt to bombard the city. On the 13th inst. the supplies of fresh meat, eggs, fish and poultry were exhausted, but there were horses enough for two months; of bread, wine and cheese, four months, and of salt meats and provisions, six months, and that the supply of all food and wines, and the people are now supplied by the military commissariat the same as the soldiers. The supply of gas has given out, and the city after sundown is in total darkness. It is said that the defeat of the army of the Loire and other disasters, have not discouraged the Parisians, and that they still cheerfully to the various measures taken by the government for defending the city and protracting the siege.

Bordeaux dispatches state that the French armies under Gen. Chanzy and Bourbaki, have been largely reinforced, and will soon be able to resume the offensive. The French forces on their retreat towards Tours, disputed the advance of the Germans with great determination. On the 13th the King of Prussia sent a dispatch, stating that after four days fighting around Beauneau, the French retired to Blois and Tours. Their loss was severe. Gen. Chanzy retired to Blois, and the Prussians were at least five miles from Bordeaux. A dispatch of the 17th says: The Germans are retreating all along the valley of the Loire.

On the 13th, Eidsberg, a French stronghold in the Vosges, the siege of which was commenced soon after the battle of Worth, surrendered to the Prussians. A full report of the heroic defense states that 52 officers, 1,839 men, and 63 guns, were captured with the fortress. Montmédy has also surrendered to the Germans. A German post-office has been established at Plalzberg. It is stated that sixty per cent. of the wounded Germans have rejoined their regiments or joined the Prussians. The question whether Prussia shall be allowed to abolish Luxembourg, is earnestly discussed in England and elsewhere. The King of Holland has telegraphed to the government of Luxembourg that he will defend the treaty of 1867, and the honor and independence of the duchy. The Prussian government declares that the great Powers will have no right to concern themselves in the matter, Luxembourg having plainly violated its neutrality in favor of France. Prussia, therefore, has reserved full freedom for her future course. The statement by some journals that the French Minister Gambetta, had taken steps for a cessation of hostilities is said to be incorrect, and all the rumors of an armistice are equally unfounded.

Garibaldi has resigned the command of the army of the Vosges, and is about to return to Italy. Gambetta has not gone to Bordeaux with the other ministers; he remains with the troops in the field.

It is announced that Victor Emmanuel, the King of Italy, will enter Rome on the 8th of next month.

It is said that one of the first acts of Amadeus, the newly chosen King of Spain, will be to give one half of the appanage of the crown, amounting to about £20,000,000, to the public treasury.

A levy of six men in every thousand throughout Prussia, has been ordered to replace the men lost to the army in consequence of shortening the term of service in the conscription of 1867.

The treaty negotiated at Versailles for the unification and enlargement of German power, has been ratified by nearly all the States, and promises to attain full success. The new treaty is said to require a great success for four times the amount needed having been subscribed for.

The provisional French government announces that it will be prepared to pay an interest on the national debt next month.

A conference of representatives of the neutral powers has been held at the Foreign Office in Berlin, at which the following basis of peace was agreed to: "Acquiescence in the annexation of Luxembourg to Prussia; the recognition of the German Empire, payment by France of an indemnity of 1,200,000,000 francs; the raising of two fortresses on the German frontier, and the session of a portion of Alsace."

Dispatches from Versailles announce that Count Bismarck has issued an order directing the destruction of the national forests of France in the districts surrounding Versailles and Paris. This order is regarded as timely, as it enables the Prussians to procure fuel and as in military operations.

Dispatches of the 19th say, that another French sortie was daily expected in the direction of Vincennes, where the French troops were being massed. The same report is repeated that the supply of food in Paris is not nearly exhausted.

A Versailles dispatch of the 18th says: The tenth Prussian corps, occupying Vendôme, on the 16th inst. captured six guns and one mitrailleuse. Next day Von Der Tann took Epinay with 230 prisoners. A German detachment from Chartres defeated six battalions at Brou. The French lost 1000 men and the Germans only 36 killed and wounded.

It is said that the Prussian forces under Gen. Chanzy still hold the Prussians in check. The French have re-occupied Vierzon.

Reittinger, secretary of Julius Favre, has escaped from Paris in a balloon, and gone on a diplomatic mission to Vienna, St. Petersburg, and London. On the 16th inst. he left with Es. Gravelin and Gladstone.

It is said that the immediate release of the Fenians now confined in prisons in Great Britain, has been decided upon.

London, 12th mo. 19th. Consols, 91½. U. S. 5-20's of 1862, 88½; of 1866, 85; ten fories, 87½. Liverpool, 4½. Middling uplands cotton, 31½; Orleans, 81 s. 8d. Sales of the day 12,000 bales. Red winter wheat, 10s. 7d. Spring wheat, No. 2, 10s.; old do., 9s. 3d. per cental.

UNITED STATES.—Congress.—In the Senate, McCreery of Kentucky asked leave to introduce a resolution providing for a few dissenting votes on the resolution of the Arlington estate to the widow of General Robert E. Lee, the removal of the grave-yards on the premises, and a general restitution for any incumbrance placed there in the interest of the government. The proposition was denounced by a number of the Senators, and a report of a few dissenting votes on the resolution. The Committee reported back, with a negative recommendation, the various bills for the abolition of the income tax. The bills were placed upon the calendar. The committee on Indian affairs reported adversely the bill to establish a department of Indian affairs, and it was adjourned postponed. The House of Representatives adopted a resolution to send a bill for an international exposition of arts and manufactures and products of the soil and mines, to be held in Philadelphia in 1876. A resolution instructing the Committee on Ways and Means to inquire into the expediency of the immediate repeal of the income tax failed in the House of Representatives. A resolution offered by Jones of Kentucky asserting the right of secession, and that all who were implicated in the late war were entitled to full amnesty and perfect pardon, was rejected; yeas, 14; nays, 142.

Philadelphia.—Mortality last week 206. Old age, 14; palsy, 5; inflammation of the lungs, 23; croup, 14; consumption, 1.

Uncivilized.—The population of New Mexico is 114,239, including 7,645 semi-civilized Indians, and 14,349 wild or uncivilized Indians. The census taker visited in his travels forty deserted villages, believed to have been once occupied by Indians who were in a state of civilization than any now living in the territory.

R. S. Allott, industrial agent of the Kansas and Pacific railroad, reports upon extensive experiments to cultivate the soil of the great plain, or American desert, along that road. It was found that forests can be established in all parts of the territory, and that the best irrigation is planting seeds is better than to transplant young trees, and the most rapid growers are the best trees for the first planting. Deep plowing is required.

The earnings of the Union Pacific Railroad Company for five months ending the 16th mo. 31st, 1870, were \$3,460,000, or \$72,924 per day.

The company have been 285,404 acres, for which the company received an average price of \$4.42 per acre.

The eleven States that in 1861 declared their secession from the Union, had in 1860, a population of 9,104,321. By the census of 1870, their aggregate population is 10,100,000.

An Indian Council was commenced at Ocmulgee, in the Indian territory, on the 11th inst., with Superintendent Hoag as president. Fifty-four delegates were present, representing fourteen tribes, including all the civilized tribes. The most important subject to be considered is a plan for organizing a territorial government embracing all the tribes. By a vote of 48 to 3, the council have adopted a report providing for the drafting of a constitution of government, republican in form, and consistent with pre-existing treaties with the United States. The Commissioner of Indian affairs, Gen. Sherman, was present and addressing the council. He said the object was to form a confederation of all the tribes resident in the Indian country—a government exclusively of Indians—ultimately to become one of the States of the Union. He spoke encouragingly in regard to the efforts already made towards civilization and improvement.

About 3,000 workmen are employed on the No. Pacific Railroad. It is expected that by the end of this month, one hundred miles of grading will be finished and forty miles of track laid.

The Dutch Gap canal, on James River, which has been considered an entire failure, at last promises success. It was deepened by the great flood, and the 19th steamer Olive Branch, 1000 tons, grounded in it, was passed safely through it. The authorities at Richmond intend improving the canal and turning main body of the river into it.

The Markets, &c.—The following were the quotations on the 19th inst. New York—American gold, U. S. sixes, 138½; 11½; ditto, 9-20's, 1368; 10-11-10-40 five per cent., 106½. Superior flour, \$5.35; finer brands, \$5.90 a \$8.75. No. 2 spring wheat, \$1.35 a \$1.36½; amber wheat, \$1.34; white Michigan, 1.145 a 1.58; white '03, 1.160 a 1.175. Canada barley, \$1.04. Western 50 a 60 cts. Western rye, 95 cts. \$1. Old rye, \$1.75. No. 2. Middling uplands cotton, 15½. Orleans, 16 cts. Rice, 61 a 7 cts. Philadelphia—8 fine flour, \$4.90 a \$4.75; finer brands, \$5 a 1 Indiana red wheat, \$1.44; Pennsylvania, \$1.25 a 1.26. Rye, 90 cts. Yellow corn, 70 a 71 cts. Oats, 50 a 51 cts. Dressed hogs, 6½ a 7 cts. Live hogs, a \$5.50 per bushel. The arrivals and sales of beef at the Avenue Drove-yard reached 2562 head, sold at 9 a 9½ cts., choice, 10 a 12 cts.; fair to good, 8½ cts., and common, 4 a 6½ cts. per lb. gross. 16,000 sheep sold at 5 a 6 per lb. fat. \$1.00, and 1000 head of calves, 10 a 12 cts. per lb. \$1.00. White wheat, \$1.75 a 1.85; fair to prime, \$1.40 a choice red, \$1.70 a \$1.80; fair to good, \$1.25 a Ohio and Indiana, \$1.40 a \$1.50. White corn, 71 cts.; yellow, 71 a 72 cts. Oats, 52 cts. Corn, 51 Cincinnati—Wheat, \$1.10 a \$1.17. Lard, 50 a 50 Oats, 42 a 45 cts. St. Louis—No. 2, 100 a 101. Middling uplands cotton, 15½. Old rye in sacks 45 cts. Chicago—No. 2 spring wheat, \$1.05, corn, 41½ cts. No. 2 oats, 38 cts. No. 2 rye, 4 Barley, 70 a 71 cts. Dressed hogs, 56.75; live 5.26. Lard, 11 cts.

RECEIPTS.

Received from Joseph Arnold, Agent, English shillings, vol. 44, and for Rachel L. Armfield, S. Alexander, Samuel J. Alexander, Edw'd Beal, Bottomley, John Bottomley, Sam'l Bradburn, W. Bellows, George Baker, John E. Baker, Robert Glasgow, J. G. Jos. Firth, Foster Green, Van G. John Hodgkin, Samuel Hope, Ebenezer Holden, Horminan, Reuben Harvey, James Kenway, St. Kirkham, Isaac Lyden, Walter Morris, Samuel hose, John Fitch Marsh, William R. Nash, Pickett, Samuel Pickett, Holman Sheppard, Sykes, John S. Westcott, F. B. Wright, Thwitt Wright, Lucy W. Walker, Arthur Wood, and Watkins, 10 shillings each, vol. 44; for Wm. Bir 22, for 4 copies of vol. 44; for Henrietta Pecko 2 shillings, vol. 43; and for Geo. Harrison, 12s. 8c. vol. 1 and binding.

The Treasurer of the Friends' Freedmen Association acknowledges the receipt of \$10 from Yohoghan.

THE BRITISH FRIEND.

Henry Longstreth, bookseller, No. 1314 Chestnut St., Philadelphia, has been requested to act as for the British Friend, for the Eastern, Middle and Western States. The subscription price is 75 cents per volume. It will be sent by mail, post paid, except that of that amount.

FRIENDS' BOARDING SCHOOL FOR FEMALE CHILDREN, TENNESSEE, NEW YORK.

A suitable Friend and his wife are wanted to care for the Institute, and all management and care of it. Application may be made to

Ebenezer Worr, Marshallton, Chester Co. Thomas Wistar, Fox Chase P. O., Philad. Samuel Morris, Olney P. O., Joseph Scattergood, 413 Spruce Street, &c.

MARRIED, on the 1st inst., at Friends' Meeting (the late) Morgan county, Ohio, ELIOTT T. of the late Stephen Todd, to SARAH PICKET, of Thomas Pickett, deceased.

At Friends' Meeting-house, Exeter, on the 12th mo. 1870, ISAAC C. CHRISTMAN to his daughter of James and Lydia Lee.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, TWELFTH MONTH 31, 1870.

NO. 19.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

Ventilation.

(Continued from page 142.)

It may be thought that this is an overdrawn picture. Many facts might be adduced to prove that the picture is but too real. Let us suffice. The Queen of England's Foot guards are men in the prime of life, and invariably picked out of the general population for soundness of constitution. Notwithstanding this, it was some years ago ascertained that the mortality amongst these men was excessive. It was proved that while the deaths amongst the general male population at the same ages amounted to only 9.2 per cent, they reached 20.4 per thousand among these vigorous Guardsmen. The investigation to which these sad facts led, showed that the mortality amongst them was caused by consumption, and that this was attributed to the very imperfect ventilation of the barracks. For example, a sergeant told that he could not endure the fetid atmosphere of the crowded sleeping-rooms between the windows had been opened. No wonder that many of these poor fellows succumbed so surely as, although more slowly than, would have done from the shot of the enemy. Measures were then taken to ventilate the sleeping apartments, and the mortality among the same troops is stated to be less, positively, instead of so much greater than that of the general male population of similar ages.

It would be easy to mention instances of directly fatal consequences which have resulted from the inhalation of impure air, having already given a sketch of the composition of the atmosphere, we must hasten to describe some of its properties upon which ventilation depends.

Air, in common with other gases, expands in volume almost uniformly as its temperature increases. 1,000 cubic inches of air at 32 degrees Fahr., when raised to 212 degrees is increased in bulk to 1,375 cubic inches. This amounts to an increase of three-tenths of the whole volume. Now, one of the laws which regulate the motions of the atmosphere is,—that the heavier or less extended portions of it rush to the lighter or

more expanded parts, and the motion continues so long as the difference of density is maintained. Let it be supposed, then, that the air as it enters a chimney fifty feet in height is at any given temperature, and that the external air is also at a given temperature, the velocity with which it will move through the shaft is capable of being exactly calculated. The motions of the atmosphere, then, are caused by local alterations in its density. It is upon this simple principle that the science of ventilation depends. In this way the external motions of the air, those grand phenomena to which we give the name of tempests, and notably the trade winds, are produced.

The necessity for external ventilation has been foreseen for us by nature. Noxious vapors arising from the earth, the smoke of cities, and the gases arising from decomposition and combustion, are at once dissipated by the winds. How oppressive the atmosphere becomes in calm warm weather, and what a relief it is to feel one's self fanned by a breeze after even a short continuance of such a calm!

We have already said enough to show that it is when we surround ourselves with an atmosphere confined within a small space that the necessity for ventilation becomes urgent. Pure air is as necessary to us as pure food, and on this subject an old writer says quaintly, "that as everything that is proper for reuniting the decay of the solid or fluid parts of our bodies deserves the name of food, the air ought to be looked upon as real food, and that which is most necessary for us." A future generation will doubtless look back even upon us of the present day with pitying wonder. Notwithstanding the knowledge we possess, rooms for living in are constantly being erected in which no ventilation can be effected when the door is closed except through accidental chinks. It comes indeed to this, that such apartments are only inhabitable owing to the imperfection of their construction. Science has, however, not been idle in this matter of ventilation. What is most required at present, is a more widely diffused knowledge of the subject.

A man produces by respiration about ten cubic feet of carbonic acid in twenty-four hours. Suppose him to be confined in a room containing 1,000 cubic feet of air, which a space ten feet square and ten feet high would afford, he would in twenty-four hours contaminate the atmosphere to the extent of one part of carbonic acid in one hundred parts of air. A certain amount of carbonic acid given off by the skin would have to be added to this. But suppose twelve persons to occupy the same chamber, and a like effect would be produced in two hours. We have previously shown that such a proportion as that just mentioned cannot be breathed with impunity. Health is daily sacrificed through inattention to the kind of atmosphere inhaled. People spend long winter evenings crowded together

in badly ventilated small rooms, or else they pass hours in larger spaces, such as churches, theatres, and other places of assembly, which in relation to the numbers present are equally crowded.

It will be obvious that to insure proper ventilation two things are necessary; first, that the cubic space of air in an apartment shall bear a proper relation to the number of persons who inhabit it; and secondly, that the air shall be sufficiently renewed. It is calculated that the cubic space requisite for each person in a house, should never be less than six hundred feet; but in hospitals, where the air is contaminated with emanations resulting from disease, 1,000 cubic feet in each ward is the minimum that should ever be allotted to each patient. Another great source of the consumption of oxygen is the burning of candles, lamps, and gas-lights. The burning of gas is especially unwholesome, not only on account of this consumption in a very high degree, but because of the other deleterious gases besides carbonic acid which are evolved in the process.

In order to do away with the injurious results which must arise from the assembling of persons in artificially lighted rooms, it is necessary that about six cubic feet of fresh air per minute shall be supplied for each person. But this, of course, involves the condition that an equal quantity of vitiated air be allowed to escape. The art of ventilation consists, indeed, in effecting this double purpose, and much ingenuity has been expended on the subject.

The different means employed have been divided into two classes,—forced ventilation and ventilation by spontaneous action. The first method is necessary whenever a larger number of persons are congregated in an apartment than its relative amount of cubic space would warrant. Sometimes fresh air, previously heated or otherwise, is pumped in, or it is blown in by a bellows, or a current is set in motion by means of a revolving fan, an Archimedean screw, or other contrivance, and in some instances pressure is also made for drawing off the foul air by mechanical means. Steam power is often employed to work machinery of this kind. The practical difficulties to be overcome in ventilating by these methods are considerable. No greater proof of this can be adduced than the case of the English Houses of Parliament, and the different methods of ventilation which have been tried for them at an enormous cost.

The scope of this article is, however, limited. What is intended is, to impress upon our readers, not only the necessity for ventilation, but how ventilation is to be effected in ordinary houses, by ordinary means.

The commonest, and by no means the worst form of ventilating a room, is by opening the windows. But since the heated and impure air always ascends, the windows should open at the top, and extend to the ceiling. It

is a great mistake, however, to suppose that opening windows upon one side only suffices to ventilate an apartment. It often happens in the still and sultry atmosphere of summer that the temperature inside a room is the same as that outside. In such a case no more change will take place in the air of a room having windows which only open at one side, than would occur in the contents of an open-mouthed bottle immersed in water. In order to change the air of an apartment, means of escape as well as of entrance must be provided. If the door be kept open, so much the better; and if not, the inevitable imperfections in its fitting allow some air to pass. But whatever may be said about the wastefulness or inconvenience of open fireplaces, they have at least one great recommendation. In houses where no provision is made for ventilation,—and, as already said, such a provision is altogether exceptional,—the chimney is in this respect of essential use. When a fire is burning, an artificial upward draught is created, which materially assists in purifying our rooms in winter; and in summer, when there is no fire, the chimney acts as an air-shaft. The principle that double orifices are necessary for ventilation, should never be lost sight of. One of these should be as near the floor, and the other as near the ceiling, as is convenient, and they should also be placed, if possible, at opposite sides of the apartment. Notwithstanding this, the fireplace in summer is often closed up as tightly as possible with a fireboard. This is done for the sake of appearance, and no doubt generally in ignorance that appearance is consulted at the expense of health.

(To be continued.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 145.)

"9th mo. 30th, 1860. On going to meeting, my mind was humbled therein under a sense of the need we have of Holy Help. Feeling constrained to bow the knee in solemn supplication to the Father of mercies, I besought Him that He would be pleased to be with us, and not forsake us. The feeble minded were brought into view, and the beloved youth also, that they might be willing to bow their necks to His yoke, not leaning to their own understanding; that so a succession of testimony bearers might be raised for His ever-excellent cause of truth and righteousness. After taking my seat, the language of David soon impressed my mind, 'Why art thou cast down, O my soul? and why art thou disquieted within me? Hope thou in God; for I shall yet praise Him for the help of his countenance.' Encouragement flowed freely to drooping minds, to trust in the Lord Jehovah, in whom there is everlasting strength. Upon returning home, my mind was favored with peaceful quiet, having nothing to regret: an unmerited favor.

"11th mo. 11th. Returned from our meeting, wherein I was favored to feel secret desires for my own preservation, and those who were assembled with me; being renewedly made sensible that we cannot reserve ourselves, as 'It is not in man that walketh to direct his steps.' The excellence also of retiring often to wait upon the Lord for the renewal of our strength, was impressively brought before me, attended with desires that not only the beloved youth, but we who are

more advanced in life, might be more frequently in the practice of it; that so the things which perish with the using, might have less place in our minds, and those things which belong to our peace and accompany our salvation, might be more earnestly sought after, even by the whole human family."

The subjoined is a letter to her nephew

"West Chester, 11th mo. 24th, 1860.

"Dear Nephew,—Though relations, we are much strangers to each other. Yet that does not hinder me from feeling an earnest desire for thy welfare, seeing that here we have no continuing city; and to seek one which hath foundations whose builder and maker is the Lord, ought to be our first and greatest concern. My desire is that thou mayest often think of Him, our Heavenly Father, who has placed a witness in all hearts, which reproves for evil, and gives peace for well doing. May thou give close attention to this in speaking word of grace; which, if yielded to and obeyed, will cleanse and purify the heart. We read in Holy Scripture that the Lord giveth to every man according to his ways, and according to the fruit of his doings. I feel a desire for thee, dear relative, that thy heart may be so cleansed and purified by the influence of the Lord's Holy Spirit, that thy ways, and the fruit of thy doings may be acceptable unto Him, who is of purer eyes than to behold iniquity in any with approbation. I know very little of thy line of life, but on enquiry, found as was thought, that thou had no settled home. If so I feel much sympathy for thee; not doubting but that in passing about thou meets with many temptations. May thou in seasons of this kind, turn thy mind inward to the Lord, our blessed Saviour, who was tempted in all points as we are, yet without sin. He alone is able to succor those who are tempted, and will I verily believe, make a way for the deliverance of those who cleave close unto Him in humility and faith, with desire for His holy assistance. It is a blessed attainment to be in favor with our Heavenly Father. There is nothing in the world comparable to it. May thou be more and more concerned, while time and opportunity are mercifully afforded, to acquaint thyself with Him and be at peace. And it now arises in my mind to recommend to thee the frequent reading of the Holy Scriptures, with thy mind turned inward to the Lord with desire that He may be pleased to give thee a right understanding of them; and then I believe He will enable thee to read them to thy instruction in righteousness. They are the best of books; and in them it is recorded, that 'it is not in man that walketh to direct his steps,' and, 'A good man's steps are ordered by the Lord.' May thine, dear nephew, be so ordered by Him through obedience to His blessed will, that when He may be pleased to say, 'Steward give an account of thy stewardship,' for thou mayest be no longer steward, thou mayest be prepared to give up thy accounts with joy and not with grief. Such is the sincere desire of thy affectionate and truly well-wishing Aunt,

HANNAH GIBBONS."

"12th mo. 15th. My beloved relative Jesse J. Maris, departed this life in the 68th year of his age; a valuable elder and member of Chester Monthly Meeting. He will not only be missed in his family, and in the meeting to

which he belonged, but in our religious society at large.

"1st mo. 10th, 1861. Our valued and my beloved friend Hannah P. Davis, was taken from us by death. She was a very useful member and elder of Birmingham Monthly Meeting; and the influence of her meek and quiet spirit will be much missed among generally. In our meeting my mind being solemnly impressed with the loss we had sustained by the removal of those who were the salt of the earth, supplication was made to the Father of Mercies, that He would be pleased, through the baptism of His own Holy Spirit, to raise up and qualify a successor testimony bearers for His ever blessed cause of truth and righteousness; whereby His name might be glorified, and His church fed."

The following letter was written to Asenath Clarke while on a religious visit in New Carolina:

"West Chester, 1st mo. 1861

"My dear friend Asenath Clarke,—(mutual friend A. R., kindly gave me the pledge of reading thy letter to her, received some weeks since. It was comforting to be so affectionately remembered by thy bringing as it did to my remembrance first acquaintance; when we were, I do love, according to my little ability, dragged together in gospel fellowship. This has renewed from time to time, so that I can only adopt thy own expression, 'Thou I been as an epistle written in my heart, have often thought I should be rejoiced hear from thee, and now to find that thou renewedly engaged in the good Master's vine, is encouraging. Truly we do not see an hard Master; for though He may seem in His wisdom to dispense close baptisms, we may have to feel much poverty of spirit and many low seasons, for the trial of faith and patience, yet in His own time does He condescend to afford a portion of bread which nourisheth and strengthens poor weary traveller to journey forward the tribulated path. The days we live in days of trial. For the divisions among us there are great searchings of heart. May unsettled situation of our religious Society a means of humbling our hearts, and bring us nearer unto Him who 'seeth not as we see.' May we 'study to be quiet, as our mind our own business'; each one seeking Holy Help to 'build over against his house.' If we were truly humbled and brought into a sense of our own nothingness and dependence, I trust the great I Am, would His goodness and mercy, compassionate low condition and help us; for pain is the lot of man. I sometimes feel a comfortable hope that as those in the different places who concerned to maintain our once favored city on its ancient foundation, are favored keep their standing in the Truth, that in time there will be a gathering unto them; an arising experienced out of our present culties; so that our poor Society may yet be in ancient beauty, even as a 'city set on a hill which cannot be hid'; when others seeing good works may be brought to glorify Father who is in heaven.

We have both, dear friend, experienced an important change and afflictive disposition, since we saw each other, in the death of our beloved husbands—our outward and staff to lean upon. It has been a

reavement indeed; yet I believe we may, Hitherto the Lord hath helped us; and trust He will help, even unto the end, as a eye of our minds are kept single unto m.

"I think thou mentioned in thy letter to R., the names of Hannah Rhoads and Mary-smore. They are both friends we love; and I may just mention that at the funeral of Jesse J. Maris, which my daughter recently attended, dear Hannah was impressively drawn in the exercise of her gift, to a large assembly, while standing at the grave, though was a wet time. I think it may be safely said she is a humble follower of our blessed Saviour. And, my precious friend, may He who has renewedly called thee into His vineyard to labor, condescend to be with thee in every season of conflict and trial, support and strengthen thee for His work and service, and when it is accomplished, reward with the waves of peace.

"In very tender love and sympathy, and according to my small measure, gospel fellowship, I remain thy friend,

HANNAH GIBBONS.

P. S. My valued cousin, James Enlen, who is near us, came in just as I was closing above, and desired me to give his love to thee."

(To be continued.)

From "After Icebergs."

Description of Icebergs.

I will describe, first, the figure of the berg, is a combination of Alp, castle, mosque, arthenon and cathedral. It has peaks and pines; cliffs, crags, chasms and caverns; lakes, canals and waterfalls. It has towers, battlements and portals. It has minarets, domed steeples; roofs and gables; balustrades & balconies; fronts, sides and interiors; towers, windows and porches; steps and enclaves; columns, pilasters, capitals and entablatures; frieze, architrave and cornice; niches, cloisters, niches, statuary and countless decorations; flutings, corrugations, carvings, panels of glassy polish and in the rough; oak, Roman, Gothic, Saracenic, Pagan, Sarcophagi. It is crested with blades and needles, capped here and there with mims, blocks and boulders, splintered and crumbled masses, its precipice has a fresh, sharp fracture, underfoot, with its expanse of surface beauteously diversified with sculptured imagery and other ornament, has the polish of ivory the glassy polish of mirrors—the enamel of shells—the fierce brightness of burnished steel—the face of rubbed marble—of smooth-alabaster—of pearl—porcelain—lily-white—sh—lily-white wax—the flesh-finish of beandone in the spotless stone of Italy. This, though, is but the iceberg of the air; the head and crown only of the iceberg of the deep sea. From the figure of the berg, I will come to scribe an important feature of its life and story: its motion; not its movement from place to place, but upon its centre—its rotation and vibration. Where the berg is not rounded—in which case it only beats and bays to and fro, vibrating through the arc of a circle like an inverted pendulum—when is not rounded, it must be supposed to be suspended at the surface—all but the most part—just under the surface of the sea, very much as a cloud, a great white under-head, hangs suspended in the upper air. Balanced around its heart, far down in

the deep, and in its cold solidity "dry as summer dust"—poised upon its centre with perfect exactness, it is evident that the loss of a single ton of ice shifts that centre, shifts it a once-notch on the bar of the mighty scale, destroys the equilibrium, and subjects the whole to the necessity of some small movement in order to regain its rest. When, instead of one ton, thousands fall off, it sets a rolling the whole elated and pinnacled circumference.

And here begins that exhibition of novel forms and shapes, and of awful force, and the sublimity of stupendous masses in motion, that so impresses, awes, startles, and fascinates the beholder. A berg in repose, wondrous as it is to him that dares to linger in its presence, differs from itself in action, as a hero in his sleep differs from himself upon a field of battle.

With regard to the motions of the berg, it must be borne in mind, that, from the fact of its centre being not on a level with the surface of the sea, but at depths below, they are quite different from what might at first be imagined. A rough globe, revolving upon its axis, with but a small portion of its bulk, say a twelfth, above the water; or, better still, the hub and spokes merely of a common wagon wheel, slowly rolling back and forth, will serve for illustration. The uppermost spoke, in its vibrations to the right and left, describes a line of some extent along the surface, not unlike an upright stick moving to and fro, and gradually rising and sinking as it moves. In this movement back and forth, the two adjacent spokes will be observed to emerge and disappear correspondingly. In this way, a berg of large diameter, instead of falling over upon the sea like a wall or precipice, appears to advance bodily, slowly sinking as it comes, with a slightly increasing inclination toward you. In its backward roll, this is reversed. It seems to be retreating, slowly rising as it floats away, with a slightly increasing inclination from you. In these grand vibrations, projecting points and masses of opposite sides correspondingly emerge and disappear, rising apparently straight up out of the sea on this side, going down as straight on the other.

From the figure and motion of the berg, I come to describe the motive power, rather the explosive power, through which the delicate balance is destroyed, and motion made a necessity in order to gain again equilibrium and rest. Whatever may be the latent heat of ice, is a question for the professed naturalist. Two things are evident to the unlearned observer: an iceberg is as solid as ivory, or marble from the lowest depths of a quarry, and cold apparently as any substance on the earth can be made. This compact and perfectly frozen body, immersed in the warm seas of summer, and warmer atmosphere, finds its entire outside, and especially that portion of it which is exposed to the July sun, expanding under the influence of the penetrating heat. The scrutiny of science would, no doubt, find it certain that this heat, in some measure, darts in from all sides in converging rays to the very heart. The expanding power of heat becomes at length an explosive force, and throws off, with all the violence and suddenness of gunpowder, in successive flakes, portions of the surface. The berg, then, bursts from expansion, as when porcelain cracks with sharp report, suddenly and unequally

beated on the winter stove. Judge of the report when the porcelain of a great cliff cracks and falls, or when the entire berg is blasted asunder by the subtle, internal fire of the summer sun! If you would hear thunders, or whole broadsides of batteries of the heaviest ordnance, come to the iceberg then.

Speaking incidentally of noises, reminds me of the hues and tints of the iceberg. Solomon in all his glory was not clothed like the flowers of the field. Would you behold this berg apparelled with a glory that eclipses all floral beauty, and makes you think of the clouds of heaven at sunrise and sunset, you must come to it at sunrise and at sunset. Then, too, you would hear its voices and its melodies, the deep and mournful murmuring of the surf in its caverns. Hark! In fancy I hear them now, half thunder, and half the music of some mighty organ.

And this reminds me of the sea, which shares with the iceberg something of the glory and the power. In the first place, from the white brightness of the ice, the eye is tuned to such a high key, or so stimulated and bedazzled, that the ocean is not only dark by contrast, but dark in reality. It is purple, so deep as to amount almost to blackness—an evening violet I would call it, a complexion magnificent and rich exceedingly in the blaze of noon, and at late and early hours when the skies are full of brilliant colors. What heightens the effect of this dye of the ocean, is the pale emerald water around the berg, and in which it floats as in a vast bath, the loveliness, clarity and beauty of which no language can paint in a way to kindle the proper feeling and emotion. From ten to fifty feet in breadth, it encircles the berg, a zone or girdle of sky-green, that most delicate tint of the sunset heavens, and lies, or plays with a kind of serpent play, between the greenish white ice and the violet water, as the bright depths of air lie beyond the edge of a blue-black cloud. There is no perceptible blending, but a sharp line which follows, between the bright and the dark, the windings of the berg, across which you may, if you have the tenacity, row the bow of your whale-boat, and gaze down, down the fearfully transparent abyss, until the dim ice-cliffs and the black deeps are lost in each other's awful embrace.

For "The Friend."

In the controversy that is pending between those who aim to express the views of Philadelphia Yearly Meeting, and the advocates of innovation, it were well for the former to examine carefully their ground, and consider whether there is any foundation for the charges brought against them. That meeting is charged with being a "hindrance to the Society." And by way of commentary upon the views put forth in the epistle issued last spring, we are referred to the waning condition of some of its meetings, and the want of religious zeal that marks so many of its members. While we may be sure that declension in spiritual health is no consequence of those doctrines, and we certain that declension has not been promoted by the manner in which they have been upheld and preached. Doubtless they are the doctrines of the unchangeable Truth, binding upon the Society, past, present and to come; nevertheless let us consider if there be not some points in our practice which weaken us in their support.

Friends have ever placed a high estimate

upon the Holy Scriptures, and in many of their religious communications, the serious perusal of that book is urged upon their fellow members. Now if there be some under our name who are exalting the Scriptures as of paramount authority to the Holy Spirit, it is no reason that we should neglect their perusal, or cease by precept and example to train our children in acquaintance with their contents.

If there be some within the ranks of our Society laboring with unauthorized activity in conducting first-day schools, it were highly culpable in us to exercise any the less care in the religious training of our children. George Fox was earnest in recommending parents to collect their children and servants on First-day afternoon, and by reading and precept, to instruct them in the truths of the Gospel.

There are some who may plead a want of qualification as an excuse for neglect of these duties, but Samuel Pothergill has said to such, 'your want of qualification but adds weight in the scale against you.'

There are some other matters involved in this controversy, of yet more vital importance to the christian life. It is to be apprehended there are those under our name who have run into formality and "much speaking," in their assumed approaches to the Father of mercies. On the other hand, there is cause to fear that (perhaps, in testimony against this abuse,) the essential duty of prayer is too little inculcated. Of course we must believe that the religious part of Philadelphia Yearly Meeting is sound in sentiment on this subject. This is proven both by their practice and language, if that language be rightly understood. But if we will notice communications from our galleries, or the religious effusions of the pens of our members, for many years past, we will find that the word itself, a word so unsurpassed in comprehensive force, is seldom used.

This was not the case with our ministers and writers of former ages. When Geo. Fox designed to express the idea, we find him using the simple Saxon word "pray." And in all the literature of the Society, from his day to the end of the 18th century, which I have noticed, we may find it as a prevalent expression. When Wm. Savery tells us of those remarkable meetings held amongst the common people in various parts of Great Britain, he informs us when such was the case, "the meeting closed with prayer." Is there not ground to fear that those who may be lingering about the "outer court," on hearing so little said of this solemn obligation, will suppose that we have ceased to regard it.

It were indeed a serious business to criticise the language of those who may be called to speak or write in the name of the Lord; but the best of us are more or less creatures of habit, and some may be found even from the gallery using language, but poorly calculated to reach the heart.

Twelfth mo. 12th, 1870.

[The views expressed in the above essay revive some feelings which have often presented themselves to our minds of latter time. We refer to that which we apprehend is the main drift of the author's concern—the fear lest the natural reaction of the human mind against error, should drive us into the opposite extreme. While we expose and condemn the efforts to convert our meetings for worship into times for scripture reading; and while we

labor to maintain, both in theory and practice, the invaluable doctrine, that it is to the operations of the Divine Spirit in the heart, that we are to look primarily and chiefly for our guidance in the way to holiness, and for that experimental knowledge of religious truth which alone enables us fully to appropriate it; it is very necessary to be on our guard lest we inevitably slide into too much carelessness in the daily and serious perusal of the Holy Scriptures, and in impressing their value on those under our care.

Similar remarks may be made on the subject of prayer and other christian duties. We earnestly desire that Friends every where may be stirred up to a lively zeal and greater earnestness in every good word and work. We fully believe that if this were the case, and they were at the same time careful to have their works all wrought in the Divine ordering and fear (which alone can make them good), that it would be an effectual means of rebuking that unsettled spirit, which is leading many away from the safe and solid ground of Truth as always professed by Friends.

In the criticisms of our correspondent, we think he does not sufficiently advert to the fact that the document issued by Philadelphia Yearly Meeting, was designed as a caution to their members against certain errors in doctrine and dangers in practice to which they were exposed. A due regard to brevity would not admit of the introduction of much notice of other doctrines, neither was it needed, as the faith of Friends in regard to the scriptures and other subjects, had been clearly and repeatedly expressed, and was not at that time called in question.

His remarks in regard to the use of the word "prayer," and his fear that this most important duty is not sufficiently adverted to from our galleries and in our writings, we think must have a local rather than a general application. We cannot conceive of a true christian who does not turn his heart to the Author of all his blessings in prayer for continued supplies of help, comfort and preservation; nor have we observed in the communications of our approved ministers any deficiency in this respect.

We sincerely desire that if any of our readers are deficient in any of the duties which have pressed upon the mind of the writer of the above article, they may be stirred up to greater faithfulness, and to a more watchful scrutiny as to the effect produced upon them by the tendencies of the present time; that avoiding errors either on the right hand or the left, we may all be brought to or preserved on the immutable foundation, having our loins girded and our lights burning, so that when the end of time comes to us, we may through unutterable mercy, be prepared for admittance into those blessed realms where, and where alone, we are forever at rest, and freed from all danger of temptation and error.]
—EDRONS.

News from a Terra Incognita.—Among the many interesting communications read at the Royal Geographical Society of England, Mr. Shaw's account of his travel to Yarkand and Kashgar merits particular attention. The common idea of Tartary is an expanse of great plains, over which wander barbarous hordes with cattle and tents; but it will surprise many readers to learn that Mr. Shaw found a remarkably mountainous country, full of set-

led habitations, with flourishing cities more than one hundred thousand inhabitants where numerous arts are practised, and a considerable amount of civilization exists.

Life and property are secure; commerce protected; light carts drawn by horses—quent the roads; and markets are held on a fixed day of the week even in the small villages. In Yarkand alone there are six colleges, with endowments in land, for education of students in Mussulman law; divinity; and in every street is a well-attended school attached to a mosque. Merchandises abundant. In one street are displayed silks of China; in another the cotton goods and prints of Russia; and elsewhere tea, silk, and all kinds of foreign produce. Horse flesh, camel, beef and mutton, are found in the bachelers' quarter; the bakers offer excellent loaves made by a process of steaming and shops for the sale of icee sherbet and tea are every where to be seen.

The estimates formed of the number of population are from twenty to sixty millions. Their industry is remarkable, for, as no rains fall, the fields and gardens are everywhere watered by canals and watercourses, great and small. If the system of artificial irrigation were cut off, the whole country would become a howling desert. Yacoub Beg, ruler, is a man of intelligence and energy under whom the extension of irrigation, road making, bridge building, and sink wells in the desert for the use of travellers are actively carried on. This interesting country was visited by Marco Polo five hundred years ago; but it is so cut off from world by high mountains and deserts, as to be lost in the vast and unknown regions described as Tartary.—*Record.*

Selected for the *Blessed*

We cannot be too sensible of the blessing we partake of, as members of a religious society, professing the principles of the gospel of Christ; and which feels bound to exert restraining influence over old and young guard them against the seductive power of temptation, as it is presented in the world large, and in the private associations of men and women, who reject all religious countenance. How grateful and consistent in our conduct ought we to be, for the salutary provisions and influences we have around us; as well as we are, or may be, with solid christians, whose sentiments and deportments are like salt to preserve, or as the dew of the tender plant, to nourish and feed the grain. In relation to forming connections like this, it is of great importance to have pure society of Society, where purity of principle, practice is incalculated.

There is great safety in dwelling like Shunamite woman, among our own people and if it be our lot to enter into a married life to make choice of one, whose training be within our own pale, or who has been brought in by conviction, under the regenerating power of Divine grace. In such training, the minds of the members receive a clear bias and stamp. They need not blear nor forego the sentiments of their education on religious points, in order to conform each other. A union in this respect has ready existed; and when bound together the most tender and endearing ties of human life, the way will be open to be constant in meetings in their heavenly pilgrimage, as we

aid and cheer one another in the difficulties that pertain to their temporal duties. What a sad loss is sustained by those young people who despise their birthright, and part with it, as Esau, for a mess of pottage. If you are not favored with repentance in time, effectual as to return, they will wander in the path of safety, and confusion and embarrassment in some way will follow. I love that forsaking a Society, where there are many means for spiritual help and preparation, and where the true nature of vital religion has been clearly unfolded, and that attended by serious disadvantages; and that you generally such are swallowed up by the world and its corrupting spirit.—*Journal of Evans.*

NONE BUT THIEF.

Selected.

BY HARRIET NEWEN KIMBALL.

Whether good or ill it fires
Where my lonely footsteps wend,
Still I walk, though unawares,
With my one abiding Friend.

He it is—misanthropic—
Whispering ever, "Be of Cheer"
Who upbraideth while I grope,
Seeking for the Help so near,

Watching, shielding, blessing on,
Though so rarely recognized—
Lord! forgive the heart undone
That hath True so lightly prized!

As Thou lovest I would love,
Thou who didst for me expire;
None but Thee in Heaven I have,
None beside on earth desire!

Selected.

HOUSES TO LET.

BY SUSAN COOLIDGE.

Every day, as I slowly ride
Over the roads with Fall rains wet,
To right, to left, on either side,
I see them standing—"Houses to let."

Tiny houses, neat and brown,
Every hedge screens one or more;
Their little owners have left the town,
And open wide is every door.

"Summer houses" they were, indeed—
Roodless, fireless, cold, and bare;
None may hope in utmost need
To find a "modern convenience" there!

Swinging from twigs by a pendant thread,
Conched in covers that once were green,
Rocking in tree-tops overhead,
There are the little houses seen.

Once they were full of happy life;
They builders all day long
Twined the walls in loving strife,
And interwove their threads with song.

Speckled eggs of brown and blue;
Calfow, chirping, hungry broods;
Soft small wings, which all day flew;
Quivering, cautious mother-hoods—

All are gone. The snow-flakes white
Lie in place of the nestlings down;
Cold winds harbor day and night
"Tenants at will" of the empty home.

Tenants a while; but by and by
April shall come, with balmy rain,
May, with fragrant, odorous sigh—
Houses shall be in demand again.

All the world shall flutter with glee,
Small brown housekeepers chirp and fret,
Homes be wanted on every tree,
And not a desirable one "to let."

be wisdom and judgment of the Lord are unsearchable, and his ways past finding out; happy are they who move at his command, and stand steadfast in His counsel.

From "McMillan's Magazine."

The Suez Canal.

(Continued from page 158.)

On entering the heights of El-Guisr, the scenery of the canal changes. The eye no longer rests on an almost unbroken expanse of lake and morass, studded here and there with islets, and at times rendered gay and brilliant by innumerable flocks—regiments one might call them, in such perfect and almost unbroken order are they drawn up—of rosy pelicans, scarlet flamingoes, and snow-white spoonbills. The view, if monotonous, has been at least extensive; but now it is bounded on either side by a high wall of sand. The soil, as the French call it, of El-Guisr is rather less than ten miles in length, with a maximum height of about 65 feet above the level of the sea, and is composed chiefly of loose sand interspersed with beds of hard sand and clay. The work here was commenced by the fellahen, who, with the primitive tools common to the Egyptian laborer, viz. hands for grubbing up the soil, and baskets for carrying it away, excavated a channel from 25 to 30 feet wide, and about five feet below the level of the sea. When they were withdrawn in 1863, the work was entrusted to M. Couvreux, who took a contract for completing the cutting to the full width, and to a depth of about ten feet below the sea-level. For doing this he employed a machine of his own invention called an *excavateur*—a sort of locomotive engine working behind it a chain of dredge-buckets on an inclined plane; on reaching the top of the plane, the buckets open at the bottom, and discharge their contents into wagons; these were drawn by locomotives to the top of the embankment, along a well-arranged network of tramways. M. Couvreux finished his contract in 1868, and then the deep dredging was continued by Messrs. Borel and Lavalley, screw-lighters carrying away the stuff and discharging it into Lake Timsah. Soon after passing the encampment of El-Guisr, and just before entering Lake Timsah, the canal makes a most awkward double bend. This was done by the engineers who traced the line in order to take advantage of a slight depression in the ground, and lessen the amount of excavation; but it is a fatal mistake, and must be rectified, as the width of the canal at that point will hardly admit of a long vessel getting safely round such turns. The width, it should be stated, varies, at least at the water-line. In those parts where the soil is either below the surface of the sea, or not more than about seven feet above it, the width is nearly 350 feet; in those where the soil is higher it is not much over 190 feet. The width at the bottom, however, is throughout 72 feet. The depth is 28 feet.

On a prominent point at the end of the El-Guisr heights stands the *chalet* of the Viceroy, occupied by the Prince and Princess of Wales on the occasion of their late visit to the canal. It commands a good view of a part of the deep cutting, and the distant prospect from it across Lake Timsah is very fine.

Lake Timsah was formerly a fresh-water lake receiving the overflow of the Nile, and to judge by its name a great resort of crocodiles, *timsah* being the Arabic word for that animal. It had long, however, been merely a lake in name, and nothing remained to mark its site but a deep depression in the

desert till the 12th of December 1866, when, through the channel already cut from Port Said, the waters of the Mediterranean, regulated in their fall by a sluice 66 feet in width, began to pour into its bed; and on the 12th of May, 1867, a regatta was held on its waters to celebrate its inauguration as an inland salt-water lake. It took 50,000,000 cubic metres of water to fill it. The canal passes along its eastern shore, cutting through two or three projecting promontories. On the northern shore is the town of Ismailia, about a mile and a half from the canal.

Ismailia, though inferior in size to either Port Said or Suez, may be said to have become from its central position the principal town on the 1sthmus. It was not until the Fresh-water Canal had been extended from Tel-el-Wadee that Ismailia began to spring up on the desert sand, now it is one of the prettiest and most charming spots imaginable. Its trim houses, well kept streets, and beautiful little gardens form a characteristic picture of French taste and neatness; and it is difficult, looking at this delightful oasis, and feeling the fresh, cool breeze from the lake on which it stands, to believe that only a very few years ago the whole was one glaring waste of barren desert sand. It seems only necessary to pour the waters of the Nile on the desert to produce a soil which will grow to perfection flowers, fruit, vegetables

in fact, anything. And, thanks to the Fresh-water Canal, Ismailia has a plentiful supply of Nile water. Not far from the town are the fine pumping engines on which Port Said and the whole line of the canal between it and Ismailia are dependent for water. It is conveyed, as has been said, through two pipes, and at every kilometre there is an open tank accessible to man and beast. From 1500 to 2,000 cubic metres of water are daily pumped along these pipes. The contractor, M. Lasseron, is paid one franc for every cubic metre. The rest of the line of the canal is more readily supplied with water, as the Fresh-water Canal continued from Ismailia to Suez runs along side it, at a distance varying from a few hundred yards to three miles. When this Fresh-water Canal was finished, in 1864, it was determined that, in conjunction with the channel which already existed from Port Said to the borders of Lake Timsah, it should serve as an anticipatory means of communication between the two seas. Accordingly, a small branch salt-water channel was dug from the main channel up to Ismailia, a distance of about a mile and a half, and joined to the Fresh-water Canal by two locks. Other locks brought the Fresh-water Canal to the level of the Red Sea at Suez, and since 1863 a continually increasing traffic has passed along this means of communication between the two seas. During the Abyssinian war it was very largely made use of. It is time, however, to return to the canal.

It passes, as has been said, along the eastern shore of Lake Timsah; and as the maximum depth of the lake does not exceed twenty-two feet, the bottom of the channel had to be dredged. A large space of the lake will also be dredged out to the depth of the canal, for the purpose of forming a harbor, with landing quays running along the northern side between the canal and Ismailia. Leaving the lake, and pursuing for a short distance a south-easterly direction, among

tamarisk-tufted sand-hills, the cutting of Toussoum is entered with rather a sharp curve. This curve will, like that at El-Guisr have to be done away with. The heights of Toussoum, varying from fifteen to twenty feet, are composed chiefly of loose sand. The first channel to a few feet below the sea-level was, as at El-Guisr, excavated by the fellahen. Dredges have completed it, the stuff being taken and discharged close to the shores of Lake Timsah in lighters which, in order to admit of their getting rid of their contents in very shallow water, open at the side instead of at the bottom. Immediately after Toussoum comes the *seuil* of Serapeum about three miles long, and from fifteen to twenty-five feet high, composed of sand with layers of clay and lime, and here and there a sort of half formed rock, of shells embedded in lime. The withdrawal of the fellahen took place before anything had been done here, and there being at that time little hope of free manual labor, it became a difficult problem to know how to get rid of the superficial soil. The difficulty was eventually met by a scheme which rivals any of the numerous ingenious and skillful contrivances brought out in connection with this canal. It was remarked that considerable depressions existed in the configuration of the soil, which might easily be turned into, as it were, closed basins communicating with the line of the canal. Then, as the surface of Serapeum was about the same level with the Fresh-water Canal, distant only three miles, it appeared possible to introduce its waters by a branch channel into these depressions, and convert them into lakes. This was accordingly done; and dredges, brought up from Port Said by the connected communication of the Maritime and Fresh-water Canals spoken of before, were floated into the artificial lakes, from which they made their own way into the line of the canal, and began clearing it out. Flat-bottomed, twin screw lighters, opening at the side, carried the stuff away, and deposited it in the lakes. At the commencement of this enterprise a great cause of apprehension presented itself, which deserves mention, if only on account of the way in which it was proved groundless. It was feared that the light sand composing the upper surface of the soil would never hold water sufficiently, and that the loss by permeation and absorption would be greater than the flow from the Fresh-water Canal could supply. Nile water, however, contains an immense quantity of mud in solution, and this sandy soil is full of very fine calcareous particles; the two soon mixed, and formed a coating which rendered the sand *quasi*-impermeable, and reduced the absorption to a minimum. While this work was going on, transverse embankments kept the fresh-water from running on the north side into the channel already cut from Lake Timsah, and on the south side into the low land between Serapeum and the Bitter Lakes. This latter portion, about a mile and a half in length, was excavated to the full depth by manual labor, chiefly European.

(To be continued.)

A remarkable trait in the character of George Fox, was his sympathy with the afflicted, and his care for the poor. His epistles abound with earnest recommendations to his brethren on these subjects, in which he

exhorts to liberality and kindness in making provision for such as were poor from causes beyond their control.

[We have received the following satisfactory statement from one of the Friends engaged in the appropriation of the funds raised under the circumstances mentioned therein.—EDMORS.]

For "The Friend."

It will be remembered that in 1860 an appeal was made to Friends of Philadelphia and its vicinity, on account of the suffering condition of the Oneida Indians residing in the neighborhood of Green Bay. In answer to that appeal a meeting was convened at Arch Street house, at which was collected a large amount of money, and two Friends entrusted with its prompt distribution.

In making their report on their return, to a subsequent meeting held at the same place, it appeared, that after furnishing the required relief a considerable sum remained in their hands. Taking the report into consideration, the Friends there assembled appointed three trustees, who were authorized to receive the unexpended balance, and appropriate the same at their discretion, for the benefit of that tribe. From that time to the present, small sums have been bestowed on needy individuals of that people, as occasion presented, leaving in the 9th month last in the hands of Thomas Williamson, treasurer of the fund, \$941.20, including interest to date. In order to investigate the present condition of the Oneidas, and ascertain whether the fund could not be more availingly applied if placed at their disposal, a visit was recently made to their reservation by two Friends for this special purpose. After consulting with the two missionaries residing with these Indians, it was concluded to call a general council of men and women, which assembled on the 6th of 10th month, 1870.

At this meeting it was proposed, in order to render the fund originally collected for their relief, more available, that it should be transferred from the present trustees, to five others who should be appointed by themselves; two of whom should be the missionaries for the time being, and the three others to be chosen at a general council of the nation, by a vote of two-thirds of those assembled. The subject being fully explained and as fully united with, an election then took place, which resulted satisfactorily, the three most eligible men of the tribe being chosen trustees.

These trustees, or their successors in office, are to hold the fund, invested in good mortgage security, and apply the interest thereof (now amounting to \$80 per annum), to the relief of the most destitute of their people. No money is to be drawn from the treasury for any purpose whatever, except by a vote of two-thirds of the board, who are to serve without pecuniary compensation, and are required to keep an exact account of their proceedings, and forward the same annually to Philadelphia.

When the time shall arrive when it may be deemed advisable to dissolve their present tribal organization and hold their land in severalty, then the whole of the fund, or so much as may be required, shall be applied to paying the expenses of a survey, and the just allotment of their several individual portions. Although this tribe has made great ad-

vances in civilization, and is now living comfortably and in a prosperous condition, yet learn with sorrow and with shame, that effort are now making by unprincipled white men to sow dissension among them in order to bring about a treaty for the sale of their beautiful reservation. They were earnestly treated to turn a deaf ear to all such overtures, as they only came from their enemies and if listened to, would sooner or later result in their degradation and ruin. Their warning was well received, and it was believed would have a good effect.

Oiling Farm Implements.—The Boston *Creator* gives the following practical advice its readers:

"Every farmer should have a can of linseed oil and a brush on hand, and whenever buys a new tool, he should soak it well in the oil and dry it by the fire or in the sun before using. The wood by this treatment toughened and strengthened, and rendered impervious to water. Wet a new hay rack and when it dries it will begin to be loose the joints; but if well oiled, the wet will hurt but slight effect. Shovels and forks are preserved from checking and cracking in the eye of the handle by oiling; the wood becomes smooth as glass by use, and is far less likely to blister the hand when long used. Axe handles handles often break where the wood enters the iron; this part particularly should be toughened with oil to secure durability. Oiling the wood in the eye of the axe will prevent swelling and shrinking, and sometimes getting loose. The tools on a large farm, a heavy sum of money; they should be of the most approved kinds. It is a poor economy at the present extravagant prices of labor set men at work with ordinary old-fashioned implements. Laborers should be required to return the tools to the places provided them; after using, they should be put clean, bright, and oiled. The mold-board plows are apt to get rusty from one season another, even if sheltered; they should be brushed over with a few drops of oil wiped away, and they will then remain in good order until wanted."

Tobacco an Exhaustive Crop.—In speaking of the exhaustive effects of the tobacco-plant the *Journal of Chemistry* says:

"To the farmer, who cultivates the plant proves a robber of the first magnitude possesses a capacity for plundering the greater than any other tree, shrub, or plant known. The amount of mineral constituent which it carries of can be judged of by carefully examining the ash as it accumulates the end of an ignited cigar. It often remains after the organic portion is removed, showing the full size and outline of rolled leaves, to the eye apparently nothing is lost by combustion. If the wood burned in our stoves and upon our hearths was as rich in soil-constituents, we should need the services of servants to carry away the ashes. Five hundred pounds of the dried leaves the soil produces robs it of at least twenty pounds of its most valuable mineral atoms."

"The comparative exhaustive effect of tobacco upon soils may be judged from fact, that fourteen tons of wheat, fifteen of corn, and twelve tons of oats remove more of the principle of fertility than a single ton of tobacco."

Anecdote of the late Owen Lovjoy.—During the late campaign, he applied to the State territorial committee of his party for an appointment to speak on the political issue in South Illinois. The committee urged that it should cause the party certain defeat at the polls, owing to his well known anti-slavery sentiments, and offered him all the appointments that he would accept to speak in any portion of the State. By persistent effort, however, he got the consent of the committee to do as he desired; but on the condition that he should appear unannounced, addressing a community most hostile to him—and his principles, he rose before a vast crowd of brawny-handed men, who had just listened to a soft-soaping oration, and without introduction, began his speech by saying: "Gentlemen, there's a great criminal in the land; a criminal who is permitted to perpetrate the foulest outrages upon humanity without meeting punishment or rebuke. To these committing acts than which none more heinous are found in the category of crimes, these sacrilegious hands he has dragged husbands from the presence of loving wives, and babes from devoted husbands; he has separated children from aged parents; he has blessedly torn helpless infants from the arms weeping mothers." In this strain he went in language which, though harsh to the ears, was softening to the heart, to describe the institution of human slavery, holding it before his audience all the while in the character of an individual. When the description of his character was complete, and the crowd that surrounded him was roused with indignation against the criminal, he brought his speech to an apparent conclusion with the words, "That criminal is slavery." If a voice more than human had rang into the ears of each one of the audience, "Thou art the criminal!" they could scarcely have been more amazed and repentant. Giving the crowded time to recover from the shock, the speaker, raising himself to his fullest height, and assuming the tone of one about to pronounce an astounding fact, exclaimed: "I am Owen Lovjoy, the live Abolitionist. Look at me!" And the rough hands, that, up to now, had his name been announced, would have torn him from the speaker's side, were raised with waving hats, to give utter zest to the cheer that followed; or to wipe the moisture from eyes that glistened with tears of repentance.

THE FRIEND.

TWELFTH MONTH 31, 1870.

At the close of the day on which this number of our Journal is dated, the year 1870 will be ended, and another year will begin. At a juncture, the mind, almost involuntarily, occupies itself with by-gone events, and they come forth from the unlocked chambers of memory—with the thoughts, the feelings and the purposes once associated with them. It can hardly be otherwise than that feelings will be subdued and saddened, not with remembrance of the loved or reprobated who have been gathered to their fathers; but changes unanticipated and regretted; sadness of all, with the enforced consciousness, that that within us which is appointed to death, still lives, and we continue cold

and halting in the performance of duty, to Him, whose dispensations to us are all fraught with wisdom, and filled with love.

Without presuming to reduce the reflections of others to our own standard of thought, we may, with good reason, suppose that the same event, if allowed to address itself to the understanding and the heart, may make similar impressions and call forth similar thoughts in most of our readers, as in ourselves. All have their disappointments and sorrows, though not springing from the same causes, and all must be sensible of their shortcomings, whether from intellectual weakness or negligence in pursuing natural things, or from disobedience in relation to things spiritual. There is then a community of interest, and, in one sense, a sameness of thought and feeling, uniting us together in a common brotherhood. All are not born to move in the same sphere, nor to engage in the same pursuits, but all have received from the one bountiful Source of all good, minds which are designed to be cultivated and exercised; and all have been entrusted with a measure of Divine Grace, by co-operation with which their evil propensities will be subjugated, and they brought into conformity with the Divine will.

Infinite wisdom having so organized us that we can reciprocally exchange our ideas, the responsibility is great that in our intercourse, bearing upon advancement in worldly good, we go not beyond a correct criterion in estimating the value of knowledge, wealth, honor and the pleasures of sense; while we are bound ever to keep in view the inestimable importance of that child-like acquaintance with and obedience to Him, whom to know is eternal life, and which, therefore, far transcend the glory of every other acquisition.

But there are other reflections connected with the hour, that call imagination and sympathy into action. Since the beginning of the year, how many domestic circles has death stepped into, and with relentless hand separated beloved relatives and dearest friends; forcibly bringing into consideration the awful realities of a future state, and the slender thread that holds us to this changeful world. So constantly are these breaks in domestic and social circles taking place, so uniformly are the vicissitudes of life distributed throughout all classes, that happiness and unhappiness are unmeaning terms when applied to rank or outward circumstances. The negligent, the indifferent and the disobedient, be they rich or poor, learned or ignorant, take up a heavy cross to their happiness if not to their will, while they follow a cheating master, who with all his lying promises, can never give rest to their souls. It is therefore one of the marvellous effects of the fall, that thousands may be seen around us, professed believers in christianity, immersed in the cares, the pleasures and the follies of the passing hour, who give little or no evidence that they have any concern for the termination of their probation, or allow their thoughts to be occupied with the marvellous regeneration to be accomplished before the night come wherein no man can work, in order to enter the home of eternal rest and bliss. And yet, so great is the deceptiveness of unrighteousness, that care is taken to preserve such an exterior as may secure the approbation, or at least ward off the censure of the equally superficial society in which they move. The trappings of folly, the false sentimentality of self-love,

and the resources of pride, are all employed to deck and display the enjoyments of sense, and to pass them off for the realization of true happiness. But how often have the trials and mutations of the past year, brought home to the unregenerate heart, the consciousness that all yet obtained is unsatisfying, and that beauty, riches and knowledge are alike insufficient to silence the convictions of conscience, or content the longings of an immortal soul; to give stability in the hour of temptation, or confidence when looking forward to a judgment to come.

In this day of almost idolatrous honors to intellectual greatness, it will be well should our recollections of the year just closing, fix more firmly in our mind a correct estimate of the relative worth of knowledge, however extended, and true wisdom. Such is the fallibility of man, that the refinements of literary pursuits, or the abstractions of scientific research, though far above and superior to the pleasures of sense, are yet surrounded with temptations and dangers. Unless the knowledge of ourselves has been acquired in the school of Christ, so as to clothe us with humility and distrust of our abilities, leading to watchfulness unto prayer, our finite powers of reasoning may be easily deceived, creating doubts of some of the truths of revelation, and the head insensibly lead the heart astray, while following the dazzling but false light of a specious scepticism; springing spontaneously in the richly cultivated intellect, or planted there by admired, but misleading teachers; some of whom, though rich in intellectual lore, ignore the existence, or deny the immortality of the soul; while others in their blind search for the "water of life," exemplify the folly described by the poet,

"Of dropping buckets into empty wells,
And growing old in drawing nothing up."

But learning may be seen dignifying itself as the champion of religion, defending her from the attacks of enemies and overturning the strongholds of error. When clothed in the love-wrought garment of humility and self-abasement, it not only lightens the burdens and cheers the heart of man, but while lessening his ignorance, educates him to look to the religion of Christ for light, liberty and peace.

How has the past year illustrated the prevalent idea that this is not only an eventful period, but that the world has reached a turning point, from which all things are to undergo a change? Does history continue to repeat itself, or are the circumstances, social and political, which mark the age and affect our experience, essentially different from those that preceded them? We see that with all the skill and knowledge devoted to political science, in order to shape and accommodate institutions and laws to the wants and interests of communities, neither statesmen nor legislators have been able so to impose legal restraints on the relations of one nation to another, as when seeking to preserve or establish what they claim as their respective rights, they shall not resort to the barbarism of war. The past year has been made memorable by a war of aggravated folly and wickedness. A war which, unless waged simply for murder and destruction, it is difficult to see what is the stake at issue. If at its commencement the conflict was to gratify the jealousy between thrones, or to establish a dynasty, it has now ceased to have either

object; nor can it be said to be a struggle between the symbol of royalty and a republic; for amid the cries that go up from the suffering people, there is not one, on either side, that indicates they are contending for a principle.

Did we judge of the Christian civilization of Europe, by the selfishness and heartlessness exhibited by its governments within the past year, we would find little to encourage the hope of progress; and indeed we should be almost driven to despondency in contemplating the course of human affairs, were it not that we know the principles of truth and of right are realities; and however a selfish and perverse policy may oppose them, they must finally triumph by the slow but certain discovery that success and happiness are inseparably linked to them.

But we need not go from home to see and to feel that unregenerate man continues to be of the earth earthy, and his natural wisdom sensual, devilish. That which alone can give him a new being, emancipate, elevate, and adorn him with heavenly graces, is the Lord from heaven, a quickening Spirit. Were we, who profess to be believers in the spiritual character of the gospel of salvation, practical exponents of its transforming power, we should indeed be lights in the world, drawing and guiding others to the fulness of the blessings of the gospel of Christ, and all our differences, our revivits and our controversies, might be buried out of sight, in the grave of the year.

SUMMARY OF EVENTS.

FRANCE.—The military operations in France during the past week show great determination on the part of the French, and that communication is still maintained between all their forces. A severe battle has occurred between the French, under Gen. Chanzy, and the combined armies of Prince Frederick Charles and the Duke of Mecklenburg, with what result is not certainly known, besides claiming the advantage. In the neighborhood of Amiens also, the German forces under General Manueff have had a battle with the French under General Faidherbe. The accounts of the French claim a victory, but those of the Germans are directly contrary. At Paris another sortie has been attempted, but on so large a scale as the one made by Gen. Ducrot. The French were repulsed with a loss of about 800 men. The Prussian loss was small.

General Trochu recently released some German officers who were held as prisoners, having previously taken them through the famous stores of provisions, and showed them all, in order to convince the besiegers that Paris would not soon be obliged to surrender for want of food. The Parisians do not fear bombardment, the guns on their fortifications having as long a range as those of the Prussians, with perhaps a very few exceptions. As far as appears, the city is not certainly known to be under a general siege, and many of the people in consequence spend most of the day in bed in order to keep warm.

On the 18th ult., the Baden troops captured Nuits, S. W. of Dijon, on the road to Lyons. In the engagement about 1,000 Germans were killed and wounded, and the French lost 1,700 killed and wounded and 600 prisoners, besides guns, ammunition, &c.

On the capitulation of Thionville, 5,000 French troops were paroled. During the bombardment the city was greatly damaged by the shells thrown into it. The injury is estimated at \$3,000,000.

The London *Morning Post* predicts for the Prussians great hardships and losses during the present winter, because the Parisians have demonstrated their ability to resist indefinitely.

Germany is suffering from a scarcity of coal. The working of many mines has ceased, the miners having been drafted into the army.

Great pecuniary distress has arisen among the poorer classes in the towns of France by the French government having appropriated to war purposes the money in the savings banks, as well as the property of the corporation and communes, which, in accordance with

French law, had to be deposited in the coffers of the State.

The Bordeaux dispatch of the 24th says, that Havre and Cherbourg are now impregnable to any force the Germans can bring against them. A majority of the citizens of Bordeaux having requested the suppression of reactionary newspapers, the government has replied that it prefers to treat them with silent contempt.

An outcry is so overstocked with importations that the authorities have given notice of their inability to shelter properly goods. The wharves and docks are covered with merchandise suffering from exposure.

Several vessels have arrived at French ports with arms.

It is reported that the Prussians expected to receive provisions from England at Dieppe, but that the close watch by the French cruisers has prevented the success of the plan.

A dispatch from Munich says it is certain that the treaty between Bavaria and the North German Bund has been rejected by the lower Chamber, having failed to receive a two-thirds vote. The Chamber will be dissolved and a new one chosen, involving great delay. This action is regarded as an insult to Germany, and especially to Prussia.

It is stated that the first meeting of the conference on the Danube will be held in London on the 30th proximo. It is expected that France will be represented by Thiers.

A St. Petersburg dispatch declares that in discarding the portion of the treaty which neutralizes the Black Sea, Russia, if only cancelled a compact which all parties are obliged to observe. Prussia, in according the invitation to be present in the conference, stipulates that no topic foreign to the question of revision of the Paris treaty of 1856, shall be introduced into the deliberation.

The eclipse of the sun was seen but imperfectly in the south of England, but was well observed in the north.

John Bright has resigned the presidency of the Board of Trade.

New Years has been fixed for the entry into Madrid of the Duke of Aosta. In the mean time he occupies the royal palace at Aranjuez.

Dou Crisp has issued a protest against the election of J. M. Ashley to the throne, and in support of his own claims thereto.

The Spanish Cortes has been dissolved by a vote of 129 to 4.

The bill ratifying the vote of the Roman people for annexation to Italy, has passed the Italian Chamber of Deputies, with few dissenting votes. A bill providing for the removal of the capital from Florence to Rome within six months, passed by a vote of 192 to 18.

The Mont Cenis Tunnel is probably completed. On the 21st inst. only about 16 feet remained to be pierced. Liverpool, 12th Mo. 23d. Sales of cotton for the week 90,000 bales; stock 374,742 bales, of which 95,000 were American. New York 2nd week, 108, 167; 95, 98, 11d. per cental.

The Mexican Congress have passed the Tehuantepec Canal concession by an almost unanimous vote—131 to 3—and in a form that is said to be satisfactory to the company seeking it.

It is reported that the Atlantic Cable officials despair of raising and repairing the broken cables before the sixth month next, when the weather will probably be more favorable for the undertaking.

UNITED STATES.—*Census Returns.*—Maryland has 781,654 inhabitants, being an increase of 94,000 since 1850. The combined population of Oregon, Nevada and California, is 629,558, an increase of 190,217 since 1850. Oregon had increased 54 per cent., Nevada 41 per cent., and California only 33 per cent. Wisconsin has 1,055,569 inhabitants and 198,263 dwelling houses. Ohio has 2,968,681 inhabitants.

Water.—*Examined.*—Robert S. Welch, of Ohio, has been appointed to this service. The nomination was promptly confirmed by the Senate. It is understood that he will be instructed to press more earnestly for a settlement of the questions in dispute between the two nations.

Philadelphia.—Mortality last week 257. Consumption, 49; diphtheria, 9; inflammation of the lungs, 8; old age, 10.

Congress.—The Senate Finance Committee have reported a bill providing that the amount of bonds authorized by the act for refunding the public debt, bearing an interest of six per cent., shall not exceed five hundred millions, interest payable quarterly. After a heated and acrimonious debate, the Senate has passed a joint resolution providing for the appointment by the President of three commissioners and a secretary to visit San Domingo, and there study the political state and condition of the republic; the popular feeling about

annexation to the United States; the material and dustrial wealth of the island, its climate, ports, &c. The report and nature of the tobacco crop of foreign treaties, and the conditions under which people would welcome annexation.

Miscellaneous.—The Department of Agriculture estimates the total product of Indian corn this year a 100,000,000 bushels. The average per acre has been 28 bushels. The yield of the tobacco crop will be at least 200,000,000 pounds. The hay crop is less in quantity than that of 1859 by about fifteen per cent, but quality is better. The potatoe crop is about 20 per cent below that of last year. The cotton crop is estimated at 3,500,000 to 3,750,000 bales.

The value of the domestic products exported to foreign countries during the fiscal year ending 6th 30th, 1870, amounted to \$408,267,673. Of this amount the Southern States furnished as least \$260,000,000 the cotton alone reaching the value of \$227,957,624, tobacco \$24,100,420. The exports of breadstuffs flour amounted to \$71,285,607. About \$2,000,000 worth of sewing machines were exported to Great Brit Germany, Brazil, France, Australia, Mexico and So America.

The weather was intensely cold throughout a large portion of the United States, from the 22d to the 25th inst. The following is the nature of the observations from places named: viz: Chicago, 16° below zero; Peoria, Illinois, 20° below; Bloomington, 22° below; Indianapolis, 8° below; Lafayette, 10° below; Union City, Indiana, 12° below; Vincennes, 16° below, and Terre Haute, 14° below; Chattanooga, Tenn., 4° below. The following is the amount of snow reported: Chicago says the thermometer during the past week has run from 8° to 28° below zero. There are eighteen inches of snow at Taos, and two to three feet on the mountains. Very low temperatures are reported from Virginia North Carolina and further south.

The following are the prices of wheat were the quotation on the 24th inst. *Philadelphia*—American gold, 1 U. S. sixes, 1881, 113; ditto, 1870, 1868, 110½; 10-40 five per cents, 109½. Cotton, 55½ a 104 cts uplands and New Orleans. Superfine flour, \$4½; \$4.75; finer brands, 55 a 57.75. Indiana red wheat, 88 a 91. Yellow corn, 74 a 75 cts. Oats, 54 a 56 cts. Lard cts. Cloverseed, 104 a 11 cts per lb. Timothy, \$ a \$5.50 per bushel. Flaxseed, \$2 a \$2.10. *Cincinnati*—Family flour, 53.50 a 55.00. Red wheat, 81½. S. C. Corn, 52 a 54 cts. Iowa barley, 8.405. L. 11 a 11½ cts. Dressed hogs, 87 a 72½. *Chicago*—2 wheat, 1.05. Corn, 43; cts. Oats, 28½ cts. 70 cts. Barley, 70 cts. Dressed hogs, 6.90 a 6.90. *Madison*.—No. 2 spring wheat, \$1.05. No. 1 ry cts. No. 2 corn, 47 cts. *Cleveland*.—No. 1 red wheat, 81.25; No. 2 do, 81.21. Corn, 58 cts. 47 cts.

RECEIPTS.

Received from Friends of Middleton and Carme per Samuel Shaw, a \$3.50 for the Freedmen.

FRIENDS' BOARDING SCHOOL FOR IND CHILDREN, TUNNENSA, NEW YORK.

A suitable friend, and his wife are wanted to charge this institution, and manage the farm attached with it. Application may be made to

Ebenzer Worth, Marshallton, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE.

Near Frankfurt, (Twenty-third Ward.) Philadelphia. The Friends before named—JOSIAH I. W. TROTTER, M. D. Application for the Admission of Patients nor made to the Superintendent, or to any of the Board Managers.

DIED, Eleventh Mo. 29th, 1870, near Mount Pleasant Ohio, MARY ELLIS, daughter of Lewis and Mary Taylor, aged 23d year of age. She was a member of Creek Monthly Meeting. She said, from a child to her death much conflict to be plain in her dress; b obedience to this duty she now had peace. Her free petition, "O Father, grant me patience to the end, remarkably answered through her protracted life. She said before her death and said to her little "Do not cry for me, I am happy."

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

The Snez Canal.

(Continued from page 150.)

The so-called Bitter Lakes were an extensive depression in the desert soil, about twenty miles long, from a quarter of a mile to miles wide, and of an average depth in centre of from eight to thirty feet below sea-level. The bottom in the deepest parts were covered with a very thick deposit of salt, and the whole was in fact a sort of salter marsh. The high ground on the east-side is dotted with tamarisk shrubs, formed with the earth and sand at their roots, high and, which at a distance have so much the appearance of trees that the French have given it the name of the "Forêt." The sandy, very surface all about is strewn with shells, presenting almost the appearance of a beach. Some people consider this depression of the Bitter Lakes to have at one time formed the head of the Red Sea; M. de Lesseps is of opinion that here must be placed the point of the crossing of the Israelites, a narrower and shallower point in this depression serves to divide it into two unequal parts, that on the north being called the Grand Bassin, and that on the south the Petit Bassin, "des Lacs Amers." The mer is about fifteen miles long, from five to six miles broad, and of an average depth of from twenty-five to thirty feet, the deepest part being covered with the salt-pan already mentioned; the latter is about ten miles long, from five to six miles broad, and with an average depth of from fifteen feet. The narrow neck that divides the two lakes was first cut through, and it remained to fill them as Lake Timsah had been filled. For this purpose a weir was constructed obliquely across the line of the canal at the commencement of the depression, similar in principle to that which had regulated the flow of water into Lake Timsah, far larger and stronger, it being over 300 feet in length—the largest sluice, probably, ever constructed. The flow of water could be regulated to a nicety by the gates. It had been intended that the inauguration of this stupendous undertaking should take place in the presence of the Prince and Princess of Wales on their return from the Nile,

but they had not arrived at the time that all was ready, and the sluices were first opened in the presence of the Viceroi, who, it is worthy of remark, had never before visited any part of the canal, political reasons having kept him from showing any public personal interest in the undertaking up to this time. On the 17th of March, 1869, the two dams which, as the reader will remember, confined the fresh water in which the dredges were working through the heights of Serapeum, were cut, some of the sluices were raised, and the filling of the Bitter Lakes commenced. It was a moment which had been looked forward to with great anxiety, nothing of the same kind ever having been before attempted on such a large scale. All, however, went well; the wooden barrage successfully withstood the rush and pressure of the water, and the only mishap was the upsetting of one of the dredges at Serapeum. There certainly were some other sufferers. The salt water killed all the fish which had come in with the fresh water from the Nile, and for some days afterwards the canal was covered with their dead bodies. It has been calculated that it will take nineteen hundred millions of cubic metres of water to fill the Bitter Lakes. In this estimate is included an allowance for evaporation and absorption, based upon minute and careful experiments. Of this enormous quantity of water the Mediterranean will supply the largest share, the Red Sea also contributing its quota.

The course of the canal follows a straight line from the cutting of Toussoum to the centre of the "Grand Bassin;" it then makes a bend eastward, to near the commencement of the channel leading into the "Petit Bassin." Through this channel it passes in a direction almost due east and west, and then, shortly before leaving the Bitter Lakes, resumes a direct southerly course. Its line through the lakes is carefully buoyed out, but a considerable portion of their area will be dredged out to the full depth of twenty-six feet, to serve, like Lake Timsah, as an inland harbor.

On leaving the Bitter Lakes, the canal passes for a mile or two through a gradually rising ground to the south of Chalouf el-Terraba. The plateau is here from twenty to twenty-five feet above the sea-level, and about six miles in length. A part of the surface soil was excavated by the fellahs. After their removal nothing was done till 1866, and then the work was recommenced upon a different system to any hitherto employed. It was let out by the piece to gangs of workmen, got together from all countries. They were provided with tools; and a system of tramways and inclined planes served for the conveyance and discharge of the material excavated. The soil consisted chiefly of gypseous clay and pure clay, but an obstacle hitherto unmet with was encountered in the shape of a layer of rock several feet deep, and extending for about 400 yards along the cut-

ting. It was composed principally of sandstone, with varieties of limestone and conglomerate, the latter in some places very hard, in others soft, as though recently formed. A few Italian miners soon removed it by blasting. The work here was considerably impeded by the great quantity of water found at a certain depth, and which was increased by the infiltration from the Fresh-water Canal, not a quarter of a mile distant. This water was kept under by engines, which pumped it over the west embankment into a part of the plain where a portion of the bed of the old Pharaonic canal offered a natural reservoir. Traces of this old canal may be seen in many places.

After Chalouf the canal enters with a gentle turn eastward what is called the Plain of Suez. This plain is a low marsh, with a thin coating of sand and a substratum of clay and mud. It is hardly more than a foot or two above the level of the sea, and, indeed, at the period of high tides the waters of the Red Sea completely cover it. A first channel was cut by hand labor, and it was intended to complete the depth by dredges working in the water, which rapidly accumulated. But after the dredges, brought down the Fresh-water Canal, and floated thence by an ingenious contrivance into this channel, had begun their work, it was found that the nature of the soil in some parts was so solid as, if not to preclude the possibility of the dredges working in it, at any rate to render their progress excessively slow, and the expense in repairing the damage to them by the great strain enormous. Another system of procedure, presently to be explained, was accordingly adopted. It should here be stated that in 1868 the contract for the completion of the whole work yet remaining to be done was taken by Messrs. Borel and Lavelley, who had been already so successfully engaged upon the greater portion of it. These gentlemen, by the terms of their contract, undertook to deliver up the canal in a completed and navigable state to the Company on the 1st of October, 1869, under a penalty of 500,000 francs (£20,000) for each month of delay. The slow progress made by the dredges in the Plain of Suez gave them little hope of completing this part of the canal in time; and, inverting the course hitherto pursued, they determined, if possible, to substitute hand-labor for machinery. The dredges were removed, the water pumped out, and all the hands available concentrated on this point.

With the withdrawal of the fellahen it had seemed as though manual labor would never again figure conspicuously in the accomplishment of any great part of the canal. European laborers, even if they could have been imported in sufficient numbers, would never have been able to support the climate, and the privations which the absence of water and of easy communication at that time ren-

dered inevitable; and the natives who offered themselves voluntarily were very few in number—nor, indeed, were their services considered of much use. By dint of numbers during the continuance of the *corvée* they had accomplished a good deal, and moreover their cost but little; but their individual labor, though worth two or three piastres a day, was certainly not worth as many francs, the least that they could be had for as free agents. Gradually, as the means of providing them with food and water increased, laborers became attracted from Europe, and in 1867 the Company found itself able to command some 3,000 or 4,000 men, exclusive of those employed on the dredges and other machine-work. They were a motley crew, from all parts of the south of Europe. At the same time the number of native candidates for work had also considerably increased; Syrians too, and Bedouin of the desert came flocking in. An increased want of hands made it necessary to accept everybody; though as has been said, Oriental labor was not rated very highly, and involved certain disadvantages. For instance, these Arabs at first steadily refused to work by the piece. They wanted to be paid for each day's labor, with the power of going away whenever they liked. And as unremitting exertion is contrary to Arab habits, it was necessary to place overseers to see that they earned a day's wages. A certain time, too, was lost in teaching them to handle pickaxe and spade, and guide a wheelbarrow over a suspended plank, the first attempts generally ending in an ignominious upset and redeposit of the contents whence they came. Another peculiarity they had, which made them at first rather expensive workers. It was noticed that the shovels served out to them were used up with curious rapidity. At last it happened to an inspector to discover evident marks of fire on one of the worn out tools. On inquiry it was found that the Arabs had concluded that shovels, though they might be perverted to the purpose of digging were evidently, by their shape, intended in the first instance for the roasting of coffee and corn, and they had accordingly so employed them. The difficulty of managing the tools their natural aptitude for imitation soon overcame. An appeal to their cupidity, unerring means for convincing an Arab, removed their objections to working by the piece. For instance, when a gang working by the day had earned altogether a certain sum, say forty napoleons, the inspector would show them a similar amount of work done by the piece in the same time by the same number of men for which fifty napoleons had been received. This argument usually proved irresistible, and as a general result both contractors and workmen benefited. But though, as they improved in handling their tools, the natives managed to do good work, they seldom or never could earn as much as Europeans, and while a worker in a European gang would earn from five to six francs a day, three or four were the native's average gain, and gangs fresh to the work got perhaps only two. But these are large daily earnings for an Egyptian, a Syrian, or a Bedawee, and continually increasing numbers came to supply the place of those who returned home to spread the story of the profitable work to be done, and tell their listeners of the wonderful "Goobaneyieh" which, though it made

them work hard, did not bastinado them, and, wonder of wonders, actually paid them what it had promised. Many a "*Alashallah!*" was this last statement have elicited. Thus it was that the contractors found themselves able to command a supply of free manual labor beyond anything ever supposed possible, and they resolved to take advantage of it for executing the remaining six or seven miles of the canal from Chalouf to the commencement of the Suez lagoons. Nor did the result belie their expectations. In the month of April of the present year there were some 15,000 men at work.

(To be continued.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 147.)

"1st mo. 16th, 1861. My beloved and valued cousin, Joseph Rhoads, departed this life after a short illness. He was a valuable and useful member of our religious Society, and an elder of Chester Monthly Meeting. I think it may be said, he was remarkable for his circumspect walk through life.

"1st mo. 23d. Rebecca Jackson was taken from among us by death, after a lingering illness. My mind was often in sympathy with the dear young woman while living, and I would have gladly visited her and her widowed mother, but from bodily indisposition consequent upon advanced age, I was prevented; yet my tender sympathy still flows towards the dear bereaved mother. Truly by the removal of so many and varied in age, the language is forcibly sounded, 'Be ye also ready,' &c.

"3d mo. 22d. Died our much loved and valued friend Mary Kite, a minister, in the 69th year of her age. The weight of her spirit will be much missed in our Monthly Meeting; while her consistent life and conversation held forth the language to survivors. Follow me as I am endeavoring to follow Christ. She was indeed an example worthy to be followed, and through faithful attention to her religious services, in much infirmity of body at times, was permitted to look at the termination of her earthly pilgrimage with holy hope.

"4th mo. 29th. I omitted to mention in its proper place, that about three months since I had a spell of sickness; during which season, an exercise I had felt for a considerable time so pressed upon my mind, that I thought the time had come to endeavor to make some move in it: it was that of having a religious opportunity in a family near us, who are descendants of Friends, but not members of our religious society. Mentioning the subject to a friend in the station of elder, he did not discourage me; and way being made for it, a visit was performed a few weeks since, in company with cousin James Emlen and my daughter J., much to the relief of my mind, and apparently acceptably to the family for whose welfare, both parents and children, I had felt tenderly interested. Although I went to see them under much discouragement, and trust I may say holy fear, yet to be enabled to relieve my mind, and feel the reward of peace, is a favor which I desire to have in grateful remembrance to the Author of all our sure mercies, now in this advanced age, being in my 91st year.

"5th mo. 5th. It is a time of sorrow and of

lamentation from the scourge of war threatening our country. Several companies of soldiers are now in this place, waiting I suppose the word of command to engage in hostilities. Being favored to get to our meeting to-day, it felt to me that in the early part of it, there was a solemnity spread over it. I do not doubt but that many hearts were turned to the Lord in earnest solicitation for their own preservation and that of others. The solemnity of the occasion was caused by the thankfulness to the Author of all good. Several soldiers were present.

"6th mo. 10th. For two weeks or more have felt poorly in body, so as to be mostly confined to my chamber. It has been a time of looking over my past life, wherein some omissions came plainly before me, to my humiliation. Secret desires were raised to the Father of all our sure mercies, for more purity of heart; and that I might be more entirely dedicated to His blessed will, the few remaining days of my lengthened pilgrimage. Being favored to get to meeting yesterday, my mind was early brought under exercise for our individual advancement in the blessed Truth, more especially the younger part of those assembled. It felt to me that it would be best to express something of my feelings, which was enabled to do to the relief of my mind.

"10th mo. 8th. For some time past I have been with me a season of trial and close pruning, wherein desires have been raised, that all which opposes the Lord's will in me, might be reduced and laid in the dust. Upon going to meeting day before yesterday, my mind became awfully impressed with the spirit's supplication, which being yielded to, I was afterwards favored with a degree of peace quiet, though not so much relieved as at some other times. The silent breathing of my spirit this morning, Father of Mercies! be pleased to keep me near unto thyself in this time of conflict, enabling me to bear patiently the turning of Thy Holy Hand upon me, and suffer nothing to be done by me, but that which will be to Thine honor, and my soul's peace. Amen. Not long after the foregoing happened, my mind was favored with such quiet that indeed it seemed as though the enemy was chained down by Divine power; and was permitted to partake of a little of the bread, which nourishes and strengthens a weary traveller to journey forward.

"11th mo. My dear friend Elizabeth Eva suddenly departed this life about the middle of this month. She was a dignified servant of the Lord, and will be much missed, not only by her own family and near connections, but by the church also, in this day of declension. May the Lord of the harvest be pleased to raise up, and qualify a succession of laborers in his harvest; that so His blessing of Truth and righteousness may be wanted advocates, is the present breathing of my spirit.

"12th mo. 1st. Being favored to get to meeting, my mind became exercised in desire for myself and those assembled, that we might strive to know the day's work going on in the day; that when the solemn close of the life comes, we might be found among the number of those whose lamps are kept bright and burning. A few words were expressed to above import. Though I could not see that I had missed in conveying what opened before me, yet my mind was left in a search and quiet state. Gracious Father! be pleased

preserve me from uttering words professedly religious, without Thy help requiring." After an allusion to an attack of extreme cough, which commenced on the 31st of First month 1862, and continued for more than two weeks, Hannah Gibbons thus writes 6th mo. : "I experienced many low seasons, and loss of faith and patience; being scarcely able to ask for an increase. But at some other time a hope was mercifully granted, that I should not be forgotten by Him who careth for the ransomed: yet my mind was permitted to be depressed at times with doubts and fears respecting my acceptance with the High and Holy One; being renewedly and solemnly impressed with our dependent state, and of our inability to err, as well as that of ourselves, without Divine aid, we can do nothing. Desires were also felt, that self might be so repressed, that nothing might remain in me which did oppose the Lord's will. After a close resting exercise, my mind became favored with a comfortable calm, which no human aid could give: and the language arose, 'The Lord taketh pleasure in them that fear Him, in those that hope in His mercy.' My hope in His mercy was renewed; and I could say in secret of my heart, 'The Lord is a strong God in the day of trouble.' May the foregoing season ever be held in grateful remembrance to the Father of mercies. It is unexpected and not desirable to me to be even so far restored to health and strength; yet I wish to be preserved in patience, until He who giveth life is pleased to take it. And I may be kept from bringing dishonor to His blessed Truth the few remaining days of my pilgrimage, is often the silent prayer of my heart. I am now in my 92nd year.

7th mo. 13th. I was favored again to sit with Friends in our meeting, which felt a privilege of no small value. I was renewedly impressed with desires for myself and those around me, that more purity of heart might be experienced; and that we might be preserved from any mixture of self in our religious exercises. Love flowed to my brethren and sisters in silence, and I felt a degree of thankfulness that I had been permitted to sit with them once more."

The following letter is dated about this time:

"7th month, 1862.

My dear nephews ——— and ———, My mind is turned towards you in tenderness and heartfelt desire for your best welfare; and not knowing that I shall have opportunity of expressing my mind very fully, feel inclined to convey something of it in this way. It is good for us to remember here we have no continuing city, and to one which hath foundations whose builder maketh it the Lord, ought to be our first and greatest concern. I am aware that it is well for us to be careful to provide for the support of these poor bodies, yet how much more important it is, that we should be careful for the immortal part—that which survives beyond the grave. We may suffer our hearts to be so engrossed in worldly pursuits, that we are fading and transitory, as to hinder our progress in the heavenly journey. It is well for us to bear in mind, that enjoyments of this kind belong to this life will fail to satisfy the soulings of an immortal soul, if we have given for reflection at that solemn season will sooner or later overtake us all. We are from time to time, those who are out-

off as in a moment; and none of us know how soon we may be called upon to give an account of our stewardship to a just and righteous Judge. Hence the necessity of our living each day as though it was our last; not looking outward, but endeavoring to know the Lord for ourselves, agreeably to what is written, 'That which is to be known of God is manifest within,' &c. I feel while I write love to flow towards you, the children of a beloved sister; whose anxious desire for the welfare of her dear offspring I was a witness to, and therefore write the more freely. We read in Holy Scripture that the fear of the Lord is the beginning of wisdom. May you more and more be concerned to live in His fear, even the fear of offending Him. Those who do so are comforted at seasons with His favor, and the shedding abroad of His love in their hearts, which is more to be desired than any worldly acquisition, and surpasseth the understanding of man, and the power of argument. We are very dependent beings on Him who created us. In Him we live and move and have our being; and from whom we receive every blessing both spiritual and temporal. Even our daily food and raiment demand our humble gratitude, and yet how liable we are to forget our dependent state, and the many blessings we are favored with. I do not forget while I write that it is but little we can do for another, beyond the effort to stir up the pure mind by way of remembrance of our religious duty. Though 'Paul may plant and Apollos water,' it is God who giveth the increase. Therefore unto Him may you look for help and strength in the heavenly journey, which it is my great desire you should be found in. We may make a fair show amongst men, yet our lives may be conformed to a standard of moral rectitude, yet if we do not come to experience a union and communion with the Spirit of Truth, and an obeying its secret motions, we shall not experience an advancement in the high and holy way cast up for the ransomed and redeemed of the Lord to walk in. That may you, my dear nephews, by increasing dedication of your own wills to the Lord's will, be found to know an increase in vital religion, is the feeling desire of one who loves you. Hoping you will excuse the freedom I have taken in thus writing, having nothing in view by it but your best welfare and the relief of my own mind, and with love to ———, desiring you may be one another's helper in the Lord, I am your affectionate, and truly well-wishing aunt,

HANNAH GIBBONS."

(To be continued.)

Autumnal Tints.

Green, you know, is a color compounded of blue and yellow rays; hence the green of chlorophyll, the pulpy substance of all leaves, must have been produced by a mixture of these colors. Frémy, the French chemist, after dissolving chlorophyll, was enabled to resolve the green solution into its constituent colors. He thus obtained two liquids, the one being of a bright blue, the other a yellow color, which when mixed gave the leaf-green of the forest. This blue vegetable coloring matter is of course susceptible of being reddened by acids, and its distinct identification as a constituent of chlorophyll furnishes a simple and satisfactory explanation of autumnal coloring. Before the frost checks circulation in the trees,

their sap draws alkaline matter enough from the alkalies and alkaline carbonates in the soil, to counteract the tendency of the carbonic acid in the air to redden their vegetable blues. There is, therefore, during the warm months a state of equilibrium between the acid element in the air and the alkaline element in the sap, so that the leaves retain their natural green. When, however, in the fall the flow of the neutralizing alkalies is suspended by cold weather, the sap ceasing to circulate, the leaves are no longer able to preserve their neutrality. Their vegetable blue is at once encroached upon by the acid in the atmosphere with the characteristic reddening effects which we see in Autumn. The differences in vividness and splendor of the autumnal tints observed from one year to another, are accounted for by the differences in the times at which frosts occur. If there is no frost till late in the fall, the leaves lose much of their substance during the year's decline by a gradually desiccating process, so that when the circulation is suspended by frost there is but little body left in the leaves to exhibit the red reaction. When, on the contrary, there is a sharp frost in the early autumn, stopping the circulation while the leaves are vigorous and full of matter, the acid has plenty of material to act upon, and splashes the woods with gorgeous, vivid reds. That the autumnal coloring is simply due to the action of an acid upon vegetable blues, has been confirmed by subjecting reddened leaves to an alkaline atmosphere. In vapor of ammonia, bright red leaves will return to their natural green. This has been determined by skillful chemists.

I might add that Frémy decided that the yellow constituent of chlorophyll was more stable than the blue. This is why the yellow leaves predominate in autumn. In them the blue coloring matter has perished.

Yours,

G. N. M.

The Apostle Paul and the Bishop of Carlisle.
—Many Christians have read, with much grief and pain, the following paragraph which has gone the rounds of the press:—

"The Bishop of Carlisle on England and War."
—The Bishop of Carlisle, Dr. Harvey Goodwin, presided on Wednesday night at the annual meeting of subscribers to the Carlisle School of Art. He said there used to be a saying—which was none the worse for being a little rough—one Frenchman can 'lick' two Portuguese, one Englishman can 'lick' all three. That was a very proper view for all Englishmen to have, and he had no doubt every true-hearted English boy in the school would go in for the great truth that an Englishman can 'lick' a Frenchman, or a German, or anybody else. That was the view, at least, which had been taken up till now; but now there was a grumbling, pitiful spirit which had taken possession of some Englishmen, and it seemed that if any great continental nation—if anything like a great Russian bear—was disposed to growl, we should forth with say, 'Oh, don't growl; don't show your teeth, and, whatever you do, don't bite us!' That was a disgraceful feeling. We should all be desirous of peace, but at the same time we should be confident in the strength which God had given to this great nation. These remarks were received with loud cheers."

In the actual event of a war between England and Russia, one would imagine that

Bishop Goodwin could hardly fail to have grave doubts as to the share of influence in causing slaughter and misery which such words, from one in his high position, might have exerted. And one cannot but reflect on the different tone and spirit of the fathers of the early Church, and of the Apostle Paul in particular, who, under the inspiration of Him who is "the Author of Peace, and lover of concord," thus wrote, in his Epistle to the Colossians (as in a similar strain elsewhere): "Put on therefore, as the elect of God, holy and beloved, bowels of mercies, kindness, humbleness of mind, meekness, long-suffering; forbearing one another, and forgiving one another, if any man have a quarrel against any: even as Christ forgave you, so also do ye. And above all these things put on charity, which is the bond of perfectness. And let the peace of God rule in your hearts, to the which also ye are called."

What a contrast between modern and primitive Christianity!—*Herald of Peace.*

The Power of the Leaf.—In the first place, says the *English Mechanic*, let us fully understand what we mean by *worker*—or let us agree as to the definition of the term. To illustrate, we say of the locomotive that it performs a certain amount of labor, it turns so many wheels, drives so many looms, draws so many cars so many miles an hour—we speak of it as a worker. So, too, of man—we speak of him as a worker. He performs so much labor, physical or mental. Yet the locomotive, with all its ponderous bars, its mysterious valves, its great lever, its hidden springs, can do nothing. It is dead, inert metal. True, too, of man, that wonderful combination of bones and muscles, and nerves and tissues, can do nothing but decay, and be restored to dust again. The brain cannot think, the eye cannot see, the ear cannot hear, the nerves cannot thrill, the muscle cannot contract. In the same sense the leaf can do nothing. Yet in the same sense that a locomotive can draw a train, or that a man can think and labor, is the leaf a laborer that outworks them all. The locomotive is a combination of material things so arranged, that through or by them we discern the operations of force. Man himself is nothing more. The leaf is the same. Better, perhaps, that we say these are the workshops wherein force exhibits itself, and produces results. When did the leaf begin its work? It was the first to rise on creation's morn and go forth to labor. Ere the almost shoreless ocean dashed upon the low Silurian plain, the leaf was at its work. And through all the long ages it has worked—worked to develop better and higher forms of life. And the earth's broad face is written all over with the evidences of its faithfulness.—*Living Age.*

Selected.

William Evans, in his journal, on page 195, says: "In conversation last evening with my beloved father, he said that in the course of his experience, he had remarked, that those Friends who manifested a disposition to palliate the offences of those who had broken the discipline, generally lost ground in a religious sense; and those whom they were disposed to screen, rarely came to anything in the church; and when such fell away, they were more severe against the unfaithful ones than against those who, in the uprightness of their hearts,

could not compromise the cause of Truth, but stood steadfast in its support against wrong things. He was not in favor of a rigid administration of the discipline; but he believed that where it was kept to, in a disposition to restore, and when that failed to produce the effect, to keep to the judgment of Truth; it would always be found in the end, best for the meeting and for the offender."

TWILIGHT.

BY M. B.

Sunset glow has faded quite,
Earth's gay colors pass from sight.
Day is gone; now cometh night.

Clear stars slowly, one by one,
Shine from depths of heaven. Done
Is the work of day's bright sun.

Rest from labor twilight brings,
Caltness comes on Shadow's wings;
Pence the song that evening sings.

Peace, whose angel comes in pain
• Offentimes, the loved to gain,
Other blessings proving vain.

"Peace, be still," He said, and wave
Quick obedience to Him gave.
Speak thus, Lord, our souls to save.

Selected.

THE PATHWAYS OF THE HOLY LAND.

The pathways of thy land are little changed
Since Thou wert there;
The busy world through other ways has ranged
And left these bare.

The rocky path still climbs the glowing steep
Of Olivet;
Though rains of two millenniums wear it deep,
Men tread it yet.

Still to the Garden o'er the brook it leads,
Quiet and low;
Before his sheep the shepherd on it treads—
His voice they know.

The wild fig throws broad shadows o'er it still,
As once o'er Thee;
Peasants go home at evening up that hill
To Bethany.

And as, when gazing, Thou didst weep o'er them,
From high to high
The white roofs of disrowned Jerusalem
Burst on our sight.

These ways were strewn with garments once and palm
Which we tread thus;
Here through thy triumph on Thou passedst calm,
On to thy cross.

The waves have washed fresh sands upon the shore
Of Galilee;
But chiseled on the hillside's evermore
Thy paths we see.

Man has not changed them in that slumbering land,
Nor time effaced;
Where thy feet trod to bless we still may stand—
All can be traced.

Yet we have traces of thy footsteps far
Truer than these:
Where'er the poor and tried and suffering are
Thy steps faith sees.

Nor with fond, sad regrets thy steps we trace;
Thou art not dead.
Our path is onward, till we see thy face
And hear thy tread.

And now, wherever meet thy lowliest band
In praise and prayer,
There is thy presence, there thy Holy Land;
Thou, Thou art there.

—Independent.

A plain, decent dress, a plain house, furniture and fare in all things, well become the humble followers of a meek and humble Saviour; plainness and simplicity of language will best adorn a real christian.—*Job Scott.*

From "Good Health

Ventilation.

(Concluded from page 146.)

Light and air are two of the essentials health. Of the influence of light, much could be said but space admit of it. But there is such connection between them as some appear to suppose, for at night ventilation is of greater importance than during the day. More time is passed in the same atmosphere during sleep, than in our waking hours. The system is also more susceptible of noxious influences when we are sleeping. On these counts the ventilation of bed-rooms should be carefully attended to. Unfortunately an absurd belief still prevails that night air is dangerous. This belief we have taken some pains to aid in dispelling, in our article on "Take Cold," in our July number. Here we shall only add, that no air admitted from without likely to prove half so perilous as that which is breathed and re-breathed by the unfortunate occupant of a small and tightly-closed chamber. The great objection to open windows and doors, is the uncomfortable draught which is caused by them. This objection with many persons, insurmountable, and there are numerous contrivances for otherwise entering entrance and exit to the atmosphere. One of the simplest is to have a portion of the window filled by perforated plates of glass or with perforated glass. The draught caused by air entering through small apertures is fused and rendered less perceptible.

Ventilation by this means is necessarily imperfect. Another plan is that by the revolving tin fan, still to be seen in England occupying the place of a pane of glass in old-fashioned windows. Ventilators made of plates of glass which can be opened or closed after the fashion of a Venetian blind, occur the same position in some modern windows. These are in every way superior to the preceding, as they do not interfere with the light and the current of air can be directed either upwards or downwards.

Ventilation from below is effected by means of air-channels and grated openings in floor, but it is disagreeable on account of draught thrown upon the legs of persons in the room. A far better method is to have the skirting boards of the room arranged that spaces for the transmission of fresh shall exist between them and the walls.

Several methods of ventilating from the roof are employed in factories, stables, and other buildings. One method is interesting because it depends upon a curious property of the atmosphere. It consists in the perpendicular insertion in the roof of a tube, which is divided longitudinally by a partition. The extremity of this tube communicates with the outer air, and the other with the room to be ventilated. It is found that the foul air protrudes through one part of the tube so divided while the fresh air passes in through the other part. A tube inserted within another tube with a space between them, is sometimes substituted for the divided tube. But the objection to both methods is, that at the opening of the fresh current, in its descent into the room, it mixes with the vitiated current.

We have now to describe one of the simplest and most modes of ventilating ordinary rooms with which we are acquainted. One equally applicable in winter as well as in summer, because all draught is avoided; even if a window be opened at the top, a draught

draught is frequently felt, and in rainy weather it is often impossible to keep the flow open. The present plan is applicable to all kinds of weather, and would be perfect ventilation could be effected nearer to ceiling.

It can be applied at an expense of a few shillings, and as no unsightly appearance is made, equally applicable to the cottage and to the mansion. A piece of wood an inch or two in thickness, three inches wide, and as long as the breadth of the window through which ventilation is to be established, should be prepared. Let the sash be now raised, and let the slip of wood be placed upon the top of the window; the sash is then to be drawn down closely upon the slip of wood, the slip has been well fitted—and the fitting may be made more complete by adapting it to the grooves in the sash and its frame, if any—no draught will be experienced in consequence of the displacement of the sash at the top. The effect of such an arrangement is, however, to cause a separation between the bars of the sashes at the centre. By this means a perpendicular current of air will be directed into the room between the glass in the upper and lower sashes and their respective bars, or else the current will pass outside in the reverse direction, in a manner which all inconvenience from draught will avoid.

Supposing that two or more windows at opposite sides of a room are fitted in this manner, a very satisfactory ventilation will be effected. Owing to a difference in its equilibrium, the air will rush in on one side and out on the other side of the apartment. The slips of wood are painted of the same colour as the windows themselves, they will not attract notice.

We cannot conclude the subject of ventilation without an appeal to clergymen, schoolmasters, and others, who are in positions of authority. Immense good may be done by impressing upon the minds of those over whom they are placed, the vital importance of breathing pure air. Especially should this be instilled into the young. It forms as yet an essential part of a liberal education, that a man should be taught to understand the conditions upon which he lives, or how he should preserve his health. Such knowledge is certainly not less important than most of the instruction he receives. Yet all the knowledge which concerns his physical existence ought to be picked up by chance, or to be effected by experience—an experience sometimes only obtained by the sacrifice of health. The subtle causes which vitiate the air we breathe must, as we have seen, be sought out and understood. And if this kind of knowledge is important to those who live in large airy houses, how much more important to those who pass their lives in humble cottages, and in the closely-packed tenements of towns! How many headaches would be avoided, how many a pallid cheek would be rosy with the glow of health, how many opening spirits would be roused to the enjoyment of life, how many sickly infants would be transformed into vigorous men and women, freed of being prematurely cut off by disease—were the simple facts universally known and acted upon, that no kind of stimulant is permanently enlivening, no food more strengthening, than a proper supply of fresh air in our houses.

It is a pleasant reflection, that within the present century, owing to many causes, but chiefly to the advancement of science, longevity has greatly increased in this country. We feel assured that a very considerable increase is still to be effected by a more widely spread knowledge of the principles and practice of ventilation.

From The "British Friend."

John Burnyeat, and the Character of Friends' Meetings in his days.

Among those in Cumberland who, in the year 1653, were convinced of the gospel truths which George Fox preached, was John Burnyeat. His residence was Crabtreebeck, by the side of Lake Loweswater, where he was born. The house is now somewhat ruinous. The initials of several of the family may be seen on the walls. It is situated within the compass of Pardshaw Meeting.

In the Monthly Meeting's "testimony" it is related "that his parents were of good repute, and his education was according to his parentage." After his decease in 1691, five testimonies relative to his character as a Christian minister were issued, namely, one from George Fox, describing him "as a dear friend and brother in the Lord, and an able minister of Christ Jesus, who freely preached the everlasting gospel, and labored to keep it without charge;" a testimony from Friends in Cumberland, signed by John Banks, Christopher Story, James Dickinson, and several others; a separate testimony from women Friends in Cumberland; also from Friends in London, signed by Stephen Crisp, William Penn, and ten others; and one from Friends in Ireland, dated Dublin, 1691, where he was married, and lived during the later years of his life.

His travels in the ministry were extensive, embracing a service of many years, and enduring much hardship, suffering, and imprisonment, in this country and in Ireland. He also went over much of the settled districts of the United States, and had meetings with the Indians, and in Barbadoes.

In this revival of a memorial of so "eminent and faithful a servant of Christ," as he is designated in the title-page of the book of his faithful labors, edition 1691, I propose briefly to give an account from the part containing John Burnyeat's autobiography. He writes a minute record of his spiritual exercises, and how the first meetings were held among those, like himself, brought to sit under the direct teaching of their Lord by his Spirit, and who were gathered unitedly into the same experience and profession of worship. He had been a high professor, but not a possessor, of the truth. He informs us, he "had made a high profession of imputative righteousness; that though I lived in the act of sin, the guilt of it should not be charged upon me, but imputed to Christ, and his righteousness imputed to me. I found it otherwise when I was turned unto the Light, which did manifest all unimproved things. Then I came to see that the guilt remained while the body of death remained, and through its power was led into the act of sin. Then I saw there was a need of a Saviour to save from sin, as well as the blood of a sacrificed Christ to blot out sin, or faith in his name for the remission of sins past. Then began the warfare of true striving to enter the kingdom. Paul's state was seen; to will was present, but power was wanting many times to do. Then was the cry,

'O, wretched man that I am! who shall deliver me from the body of this death,' and free me from the prevailing power of the law which remained in my members, warring against the law of my mind, which brought me into captivity to the law of sin? All my conceit in my notional faith, and my pretence and hopes of justification thereby, were overthrown. All that I had builded for several years, after acquaintance with the Lord, and the knowledge of him, and peace with him, was seen to be but a Babel tower, which God brought confusion upon, and that which never could be perfected to reach to heaven, being out of the faith of his covenant. All my works were confounded by the visitations of God, in his love, and by the springing of the day from on high which discovered things as they were. The Lord brought confusion upon them. I was amazed, and fear beset me on every side, and I began sometimes to fear I was undone for ever, for that had entered into my heart that had turned the fruitful field into a wilderness. The day of God discovered all to be desolation and dryness. My soul was brought into deep lamentation—sorrow such as had never before been my experience. My notion and talk of my imputation of the righteousness of Christ being but my own, which by his Spirit I had no seal for, I saw clearly was but like Adam's fig-leaf apron, in which he could not abide the coming of his God. O, the horror that overtook me! O, the poverty and want that my soul saw itself in by divine light, to which my eye was now turned! The springing of this light manifested all things. The load and burden of many, with myself, became grievous in that day. We began to mourn after a Saviour. We looked for a Deliverer. We cried for a Helper and a Healer. The day of the Lord had overtaken us. The fire and sword which Christ brings upon the earth, through burning and judgment, was begun, by which the filth of our defilement was to be taken away.

"In this distress deep was our groaning and our cries unto the Lord. He was pleased to hear, and showed mercy. For we often assembled together, as the Lord's messengers, whom he sent among us, had exhorted us. We waited in the Light of Christ. In our spirits, through this light, we warred, and watched against the evil seen therein, and according to that understanding received, waited therein upon the Lord to see what he would manifest further, with a holy resolution to obey his will, whatever it cost us. This was the condition of many in that day. We valued not the world, nor any glory nor pleasure therein, in comparison with our sons' redemption. We waited until the Lord in mercy would blot out the guilt which remained that occasioned his wrath, and sprinkle our hearts from an evil conscience, and wash us with pure water, that we might draw near with a true heart, in a full assurance of faith, as the Christians of old did. We were compassed with fears, and yet came to know that there was no other way but to dwell in the judgments of the Lord, and wait in them, understanding that we must be redeemed with judgment, as was said of Zion, Isa. i. 27. So waiting, we began to learn righteousness. We had longing desires to walk therein, and no longer be satisfied with a talk thereof. Thus waiting for, and seeking after, the Lord (though greatly ignorant of him), in a deep sense of our own unworthiness and unpre-

paredness to meet him, because of the pollution of our hearts, seen by his light shining therein, we were still bowed down in spirit, tossed in soul, and not comforted. We were ready to sink, like Peter, often crying out in the danger. Thus our hearts became quite dead to the world and all its pleasures and glory, and also to all our former dead profession, for we saw there was no life, nor help, nor salvation in it, though some of us had tried it thoroughly.

"Yet when we began to forsake all our past vanity, and the dead image of profession, in which we had worshipped with our unprepared hearts and unsanctified spirits; when we had experienced the insufficiency of all to give ease, help, or salvation; when we had denied all, as we had been directed, and turned our minds upon the Light of Christ Jesus, shining in our hearts, we met together to wait therein upon the Lord, according to Christ's command, John xii. 3-6: While ye have the light, believe in the light, that ye may be the children of light."

Each persecution is detailed which befell these early believers in spiritual waiting and worship by profane scoffers and professors with whom he had formerly walked in fellowship. He says they began to reproach them with error and schism, and to reproach the divine light of Christ as natural and insufficient, and a false light and a false guide. The light was set at naught by the carnal professors of christianity, even as Christ was set at naught by the carnal Jews, who professed the law, and saw not through the veil upon the end. In their weak state they were beset on every hand as the Israelites in Egypt, and their hope was so little at times that they looked for nothing but death. Yet through many tribulations, and by hard striving, they believed the kingdom of their Lord must be entered, Luke xii. 24.

At the present time it may be profitable for some of us to dwell upon the description given of the early meetings for worship in this memoir, showing what these early Friends in Cumberland believed themselves to be called out of, and unflinchingly to testify against, in the face of a fiery persecution not unfrequently unto death. It appears to the writer that some among us, high in position and profession, seem almost like those whom the apostle Paul had to address, needing to be taught again which be the first principles of our doctrine. There seems a manifest desire in some quarters, although I would fain hope not an increasing one, to hurry backwards into things out of which we as a spiritually minded, a devoted, and united people, in our earliest days, were so remarkably called. In the district of West Cumberland, where John Burnyatt resided, almost every yeoman's homestead in his day became the home of a Friend. Pardshaw meeting-house was often too small for the worshippers, and when George Fox visited the neighborhood, the people for many miles round assembled underneath the adjacent crag, whence a large multitude was frequently addressed. Yet, although many appear to have been such meetings, and large the gatherings of people, when a powerful and convincing vocal ministry freely flowed, we may learn from this ancient memoir that the special mission of our early Friends was to gather a people who, believing in the privileges of the gospel, would often sit together, as in heavenly places, to be fed, taught, and

watered immediately by the heavenly Shepherd alone.

As a concluding extract I subjoin a striking testimony which J. B. gives to the character of these meetings and their worship.

"We were commanded to withdraw, and be separated in our worship, and wait to have our hearts sanctified, and the spirit of our minds renewed, that we might come before the Lord with prepared vessels; for we soon learned to see this, that it must be true in the substance, as in the figure, when all the vessels of the tabernacle were to be sanctified, consecrated, or made holy. Therefore did we come out from among such in their worship that lived in uncleanness, and pleaded for sin, which made unholy. We met together, and waited together in silence, may be sometimes not a word in our meetings for months; but every one that was faithful, waiting upon the living Word in our hearts, to know sanctification thereby. By a thorough cleansing and renewing of our hearts and inward man, and being cleansed and made meet, we came to have a great delight in waiting upon the Word in our hearts, for the milk which Peter speaks of (1 Peter ii. 2.) In our so waiting we received the virtue thereof, and grew thereby. We were fed with the heavenly food which rightly nourished our souls, and so we came more and more to receive the Spirit of grace and life from Christ our Saviour, in whom all fullness dwells. In this power and fullness we did worship the Father. We waited upon the teachings of his grace in our hearts, and he taught us thereby to deny all ungodliness, and to live righteously. Thus we came to know the true Teacher, witnessed by the saints of old. We wanted not a teacher, nor true divine instructions, though we had left the hiring priests, and also other high-flood notionists. We sat down together in silence, for that was our desire, to have all flesh silenced before the Lord and his heavenly power, both in our own hearts and from without. Thus, coming into true silence and inward stillness, we began to hear the voice of Him who said he was the resurrection and the life. He said unto us, Live, and gave unto our souls life; and this holy gift which he has given according to his promise, has been unto us as a well of water springing up into everlasting life. H. S.

(To be continued.)

A poor and simple-hearted African once came to Moffat, the missionary, and told him, with a lugubrious face, that his dog had torn his copy of the New Testament, and swallowed some leaves of it, and that he was grieved about it, for the dog was very valuable. "But," said the missionary, "why do you grieve so? You can get another Testament, and the leaves will not hurt the dog." "Ah," said the savage, "that's what I fear. He is a good hunter and a good watch-dog, and the New Testament is so full of gentleness and love that I am afraid he will never be of any service again!"

Twelfth mo. 30th, 1823. "At the Quarterly Meeting, (supposed to be London and Mid-dlesex) Sarah (Lynes) Grubb was led to speak, with wonderful power, against the Babylonian mixtures, in which, as a people, we were mournfully involved, at this day. We have faithful testimony bearers."—*Mary Capper.*

The Railways of India.—A great deal been said and written respecting the construction of the Pacific Railway across the American continent; and much praise has been very justly bestowed upon the energy of American character which has brought work to its present position. While, however, we are lavish in our expressions of admiration for the great qualities which have thus been called into existence, we ought not to lose sight of the still greater work which have been accomplished in India in the matter of railways. A vast work was carried on silently and unobtrusively and under difficulties even greater than which have been experienced in regard to the Pacific Railroad, and we claim for those whom these great works have been achieved some share of that admiration which is given so freely and so fairly to our American cousins. The Pacific line, including as it does the two separate schemes of the Union Pacific and the Central Pacific, is about 1,100 miles in length. Two of our leading Indian lines, namely, the East Indian and the Great Indian Peninsula, at present in work, have joint mileage of 2,230 miles, greater by more than one-half of the whole length of the Pacific Road. Like the Pacific these lines cross the Indian empire from east to west, and connect Bombay and Calcutta, just as the Pacific forms the connecting link between San Francisco and New York. By means of the East Indian a railway connects Calcutta with Lahore, more than 1,000 miles distant from each other; in the south, Madras and Bangalore, connected by a line crossing Southern India, in Central India, is connected with the port of Bombay by means of the Gwalior and Panjab line; Lahore, in the north-west, and Kurrachee, in the Indus, are brought in direct connection with each other. There is now actually completed and at work in India 3,942 miles of railway, or about 600 more than the whole mileage between New York and San Francisco, and there remain to be completed lines already sanctioned, 1,665 miles. This great extent of railway has been constructed in a country many thousands of miles distant from England, where, with trifling exception, the whole of the capital was provided. For the construction of this works there was required to be shipped from this country 3,529,000 tons of goods, of a value of 23,252,000 pounds, and which were conveyed in 5,339 ships. In America no such difficulty as this was experienced. The road as it was formed, was enabled to carry iron and timber required for the construction. The contractors worked from an already organized base of railways at home; the material for the Indian lines had to be borne over thousands of miles of a sea voyage. The construction of the Indian railways has presented difficulties of a much more formidable character than those which have been met with on the Pacific line. It is true that the railway has been carried over vast plains a mountain ranges of which little was known and in the face of the attacks of hostile Indian tribes. In India, the works were carried out in the face of difficulties connected with the oppressive heat of the climate through forests and jungles which were the resort of savage animals, and the people employed were natives of the country, speaking a language unknown to those by whom they were employed, and whose habits and mod-

unfitted them for labor such as that on which they were engaged. Great works, as those of the Bhore Ghaut and Thullut inclines, presented difficulties equal to, or greater, than any experienced in the mining over the Rocky Mountains. Streams ran more and more rapid than met with between the Gha and San Francisco have been successfully bridged, and present some of the great triumphs of modern engineering science, engineering.

Proper Treatment of Children in Thought.—Every mother knows that a plant, in order to be developed according to the nature of its nature, requires rest. If you take a favorite flower-pot and shake and tumble it every day, she will raise strong and serious objections to such a course of procedure. But you do the same thing with her baby, she ceases; though by such shaking and tumbling you might confuse and break the already formed thought-chains, leaving them limber, like a city after an earthquake. In what child has not been tossed or rocked until stupefied to sleep? And when the victim made objections by crying, it was shaken the more.

At any person be put into a swing, and there but half an hour in constant motion it will not only produce dizziness, but unfitness for the process of thinking. We ask any common-sense being if there were more stupefying and senseless manipulation than this perpetual shaking back and forth, up and down? Then comes the palsy, and the soothing syrups! No woman would give them to her dog, but her much-loved baby must take them. The very best child is thus prepared for the semi-intellectual incapacity which we see everywhere.

Twenty-seven millions,—mostly fools!—Carlyle, in speaking of the inhabitants of Great Britain; and the same remark might be applied with equal force to this country. Among the various causes which produce the want of comprehension so widely noticed in children, there is none more prominent or more true than this shaking of babies,—this induced sea-sickness produced by a practice which is of its origin.

And, unfortunately, the difficulty does not stop here. After the child has grown a little, it is not infrequently trained after the manner of a poodle-dog for an exhibition; the parents are delighted when they have taught their offspring a little trick, and the poor child is required to perform all occasions. Is it not the smartest baby ever saw, Doctor? asks the loving mother. And is there a man who dare say No? And of letting the child sit and creep upon the floor, learning distances, forms and colors. The dancing sunbeam upon the carpet, listening quietly to the sounds mother and other circumstances provide, it is set up like a doll or show-baby, carried by a photographer, under the pretext of seeing the likeness of the dear little one,—to other places for like reasons,—and is in constant handling, for fear of soiling clothes.—*Carl Both.*

One must be born again of the incorruptible and word which liveth and abideth. Of this there is no true settlement of the heart, no true peace, no true joy, no entrance into the everlasting kingdom of our Lord and our Jesus Christ.—*Thomas Kite.*

First Colored Man in Congress.—Joseph H. Rainey, who will take his seat in the present Congress, having been elected to fill the place of B. F. Whittemore as Representative from the first Congressional District of South Carolina, is the first colored man who has held such a position in this country. He is the pioneer of the colored people in the House of Representatives, as Revels of Mississippi is in the Senate. He is thirty-eight years of age, a native of Georgetown, D. C. His father and mother were slaves. Two years ago he was elected to the South Carolina State Senate, and in that body, has served as Chairman of the Committee on Finance. In July last he was nominated as a candidate for Congress in the district recently represented by B. F. Whittemore, both to fill the latter's unexpired term and to represent the district in the Forty-second Congress. He was elected by a large majority for the regular term, and had no opposition for the vacancy. J. H. Rainey is a man of fine personal appearance, a light mulatto, with more of the look of a Cuban than of a negro. He is said to be an able man, who will do himself and his constituents credit.—*Exchange.*

THE FRIEND.

FIRST MONTH 7, 1871.

There is something peculiarly solemn and impressive in true silent worship. Those of our meetings held in silence are often the most strengthening and refreshing. Many who have been long accustomed to stated forms of vocal service, the singing of hymns, and the melody of music in their places of worship, have acknowledged the superiority of this mode of coming into the presence of the High and Holy One, of communing with their own hearts and being still, until the great High Priest has prepared an offering that can be offered in spirit and in truth, and which the Father will deign to accept.

Worship, divine worship, is one of the highest and most solemn acts in which man can be concerned. Seraphs and archangels cast down their crowns to engage in it, and the spirits of just men made perfect offer its tribute in the courts of heaven. And yet none are so poor, so lowly or so cramped by outward circumstance, but the Father seeks them as true worshippers, and will make them such, if they embrace the help He offers. It must be performed in spirit and in truth, or it is not performed at all. We have no more power of ourselves to prostrate the soul in reverent fear and love before the Father of Spirits, to clothe it with feelings of adoration, or offer Him an acceptable oblation of praise, than had the impotent folk waiting at the pool of Bethesda to impart healing virtue to the water, and to step in whenever it suited them, and be healed of their maladies. As they had patiently to wait for the descending of an angel to obtain a cure, so acceptable worship can be offered only as we patiently wait upon the Lord, and join in with the secret influences of his holy Spirit, as revealed in the heart. Thus true worshippers knowing the unprofitableness of their own works, and that they cannot stir up their Beloved when they please, wait in reverent silence, to be prepared to "worship God in the Spirit, and rejoice in Christ Jesus, and have no confidence in the flesh."

This being the ease we can understand how ceremonies, however solemn in word and manner, or unauthorized preaching or praying, will be likely to distract the attention from "the one thing needful," and may disturb and grieve those who are worshipping in spirit and in truth.

Were all the members of our religious Society practical believers in these truths, they would save themselves a great deal of inconsistent teaching, unnecessary running, and profless attempts to improve on the dignified mode of worship Friends have ever observed.

It is a great blessing that our religious Society has had ample evidence that the Head of the church dispenses to men and women, rightly prepared to receive them, gifts for the ministry of the word; and that such are often made instrumental for awakening the careless, strengthening the weak, comforting the weary, and thus edifying the body in love, by preaching the gospel in the demonstration of the Spirit and power.

It is equally a blessing to preserve inviolate the testimony against a man-made ministry, whether the making is by the individual himself, or by others. The maintenance of this testimony among ourselves, tends to keep the solemn assemblies of the people, where there may be many struggling to know their hearts prepared to offer acceptable worship, from being intruded upon by men or women who seem to forget that no preaching, teaching, reading or reciting is other than an interruption to worship, unless it is called for by Him who knows the spiritual condition of each one assembled, and is engaged in by those whom He qualifies under the immediate direction of his Holy Spirit.

Silence alone is not worship, and our meetings are not held merely to be silent. As we have said, a rightly authorized ministry is as great a blessing to the church, as a ministry not called forth immediately by the Head of the church is a disturbance and hindrance to true worship. It is a great mistake to suppose that human agency is required either by reading the Holy Scriptures, by preaching, or by what is called teaching, to arrest the attention or instruct those who have not been educated in the views of Friends relative to spiritual worship, when they attend their meetings. There is an ever present Teacher, who often preaches the gospel to such in the silence of all flesh, as never man taught. It has not been an unusual occurrence that conviction and conversion, the most effectual and continued, have been effected in silent meetings; and we have good reason to believe that often the Holy Spirit is secretly extending its calls, and its offers of regeneration, in the heart on such occasions, when no outward evidence is given.

An officer high in rank in the American navy, had his residence for the summer, a few years since, in a village some miles from Philadelphia, near which was a Friends' meeting, to which no minister belonged, and it was generally held in silence. He attended the meeting two or three times, and then was missing. A woman Friend meeting with him and entering into conversation, told him how glad Friends were to have him meet with them, and hoped he would not be discouraged on account of their meetings being held in silence, but continue his attendance. Madame, said he in reply, I think I shall hardly go again, for in the meetings I attended, it seem-

ed as though every sin I had committed was brought to my remembrance.

In our 15th number was a communication, taken principally from "The British Friend," giving some account of the proceedings of Indiana Yearly Meeting, at its last session. As we appreciate some of our readers, like ourselves, may have been at a loss to understand how the proposition from the "Freedmen's Missionary Board" for extensive and extraordinary powers, was finally disposed of, after being referred to a committee, we now give the report of that committee, which was approved by the Yearly Meeting. We extract from the printed minutes, received recently.

"The Committee to whom was referred the proposition of the Missionary Board in regard to the Organization of Churches, and acknowledging the gift of ministers among the Freedmen of the South, have considered the subject in all its bearings, and are united in submitting the following report:

"In order to avoid complications, we would suggest to the Yearly Meeting that the Missionary Board be authorized to receive persons into membership, establish Meetings for worship and discipline, and to recommend such members to the Yearly Meeting for recognition of gifts, as they may think are suitable.

"We also suggest that Southland Preparative Meeting be placed under the control of the Missionary Board, and report in future to it."

The following is the minute of the "Western Yearly Meeting of Friends," proposing a general conference of delegates from all the Yearly Meetings with which it corresponds:

"This meeting has been introduced into a desire for a more perfect union among the different Yearly Meetings in Europe and America.

"There are many departments of christian labor of common interest that call for united counsel. Some of these are the education of our youth—the publication of Books and Tracts, and the general diffusion of knowledge by the press—the civilization and christianization of the Indian tribes, and of Missionary work at home and in foreign lands—the distribution of the Holy Scriptures at home and abroad—the more practical and effectual recognition of the principles of Peace by Christian professors and civilized nations,—and the determination of such questions as may be of common interest and concern the general welfare.

"We apprehend that a General Council composed of representatives appointed by the several Yearly Meetings, would have a harmonizing and uniting effect upon our common Society, and render the whole and its parts, more mutually supportive of each other,—whose conclusions and recommendations shall only be advisory in their nature.

"Should this proposition meet with general approval, we would suggest that the first meeting be held in the city of New York, on Second-day after the close of Canada Yearly Meeting, in the year 1872.

"We desire that the Divine will may influence and control our counsels in the determination of this important measure, and that what is done may hasten the work of our common Lord and Saviour, and honor his church in the earth.

"Taken from the Minutes."

So far as reported, the table shows there were 779 received as members at their own request, and 406 by request of parents within the past year.

SUMMARY OF EVENTS.

FOREIGN.—The weather has been intensely cold in France, interfering with military operations and causing much suffering and loss of life in both the French and German armies. Many German soldiers are suffering from ophthalmia. A dispatch from Strasburg announces that the Germans have stormed Belfort twice recently, and in both cases were repulsed with considerable loss. Nearly all the occupants of fifty-six cars filled with soldiers wounded in one of the assaults, were taken to death before the train reached Chateaux.

Various minor encounters are reported, in some of which the French were the greater sufferers, and in others the Prussians. The French army of the north, after its defeat near Amiens, retreated to Arras, north-east of that city. Fort Avron, on the east side of Paris, beyond the regular fortified line, has been taken by the Prussians after three days bombardment. This position, it is said, was first attacked in order to obtain a point of view from which to operate against the adjacent outlying forts of Paris. It has been occupied by the besiegers, but doubt is expressed whether they will be able to hold it against the fire of the French guns. A few shells have been thrown into Paris from the north side.

General Bonbraki has reinforced the French army under Menotti Garibaldi; and General Werder, who was advancing in the direction of Lyons, has been compelled to fall back before them. Dijon has been evacuated by the Germans and the French again hold it. Great exertions are made by the French government to send reinforcements to the troops in the field, and keep up the courage of the people. Bordeaux dispatches assert that there are 750,000 Frenchmen under arms in all parts of France, and that the total number of Germans does not now exceed 600,000.

The German forces under Prince Frederick Charles appeared to be withdrawing from the eastern department of France, and General Boreard reported that 150,000 more Germans are about entering France. It is supposed that the losses of the invaders thus far would reach 300,000 men. Besides killed, wounded and prisoners, many have died or been disabled by the severity of the winter. The number of Germans on the sick list is said to be very large—one report says 100,000.

A scheme to assassinate the King of Prussia, Von Moltke and Bismarck, was discovered at Versailles on the 23d ult. About two hundred strangers were arrested many of whom were armed with guns and pistols.

The Prussians scuttled six small English vessels at Duclair, a small town on the Seine a few miles from Rouen. This was done for the purpose of impeding the navigation of the river. On the English government remonstrating against the proceeding, Prussia promised to give indemnity bonds to the owners of the vessels, but declined to compensate the sailors for their losses.

The Prussian Government, upon application of the Prussian Minister, has stopped a ship chartered by the French government to lay a submarine cable to connect Dunkirk, Cherbourg, Brest and Bordeaux.

A London dispatch of the 1st says: The foreign office announces that the Conference of the European Powers has been postponed for a few days to await the arrival of Jules Favre, and to allow the other plenipotentiaries to receive further instructions.

The Bavarian Chamber of Deputies have rejected the Federal treaties, have voted in favor of an enlarged South German bond, to be allied with that of the North German confederation.

Wartensay and Hesse have ratified the treaties.

The king of Italy entered Rome on the last day of the year 1870. An overflow of the Tiber has flooded half of the city, and occasioned great damage to property.

The Mont Cenis Tunnel pierced the Alps on the 26th ult. and the workmen from both ends met amid great rejoicings.

A Madrid dispatch of the 30th, states that Marshal Prim died last night from wounds inflicted by assassins two or three days previously. The Cortes, on hearing of the event, unanimously voted full powers to a government formed by Admiral Topa. The new king of Spain had reached Murcia and was received with enthusiasm. The royal civil list gives the king six millions francs annually, and makes him heir to half the palaces in the kingdom. The Cortes have authorized an issue of treasury bonds.

Dispatches of the 2d state that the loss of Fort Z. by the French, had rendered two other outlying forts in the vicinity on the east side of Paris untenable and had been abandoned. Additional artillery is sent to Paris, and it is said the Prussians have now siege guns of all calibres, with which it was supposed regular bombardment would soon commence.

A Bordeaux dispatch of the 2d says, the wheat crops in the valleys and the rivers are frozen. The troops, too, both the French and Prussian soldiers have been frozen to death.

Mezeires, on the north-east frontier, has surren- dered to the Prussians after a long siege, which began after the capitulation of Sedan.

The navigation of the Thames is obstructed by Montevideo has fallen into the hands of the Prussians. It is the capital and great port of Cuba.

UNITED STATES.—Miscellaneous.—The mortality Philadelphia last week was 280. During the year there were 16,750 deaths in this city, viz: 8,825 and near 7,925 females. The adults numbered 7,926 the children 8,825. The total number of burials all kinds erected during the year was 5,287, of which 4,437 were dwelling houses. The live stock sold, principal markets consisted of 117,963 beeves; calves; 189,500 hogs, and 682,900 sheep. Besides many other articles brought to market, a large quantity of live stock, together with wool, lamb, pig and game. Near the close of the year the City Council passed an ordinance creating a Paid Fire Department to take the place of the voluntary Fire Associations.

Imports of foreign merchandise for the months ending 9th mo. 30th last, are returned at \$84,989, against \$364,677,685 last year—an increase of \$217,304. The exports in the same time have been \$551,215,764, against \$271,432,397.

The lands reserved for the Indians and which belong to Iowa, Kansas and Arkansas, are reported among the richest and most fertile in the United States. The reservation is 382 miles long, 208 miles wide, contains fifty millions of acres of land. The country is beautiful, and the climate delightful during the greater portion of the year.

The total number of immigrants landed at New York in the present year is 208,303, a decrease of 47,088 last year.

The Cincinnati post-office delivered 4,590,521 1/2 and 655,252 papers during the past year. The number of letters was about 10 per cent, and of papers 2 cent.

The annual report of the New York fire department shows that there were 964 fires in that city last year, which property valued at \$2,120,212 was destroyed.

The internal revenue bureau furnishes the following exhibit of the receipts from internal revenue for the fiscal year of some of the principal cities of the country: New York, \$18,981,845; Chicago, \$8,395,131; Philadelphia, \$7,692,097; Boston, \$6,180,530; Brooklyn, \$4,860,291; Baltimore, \$4,607,981; St. Louis, \$4,339; San Francisco, \$3,151,995; New Orleans, \$2,068; Richmond, \$2,379,180; Buffalo, \$2,315,449; St. Paul, \$2,152,282; Pittsburgh, \$2,042,129; Detroit, \$1,906; making an aggregate for fourteen cities, \$96,984. The cost of assessing the internal revenue the fiscal year was \$4,118,201.

The arrivals and sales of beef cattle at the Avondale yard, Philadelphia, on the 2d inst. were: Extra heaves sold at 9 a 9½ cts.; fair to good, 7½ cts., and common, 5 a 6½ cts. per lb. gross. Market sheep were in demand, and 10,000 were sold at 6 cts. per lb. gross. About 4,000 hogs sold at 95.50 per 100 lb. net.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TEENAGERS, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached to it. Application may be made to

Elizabeth Worth, Marshallton, Chester Co. Pa. Wm. Christy, Jr., O. C., Philadelphia. Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE.

New Franklin, (Twenty-third Ward), Philadelphia. Physician and Superintendent—JOSIAH H. W. NOTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

Tea and Coffee.

From "Good Health."

Of the hot drinks that form the daily refreshment of the human race, infusions of wine stand pre-eminent, and particularly those derived from one or other of the various plants, which are consumed by more people than all the others united. Tea forms the beverage of the three hundred millions that inhabit China; it is largely in use by the natives of Japan, Thibet, and Nepal; in Asiatic Russia the poorest enjoy it; whilst in Europe, the United States, Canada, British America, and Australasia, all classes are unanimous in praise.

Somewhat akin to tea is *maté*, the leaves of *Ilex Paraguensis*, or Brazilian holly, though not consumed over such a wide area as tea proper, it is as much the universal beverage of the southern American republics as China and Assam tea are of Europe and Asia; but it labors under the disadvantages being somewhat deficient in theine (the true principle of tea and coffee), and becoming black and unsightly if left to cool. This tendency to darken is owing to a considerable amount of astrigent acid, similar to the tannin of oak bark, which enters into its composition.

The principle to which both beverages owe their popularity, exists in the former to the extent of 5 per cent. in green, 2.55 per cent. in black, and 1.25 per cent. in the latter. It is a remarkable substance, and well merits a special paragraph. If tea or maté leaves, reduced to an impalpable powder, be placed on a watch glass covered with a white paper and subjected to a gentle heat, minute prismatic crystals collect in the form of a subulate, inside the cone. They are known to the chemists as theine or caffeine, and are almost identical in their composition. Theine has no smell, a very slightly bitter taste, and seems to exercise little influence on the flavor or smell of the leaves from which it is extracted. But, although quiescent in itself, its wonderful properties at once make themselves felt when introduced into the animal economy. Theine is one of a small group of substances which are remarkably rich in nitrogen, possessing nearly three-tenths of its weight of that element, a quantity which

exists in only a very few other known compounds.

If we divide ordinary wheat into two parts, viz, the gluten or sustaining portion, and the starch, or heat-imparting element, we find that theine fulfils the functions of the former. Possessing this extraordinary property, it stands to a certain extent in the place of food, by lessening the natural waste of the body, so that old people who can no longer digest enough of ordinary food, find in good tea, food, medicine, a gentle stimulant, a salve to their failing strength, a prop to their declining years. No wonder, therefore, that the fragrant beverage should be equally acceptable to the aged millionaire confined to his luxurious and palatial residence, and the poor seamstress stitching in her forlorn attic.

It must be evident even to the most desultory reader that any new product capable of use as tea or maté, and containing a fair proportion of the same chemical constituent which distinguishes them, is entitled to a niche in popular favor. Such a position we claim for prepared coffee leaves. So far back as the year 1845, Professor Blume, of Leyden, who had spent much time in Java, pointed out that an infusion of roasted coffee leaves had from time immemorial been a favorite beverage among the natives of the Eastern Archipelago. In Sumatra, especially, it formed the only drink of the entire population. Mr. Ward, resident many years at Padang in Sumatra, thus wrote to the *Pharmaceutical Journal* (vol. XIII, page 208): "As a beverage, the natives universally prefer the leaf to the berry, giving as a reason that it contains more of the bitter principle and is more nutritious." This is borne out by analysis, it being found that roasted coffee-leaves contain about 1.25 per cent. of theine or caffeine (the same amount present in maté), prepared coffee beans only yielding from 0.117 to 1.08 per cent. The same author continues: "In the lowlands, coffee is not planted for the berry, not being sufficiently productive; but for the leaf the people plant it round their houses for their own use. It is an undoubted fact that everywhere they prefer the leaf to the berry. While the culture of the coffee plant for its fruit is limited to particular soils and more elevated climates, it may be grown for the leaf wherever, within the tropics, the soil is sufficiently fertile."

The beverage called coffee is an infusion, or, more generally, as prepared in this country, a decoction, of the roasted and ground seeds of a shrub called by botanists the *Coffea arabica*. This plant has, however, many varieties, which are named after the various countries where they are produced, such as the *coffea mauritiana*, from Mauritius, &c.; but the true *coffea arabica* always keeps the lead in the market.

The *coffea arabica* is said to grow wild in the mountainous districts of Abyssinia, and appears to have been roasted and infused by

the people of that country from the earliest ages. We next hear of its use in Persia, and subsequently of its introduction into Arabia and Constantinople. The Greeks, with their natural aptitude for trade, soon took the matter up, spreading its use abroad, and, as we are told by Dr. Johnson, it was first sold as a beverage in London by a scion of that enterprising race named Pasqua, in 1652. Some years afterwards it was introduced into France, and soon began to take such a hold upon the taste of Europeans, as to become, what it now is, one of the most universal beverages throughout the entire civilized portion of the world.

The coffee plant, which sometimes attains the height of eighteen or even twenty feet, but is more generally about ten feet in altitude, comes into a state of maturity as regards production of berries in three years after it is planted, and usually continues to be fruitful for fifteen years. It bears a white flower, which quickly changes to a fruit, in the heart of which the coffee seeds, commonly but erroneously called berries, are deposited. The fruit when ripe is plucked from the plant into bags, the pods subsequently opened, and the seeds removed, dried, and stored. The coffee is frequently kept in store for a long time before being sent into the market, because it is found to "ripen," or improve in aroma by keeping; indeed Mr. Ellis states, that common American coffee, if kept for ten years, will be quite equal to good Arabian.

The effect of coffee on the system is exhilarating, while it yet soothes, lessens the desire for solid nourishment, and retards the waste of the tissues. It enables persons to bear fatigue, both mental and bodily, and is consequently much in vogue with those "who burn the midnight oil," or "just a toothful to keep out the cold," would be much better protected if they could be persuaded to take their "nip" in the shape of a cup of coffee. The wakeful properties of coffee are well known, and it is this which undoubtedly gave rise to its discovery, though improbable, story of its discovery. It seems, so saith this voracious legend, that an Abyssinian owned an ass, which he tied nightly to a bush adjoining his tent. Hither to the patient animal had not rendered the shades of evening hideous by un wonted sounds, but all at once it gave evidences of wakefulness, and disturbed its master's rest by loud vocal demonstrations. Notwithstanding the kicks and thumps showered upon its devoted carcass by its irate lord, it persevered in nocturnal braying. Worn out at length, he watched and observed the animal eat, with infinite relish, a quantity of berries from the bush. Struck with a bright idea, he did so

likewise, but, failing to discover any merit in the fruit, he roasted it, and found that his eyes were opened, that sleep was hindered, and that in fact he had made a valuable discovery; and so in future he changed the donkey's quarters, and appropriated the fragrant coffee to his own use.

These effects of coffee are due to three principles which it contains, viz.: (1) a *volatile oil*; (2) a substance called *caffeic acid*; and (3) an alkaloid called *theine* or *caffeine*. The volatile oil does not exist in the raw seed, but is developed in the process of roasting; and direct experiments have shown that we must, in some measure, ascribe to this oil the exhilarating effects of coffee. The caffeic acid is an astringent body akin to tannic acid, and, although it is somewhat altered in the roasting, Dr. Stenhouse states that "chemists generally are disposed to refer the flavor and peculiar properties of coffee as a beverage more to this acid than any other constituent." The third important matter in coffee is theine, or caffeine.

In addition to the above, Dr. Stenhouse states, that coffee contains 7 per cent. of cane sugar.

From all these considerations, it is evident that coffee is an article for which it is not easy to find an imitation; and as any other plant, to be equally useful, must contain the three important constituents above referred to; and there is apparently no other seed known, which would fully answer as a substitute in this respect. Looking to the great activity and peculiar properties of these substances, we cannot help seeing that, in permitting, as we now do, the admixture with coffee of vegetable matters totally devoid of them, we allow a serious injury to be done to many who depend on this beverage as an aid to the quickening and endurance of both their mental and bodily powers.

From The "British Friend."

John Burnyeat, and the Character of Friends' Meetings in his days; with a Notice of His Son, Jonathan Burnyeat.

(Continued from page 158.)

I resume a further delineation of these meetings illustrating the experience of the waiting worshippers:—

"When we were thus in our fears, and our minds not well acquainted with either right striving, out of self, or true waiting, the Lord sent his servants (who had learned of him) to direct us to wait in the light that did discover, to abide and dwell in the judgment that we received therein. As we were thus turned to this light, so were our understandings informed, and a hope began to appear in us, and we met together often, and waited to see the salvation of God (which we had heard of) that he would work by his own power. Thus waiting, the wonderful power from on high was revealed amongst us. Many hearts were reached, broken, and melted before the God of the whole earth, and great dread and trembling fell upon many. The very chains of death were broken thereby, the bonds of sin loosed, and many souls set at liberty. The prisoners of hope began to come forth, and they that had sat in darkness to show themselves, and the promises of the Lord began to be fulfilled unto many spoken of by Isaiah, xlii. 7; xlix. 9; lxi. 25. Some taste of the oil of joy came to be witnessed, and a heavenly gladness entered the hearts of many who, in

the joy of their souls, broke forth in praises unto the Lord, so that the tongue of the dumb, which Christ, the healer of our infirmities, unloosed, began to utter the wonderful things of God. Great was the dread and glory of that power. One meeting after another it was graciously and richly manifested amongst us, to the breaking, tendering, and melting of our hearts and souls before the Lord. Then we began to delight in the Lord, and in his way that he had cast up. With great fervency and zeal then we began to seek after him, and to meet oftener together than before. Our hearts were so affected by the presence of his blessed power which daily broke forth among us in our meetings, that we were greatly comforted, strengthened, and edified; for it was that same Comforter our blessed Lord promised he would pray the Father for, and which the Father should send. John xiv. 16, 26.

"We came to be taught of the Lord, according to that new covenant promise, 'They shall be all taught of the Lord.' Is. liv. 13; John vi. 4, 5. Then were our hearts inclined to hearken unto the Lord, and our ears, which he had opened to hear, were bent to hear what the Spirit's teaching was, and what he said unto the church, who was the chief Shepherd and Bishop of the soul. Thus we were gathered into a right gospel exercise and gospel worship by him through whose name we had received remission of sins past, and whose blood had sprinkled our hearts from an evil conscience, and who gave the pure water that washed and made clean; so that with true hearts many began to draw nigh unto God, in the full assurance of faith, as the ancient saints did, and were accepted. We had access by that one Spirit, by which we came to be baptized into one body, and so came to drink into one Spirit, and were refreshed and greatly comforted, and grew up together in the mystery of the gospel fellowship, and so worshiped God, who is a Spirit, in the spirit received from him, which is the gospel worship, according to Christ's appointment. John iv. 24. Then we came to see over those worships set up by imitation, and saw it to be vain to worship God and teach for doctrines the commandments of men, as our Lord had said. Mat. xx. 9. Therefore we were constrained to withdraw from these, and many of us to go and be water-bathed against them.

"Being gathered by the Lord Jesus Christ, that great Shepherd and Bishop of our souls, we became his sheep. We learned to know his voice, and to follow him, and he gave unto us eternal life, and manifested the riches of his grace in our hearts, by which we were saved through faith, and delivered from that wrath and fear which had been so weighty upon our souls, and in measure from the power of that death that had reigned and made us miserable and wretched. We came to partake of that life wherein the gospel blessedness consists. The Lord becoming our shepherd taught us, and led us forth into green pastures, where we did feed and rest together with great delight. O the joy, the pleasure, and the great delight that our hearts were overcome with many times in our reverent and holy assemblies! How were our hearts melted as wax, and our souls poured out as water before the Lord, and our spirits, as oil, frankincense, and myrrh, offered up unto the Lord as sweet incense, when not a word outwardly in our assemblies has been uttered! Then

did the Lord delight to come down into gardens and walk in the midst of the beds spices; and he caused the north wind to wa and the south wind to blow upon his garden and the pleasant showers to descend for th refreshing of his tender plants, that th might grow more and more. Unto them th had known the night of sorrow was the joyful morning come, according to the experie of Psalm xxx. 5; and such as had been in de afflictions came to witness the fulfilling of th great gospel promise, 'O thou afflicted, to with tempest and not comforted, behold I lay thy stones with fair colors, and lay th foundations with sapphires; and I will ma thy windows of agates, and thy gates of buncles, and all thy borders of pleasant ston and all thy children shall be taught of th Lord, and great shall be the peace of thy ch dren. In righteousness shalt thou be establi shed; thou shalt be far from oppression, thou shalt not fear; and from terror, for shall not come near thee.' Is. liv. 11-13; Coming to be acquainted with the power our Lord Jesus Christ in our hearts, we ligh ted in the enjoyment thereof, having re ady counted all things but as dross in co parison of the excellency that we saw there. We were therefore willing to suffer the lo of all that we might win him.

"Blessed be the Lord, many found th Beloved, met with their Saviour, witness his saving health, by which their souls we healed, and became of his flock and fami and household of faith. We found the ancie experience of the church true, as testified Scripture, 'Because of the savour of thy go ointments, thy name is an ointment pour forth, therefore do the virgins love thee.'

"Growing thus into this experience of th goodness of the Lord, and of the sweetne glory, and excellency of his power in our s; embles, we grew in strength and zeal o our meetings more and more. We valu their benefit more than worldly gain. It w unto some more than our appointed food; ar thus continuing, we grew more and more in an understanding of divine things and heav ly mysteries through the openings of t Lord's Spirit and power, that was dai amongst us, and wrought sweetly in o hearts, which united us more unto himse and knit us together in the perfect bono love, of fellowship, and membership in hi so that we became a body compact, made of many members, whereof Christ himself t came the head, who was with us, ruling ov us, and gave the gifts of his Spirit unto us, l which we came to be enlarged and furth opened, that we might answer the end f which he had raised us up as a people, and far blessed us, and sanctified us through h word that dwelt in our souls. Keeping st to our zeal, and to our first love, keepin our meetings, and not forsaking the ass bling of ourselves together, the Lord's pow still continued with us, and was renewed dai in our meetings, enlarging our understandi in the mysteries of the divine life and hidde things of God. Many through the favor God grew in their gifts, and had their mou opened in the ministry, becoming witness unto the world, and instruments in the Lor hand to proclaim his gospel."

In this delineation we have evidence th the Friends of this period in their worshi ping assemblies looked away from man. The came together to meet with their Lord, ar

sit under his immediate teaching; his bap-
tism power and his felt presence being daily
manifested. We have also some remarkable
of that even their children were carefully
ined in a knowledge of Holy Scripture, and
ught in the same way to sit as at the feet
their loving Lord. Sewell declares in his
tory of these times of violent persecution,
at where the parents were imprisoned, mere
ldren were known in many instances to
re kept up their meetings.

(To be continued.)

For "The Friend."

Reports of Friends of Philadelphia Yearly Meeting for the Improvement of the Indians.

Notice has been given, for some time past,
at a Friend and his wife are wanted to take
charge of the Boarding School at Tennessee,
New York, under the direction of the Com-
mittee of our Yearly Meeting for the Improve-
ment of the Indians, who will also be expected
to render such advice and assistance to the
Indians as they may be enabled. The Friend
and his daughter who are now in charge of
the Institution, having been engaged in the
service a number of years, are desirous of
being released, and are waiting the appoint-
ment of their successors. No suitable Friends
were offered to take their place. Considering
the interest which has of late appeared to be
taken in Indian civilization, it is cause of
pride and regret there should be so much
inactivity in procuring those willing to engage
this interesting and useful work.

The concern for the welfare of these poor
people took strong hold upon the feelings of
our forefathers. A very short time after the
organization of the committee appointed by
the Yearly Meeting held in 1795, five Friends
entered their services, and for many years after
there was a constant succession of laborers,
both men and women. About 1809 there
were five men and three women Friends re-
siding among the Senecas on the Allegheny
reservation at the same time. The duties of
the pioneers in the work were arduous.

By the instruction of the Indians, they had
a land on which they settled to clear and
bring under culture. They had also buildings
erect, and subsequently saw and grist mills
were put in operation. They did not allow
a sacrifice incident to a residence in the
wilderness, to deter them from faithfully pur-
suing their benevolent object which, as stated
in the original appeal of the Committee, was
to instruct the Indians in husbandry and
useful trades, and teaching their children
necessary learning that they may be acquaint-
ed with the Scriptures of Truth, improve in
the principles of christianity, and become
qualified to manage their temporal concerns." A
considerable number of the Friends who en-
gaged in the work, spent several years in
a service, and when released and returned
their families, expressed much satisfaction
in the retrospect of their labors; being favored
to feel that peace which accompanies the
performance of required duty. They were
able to render very important assistance to
their brethren and sisters; their kind and
faithful labors were thankfully received, and
to a considerable extent appreciated. Many
of the Indians followed their advice and en-
deavored upon the cultivation of the land, and
soon abandoned a reliance upon hunting and
trading for procuring their subsistence. The

new mode of living thus introduced, furnished
them some comforts they had not previously
enjoyed, and their gratitude to Friends for
their instruction and help was very often
heartily expressed, and the progress made by
many of them in their new business was very
encouraging to the Committee. A deputation
who visited them about ten years after the
commencement of the efforts of Friends to
instruct them, state in their report of their
visit, that "the Indians of this settlement
(Cattaraugus) have enclosed with good fence
and cultivated several hundred acres of land
within three or four years past, a considerable
portion of which was in with corn, potatoes
and oats, and they generally looked well. A
number of families have raised wheat, and are
preparing to sow more this fall. Several have
raised flax, and about twenty-five of their
women have learned to spin during the last
summer. A number of the girls have attended
to this business under the care of Hannah
Jackson, and spun yarn sufficient to make
near 80 yards of cloth, which was woven and
divided amongst them. Considerable improve-
ment has also taken place in the mode of
building, many have good houses, and some
have barns—scarcely any of the old cabins
are now standing. They have wagons and
carts, also several yoke of oxen and ploughs.
Divers of them have planted fruit trees, and
some of the young men have manifested in-
genuity in several branches of mechanical
business."

Those on the Allegheny reservation were
represented as having increased "their stock
of cattle, horses and swine, quite equal to their
means of supporting them through the winter.
Many of them have good crops of corn, oats
and potatoes, and divers were preparing to
sow wheat. Many of their women have paid
some attention to spinning, especially in the
winter season. They appear more cleanly in
their persons and houses than they formerly
did, and their manners and deportment in the
general have become more assimilated to the
modes and practices of white people."

In reply to a written address the Friends
presented to them at this period, one of the
Indian chiefs said,—

"Brothers, as we said before, we feel joyful
and most think that you are our friends. We
looked upon ourselves as lost persons until
Friends came to instruct us. Every man in
this room thanks you and all the Council at
Philadelphia, and we thank the Great Spirit
above that he has influenced you to come to
enlighten us."

"Brothers, you know we told you we would
take up work and follow your instructions.
We desired you would have patience with us
and not expect great things at once. * * *
There are many of our people who have taken
your advice, and certainly will pursue the
things you have pointed out to us, having
found the advantage of them. About ten
years ago we were in a very different situa-
tion from what we are at present."

After enumerating the improvements they
had made, described in the report of the Com-
mittee, and also requesting them to inform
their old friends that they had put a stop to
the sale of spirituous liquors in their settle-
ment, and alluding to Friends' offer to grind
grain for them, toll free, he concludes thus:

"Brothers, we feel thankful for your kind
offer. There is not a man or woman among us
but will thank you for this kindness. We

are sensible you are a feeling people, and feel
more than others for us.

"Brothers, we feel thankful in ourselves
that you have given us your advice upon
paper. We will keep it to brighten our memo-
ries, and treasure it up for our children. All
in this room return you their thanks. We
press it into your breasts to carry home even
to your wives and children for giving you up
to come and see us."

Considering how short a time had elapsed
since Friends had been instructing them, the
statement of the Committee shows a rapid
and marked improvement, which must have
been viewed with great satisfaction by those
who were instrumental in producing it. Since
that period a steady advancement has been
made, so that a considerable number of the
descendants of those who were first benefited
by the labors of Friends now enjoy the com-
forts, and some of them even the luxuries of
life. There are, however, many others who,
from various causes, are slow to abandon the
habits of their forefathers, and for want of in-
dustry and economy have but few even of the
necessaries of comfortable living, and in many
ways need the assistance of their friends.

The boarding school belonging to the Yearly
Meeting is designed to give not only literary
instruction to the pupils, but also to acquaint
the female scholars with household duties.
It is situated on land adjoining the Allegheny
reservation, about four miles from Steamburg,
a station on the Atlantic and Great Western
Railroad. There are about 100 acres of cleared
land, and several hundred acres of timber in
the tract, and there are a saw and grist mill on
the premises. The dwelling house will com-
fortably accommodate about twenty-five chil-
dren and their care-takers.

For some years past the efforts of the Com-
mittee for the improvement of the Indians
have been mostly confined to those residing
on the Allegheny Reservation, which extends
about 31 miles along both sides of the Alle-
gheny river. The location of this reservation
is not so favorable for the improvement of
the Indians in agriculture as some others. A
large number of white people, of indifferent
character, are located in its vicinity, and many
of this class occupy a portion of their land,
and exert a prejudicial effect upon them. The
high wages received for rafting lumber down
the river, induces many of the young men to
engage in that occupation which draws them
off from the timely cultivation of the land,
and introduces them into the society of white
men of low character, whose example and in-
fluence are very corrupting. Such as are thus
enticed often imbibe a fondness for liquor and
other demoralizing practices which are com-
municated by their example to their asso-
ciates on the reservation, and thus their ad-
vancement is retarded. To the Indians on
this reservation there is, therefore, still need
of labor, and important aid can be rendered
to them by educating their children, inciting
them to industry, advising and assisting them
in the management of their business, as well
as promoting among them virtuous habits,
and as ability may be afforded, awakening in
them a sense of the obligations of religion.
It is very desirable that some suitable Friends,
influenced by sympathy with the condition of
these people, may be drawn to engage in this
labor of love, and that they will make known
their willingness to enter upon the service to
the Committee, who, it is understood, are dis-

posed to make compensation therefor to the full extent of the means at their command.

From "McMillan's Magazine."
The Suez Canal.

(Concluded from page 164.)

The whole scene along these six or seven miles was truly wonderful. Such a number and variety of men and animals were probably never before collected together in the prosecution of one work. Here were to be seen European gangs—Greeks, Albanians, Montenegrins, Germans, Italians, &c., generally working at the lower levels, and where the tramways and inclined planes carried away the *debris*. Their only animal helpers were mules to draw the wagons. Then would come groups of native gangs, the produce of their pickaxes and spades borne away in wheelbarrows or on the backs of camels, horses, donkeys, and even children. Of these animals the donkeys were the most numerous, as well as the most intelligent. It was curious to watch them. Seldom did the boy whose post it was to drive them think of accompanying them; he generally stood at the top of the embankment, and emptied the contents of their baskets as they arrived. Below, as soon as the basket was loaded, one of the fillers would give the animal a smack with the spade, and an emphatic "*Empshee, ya kelb*" ("Get along, O dog.") and it would quickly move off, and gradually make its way to the top; when, the basket emptied, it would be dismissed with another "*empshee*," and proceed down again. These donkeys would preserve an unbroken line in mounting and descending the tortuous and steep incline, and if a stoppage took place, a shout from the men was sufficient to send them on again. Their only trappings were the open-mouthed sacks made of shreds of palm-leaf, flung across their bare backs, forming a double pannier. The camels had a more scientifically constructed burden, consisting of a pair of open wooden boxes closed at the bottom by doors fastened with a bolt; on the bolt being withdrawn the doors opened, and the boxes discharged their contents. In many places blasting was going on; or the half-formed rock, composed of shells embedded in lime and sand, offering as stubborn a resistance to the pick as it had to the dredge buckets; at that rate blasting was the quicker process. Steam pumping-engines at intervals of a few hundred yards kept down the water which filtered in freely, and at the same time conveyed fresh water to cisterns placed at a short distance from one another on both sides of the canal. The Fresh-water Canal is about a quarter of a mile distant. The head-quarters of this busy scene was called the "*Campement de la Plaine*," and consisted of an agglomeration of wooden huts lying in the swamp between the two canals. A short distance beyond commence what are called the Suez lagoons, and there a dam marked the end of this animated dry-work section. On the farther side of the dam was water, and dredges were again to be seen at work. A first shallow channel through these lagoons had been dug by hand. This soon filled, partly with salt water from the surrounding marshes, partly with fresh water brought through a narrow cutting from the Fresh-water Canal. The dredges with long spouts were then introduced, and carried on the work; a dam just opposite what is called

the Quarantine station stopping the flow of the tide of the Red Sea.

Shortly before reaching the lagoons the canal takes a slight turn eastwards, leaving the town of Suez about a mile and a half to the west; and then, tending westwards again, enters the head of the Gulf opposite the roadstead, and rather more than a mile below the town. Its entire length from the harbor of Port Said to the roadstead of Suez is 160 kilometers, just 100 miles. The last few hundred yards of the canal follow in the narrow channel that runs up from the roadstead to the town, and are bounded on the west by a breakwater, which also serves as a protection to the new harbor at the head of the roads. The marshy ground behind the breakwater has been raised with the stuff excavated from the bed of the canal, and a dock and landing quays constructed on it. To the north are the arsenal and dry dock, and a railway station, destined to be the terminus of the Alexandria, Cairo, and Suez Railway. A branch line for goods already comes down to the dock, and the town will no doubt soon extend in this direction. Suez has increased wonderfully within the last few years, and from a few hundred inhabitants, in sheds scattered here and there on the sand, has become a flourishing town with a population of 17,000. It cannot be said to owe its birth to the canal, as Port Said and Ismailia do; but its recent rapid increase and development is due to that work and to its humble though most indispensable *ancilla*, the Fresh-water Canal, before the making of which all the water came to Suez by train from Cairo, as it did in more early days still on camels' backs from a distance of several miles.

A few words remain to be said on the tolls to be levied, the method of transport, means of lighting, &c., to be employed on the canal. The tariff has been fixed at ten francs per ton measurement and ten francs per passenger. There were at one time various plans as to the means of locomotion to be employed for getting vessels through. At first the idea was against their using their own propelling powers; they were to be towed either by tugs, paddle or screw, or working along an endless chain, or by locomotives running along a railway on the bank. Last year, however, a commission specially appointed of French engineers, contractors, ship-owners, naval and merchant ship-officers recommended that ships should employ their own means of propulsion, and that the mean rate of speed should be fixed at ten kilometres (6½ miles) an hour. It is intended to try some electric system of lighting for making the course through the Bitter Lakes at night; and should this prove successful, it will probably be applied along the whole length of the canal. Every ship will be obliged to take a certificated pilot on board. Besides Lake Timsah and the Bitter Lakes, there will be certain points at which ships can pass one another, the present width at the bottom, only seventy-two feet, being insufficient to allow ships of large tonnage to pass wherever they may happen to meet.

We have now gone over the whole of this great work. But, even though the accomplishment of the canal be no longer a possibility, or a probability, but a certainty, the grave question still remains, Will anything come of it? Will the result be at all proportionate to the energy, and ingenuity, and, above all, the capital expended? Though

these are problems which time and experience alone can solve, it may not be amiss to amine a little some of the points connect with them. With regard to the maintenance of the canal as a serviceable and navigable channel between the two seas, the means and appliances which served to create will suffice for keeping in a state of efficient Great stress has been justly laid on the fill up with sand both at Port Said and along canal, the falling in of the banks, &c.; and doubt all this will to a certain extent place: still the providing against it press no difficulty except that of expense. As thus the real question is, whether the traffic will be sufficient to meet this undoubtably heavy expense. On this there are two points to be considered. What was the object which the canal was constructed? Is it object likely to be attained? The practical object of the canal is to reduce the navigation distance between the West and the East, nearly 8,000 miles. From England to India, for example, the distance by the Cape of Good Hope is 15,000 miles; by the Suez Canal will be 7,500. From this closer approximation of East and West will result, first, an industrial and commercial revolution which the effects are incalculable. The hundreds of millions of Europeans who send their manufactured products to the East, and seven hundred millions of Orientals who consume those products, and send in exchange their raw materials to the West, will be brought into closer, less costly, and more intimate relations. In considering whether the result is likely to be attained, it may not be out of place to recollect that up to the beginning of the sixteenth century the commerce between East and West had all passed by either of the two branches of the Red Sea. The general insecurity of life and property which began to prevail when Syria and Egypt fell under the dominion of the Turks, and consequently increased difficulties of transportation from sea to sea, necessitated the employment of some other route; and Vasco da Gama having just at that time doubled the Cape of Good Hope and reached Calicut, the circuitous sea-route became the highway between East and West. A few years ago a partial return was made to the old route; I thought there was security, still the expense and trouble of transshipment and conveyance across Egypt was an effectual barrier to being employed for heavy goods. The contrast between the two routes stood thus: by the Cape, cheapness, but with length of time; by Egypt, shortness of time, but with expense and trouble. The canal secures shortness of time combined with cheapness and avoidance of trouble. As compared with the Cape route the saving of time will considerably more than compensate for the expense of the toll, and as compared with the land route through Egypt, while the time is nearly the same, it is trouble is *nil*, and the expense considerably less—the railway charge for conveying goods between Alexandria and Suez being more than double the ten francs per ton proposed as the rate for the canal. It must be borne in mind, however, that it is only by steam that the canal route can be used. The ancient navigation of the Red Sea, and the continued prevalence in it of the same wind, preclude the possibility of sailing ships being employed with any punctuality. Steamers will have to be employed, and commanded by

ss of captains superior to the general run
all merchant-commanders. The recent
ortunes of the P. & O. Company show
tremendous are the risks which the Red
presents even to the experienced com-
nders of their boats. Much time, there-
fore, inevitably elapse before anything like a
development of the anticipated traffic can
be realized; and this will be a crucial period
for the canal. For while its expenses will
nearly exceed its revenue, it must still be
in a state of perfect efficiency in order
to induce confidence in its safety and capa-
city, and prove beyond question the reality
of the advantages which it offers. Many
modifications and changes, all involving great
cost, will also have to be made during this
time. The sharp turns must be done away
with, the breadth and depth considerably in-
creased before it can really be serviceable for
steamships. No doubt the energy which has
heretofore so successfully overcome every ob-
stacle will be equal to these emergencies. Mr.
Cressop looks upon this canal as a sacred
trust which has been given him to accom-
plish, and the faith which he has in his mission
faith with which he has inspired all those
who have so ably seconded him in his task—
never yet faltered, nor failed to justify
itself by success. We in England should at
least wish him God-speed; for if he suc-
ceeds, we shall be, or we ought to be, the
greatest gainers by his success, though pos-
sibly Italy will be the country which will pro-
portionately profit the most.

For "The Friend."

Selected from William Evans' Journal.

351, 2nd mo. 3d. Having passed some
time with little sensible evidence of Divine
light, I went to the Quarterly Meeting for
ness much discouraged, and with little
hope that the quickening power of Christ
could be felt by me. Over the men's meeting
of renewed exercise was spread; and I
ought Samuel Beattie, Sr., was strength-
ened to call Friends back from the violations
of our testimonies, which, not a few had fallen
into, by their conformity to the changeable
fashions of the world. They were calling
attention to dress and language, the reading
of pernicious books, and others calculated
to bring on the mind with unsound principles
and to poll it through philosophy and vain deceit,
and things; he believed the testimonies main-
tained by Friends respecting them were
the basis of primitive Christianity. Departures
from them created false taste; excited and
unsettled the feelings; and these led to the
like of our silent meetings, and a desire to
have preaching and vocal or instrumental
music could be heard, which men were in-
duced to think they could use as the worship
of Almighty God. But it could have no effect
except on the animal feelings, to arouse and
excite them. He opened several of our testi-
monies, and pleaded with the young people to
be the privileges which they had offered
them in such a Society as ours, that watched
over them for good. My brother Thomas
spoke to several points, as well as some
of our Friends, with which others united. I
sought it my place to say I hoped we should
profit by the exercise spread over the meet-
ing; it was an evidence that He who raised
up had not forsaken us. How fearful were
we in the beginning of our heavenly journey
doing any thing against the Truth; and

how desirous to know the Divine will and to
receive strength to do it. Was there not now
a danger, after experiencing a little prosperity,
of putting forth the hand and appropriating
the blessings of a kind Providence, to purposes
of which we should have been afraid in those
days, especially in the furniture of our houses
and in our mode of living? Entering into
our own condition, and being favored to search
Jerusalem with candles after having been so
long contending against error without, and
among others, made this meeting additionally
satisfactory, and raised the hope that the
Lord was beginning to work for and among
us.

1856, 4th mo. 28th. Our Yearly Meeting
was held last week, in which I was again con-
tinued Clerk; and I thought I had never
passed through so much suffering from day
to day, as I did through the whole of its ses-
sions. Accompanying the reasons governing
a printed statement of its acknowledgment of
that meeting in its acknowledgment of the
separate meeting in Ohio; which, some wished
to have read. After it was deliberately read,
Samuel Beattie, Sr., expressed his dissent from
their conclusion to own that party in Ohio,
and bore a very decided testimony against
separations in our religious Society; as they
were no remedy of evils or difficulties. Our
place was to bear, and patiently suffer until
the Lord brought relief. He referred to
George Fox's epistle, written from Amster-
dam, against a spirit that was seeking to pro-
mote divisions and separations in the Society
at that day. I thought the manner in which
separations and their consequences were treated,
had a useful effect upon many minds.

Burlington county, 12th mo. 28th, 1850.

For "The Friend."

Friends' Freedmen's Association—Extracts from
recent letters.

Danville, Va., 12th mo. 27th, 1850.

Snow fell here on Fifth-day night about one
inch deep. It seemed the harbinger of cold
weather. The ground, brooks and ponds,
have been frozen, even the Dan River at this
place, was sealed over from one shore to the
other. Fowls and beasts have suffered, and
in some instances I hear have perished. I
hear of no poor that have perished, but I
know there must be intense suffering, for in
many houses, open to the weather, are large
families without any fuel except a little brush-
wood, and not clothing enough for person or
bed. It is painful to see the little children
shivering and trembling, their teeth chattering
with the cold. We are diligent in doing
what we can to make them comfortable, but
all we can do is comparatively little, where so
much is needed. * * *

ALFRED H. JONES, *Supt.*

Lineolnton, Dec. 27th, 1850.

I have been visiting many of the poor
Freedmen, and found large families in great
distress and in a truly deplorable condition,
without clothing, a cold winter upon them, no
shoes, very often no fire, exposed to the in-
clemency of the weather; aged people not able
to work without food; in *five* families all were
sick with pneumonia; I gave them some
money and left with a sad and aching heart.
Many of the children are kept out of school
on account of not having sufficient clothing,
still the school is very large indeed. Will you
please appeal to the Association on behalf of

Lineolnton, and oh, may they find it in their
hearts to send me a box of clothing! The
freedmen feel very grateful for what the
Friends have done for them from the first, and
many prayers are constantly ascending that
God in His wise providence would bless the
dear Friends for their liberality and kindness.

FRANCES COLVER, (*Teacher*.)

Danville, Va., 12th mo. 30th, 1850.

The "Women's Aid Association," in their
generous liberality for charity at the different
points, completely anticipated Frances Col-
ver's appeal sent to Philadelphia last evening.
It will be hard to tell which will be most
thankful, teacher or freedmen, for such unex-
pected and welcome visitation. It does me
good to see money put into the hands of those
who will be so faithful as F. Colver in its ap-
propriation. We all feel fresh stimulated to
diligence in widening our charities by this
unexpected beneficence, and will in due time
give our sisters an account of the purposes to
which it is applied. If the cold continues, food
and fuel will be the two largest draughts upon
it.

ALFRED H. JONES, *Supt.*

Salisbury, N. C., 12th mo. 28th, 1850.

Yesterday was spent in looking up children
to bring into school. I found many families
who would send if they had clothing for their
children, and many old people suffering with
rheumatism who needed it. I mean to make
the best possible use of the cloth sent; I think
it needs a square and compass to make every
thread tell, if I get out a garment for each of
the little rag bags that I saw yesterday.

A. BERNETTE BROWN, (*Teacher*.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a
Minister deceased.

(Continued from page 155.)

"7th mo. 1862. I was favored to sit with
Friends again in our meeting at West Chev-
er to my comfort; and the following Sev-
enth-day met with Friends in our select pre-
parative meeting, a small number. Here my
mind was impressed with the belief, that the
more unreservedly we endeavored to serve
the Lord, the more we should experience Him
to be a stronghold in the day of trouble.

"27th. I was favored to get to meeting,
though in much feebleness of body. Poverty
of spirit was my portion.

"My mind frequently, in the time of my
late sickness, was impressed with desires for
the welfare of my neighbors and those round
about, whom I feared were too much in the
practice of collecting and sitting about the
streets, especially at public houses, on First-
day afternoon, when probably their conversa-
tion was not of an improving kind. It arose
with me, I thought with a degree of freshness,
and in the remembrance of our dependent
state, to have some tracts of a religious na-
ture spread among them. On mentioning the
subject to my worthy cousin, James Emlen,
he expressed a willingness to select the
tracts, and hand them where he thought
suitable; which has afforded a comfortable
relief to my mind. Having about the same
time, from feelings tenderly interested in their
welfare, written a letter to my nephews—
and —, reminding them of the need we
have through Holy Help to be making pre-
paration for the solemn close of life; both
these little acts of dedication afford me a
peaceful retrospect.

"8th mo. 5th. For several months past some omissions of duty, which I thought had been passed over by the Searcher of hearts, have freshly revived with me, attended with painful feelings, doubts, and fears, respecting my state of acceptance with the Most High. But on waking early this morning, my mind became unexpectedly clothed with a comfortable feeling, and encouragement was felt from promises that seemed sealed upon my spirit, viz:—'I have graven thee on the palms of my hands,' &c. 'Thy name is written in the Lamb's book of life,' attended with a sweetness of feeling which no human aid could give. I write with fears and care lest I should say more than the Truth would allow; but may add my heart was raised in thankfulness, as on the banks of deliverance, to Him who alone is able to help us on our heavenward journey. Gracious Father! may neither heights nor depths, things present or to come, be suffered to separate me from thy love in Christ Jesus our Lord; who for the joy that was set before Him, endured the cross, despising the shame, and is now set down at the right hand of Thy majesty on high; there making intercession for poor erring man. The foregoing season of favor I desire to have in grateful remembrance to the Author of all our sure mercies."

After alluding to a season of indisposition, wherein she says, "my feeble strength was reduced, and my mind a part of the time closely tried," Hannah Gibbons writes under date of "8th mo. 27th. I was favored to get to Monthly Meeting in much feebleness of body. I had not sat long before my mind was clothed with the spirit of supplication, not only for myself, but also those assembled with me, that we might be preserved in this day of close proving; that our hearts might be so humbled, that we might be favored to know the voice of our heavenly Shepherd from that of the stranger; and so furnished with strength in our inner man, as to obey all His requirements; that the faith of the youth might be strengthened, and they be enabled to say, 'The things I know not, teach thou me.' The foregoing impressions felt renewedly solemn; but being enabled to yield to what I believed was required, my mind was afterwards favored with a calm, comparable to 'lying down beside the still waters.'

"31st. Desires were raised for preservation. It seems to me a day wherein the enemy of our souls is very busy, and the need of watchfulness and prayer, our standing being as on a sea of glass, is impressively felt. Gracious Father! be pleased to keep me from evil, and from all the by ways and crooked paths of the evil one. Thou alone art able to do it; for 'of ourselves we can do nothing.'

"9th mo. 21st. For some time past I have felt interested in the welfare of two individuals, not members of our Society, and with whom I am not much acquainted. — and — Having heard lately of their being in an afflicted situation, my mind was much drawn towards them in sympathy; so much that I thought of trying to go to see them, but was much discouraged on account of my feeble state. On mentioning my exercise to my cousin James Emlen, he kindly entered into feeling with me and said, 'perhaps thou couldst relieve thy mind by writing (or words to that effect) and I would willingly take it and read it to them.' On reflecting on the subject the proposal felt easy to me, and I was enabled

to express my feelings in writing; which J. E. took and read to them. It appeared acceptable to both, particularly to the mother, who was tender, took the visit kindly, and sent her love to me. Her son was unable to speak from the effect of paralysis. Thus my mind was relieved from the exercise; for which I think I may say a degree of humble thankfulness is experienced.

"25th. Being with some assistance favored to get to our week-day meeting, I think I may say a lively exercise was experienced for myself and those assembled, that in this day of trial, when war and rumors of war are often heard among us, we might know a building on the sure Foundation, Jesus Christ the Rock of Ages. Lord! be pleased to keep the little ones, who have no might of their own, as in the hollow of Thy Holy Hand. A comfortable degree of hope in the mercies of the Shepherd of Israel was renewed, and desires raised, that I might be preserved from the destroyer, who is going about as a roaring lion, seeking whom he may devour.

"10th mo. 17th. Yesterday we had the company of my beloved friend, William Evans and his daughter, from Philadelphia, at our Monthly Meeting, and a few hours at our house. William's humble walk and solid deportment were strengthening to my mind; and I doubt not his communication at meeting was acceptable to Friends. It seemed to me there was a solemnity spread over us which was comfortable to feel, and cause for thankfulness to the Author of all our blessings. Though my deafness for a considerable time past has prevented my hearing what has been said in our religious meetings, desires have been raised, that being thus much deprived of this outward sense, my inward ear might be increasingly attentive to Divine guidance.

"My dear sister E. E. having been with us a few days very acceptably, has just left us. I feel lonely and stripped as to the outward, but am favored with a renewal of hope in the Lord's mercies; and that he continues to regard the poor of the flock. Gracious Father, be pleased to preserve me from evil, in thought, word, or deed; and renew my strength in the all-sufficiency of thy power to heal our backslidings when they are repented of."

"Repentance towards God, and faith in our Lord Jesus Christ," is the order in which the Apostle Paul has placed these great and indispensable christian experiences. Moreover, it was just before the ascension of our blessed Lord, that He left the charge to his disciples, "that (firstly) repentance, and (secondly) remission of sins should be preached in his name among all nations, beginning at Jerusalem." Hannah Gibbons, had no doubt, in her measure, experienced through the saving strength of Him whom, "God had exalted with his right hand to be a Prince and a Saviour for to give repentance to Israel and forgiveness of sins," that godly sorrow which worketh repentance to salvation; and hence her allusion to "the all-sufficiency" of that Almighty "power to heal our backslidings when they are repented of." Thus it is; when the poor sinner is brought, through the convicting, convincing power of the Holy Spirit to have the eyes of his understanding opened, and to be sensible of his sin, and is grieved and humbled before the Searcher of hearts on account of it, then He who commandeth all men every where to repent, and causeth His light to

shine out of darkness for their guidance, in His condescending love and mercy, grant repentance to life. For, saith the Ape "the goodness of God leadeth thee to repentance." And again, "godly sorrow worketh repentance to salvation not to be repented. In connection herewith may the stirring, proof of the Spirit to the church of Ephraim due place with us in this day of false opinions, of strange disputations, of false beguiling liberty, and wherein "the ancient landmarks which our fathers have set being so removed: "I have somewhat agitated thee, because thou hast left thy first love. Remember therefore from whence thou art; and repent, and do the first works else I will come unto thee quickly, and remove thy candlestick out of his place except thou repent."

"10th mo. 19th. In our meeting at West Chester, my mind became early clothed with desires for our best welfare; and the language of one formerly weightily impressing mind, it felt as though I could not be without expressing it: 'Turn thou me, a sinner, shall be turned, for thou art the Lord my God. Love flowed freely to the gathered assembly and I was favored to return a little relief, and under no condemnation. Gracious Father, feed me with food convenient for me, learn me to be content therewith.

"25th. Attended our Select Preparatory and 26th, our First-day meeting for worship. Both were seasons of lowliness to me; y^t true desires were raised in both for a continuance of Holy Help.

"29th. Our Monthly Meeting was held at West Chester: in which my mind was repeatedly impressed with a sense of our dependence, and the need we have of Holy I^{ts}. Desires were raised for a renewal of strength from time to time to do the Lord's will: that our eyes might be anointed with eye-salve of His kingdom, that we might be enabled to see with holy certainty, the things which belong to the Lord's honor and our souls' peace in the day of trouble, and be able to do them. My mind being clothed with the spirit of supplication, I trust I say avfully so, it was yielded to on the bed of knee. After which our valued friend, vid Cope, was engaged in testimony, seemed to me a solemn covering was spread over us, which no human aid could give. This is cause for thankfulness to Him when He opens none can shut, and when shuts none can open."

(To be continued.)

Scientific Seraps.

Mount Washington Railway.—The depot 2,655 feet above the level of the sea, or 1 feet above the White Mountain House. It leaves a grade of 3,600 feet to be overcome the height of the mountain is 6,235 feet at the level of the sea. The length of the road is two miles and thirteen sixteenths.

The heaviest grade is thirteen inches to a yard, and the very lightest, one inch to a foot. A part of the course is over "Jacob Ladder," the zigzag portion of the old path lying just above the point where trees are left behind. The railroad is a generally straight line, however, curves slightly only to maintain a direct course.

The locomotive pushes the cars before it on the incline, and both run upon three rails, the centre one being a cog rail. The engine

re kept upon the track by friction rollers on the side of the cog rail, and the means for stopping the descent are ample. Means of atmospheric brakes either the engine could be sent down alone at any rate, fast or slow, and there are also brakes operating with equal directness the central wheels, together with other means of governing the machinery of locomotives.

Every competent person who has examined the road and the running machinery, unceasingly both as safe as they could possibly be made. The landing place at the top of the mountain is directly in the rear of the graph office, and but a few rods from the top of the Tip-top House.

Oscillation of Railway Cars.—There is so latent an idea that the unpleasant, and to nervous, injurious oscillation of railway cars is due to the axles being too wide for the rails, that the following explanation given in "Times," by Charles Fox, is of much importance, both to the public and the companies.

The oscillation of railway trains, more especially at high velocities, producing what is usually called gauge concussion, is a very serious source of wear to the permanent way, rolling stock of railways, and as a consequence, of great expense, to say nothing of discomfort it occasions to passengers, and my opinion, caused, in very great measure, by the use of wheels the tires of which are of cones instead of cylinders.

The question of passing with steadiness straight lines, seems to have been altogether overlooked in the introduction of iron wheels, for it will be obvious that with such play allowed between the tire and rails, unless one-half of such play be constantly preserved on each side of the way, wheels staked upon the same axle will run upon different diameters, and consequently, a struggle arises which cannot fail to result in oscillation, inasmuch as the motion of the flanges touches a rail, that rail, becoming larger than the opposite one, it is off from the rail, only to make the same error perform in its turn, the same error, when serious oscillation is the re-

sult, no advantage is found to arise in the use of iron wheels in passing round curves, and which evil results therefrom, on straight lines. I have constructed upward of 250 miles of railway abroad, in the rolling stock of which I have departed from the usual form of iron wheels, and have used only cylindrical ones, and, as I expected, been gratified with satisfactory reports I have received of the fitness of trains supplied with them.

Electricity and Railroads.—On the railroads of the United States, where electricity is taking the place of steam, a watchfulness. On many lines there are contrivances where the passing of a train is automatically announced to neighboring stations. The cars pass over connectors, and the train records itself before it is behind, so that its progress and appearance are alike indicated.

Wooden Car Wheels.—The directors of the York and New Haven Railroad have decided as an experiment, to use wooden wheels instead of the iron wheels. Quite a number of these wheels have been purchased and will be substituted for the present ones on some of the new cars. They are expected to cost nearly treble the price of

iron wheels, but are considered quite as cheap in the end. They are made of elm or teak wood, and bound with steel tires. Besides being less liable to break by the action of frosts, they make less noise.

Alarm-Bell for Locomotives.—A new alarm-bell was tested on the Detroit and Milwaukee Railroad lately. The invention consists of an ordinary bell, weighing about 100 pounds, placed on the platform of the locomotive, immediately over the cow-catcher. A rod attached to the eccentric shaft causes a clapper to strike the bell each turn of the driving-wheel. The bell is suspended loosely, and revolves from the force of the stroke it receives, so that all parts of the surface are equally exposed to wear. The advantages of this arrangement are a continuous sound, slow or rapid in proportion to the speed of the engine, each 15 feet producing a stroke of the bell. In case of an accident, the railroad company can always prove that their bell was ringing according to law; and owing to the position in which this bell is placed, the sound can be distinctly heard about three miles in daytime, and by night four miles or more, the ground and the continuous rail, both excellent conductors of sound, assisting in carrying the vibrations. The Detroit and Milwaukee Railroad have 24 of these alarms already in use, and intend to provide all their passenger engines with them.

Letter of John Thorp.

Manchester, 10th mo. 26, 1876.

To —,

My dear Friend:—I am obliged to thee for the particular account of the state of the church in —, though, alas! it is a very poor one; and I am afraid such is the case too generally amongst us everywhere. Why it is so, the cause is as obvious as are the effects;—the people have forsaken the Lord, and gone after other gods; and therefore it is that the Lord's heritage is become desolate, and "the daughter of Zion covered with a cloud." Yet, however discouraging the present situation of things may appear; however affecting the prevailing desolations, so that the standard bearers may be ready to faint, and like poor Elijah, may be ready to think and conclude that they only are left, and their lives also are in danger, I do believe there is not only left a "seven thousand" amongst us, "all the knees" of whom "have not bowed to Baal, and every mouth" of whom "hath not kissed him," but I do believe the Lord, in unfailing mercy, is bringing His work again upon the wheel, and that He will yet more and more effectually revive it, as "in the midst of the years." So that I would not have us to be discouraged; I believe the Lord would not have us to be discouraged, neither grow weary, nor faint in our minds; but rather, let the hands that hang down be lifted up, and the feeble knees confirmed; for the Lord is remembering Zion; He will rebuild her waste places, so that she shall yet become the "perfection of beauty, and the joy of the whole earth." "Therefore rejoice ye with Jerusalem, and be glad with her, all ye that love her; rejoice for joy with her, all ye that mourn for her, that ye may suck and be satisfied with the breasts of her consolation; that ye may milk out of her and be delighted with the abundance of her glory." "The cause is not ours; if thou dost well,

shalt thou not be accepted?" Let others do what they will; let them choose and worship what gods they please, "as for me and my house we will serve the Lord;" let us thus consider and resolve. What! though many are offended in Christ, and draw back from following him, shall we also go away? God forbid this should ever be the case with any who have known him, and that with him are the rewards of eternal life.

Oh that we might be encouraged to persevere in faithfulness, under every permitted dispensation, whether to ourselves or to the church of Christ! Leaving the effects and consequences of things to Him, who hath the control of times and seasons, let us be resigned to our various allotments, and not murmur at the cup which the Father hath given us. Remember, we are but servants and stewards; that it will be enough for us, if we be found faithful. What though that part of the vineyard be unpleasant to labor in; though there be not many mighty works to be done, because of unbelief; though the fields should not be white unto harvest, but rather the fallow ground want ploughing up, that the thorns and briars may be consumed; nay, though none should believe our report, and "though Israel be not gathered," those who have been careful to abide in their lot, who have been attentive to the voice of the true Shepherd, and given the people warning from Him, "shall be glorious in the eyes of the Lord, and their God shall be their strength."

I wish thee to let — see this; I may acknowledge he has been much in my view whilst I have been writing; for, though he is personally a stranger to me, yet my heart hath been filled with earnest prayer for his preservation in the right way of the Lord; that "neither things present, nor things to come, nor height, nor depth," may ever be able to beguile him of his reward, or frustrate, in any measure, the gracious intentions of the Almighty concerning him.

I wish for thee, my dear friend, careful, reverent attention, and humble obedience to every manifestation of duty; and that hereby thou mayst increase in true riches.

I am thy affectionate friend,

JOHN THORP.

THE FRIEND.

FIRST MONTH 14, 1871.

We trust that the communication in our present number, in relation to the care and labors of Friends of Philadelphia Yearly Meeting for the civilization of the tribe of Indians on the Allegheny river, and the need long existing of a suitable member to occupy the position of Superintendent of the School and Manager of the farm, will engage the attention of our readers. The work is of great interest to Friends generally, as well as to the natives, who are sensible they stand in need of just such help as the resident Superintendent, with the aid and advice of the Committee charged with the concern, is calculated to supply.

Public attention and feeling have been aroused on behalf of the Indians in the far west; and we rejoice to know that willing laborers have been found, to occupy the responsible positions of agents, teachers, &c., among different tribes there, even where they

are far separated from most of the comforts of civilized society. It is, we apprehend, an almost unprecedented circumstance, that the Indian Committee of Philadelphia Yearly Meeting has been *so long* waiting for some one to come forward to fill the station which would have been some time vacated, but that the present incumbent is unwilling to leave the Indians without any assistant and adviser. We cannot but believe that if the pointing to religious duty was more closely regarded, some one among our younger or middle aged members would find it their place to devote a portion of their time and talents to this benevolent work, and thus enable the Committee to carry out more efficiently the concern of the Yearly Meeting for the christian civilization of these aborigines of our country.

SUMMARY OF EVENTS.

FOREIGN.—A Madrid dispatch of the 3d says: Prince Ardenens, immediately after his arrival in the capital, paid a visit to the widow of General Prim, and in a feeling manner expressed his sympathy for her bereavement. He then proceeded to the chamber of the Cortes and took the oath as king of Spain. The enthusiasm of the people was universal. The king has counselled with Generals Riquelme, D'Alcazar and Olazoga on the formation of a constitutional ministry.

The Fenian convicts released by the British government have left Liverpool for New York in the steamer Cuba. The government pays their expenses to the United States. When the ship reached Queenstown, a conflictive dispute arose between the British and an outfit of 420. Their pardon is not complete. So long as they remain within the British dominions they are subject to the full penalties of the law under which they were sentenced.

It is announced that it is impossible to fix a definite time for the meeting of the Congress Powers in St. Louis, in consequence of the absence of the French representative.

The cable between Malta and Alexandria, which cost the English government over two millions of dollars, has been sold to the Malta and Alexandria Telegraph Company, together with all the stores on hand, for \$1,000,000.

London, 1st mo. 7th. Consols, 92½. U. S. 5-20's of 1862, 89½; of 1865, 89½; of 1867, 88½; of 1870s, 88. Liverpool.—Uplands cotton, 7½ a 7¾; Orleans, 7¼ a 8d. Winter wheat, 10c. 9d. per 100 lbs.

Field operations continue in France notwithstanding the severity of the weather and the consequent sufferings of the troops. Many engagements between the hostile forces are reported, the most important of which occurred at Bapaume, near Arras, in the North of France, on the 4th inst. The battle was sanguinary, but as usual the French and Prussian accounts differ greatly, each claiming the advantage. The Prussians on the 4th surprised the French in their offensive. At Ronen, capturing three stands of colors, two cannon, and 450 prisoners.

The siege of Belfort continues. By the surrender of Mezieres, 2,000 prisoners, 106 guns, and a quantity of stores, fell into the hands of the Germans. A telegram from Basle reports fighting on the Swiss frontier, in consequence of which two hundred French troops retreated into Switzerland, where they were disarmed by Swiss soldiers.

Bordeaux dispatches assert that Gen. Chanzy's army has been strengthened and increased to more than 200,000 men, and is now ready to resume the offensive. A portion of it is now strongly posted near Vendome. It is further said, the engagements along the Loire for a week past have all been successes for the French. Near La Chartre, 1,200 prisoners were taken by the French. A Prussian column recently lost 300 men by drowning, in an attempt to cross the Loire on the ice.

Versailles dispatches, on the other hand, report a series of successful engagements with the army of the Loire, near Vendome.

In the east of France the French claim more success for their arms.

It is reported that the French General Faidherbe has retreated with the main portion of his army, it is said to be crowded with wounded soldiers.

The French evacuated Havre on the approach of the Prussians. It is reported that the Prussians were pursued at Bolbec, a few miles N. E. of Havre.

The bombardment of the southern forts of Paris com-

menced on the 5th inst., and on the 7th, forts Issy and Vanvres were silenced. The bombardment of the outside defenses on the north-east side of Paris, continued. The loss of life on either side do not seem to have been large.

A correspondent of the *Tribune* sends letters and Paris papers to London, up to the 31st ult. He says: Coal cannot be bought as it has all been used for casting cannon, and by the railways and mills. Wood is going for good and the trees of the Bois de Boulogne and Boulevards are now being cut down. Bread is plentiful; it is not rationed, and is expected to last until the end of February. The deaths in Paris for each of the last two weeks was 2,700.

The French government informs telegraph companies that messages from Paris will be accepted and forwarded by pigeons at the sender's risk. The charge is ten cents per word, and must not exceed twenty words.

On the 8th inst., the King of Prussia telegraphed from Versailles to Berlin as follows: "Frederick Charles continues his victorious advance on La Mans. Everything has been quiet in the north since the 3d inst. The bombardment here is proceeding favorably. The barracks at Fort Vanvres are on fire."

Another dispatch says: "The advance columns of the German forces in the valley of the Loire, have reached St. Charles, near Sarge, Savigny and La Chartre. They encountered obstinate resistance along the whole line."

A detachment of the German army investing Belfort stormed a village south of that city on the 7th inst., and took seven hundred prisoners.

The government of Paris has issued a decree annulling the consolidation of all the military organizations of the city, and the re-estabishment of the city with the regular army for the defence of the city.

UNITED STATES.—The public debt statement shows a reduction during the Twelfth month, of \$2,240,701. The coin balance on the 1st inst. was \$107,802,280, and the total balance on the 31st, \$107,291,291.

The public debt of the State of Pennsylvania on the 30th of Eleventh mo. 1870, was \$31,111,662. The Governor states in his message, that the average reduction of the State debt, for the last four years, has been \$1,648,187, and that the whole of the debt, estimating the revenues and expenditures to continue as at present, can be paid off in the next year.

The balance of the State of Pennsylvania on the 30th of Eleventh mo. 1870, was \$31,111,662. The Governor states in his message, that the average reduction of the State debt, for the last four years, has been \$1,648,187, and that the whole of the debt, estimating the revenues and expenditures to continue as at present, can be paid off in the next year.

The State Superintendent of Public Schools reports 14,212 schools with 17,612 teachers and 829,891 pupils. The increase for the year was 13,138.

The State debt of New York is \$32,409,144, having been reduced to \$14,590,000 in the last year.

The State debt of Maine is \$18,968,000. Of this sum \$34,000 falls due this year, and is provided for by a sinking fund.

The total debt of the State of Virginia, including interest, is \$41,393,000. Much of this debt is held by citizens out of the State, and foreigners.

The mortality in Philadelphia last week was 255, including 12 deaths from croup, 29 of consumption, 28 inflammation of the lungs, 10 scarlet fever, and 9 of old age.

The proceedings in Congress have not been important.

The Senate members of Congress have held a conference and decided unanimously to oppose the President's scheme for the annexation of the Dominican republic. As it is deemed objectionable by many of the Republican members also, it seems probable that the measure will not prevail at present.

It is stated that a heavy migration is now in progress from Tennessee and Georgia to Texas.

It is reported that many thousands, and are said to be composed generally of a better class than have gone hitherto.

The national House of Representatives has adopted a resolution requesting the Committee of Ways and Means to report a bill for the redemption of the national debt.

The House Judiciary Committee have agreed on a bill making the number of members of future Congresses 280, being an increase of forty members over the present appointment.

Mr. Markedakis, Wisconsin, has become a great market for wheat. The receipts last year were 19,060,991 bushels, and the shipments 22,154,471 bushels.

The number of letters, &c., sent from the Philadelphia post-office during the year 1870, was 24,869,723. Stamps and stamped envelopes were sold at the office during that period to the value of \$687,115.

The Markets, &c.—The following were the quotations on the 9th inst. New York—American gold, U. S. sixes, 1881, 110½; ditto, 5-20's, 1868, 108½; 10-40, 107 per cents. 107. Western superfine flour, \$5.85; S.80; finer brands, \$5.85. W. Western amber wheat, \$1.42; amber State, \$1.50; white Michigan \$1.50 a \$1.63. Canada barley, \$1.10 a \$1.12. On a 62½ cts. Western mixed corn, 77 cts.; Jersey Ye 82 a 84 cts. *Philadelphia*—Cotton, 15 a 15½ cts. uplands and Western, Superior flour, \$4.75 a \$4.75; finer brands, \$5 a \$5.50. Western amber wheat, \$1.60; Indiana red, \$1.54 a \$1.58; Penna. red, \$1.45. Western mixed corn, 75 a 76 cts. Oats, 51. Clover seed, 11 a 11½ cts. Timothy, \$5.25 a \$5.50 bushel. The sales of beef cattle at the Avenue Du Verdun, ranged 13,700 head. Hides sold at 81½ a 83½ fair to good, 61 a 73 cts., and common, 5 a 6 cts. l. b. gross. About 14,500 sheep sold at 5 a 6 p. cts. gross, and 3,500 hogs at \$9 a \$9.75 per 100 lb. *Cincinnati*—Family flour, \$5.60 a \$5.75. Red w. \$1.15 a \$1.17. Corn, 52 a 53 cts. Rye, 90 cts. O. 111 a 113 cts. *Chicago*—No. 2 spring wheat, \$1.11. Corn, 43½ a 44 cts. Oats, 39½ cts. *St. Louis*—No. 2 red winter wheat, \$1.10. 39½ cts. Barley, 80 a 85 cts. *Milwaukee*.—No. 1 sp \$1.12½. No. 2, \$1.10½. No. 2 Oats, 43 cts. N. corn, 47½ cts.

FRIENDS' BOARDING SCHOOL FOR INDY CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to

H. Chenevix-Trench, Marshallton, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelph Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE

Near Frankford, (Twenty-third Ward,) Philadelphia. Physician and Superintendent—JOSUAH H. WOTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the 5th of Eighth month, 1870, at his residence near Columbus, N. J., in the 85th year of his age, PETER H. ELLIS, a much beloved member of Mansfield Particular and Upper Springfield Monthly Meetings. He was enabled to bear a protracted illness with composure and christian resignation, often evincing those around him, that his mind was staid upon Christ Jesus his Saviour.

—, on the 2nd of Twelfth month, 1870, ELIZABETH R., wife of Charles Wright, in the 62d year of her age a beloved member of Mansfield Particular and Upper Springfield Monthly Meeting. This dear Friend enabled to bear a suffering illness with patience, her mind stayed upon that unmovable Rock, Jesus.

Having not put off the great and important work of preparation until a dying hour, she peacefully and quietly away, leaving the consoling denance to her dear relatives and friends, that she entered that blissful abode prepared by the Lamb his Saviour.

—, on the evening of the 7th of Twelfth month, after an illness of two days, SARAH, widow of Foghill Ogborn, in the 71st year of her age, a member of Frankford Monthly and Germantown Particular Meetings.

Gently and peacefully her spirit passed away early shadows were revealed in Eddin, Michigan, favored to see clearly the dawn of a new day.

—, at his residence in Smyrna, N. Y., on the 6th of Twelfth month, 1870, BENJAMIN R. KNOWLTON, the 74th year of his age, a beloved and consistent member and elder of Smyrna Monthly Meeting.

His universal benevolence, and his loss will be deeply felt. —, at his residence in Eddin, Michigan, on the 27th of Twelfth month, 1870, ABRAHAM A. KNOWLTON, the 50th year of his age, an esteemed member of Eddin Monthly Meeting, and a firm believer in the principles and practices of Friends.

He has long been desirous to feel his brethren around him. His mind was clear to the last, and his resignation to the will of his heavenly Father.

—, on the 24th of Ninth month, 1870, STEPHEN A. ABRAM A. and Martha M. Knowles, in the 72d year of his age, a member of Rollin Monthly Meeting Michigan.

The Sargasso Sea.

Collingwood, the author of the "Narrative on the China Seas," has lately published *The Intellectual Observer*, an interesting account of that widely extended but rarely traversed portion of the North Atlantic, called the Sargasso Sea," from which the following extracts are taken:

Among the many remarkable phenomena connected with the Gulf Stream, not the least remarkable is the existence of those vast low-lying meadows of sea-weed, commonly known as the gulf-weed, or Sargassum; whose accumulations, within certain parallels of latitude and longitude, have given to that area the name of the Sargasso Sea. These marine reefs, as they have been called, have attracted the notice of all navigators since the time of Columbus, who, in his first voyage, recorded his earliest check upon falling in with it. The great pioneer entered the Sargasso in lat. 26° N., and long. 48° W., and his shipmates at once took fright at the ghastly appearance, feeling assured that their ships would be entangled in the weed if they were starved to death, or that they would be about to strike on some unknown coast. On this part, he says, "the sea was covered with such a quantity of sea-weed, like little bushes of the fir-trees which bear the pistachio nuts, that we believed the ships would be aground for want of water." They could not understand how such vast quantities of vegetation could merely float on the surface, or the appearance of a lobster among the weeds confirmed their fears;—and deeming it necessary that they must be either in, or approaching, shoal water, they entreated the discoverer to turn the ship's head. But he never wavered, and on the tropic, long. 66°, the first vessel which had ever entered the Sargasso Sea emerged again into open water.

The extent of the Sargasso Sea is in doubt, but the vast natural agency to which it primarily owes its existence. It stretches from about 65° West longitude, and between the parallels of 20° and 45° is of considerable width, narrowing from 12° in its northern part, to about 4° or 5° where least extended; while the remaining 20° of westerly latitude takes the form of a narrow belt of

various detached tracts, influenced as to situation by local currents, and averaging 4° or 5° only in width. An idea may be obtained of its area by the comparison of Maury, who states that it is equal to the great valley of the Mississippi; or still better, perhaps, from Humboldt's estimate, that it was about six times as large as the Germany of his day.

"The earlier navigators often found the gulf-weed a serious impediment to their progress. Lærus mentions that for fifteen continuous days he passed through one unbroken meadow, sea-weed prairies, as Oviedo characteristically calls them,) so that he could find no way through for oars. On certain occasions it has been found that the speed of vessels through the Sargasso Sea has been materially retarded; and it has been described as so thick, that to the eye, at a little distance, it appears to be substantial enough to walk upon. James Barbot, Jun., voyaging to India in the year 1700, says,—'Twenty or twenty-five leagues west of Cabo Branco, we often see the ocean almost all over covered with a certain weed of a yellow-green color, called Sargasso, resembling that which grows in our wells, or samphire, bearing a sort of seed at the extremities, which have neither substance nor savor. No man can tell where these weeds take root, the ocean being there so deep; they are also seen thus floating on its surface sixty leagues to the westward of the coast of Africa, for the space of forty or fifty leagues, and so close and thick together in some places, that a ship requires a very fresh gale of wind to make her way through; and, therefore, we are very cautious to avoid them in our course.

"That this is not the condition met with under all circumstances, is proved by the fact that passing through this region in 1867, the writer made a seven days' voyage through its central portion, during which the sea was at no time covered with the weed, so as to form a continuous meadow. It made its appearance usually in large patches, generally upon the surface, but sometimes apparently sunk to some distance below it. It varied considerably in appearance—was sometimes dark-colored, dense, and compact, and covered with berries; at others, pale and attenuated, with few berries. The masses, on some days, were round and shapely, and usually scattered somewhat indiscriminately over the surface of the sea. Occasionally only a few small tufts appeared for many hours; and on one day the only sign of its presence was a long narrow streak, extending across the ocean as far as the eye could reach, in the direction of the wind. The fact, indeed, is that the Sargasso Sea, dependent as it is upon a great physical phenomenon, changes its position according to the seasons, storms, and winds; its mean position remaining the same as it has been ascertained by observations during many years past. The Gulf Stream is the great power which maintains these marine pastures—a current whose impulse and origin,

according to Humboldt, are to be sought to the south of the Cape of Good Hope—after a long circuit it pours itself from the Caribbean Sea and the Mexican Gulf through the Straits of the Bahamas, and following a course from south-south-west to north-north-east, continues to recede from the shores of the United States until, further deflected to the eastward by the banks of Newfoundland, it approaches the European coast. At the point where the Gulf Stream is deflected from the banks of Newfoundland towards the East, it sends off branches to the south near the Azores. This is the situation of the Sargasso Sea.

"Patches of the weed are always to be seen floating along the outer edge of the Gulf Stream. Now, if bits of cork, or chaff, or any floating substance, says Capt. Maury, be put in a basin, and a circular motion be given to the water, all the light substances will be found crowding together near the entrance of the pool, where there is the least motion. Just such a basin is the Atlantic Ocean to the Gulf Stream; and the Sargasso Sea is the centre of the whirl.

"The Gulf-weed itself has so peculiar a history, that it forms not the least remarkable point of interest in the description of the Sargasso Sea. It is one of the numerous species of the genus Sargassum, which is among the most natural and readily distinguished genera of the family of Fucoaceæ. The Spanish word Sargazo, or Sargao, meaning sea-weed, supplies its common English name.

"The integument is leathery, and the general color brown, of varying shades, sometimes light, and sometimes dark. The most striking peculiarity, on a cursory view, is the abundance of globular cells, which have been taken by the unlearned for fruit, but which are in reality merely receptacles of air, by means of which the plant not only floats upon the surface of the ocean, but also is enabled to support vast numbers of marine animals, which find shelter among its tangled fronds.

"It is not altogether a useless weed, for it is said to be eaten in China, and to be used as a pickle, and in salads, in some parts of the East. The quantity of soda it contains, in common with other sea weeds, renders it useful as a manure; and it is even in repute as a medicine in some countries, and among certain classes.

"There is one point in the natural history of the Sargassum which has excited the attention of all observers, and more particularly of botanists. It is the fact that the Sargassum is always found floating upon the deep sea, and is yet destitute of any apparent means of propagation. Agardh remarked that no fruit nor root could be detected; and expressed his belief that it grew in the depths of the ocean, and was torn up by the waves. This belief was very general at one time, and it was supposed that the perfect plant was unknown; but that the Gulf Stream collected together the torn-off masses of its vesicular summits.

"Meyen, in 1830, passed through a considerable portion of the great band of gulf-weed, and he ascertained, as he states, from the examination of several thousand specimens, that it was uniformly destitute of root and of fructification. He therefore concluded that the plant propagates itself solely by lateral branches; denying at the same time that it is brought from the Gulf of Florida, as, according to his own observations, it hardly exists in that part of the Gulf Stream, near the great band, though found in extensive masses to the westward. Robert Brown, however, was of the opinion that the shores of the Gulf of Florida had not been sufficiently examined to enable him absolutely to decide that it is not the original source of the plant.

"That the gulf-weed of the great band (says Robert Brown, from whose communication on this subject this information is chiefly derived) is propagated solely by lateral or axillary ramification, and that in this way it may have extended over the immense space it now occupies, is highly probable; and perhaps may be affirmed absolutely without involving the question of origin, which he considered still doubtful."

(To be concluded.)

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 166.)

"11th mo. 16th, 1862. Attended our meeting on First-day, wherein my mind was early drawn to our younger Friends, particularly the brethren, in this day of awful calamity,* that they might be brought into an humble state of mind, comparable to the passive clay in the hands of the Heavenly Potter, and experience a willingness, to be fashioned and formed according to His own good pleasure; and thereby be preserved from the many evils that surround us. After endeavoring to relieve my mind of the exercise, I was favored, I trust I may say, with a degree of holy quiet.

"20th. In our week day meeting my mind was rather unusually impressed with desires for the preservation of the dear children, several of whom came in near together, I suppose from school. As the exercise continued, I thought perhaps the school might be the place to express something of it; but on further weighing the subject, it seemed as though the present was the best time. After expressing a few words to the dear children particularly, my mind was renewedly clothed with desires for myself, to be enabled to leave the things that are behind, and press forward in the line of apprehended duty in simplicity and faith."

The following letter to her brother Jacob Pusey, is dated,

"12th mo. 19th, 1862.

"Dear Brother,—My mind being frequently turned towards thee in tender affection, particularly of latter time, I therefore felt inclined to put pen to paper and tell thee so, while time and opportunity are afforded, feeling encompassed with infirmities, and that my time in this state of mutability will not be likely to be much longer. I may say the nearer the approach of the end of all things here, the more awful it appears to me; and to endeavor with Holy Help to be ready for the solemn event, is daily, and oftener than the day, im-

pressively before me. Seeing we have no confining city here, my mind is at times drawn forth in solicitude for the welfare of others; and for thee, dear brother, I have desired that nothing appertaining to this world, may prevent thee from earnestly endeavoring to know the work of the greatest importance—that of the soul's salvation—going on with the day. We are by nature prone to evil, being the children of disobedience; and have need of the regenerating, cleansing influence of the Lord's Holy Spirit, the 'Holy Ghost and fire'; to cleanse us from the impurities of our nature, comparable to dross and tin. We read in Holy Scripture that 'Except a man be born again he cannot see the kingdom of God.' This of being born again is not agreeable to the natural part; but I desire for us that we may be willing to bear all the turnings and overturnings of the Lord's hand upon us in order for our refinement; that so all that is offensive in His sight may be removed, and we be brought into a childlike, teachable state, wherein a willingness is experienced to do the will of our Heavenly Father. Then we shall know Him to be our shield and strength in times of trial. We have an unwearied enemy, who will, if possible, frustrate every good word and work; that it is needful for us in the present day to remember the injunction of our blessed Saviour to His disciples formerly: 'Watch and pray that ye enter not into temptation.' Two spirits are striving within us, and we have need to be humble and watchful in order that we may know the voice of the true Shepherd from that of the stranger. But how encouraging is the language of the Saviour of men, 'My grace is sufficient for thee: for my strength is made perfect in weakness.' A measure or manifestation of Divine grace we are all favored with. If this be yielded to and obeyed, it will enable us from season to season 'to put the armies of the aliens to flight,' our soul's enemies, and to press onward in the heavenward journey. That this may be thy and my happy experience, my dear brother, is the present breathing of my spirit.

Thy affectionate sister,

HANNAH GIBBONS.

After stating that she had been able to meet with her friends for the purpose of Divine worship but once in more than four weeks, she thus writes under date of

"1st mo. 8th, 1863. To-day I was favored to get to meeting; a privilege of no small value. My mind was impressed with a few words which seemed best for me to express. After which my dear friend L. K. appeared in solemn supplication. It felt to me to be a time of renewed favor, and cause for thankfulness to the Giver of every good.

"11th. I was enabled to attend our meeting again, wherein my mind was weightily engaged in tender concern for the welfare and preservation of the youth. Being strengthened to express something of it, I felt peace. But in the afternoon of the same day I was much exercised, without experiencing much relief. Gracious Father! be pleased to enable me to be faithful to all thy requirements.

"15th and 18th, I was also favored to get to meeting. Poverty of spirit was experienced; being renewedly made sensible that of ourselves, without Divine aid, we can do nothing. Oh that I may be enabled in my daily walk to show forth more of the meekness of wis-

dom; that wisdom which is profitable to direct aright.

"28th. I was favored to get to our Month Meeting. That for worship was a time labor without experiencing much of the presence of Heavenly good. That for discipline was a time of exercise also. In the answer to the eight queries from our own Preparatory Meeting (West Chester) deficiencies were: parent; and it felt to me there was little ability to labor for their removal, with a little zeal that is profitable to direct aright, even to the putting shoulder to shoulder order for the repairing of the waste places our Zion."

This of "putting shoulder to shoulder order for the repairing of the waste places our Zion," and a deep religious exercise, as for the salvation of his and her soul, is apprehend, much wanting among us. Is the not danger either of our looking too much one another for help, or of allowing supineness or worldly-mindedness to prevail over rather than in seeking to draw water out of the wells of salvation for ourselves. That spiritual sustenance can only be obtained waiting upon the Minister of the Sanctua and feeling individually after Him who shall call effectually help us, and in whom are all the treasures of wisdom, grace, knowledge and comfort, an unbounded store. Were we more greatly athirst for the living water, which holy Redeemer declared to the woman of Samaria should be in her a well of water springing up unto everlasting life, it is that though as a Society we might have many causes for trembling and for mourning, how would these seasons be truly those of humble joy and thanksgiving, and draw nearer unto Him in whose band our breath and whose are all our ways.

It is recorded by that able minister of Christ, John Burneart, who died in 1691, that the Lord's condescending goodness and me was very great to Friends, and to the meetings of Friends in that day: which would so no less to us, were we as inward and content in seeking after Him and His life-giving presence, whose Hand is not shortened. His mercy withdrawn, but who is the same yesterday, to-day, and forever. John Burneart writes: "O the joy, the pleasure, the great delight that our hearts were once with many times in our reverent holy assemblies! How were our hearts melted as wax, and our souls poured out as wax before the Lord, and our spirits as oil, fragrance, and myrrh, offered up unto the Lord as sweet incense, when not a word uttered in our assemblies has been uttered! Did the Lord delight to come down into garden and walk in the midst of the bespeices; and he caused the north wind to wa and the south wind to blow upon his gar and the pleasant showers to descend for refreshing of his tender plants, that t might grow more and more."

We have heard the allusion sometimes made to the want of a more baptizing minister. But is there not a need no less of baptizers or worshippers? By which we mean more of a hunger and thirst, with the heart's secret pleading in all those assembl after the bread and water of life; producing more manifest tenderness in our silent meetings. For if the Minister of ministers, whose overshadowing presence and baptizing power is not felt and known in our relig-

* No doubt in allusion to the war of the rebellion then raging.

semblies, causing not only "the hills to melt in at his presence," but the north wind, the south "to blow upon his garden that the spices thereof may flow out," vain will be every human effort. It was declared of some merely, "If they hear not Moses and the prophets, neither will they be persuaded though one rose from the dead." So also reign, if we will not hear and heed the still all voice of the Lord's Holy Spirit, which sends as "the small rain upon the tender herb, and as the showers upon the grass," unless it would seem will we be baptized of humility and contrition of soul by the adings of the poor instrument. For well says the Poet written:—

"In vain thy creaturest testify of Thee,
Till thou proclaim thyself. Their's is indeed
A teaching voice; but 'tis the praise of Thee,
That whom it teaches it makes prompt to learn,
And with the boon gives talents for its use."

If we mistake not, the day calls for both sisters and hearers to dwell increasingly deeply under a humiliating sense of the state of things among us. That thence may cry mightily to the Father of mercies I God of all comfort, that though He "hath heard the daughter of Zion with a clond in anger," He may be impertuned to yet re His land and pity His people; even once to send forth His light and truth; that though His tender mercy, the Dayspring on a High may visit and revisit, and so enlighten and guide, that upon sanctified hearts, the acceptable sacrifices of broken spirits and contrite spirits may be rendered to Him, who delighteth therein, and who God of mercy,

(To be continued.)

The Ixite Fibre.—The following is a letter from J. McLeod Murphy to the Commissioner of Agriculture, accompanied with three skeins of the ixite fibre, *Bromelia sylvestris*, each produced from a single leaf, of which a single cord might average 20. We extract the substance of this letter from the "Report of Department of Agriculture" for May and June.

First of all, before I describe the plant and the method of its cultivation, I beg to call your attention to the extraordinary length and strength of the individual fibres, their capability of being divided almost infinitely without breaking, their flexibility without kinking, and the readiness with which they receive and hold vegetable or chemical dyes without being impaired. Since my return from Mexico, I have had little or no opportunity of testing this plant practically; but a few samples, such as I send you, were given in an old and experienced maker of fishing-line, and he does not hesitate to pronounce the ixite fibre as superior, in every respect, to the manufacture of trout and other fishing-line, not only on account of the readiness with which it can be spun, its extraordinary length, but its perfect freedom from kinks in wet. The only secret, if there is one, consists in the preliminary precaution of boiling the fibre (as you have it here) before tying it. In this one respect it will surpass the use of silk.

Apart, however, from its use as a thread, I find nothing in saying that it forms the paper stock that can be obtained, I speak in reference to the imperfect, withered, dried, and dried leaves, from which the cannot be conveniently extracted by the

indifferent mechanical means that the Indians employ. Although I have no samples of paper made from this source just now at hand, yet I can assure the department that several magnificent samples of paper for banking and commercial purposes have been made by manufacturers in the Eastern States, from the dried leaves of the ixite plant, brought from the neighborhood of Tabasco.

"The samples of fibre I send with this were obtained by the most primitive means, namely, by beating, and at the same time scraping the leaf of the plant (in a green state) with a dull machete. Then, after the removal of the glutinous vegetable matter, it is combed out and rubbed between the knuckles of the hand until the fibres are separated. The next step is to wash it in tepid water and bleach the skeins on the grass. This is the method pursued by the Indians on the Isthmus of Tehuantepec; and the average product for the labor of a man is from 4 to 5 pounds per day."—*Annals of Scientific Discovery.*

From the "British Friend."

John Burnyeat, and the Character of Friends' Meetings in his days; with a Notice of His Son, Jonathan Burnyeat.

(Continued from page 165.)

In illustration of this early piety, and in connection with J. Burnyeat's biography, a narrative is recorded of very early maturity in spiritual life and knowledge. In the records of Pardshaw Meeting we read of Jonathan Burnyeat, the only son of John and Elizabeth Burnyeat, although he is not mentioned in this journal. From an account drawn up and published in 1857 by our late valued friend Thomas Chalk, I extract the following particulars:—He was born in 1686, and left an orphan in his childhood, his mother dying in 1688, and his father in 1690. It seems therefore probable from these records, that after his father's decease he was committed to the care of his relatives in the locality of Pardshaw. No account has been transmitted from which we can trace the operations of divine grace in his early childhood. Yet the testimony given in the Journal of James Dickinson, who was a minister of deep and large experience, in an account of their first journey together in Scotland, would lead to the inference that this youthful minister had been under the sanctifying and preparing influence of the Holy Spirit for not a very brief period. The next account is from the manuscript referred to, J. B.'s private memoranda, written in a clear and elegant hand, but in an abbreviated style, when he was under seventeen years of age. He is thus introduced by James Dickinson when in his thirteenth year.

"In the forepart of the year 1699, I had drawings in my mind to visit Friends in Scotland, and proceeded on that service in company with Jonathan Burnyeat (son of John Burnyeat), who had the like concern. As he was very young, and had not travelled in Truth's service before, a concern fell on me for his preservation every way. The Lord was kind to us, and bore up our spirits in all our exercises. My companion was deeply opened in the mysteries of God's kingdom, and grew in his gift, so as to give counsel to young and old. He was very zealous against deceit and wickedness both in professor and profane, and often reproved such. We travelled together through the south and west parts of Scotland, to Douglas, Hamilton, and Glas-

gow, and had many meetings among the people; laboring to turn their minds to the Lord Jesus Christ, who is the Light of the world; warning all who professed the Light to be their way to be very careful to walk therein, that they might know their communion to increase with the Lord, and the blood of Christ to cleanse them from all unrighteousness. Then we travelled down into the north, and had many precious meetings. From thence we returned to the Yearly Meeting at Edinburgh, where we met with many brethren. Abundance of people came to the meeting, who were very rude and wicked, and labored to disturb us; but the testimony of Truth coming over all some among them were troubled, and chained down by the power of God. We were deeply bowed under a sense of the Lord's favor to us; yet under great sorrow to see the wickedness of the people. A concern came upon Jonathan Burnyeat that write a Warning to the inhabitants of that place, which was afterwards put in print to answer its service. Then we travelled to Kelso, and visited Friends there; so to Berwick-upon-Tweed; from thence to Northumberland, and had meetings at several places. Many hearts were reached by the power of Truth. Being clear, we returned home, and witnessed peace to flow in our souls."

In the year 1703, again in company with James Dickinson, there is a memorandum of another visit to Scotland, travelling 524 miles, and holding thirty-two meetings; in the autumn of 1704, then in his eighteenth year, to the Friends in Yorkshire and Lincolnshire. On their way they first stayed a night at George Bewley's, of Hatteliff Hall, near Calkebeck, Cumberland; and on the day following, First-day, they attended what is termed a General Meeting held at his house. In this journey they were absent seventy-one days, and attended eighty-one meetings. In order to attend two meetings in one day, they agreed to separate, of which we have the following brief but interesting notice. "With a young man I went to Bridlington, where we had a little meeting late in the evening at Joseph Smith's house, who is a prisoner at York, to which came several not of our profession; and although I was alone, yet Truth helped me through. Several of the people were very civil, and in some the witness was reached."

This journey closes with the following striking reflections as the experience of a mere youth. We believe there are few readers but will be impressed with a feeling of devout admiration of so bright an example of watchfulness, humility, and faithful dedication in a stripling minister in but the eighteenth year of his age.

"*Tuesday month 17th, 1704.*—Seventh-day. We got back into Cumberland. I got to Grey-southen this night, and found all our folks alive and well, through mercy; for there had been a great mortality in the time of our absence, and many of our Friends died. Thus that same providential Hand that drew us from our brethren and sisters at home, went along with us, opened our way and service for us in our outgoings and incomings, and brought us home again in due time. O let my soul reverence that dreadful Being, the majesty of heaven, who takes his dwelling with the humble! for he was with us in this journey, and carried us through hard and smooth places. And though our exercise was sometimes hard, being concerned in digging and

pruning work, and sometimes it came close upon me, [being] but young in my gift, to speak home to matters according to that understanding I had; and it was not always well taken by some that loved a fleshly liberty, [and were unwilling] to be told of some weak places; yet, as I gave up to the Lord, in obedience to speak or write [he helped me.]

"In particular, during this journey; it lay pretty much upon me for some weeks to write unto Friends in the Isle of Axholme, [as at the meeting there] I had not gotten myself fully clear. At last I acquainted James Dickinson with my concern. He was a true nursing father to me in this journey, as he had been from the beginning, and was as true behind my back as before my face. The Lord reward him for it! is the sincere breathing of my soul.

"He advised me to write what was before me. When I had done so he read it; and then read it to Joseph Richardson, who was a tender-spirited man; and yet, because the paper was sharp, and touched pretty closely on something which that meeting unto whom I wrote was guilty of, he rather disliked it, and showed his dislike to it, although tenderly. But, oh, the reasonings, fears, and dejection of mind that took place in me for a time! Methought I could willingly have languished away. My heart within me trembled for fear; my knees were ready to smite one against another; and I had liked to have despaired altogether. But this conflict with fleshly reasoning, although sharp, lasted not long. James Dickinson took the paper, and observed the contents of it; and understanding that the principal reason for which J. R. objected to it was, because he feared it would cause them to be over severe in judgment with a backslider, and would let their hands too far loose upon him, James pleaded [for faithfulness] before J. R., and laid things home upon the Friends; inasmuch as, when I had written the paper over the second time, and had polished it a little in some respects, Joseph approved of it extremely well, and said he would send it to them to whom I wrote it. I left it in his hand to do with it as he inclined, and in so doing I had abundance of satisfaction and ease of mind: my heart was filled with the joy of God's salvation, who was nigh to help my poor drooping soul, that had liked to have despaired. But, blessed be God! he never leaves nor forsakes him, in the nearest trials and exercises that he may suffer to come upon them. Although he may try their patience, yet, in his own due and appointed time, he will appear to the relief of his distressed, afflicted ones; my soul hath been a living witness of it. For he did, by his own divine power, make way for me through this exercise, and filled my heart (which had been filled with doubts, consultations, and fears) with divine gladness, in which my soul had cause to triumph over all, and to say, He is everlastingly worthy to be worshipped, followed, and obeyed, through all, and over all, for his goodness endures for ever and for evermore. Amen.

(To be continued.)

For our part, we seem (I mean the Society) to live in great union, but I fear the unity of the one ever blessed Spirit is not the source; but rather an agreement to let things go as they will or may, without much care about them; and if any are zealous for the testimony,

rather to single them out as turners of the world upside down, and troublers of the church's quiet.—*Cor. of S. Fothergill.*

THY WILL BE DONE.

'Tis hard when all around is gloom,
And through the darkness trials loom,
And seem to lend swift wings to fear,
And nought is left our hearts to cheer.
Oh! then 'tis hard the race to run,
And faithful say, "Thy Will be done."

Oh! when we feel the Tempter's power,
And see the clouds in darkness lower,
And anguish stern would break the heart,
When friend from friend is called to part,
'Tis then we weary of the race
Nor say, "Thy Will be done," with grace.

Oh, when our love is cast aside,
And we by hatred thus are tried,
Are fain to turn from all that's pure,
And glad receive the Tempter's lure.
Oh! then our Father's suffering Son,
Help us to say, "Thy Will be done."

Thy Will be done, above, below,
And may we be in thy favor grow,
And though the cross be hard to bear,
Remember we the crown shall wear.
Oh! let us never more repine,
But cheerful say, *Thy Will, and mine,*

Catawissa, Pa.

Morn hath brightened slowly;
Night hath passed away!
Calm, and sweet, and holy;
Be this a Sabbath-day.

All around is beauty,
All within is love,
Strong for every duty,
Fixed on things above.

There is good supernal,
There alone is rest,
Silence, sweet, eternal,
For Thy children blest.

"Ivy."

Selects.

—*Davis.*

For "The Friend."

Extract of a Letter from Emmeline Tuttle, who is engaged in teaching the Indians, to R. T. Haines, Secretary to the "Women's Indian Aid Association."

Indian Territory, 12th mo. 23d, 1870.

Dear friend, R. T. Haines,—We were happy as we always are to receive words of kindly greeting, and more especially were we made glad when we learned that a kind friend had sent to our care such things as we are now needing to supply the destitute. Only this morning when I awoke, and realized the severity of the weather, and the suffering that must be realized in this great Indian country, I wept long and earnestly over the sad state of things as they now exist. Oh! it is impossible for those in the distance to conceive for a moment the magnitude of this work. Truly thou well said, "were it not for the help and strength so mercifully promised and surely granted for the asking, vain would be the help of man;" we have experienced this in our extremity, during these long months of privation and want; and did we not believe that the hand of God was in it, surely we would long ere this have fainted by the way. Our physical wants have, the best we could do, been poorly supplied, but we are now in a condition to fare better, and leaving the past, hope for the future. We have been living in the school-house for the last six weeks—there was no other place where we could get

a shelter. Last Second-day, on account of severe snow storm, we found it would be safe for us to remain there longer, as the house is very open and uncomfortable, having been left for the Indians to finish, and they had not been able to furnish means to do it; we consequently were repaired to our little domicile which is nearly completed, where we live comfortably quartered, notwithstanding we have not a carpet, or any convenience of the house. We found when this cold weather set in, that charity demanded we should take some of the orphan children under protection. We feel that these children must be cared for, and kept alive until we have weather, and yet it is almost more than we can do; my heart often aches for them in this distress. I would ask for an immediate supply of women's and children's stockings, also few pair of shoes, and a supply of eog blankets. I have felt much in regard to women here, have encouraged them to prepare for home comforts, to take care of the selves to prevent disease, to prepare bedding and have encouraged the girls to bring their patch-work to school, which they love to do—but they have very few pieces. When I send a box, if you would put in some scribbles and remnants we could soon work them. Several of our best girls have married late and would assist me at any time in making clothing for the poorer children. Many the mothers can sew, but nearly all of them are poor housekeepers, and need encouragement in every way; and yet we need to preach them very cautiously in order to them good.

The chief's wife lives well, is an intelligent woman, and somewhat companionable, have been teaching them how to make bread and to-day have been teaching one of the girls how to patch—she is progressing finely, wish some of you could see the work she has just completed. Poor things, they like a dress, beads, rings, and so forth, but little about comfort. When we received of the girls, who is now with us, she had calico dress, but little under clothing; she succeeded in fitting herself quite comfortably. She cannot speak English, but watches closely, and tries to gratify every wish of mine. They never refuse to do what I bid them, and manifest a very strong attachment for us.

We have our hands full, but amid all the privations and trials, we feel that it is a privilege to work for degraded and suffering humanity. Our school continues to prosper. The temperance cause is gaining, and religious meetings increasing in size and interest. Truly thy friend,

EMMELINE H. TUTTLE

Contributions received by S. W. CORE, Treasurer, 1312 Filbert Street.

More Spiritual Mindedness.—I think I am not quite ignorantly prejudiced against intellectual progress; but I am jealous lest I should depart from under the yoke and of Christ; for what would then be the result? I long for christian believers, in our out of our own Society, to be more spirit-minded; bound together in true unity, and the peaceable fellowship of the gospel, in the holy Head. Every sacrifice of self-love and self-will, of the unsanctified part in us, have an abundant reward.—*Mary Cappe*

For "The Friend."

The Old Slop-gatherer.

It is interesting to notice how much we are sometimes helped to notice how much we are sometimes helped to notice with patience the troubles that assail us, by a comparison of our lot with that of others who are in greater calamities.

A friend of mine once related a chapter in experience, which gave a pleasant illustration of this principle. At the time referred to he was actively engaged in a manufacturing concern, which employed a number of workmen. One who was associated with him in business, and who attended to the details of the factory, had occasion to be absent from home, and the care devolved upon himself. Every thing seemed to work by "the rule of triars." A part of the machinery gave way, and the men struck for higher wages. A friend was standing at the street door, desirous to know what to do, and with some feelings of impatience and irritation struggling to find expression. Just then an old man drove up, with an old horse and cart, whose business it was to collect kitchen slops, and which he fed his two or three pigs. He

had known him years before, and supposed had passed away from the scene of his sorrows. He so saluted him, "Why, Jemmy, are you still alive?" "O yes, Mr. —," replied the old man, "I am in trouble." He went on to tell his sad story. He had purchased a lot of property some years before, paying \$1000 as part of the price, and leaving a mortgage on it for the balance. The curbing and paving of the streets in front of it had cost him about \$250, and he had spent \$150 in repairing up a stable. Hard times came on, and he being unable to pay the interest money which fell due, the property was sold from him, and he was deprived of his humble home, and hardly obtained earnings he had invested in. One of his daughters had married a man who became very intemperate, and soon died under the effects of hard drinking. At the funeral was over, his widow went to her sister's house for shelter, and worn out with sorrow, fatigue and anxiety, they threw themselves on the bed for rest, leaving a can-burning, which by some means set the clothing on fire, and one of the poor ones was so badly burned that she died the next day. In addition to all this, his horse, which had been turned out into a meadow where it was mired in a ditch, and it too died. One of the neighbors had kindly purchased her old animal for \$40, and given it to her, but he did not know where he had put his horse that night, and so he had to hastily added, "Mr. —, I am in trouble."

The old man's narrative brought a new set of feelings into the mind of my friend, and he compared the comparatively light trouble which had disturbed his equanimity, with the multiplied losses which had fallen to the lot of his humble acquaintance, he doubtless felt that there was one whose crosses were heavier than his own. So he gave him some good counsel, and tried to comfort him in his afflictions. As they were about parting, he was pleasant to observe the effort the old man made to look on the brighter side of the matter, and to hear his expression of gratitude to our Heavenly Father, that he had still been able to him "his old woman."

When next we are tempted to suffer our spirits to be unduly disturbed by the minor

trials of life, let us remember the old slop-gatherer's experience, and strive to suppress any disposition to murmur at our troubles; but wisely aim to preserve our minds in that quiet and settled condition, which will enable us most effectively to meet and overcome the difficulties we have to encounter. Even if severe calamities threaten or overtake us, we have an unfailing refuge, if we are struggling to do right. It gives a silver lining to every cloud, to know that our Heavenly Father, whose power and goodness are both unbounded, will not suffer more to befall us than will tend to promote our own best welfare. Under every affliction let us strive to recognize the chastisements of His hand, who does not willingly afflict or grieve the children of men, yet often administers the rod, so that we, being humbled and made submissive by it, may more fully bow to His wishes. He stains our pleasant pictures, overturns our plans of worldly pleasure or prosperity, and makes us familiar with disappointment and trouble, so that the heart may be led to seek for durable riches and treasures in those Heavenly mansions where nothing can disturb our peaceful enjoyment of them.

When a child at school is puzzled over a mathematical problem, the solution of which taxes all the mental ability he possesses, the wise teacher encourages him to persevering effort, by the assurance that the overcoming of such difficulties in his studies is one of the most effectual means of strengthening the powers of the mind; and that this object is even more important than the knowledge of the subject, which he acquires. Let us remember that our school days have not ceased, that this whole life is but a stage of preparation for the eternal world into which we shall ere long enter; and that it would be as unwise for us to shrink from the trials and troubles that are meted out to us, as it would be for the school-boy to throw aside, without effort, the task assigned him by his teacher. These things are the necessary parts of our intellectual, moral, and spiritual training, and furthermore they are assigned us by a perfectly wise and skillful Heavenly Teacher, who knows exactly what lesson each of us needs to learn. Let us, then, trust unreservedly to Him, of whom it has been said with equal truth and beauty—

"From Thee is all that sooths the life of man,
His high endeavor, and his glad success,
His strength to suffer, and his will to serve."

Management of Oxen.—The ox should be as little abused by threats and whipping, as by stinted feed and overtasked labor. Loud and continued hallooing, or the severe use of the lash, is as impolitic as it is cruel and disgraceful. We never witness this barbarity without wishing the brutes could change places, long enough, at least, to teach the biped that humanity by his own sufferings, which his reason and sensibility have failed to inspire. Clear and intelligible, yet low and gentle words are all that are necessary to guide the well-trained, spirited ox.

The stick, or whip, is needed rather to indicate the precise movement desired, than as a stimulant or means of punishment. The ox understands a moderate tone more perfectly than a boisterous one, for all sounds become indistinct as they increase.—*R. L. Allen.*

Scientific Seraps.

Narrow Gauge Railway.—The Portmadoc and Festiniog Railway, Wales, is now attracting much attention from railroad men. This is a little line in North Wales, which was originally constructed for the purpose of acting as a tramway for slate and stone from the hills of Merionethshire to the sea-shore. It is now being used as a regular goods and passenger line. The chief peculiarity in its construction is that the gauge is only two feet broad. Hence, though the line runs through a very difficult country, the expenses of construction and working are so small that the traffic yields the enormous revenue of 30 per cent. The reason is simple enough. It is because the proportion between the dead weight and paying weight is so much less than upon other railways. The engine and tender upon this line weigh about 10 tons, against 40 tons upon the wider gauge of other lines. Instead of a first-class carriage, weighing 7½ tons, to carry 32 passengers, and representing nearly 5 cwt. of dead weight for each passenger, the carriages on the Festiniog weigh only 30 cwt. for 12 passengers, or two and a half cwt. for each person carried.

Durability of English Locomotives.—The life of a locomotive boiler has been found to be about 350,000 train miles; but this may probably on some lines go up to 400,000, or even 500,000 miles, as its wear and tear would depend greatly on local circumstances, and particularly on the chemical qualities of the water employed. Assuming that the life of the engine is determined by the endurance of the boiler, and that if, under favorable circumstances, it will last 500,000 miles, then during that time the fire-box will probably require to be renewed at least 3 times; the tires of the wheels, 5 or perhaps 6 times; the crank-axes, 3 or 4 times; and the tubes probably from 7 to 10 times.

Briquettes.—The general use on the Continent of "Briquettes" as fuel for locomotives is a matter of deep interest to our railway companies, both as respects economy of consumption and room required for storage. They are composed of finely powdered, washed coals, cemented with a material which forms the refuse of starch factories, or with coal tar. The mixture is subjected to the pressure of a piston in a cylindrical or polygonal case, and then exposed to a current of hot air in a kiln for about 3 hours. The resulting blocks weigh on an average 8 pounds, and burn with a residue of from 4 to 7 per cent. of ashes. The experience of the Austrian railways is, that they evaporate 7.2 pounds of water per pound of coal.

Centrifugal Pumps.—The great Appold centrifugal pump to be worked in connection with Mr. Hawkshaw's important work, the Amsterdam Ship Canal, is to lift 2,000 cubic metres, or, say, 440,000 gallons per minute. The lift is not great, but for each foot of lift, the actual duty, irrespective of all losses of effect, is 133½ horse-power.—*Engineering.*

Inverted Siphon.—An iron-pipe, 11 inches in diameter, and 8,800 feet (one and two-thirds miles) long, has been laid in Tuolumne county, California. It runs down a mountain, under a creek, and up the ascent on the opposite side, under a perpendicular pressure at the lowest point of 684 feet.—*Journal Franklin Institute.*

A Rapid Change of Gauge.—In Missouri, the Missouri Pacific Railway—a road nearly 200

miles long—changed its line from the broad to the narrow gauge. Nearly 1,400 men were engaged in the work; and they labored with such celerity, that the task was accomplished in 12 hours, and without interrupting the business of the road.

Large Blast.—The operation of blasting off the rocky headland of Lime Point, opposite Fort Point, and forming the northern entrance to St. Francisco Bay, for a heavy water-battery, has been conducted under the direction of Col. G. H. Mendell, U. S. Engineers corps. Two blasts have already been made; one with about 10,000 lbs. of powder and a second with 24,000. This second blast is supposed to be the largest ever a tunnel had been run in a north-westerly direction into the base of the hill, a distance of about 30 feet, where a chamber was formed on the right to contain 3,000 lbs. of powder; thence the tunnel ran in a direction south of west 31 feet, where a chamber was formed on the left for 6,000 lbs. of powder; thence on the same line 45 feet, where the third chamber was formed to contain 7,500 lbs. These chambers were about 5 feet by 7 feet, to contain from 125 to 130 cubic feet. When all were chambered out, a board partition was put up in front of each chamber to hold the powder. The greatest care was used in placing the powder in the chambers; the men wore the French sabots, or bandaged their feet in bagging; the barrel of powder was opened at the mouth of the tunnel, and carried into the chamber in sacks, the men groping their way into the dark tunnel, and delivering their dangerous burden to the foreman, who emptied it into one immense bin in the chamber. At a certain stage of the filling up, 8 cartridges were distributed at different points in the mass, each cartridge having an electric wire leading to the central wire connected with the machine outside. As fast as these chambers were filled, they were sealed up with clay and the tunnel tamped with the same material, the wires for firing the mass leading through a small box at the bottom of the tunnel. These wires, two in number, were of copper, one an insulated wire to convey the electricity to the mass of powder, and the other a plain wire for the return current; one connected with the positive, and the other with the negative pole of a powerful "Beardslee" magneto-electric machine, located in a secure place outside, and several feet distant. On connecting the poles, the explosion took place with a heavy, dull sound, and an immense mass of earth and rock was thrown into the air about 70 feet, and the whole face of the cliff came crashing down to the base and tumbled into the sea. The cliff has been blasted off for about 200 feet along its base and tumbled into the sea, and about 175 feet in height with an average depth of about 60 feet.—*San Francisco paper.*

For "The Friend."

The evening preceding the decease of John Thorp of Manchester, England, he related to his family the following circumstances, which occurred in his youth, and which it is not known that he ever before communicated.

"When a boy, about 14 years of age, my attachment to music and singing was such, that when walking alone in the lanes and fields on an evening, I frequently gratified myself by singing aloud; and indulged therein, even after my mind became uneasy with

the practice, until, in one of my solitary evening walks, and when in the act of singing, I heard, as it were, a voice distinctly say, 'If thou wilt discontinue that gratification, thou shalt be made partaker of a much more perfect harmony.' Such was the powerful and convincing effect of this solemn and awful communication, that he added, he never afterwards indulged in the practice.

"After a short suspense of conversation, he related the circumstance of Luke Cock having been a great singer, prior to joining the Society of Friends; and that John Richardson said of him, 'he was the greatest singer in that part of the country where he resided, and that he sung then the songs of Babylon, by the muddy waters thereof; but having drunk deep of the brooks of Shiloh, which run softly into the newly converted soul, he could sing and rejoice in the Lord Jesus Christ.'"—*From a Memoir of his Life and Character, by John Bradshaw.*

FOR THE YOUTH.

Talk About War.

"Pray tell us something about the War, grandpa," said Betsy and Jane, running towards the old gentleman, as he sat silently musing upon the great events of the day.

"Oh, do, pray do, grandpa," added Robert, as he looked up into the saddened countenance of him who began now to be bowed down beneath the weight of years. "I long," continued the little fellow, "to hear of the great doings of the soldiers. Oh, how I should like to be a soldier!"

"And how I should like to see the troops, and the flags, and the banners, and hear the bands and the great cannons," said Betsy.

"Yes, to see the horses galloping and prancing, as pleased as their riders to take part in the scene. Oh, Betsy, don't you remember that a beautiful sight the review was? There was the splendid dress of the soldiers; and there was the gold lace, so beautiful!—on the officers' coats, and the waving feathers in their caps; and the saddle-cloths, or what was worked so beautifully on the cloth; and then there was the scabbard dangling, and the naked sword sparkling so brilliantly in the sun; and then there was the trumpet-call and the bugle-note, and the dashing here and there; and presently there was the roar of artillery, and then the sharp, shrill crack, crack, crack, of the infantry all down the lines."

"These utterances of the little folks were expressed, as it were, in a breath, and bespoke all the heartiness and vivacity of youth, as yet knowing nothing of the sobering, saddening influences of real life, to say nothing of military warfare.

"And so you think you would like to see a battle?" calmly added the elderly one, as he sat thoughtfully and painfully listening to the little group by whom he was surrounded.

"Oh, yes, yes, grandpa," they all exclaimed, as with one voice; "we should, indeed."

"I think you would be quite of another mind," said the old gentleman, "if you really knew what you were talking about."

"Do you, grandpa? Why, where could there be anything more beautiful?" said Robert. "Only think, grandpa, if it were so fine a sight at the review, with only fifteen hundred or two thousand soldiers, besides a

troop or two of artillery, what must it be of scores of regiments, and tens of thousand foot-soldiers, besides whole regiments of poons, with hundreds of artillery and g pieces? Oh! it must be a glorious spectacle, indeed!"

"Yes, that it must," exclaimed both girls.

"I am sure I should never forget the sight," said Robert.

"That's quite true," remarked the old gentleman, "you never would; and, having witnessed it, you would never wish the scene repeated."

"Why not, grandpa? I should think a scene were worth seeing every day, not once or twice merely."

"Well, now, my dear children, let me plain to you, that the little you have seen, soldierly is very different to what it really is. You have merely seen it upon parade or view—just a little practice, so far as it is adopted. Remember that, in all the displays of which you have spoken, you never saw a man fall! Not one was killed, why? Because it is merely what is called sham fight. It was only playing at it. The charges consisted of powder only; there was no ball in the cartridge, nor shot in cannon."

"Oh, we never thought of that, grandpa," exclaimed the children as with one voice.

"Ah, my children," said he, "had it been real, and not merely pretended fighting, would soon have witnessed a very different state of things. Had the cannon been used, and had the infantry been supplied other than blank cartridge, hundreds would have fallen, and the plain o'er which troops swept would have speedily been strewn with the dead and dying. The gle-note and trumpet-call would have responded to by the death-shriek or the rible cries and groans of the wounded."

"Oh, we never thought of that, grandpa," again exclaimed the children.

"I am quite sure you did not," said the old gentleman. "A single glance at such a scene would terrify you beyond measure, leave upon your minds never-to-be-forgotten impressions. Nothing would erase your memories such dire spectacles of a battle-field exhibits. It is something difficult to think of scores and hundreds of noble-hearted fellows being, as it were, piled down under the terrific fire of artillery beneath the charge of cavalry, or at the feet of the bayonet. Such things are dreadful, the extreme to think of. Men, in such circumstances, are maddened with rage; feel and act towards each other as so many demons; they are no longer human, but beasts; and yet, ere war was declared, the naught of anger or bitterness about them. They fight, not for themselves, but by the will and too often to serve the whims and fancies of others."

"This seems very sad, grandpa."

"It does, dear children; and what you think of soldiers and of warfare, if, by the sanction, and by the will of the King and the government, your papa were come to go and fight?"

"What, go against his own will, grandpa?" "Yes, snatched, as it were, away from your mamma, and all the peace and happiness of home, to go and take part in a war that he had nothing to say to."

THE FRIEND.

FIRST MONTH 21, 1871.

And suppose he were to be killed, grand-
said Jane, "wouldn't that be dreadful?"
It would, indeed, my child; but then that
it should only be sharing the fate that hundreds,
even thousands, do. Others, again, are
aimed for life, even if they do return to their
a happy home. Think of your poor papa
returning after many months' with perhaps
arm, or both, wanting, and perhaps minus
g as well?"

"Oh, that would be awful," said Betsy.
Yes, but I would sooner have him so,
n not at all," said Robert.
Oh, yes, and so would I," exclaimed both
girls. "But wouldn't it be dreadful for
y, thus to be taken away, and never to re-
y?"

"Ah," said grandpa, "and perhaps lie all
at upon the battle-field, wounded and
ding to death; there, in the dense dark-
and the silent gloom, except that si-
e were broken by the cries and the
ans of his fellow-sufferers. No friend at
to staunch the blood, bind up his wounds,
ive him so much as a cup of cold water to
ch his thirst, after all the horrors of the
ious awful day. Oh, how he would think
is own quiet home—of your mamma—of
y; and yet, none to help, and but sorry
pects of ever returning to you again,
then, if he did not die there, perhaps in
y or so he would be found by the enemy,
carried away to a foreign hospital, there
nger among those who probably would
alling down curses upon him and his
try for helping to bring them to a simi-
ate with himself."

"Oh, grandpa," said Robert, "I never
got of this when I talked about soldiers
war."

"I was sure you did not, my dear boy."
But now you have named it, grandpa,
it'd it be very awful for those that are
ned in the battle to lie helpless on the
nd; to see the troops come galloping
them, and they unable to help them-
s, or get out of the way."

"Of course it must, my boy; and these
natters which are little thought of. Not
there are hundreds who might recover
ullet wound, but who are trampled to
y by the horses, or perish under the
s of the artillery."

"Oh, grandpa, I have no wish to be a sol-
now," said Robert.

"No, nor do we wish to see a battle," ex-
ced both Jane and Betsy.

"I felt quite sure of that," said their grand-
"I knew you would feel very differently
you came to hear of the fearful slaugh-
terand upon war, as well as the hun-
dreds and thousands who were thus so sad-
and so cruelly deprived of husbands,
ather, and brother."

und in almost every mind a secret dis-
ainst Friends who signed the Epistle*
tion and Advice; and fully expected to
ed by the Meeting for Sufferings, for
concerned in it. But innocently con-
of my own and Friends' integrity, and
ful of that which engaged us, I was quiet,
ret hold. I have this remark to make,
ugh subscribing that Epistle hath made

*Churchman's Journal, p. 235, Friends' Library

me the butt of professor and profane, I never
once repented it, I believe it was right, and
leave the effect to him, whose ways are un-
searchable, yet faithful, just and true.—*Cor. of*
S. Pothergill.

*Benevolence to Animals as a part of the Edu-
cation of Youth.*—Almost all boys are fond of
dogs, and yet nearly all will persecute cats,
rob birds' nests, and pelt frogs. There are ex-
ceptional boys, who delight in cruelty, and
they frequently grow up with their evil pro-
pensities strengthened by age and exercise.
There are also men of brutal disposition, who
have acquired their ruffianism, after passing
through the juvenile stages of their existence,
and they are at once the plagues and the puzzles
of society, defying its punishments and
resisting its benevolent endeavors.

Cruelty to animals is partly the work of
brutal natures, and partly perpetrated by well
meaning people under the influence of bad
habits; and if we could estimate the total
quantity of cruel infliction imposed upon birds,
beasts, reptiles, and fish, we should probably
find that by far the larger proportion resulted
from the ill-regulated action of good, and even
benevolent persons. Much ill-treatment of
animals comes out of the ordinary proceed-
ings of trade. It has been the custom to bleed
calves, to cram sheep and poultry into the
smallest possible apparatus of transport, to
drive cattle for long distances without per-
mitting them to drink, and to slaughter them
without sufficient avoidance of pain. Each
little circle in which these malpractices occur,
forms its own theory of cruelty and benevol-
ence, and laughs scornfully at outsiders who
object to its ways. The fox-hunter thinks a
man a fool who reminds him of the unben-
evolent character of his sport, and the fine ladies
who flock to aristocratic pigeon matches,
have no more compunction at witnessing the
sufferings of the maimed birds, than the Span-
iards have for the gored horses and tortured
bulls in their disgusting national recreation.
It may be affirmed that the cruelty of custom
or indifference does not lead to the demoral-
ization which inevitably results from a delib-
erate choice of action that inflicts unnecessary
pain, and yet all familiarity with needless and
useless suffering must tend to damage char-
acter, unless it excites strenuous resistance to
the evil, and efforts for its cure.—*Late Paper.*

Gov. Claflin of Massachusetts, in his annual
message, makes the following sensible re-
marks:—"We cannot deprecate too strongly
all attempts to arouse among us a spirit of
hostility toward other nations. The middle
classes of the people of Europe look to Amer-
ica as their refuge from tyranny, and as the
home of the poor. They were our friends in
the darkest days of the rebellion. In Great
Britain, even amid the extreme sufferings
caused by the continuance of our struggle,
they constrained their rulers to observe neu-
trality; and they in the end will compel their
government to render us the meed of justice.
Upon them would fall the horrors of war in
any contest with us, and we should be slow
to weaken their confidence in our magnani-
mity, or give to their opponents the long-
sought opportunity of attaining power, and
thus increasing the danger of war, by post-
poning the settlement of the questions in dis-
pute between the countries."

In reading a communication, not long since,
from a member of London Yearly Meeting,
we were struck with the complaint made that
it was now almost impossible to distinguish,
at sight, the members of that meeting from
other professors. The writer, we inferred,
had himself thrown aside the plain dress of a
Friend, but he confessed the loss sustained,
felt more sensibly on some occasions than
others, by not knowing whether those met
with, were members of the same society with
himself, and consequently bound to bear the
same testimonies. We can readily understand
this feeling of loss, and however blinded ma-
ny of our members may have become as to
the religious duty to adhere to that plainness
of apparel which is characteristic of the true
Friend, they must, we apprehend, be sensible,
that as this is departed from, and no distinc-
tion in dress or manners is observable between
them and other religious professors around
them, that peculiar feeling of brotherhood,
which has heretofore existed among Friends,
which warmed the heart with sympathy and
love towards others met with, who, though
strangers, by their dress and manners, at
once showed they were their fellow members,
and therefore bound to support the same spir-
itual religion, has been greatly weakened or
destroyed. Nor is this feeling of affectionate
interest in those making the appearance of a
consistent Friend, confined to Friends. Occa-
sions have repeatedly occurred, when other
religious professors have expressed the grati-
fication they felt on meeting unexpectedly
one who they recognized, by dress and lan-
guage, to be a Friend. At a crowded dinner
table in Geneva, at which a plain Friend was
sitting, a man walked up and threw his arms
around him. On the Friend expressing his
surprise, as they were strangers to each other,
the man apologized, saying that though not
a member of the Society, he knew the charac-
ter of Friends, and he was so rejoiced when
he unexpectedly saw in a foreign country, one
he recognized as a Friend, he had, without
thinking of its singularity, yielded to the im-
pulse of his heart to go and embrace him.

We have repeatedly expressed in these col-
umns our views on the subject of dress, gen-
erally, and on the plain dress of Friends. That
it is our belief all *our members* who are brought
under the government of the Holy Spirit—
from the requirements of which our plainness
of apparel had its origin—will, sooner or later,
as they experience their natural propensities
subjected to the restraints of the cross, find
themselves constrained to adopt it. That
where it is disregarded and held up as a mere
sectarian form, better cast aside than observ-
ed, it is evidence that the individual has not
yet attained a practical understanding of the
requisitions of the gospel, on which the testi-
monies of Friends rest, and that he or she will
be found indifferent in the support of some
others of those testimonies. But we are now
referring to the loss Friends sustain, in pro-
portion as they give up the garb by which
they have been long known, and which, in
the eye of others, is more or less a testimonial
of the cross-bearing religion they profess.
We are fully aware that a plain dress is val-
ueless as a substitute for regeneration and its

fruits. The cleanness of the outside of the vessel will be of little avail, unless the inside is clean also, but where a *Friend* experiences the inner washing, the outside will in time correspond.

—About the year 1826, Baltimore Yearly Meeting received a communication from a tribe of Indians, in which that body had been long interested. Among other things contained in it, were remarks on the changes which these children of the forest had observed even then, taken place in the Society; the substance of which that Yearly Meeting deemed of sufficient importance and weight, to transmit, through its minutes to its subordinate meetings, viz:

“We have recently received a solemn message from our Indian neighbors of the Shawnee nation, informing, that during a council lately held among them, while they were under a deep conceit on account of many deviations from their ancient simplicity, and were laboring to reform their own people, they likewise felt a concern for us; stating, that in former days they knew us from the people of the world, by the simplicity of our appearance; which in times of war had been a preservation to us; but that now they have to lament that they know us not (or many of us), by reason of our departure from our ancient plainness, and that they earnestly desire we would labor with our deviating members, in order, if possible, to bring them back to that simplicity which will again distinguish us as the children of the Great Spirit.”

There is sometimes an assumption of superiority so great as not to notice such “little things” as affect others. But so far from this being an evidence of true elevation of mind, it more frequently arises from contracted vision, incapable of estimating the consequences often flowing from what is slighted as being of small moment. What the world may esteem as little things the Almighty may look on as great, and it is not unusual for the proud spirit of man to be willing to make what are considered great sacrifices, if he may be allowed to follow his natural inclination in little things.

SUMMARY OF EVENTS.

FOREIGN.—The French army commanded by General Chanzy, offered determined resistance to the advance of the Prussians under Frederick Charles and the Duke of Mecklenburg, but was compelled to fall back upon Le Mans, a city 12 miles S. W. of Paris. Here a general engagement took place on the 11th and 12th inst., with severe losses on both sides, but ending in the defeat of the French, a portion of whom retreated on Alencon, and the rest toward La Val. Alencon is north of Le Mans, and La Val to the west. The Germans captured 16,000 of Chanzy's force between the 6th and 12th inst., and took twelve cannon and mitalraile. The Prussians occupied Le Mans, and subsequently moved to the north of that place.

Dispatches from General Borkbrak report that the French were still gaining ground in the east of France. Dijon, Gray and Vesoul had fallen into their hands. A Versailles despatch, on the contrary, states that Gen. Wender defeated Borkbrak on the 9th, south of Vesoul, and took 800 prisoners. Villers Exel has been taken by the Germans after a severe struggle in which the captors lost 2,000 men killed and wounded. A large number of German army is now formed by the eastern department of France. Gen. Manteuffel has been transferred from the north to a command in the east of France.

Peronne, thirty miles east of Amiens, has capitulated to the Prussians, with 2,000 French troops.

The bombardment of Paris continues with no intermission. During the last 24 hours the Prussians have gained some of the French positions, and brought their guns nearer to the city, the fire is said to reach all por-

tions of Paris from Porte Mailloth south and easterly to Fort Bicetre. The greater portion of the city was still out of instant danger. Many of the houses have been burned by the shells, and a considerable number of persons, including women and children, have been killed. The French foreign office has protested against the bombardment of Paris, on the ground that it was commenced without the formal notification required by the usages of civilized warfare.

The weather in France had moderated, to the great relief of the sick and wounded.

English travellers bear testimony to the generous treatment accorded to French prisoners of war in Germany.

The reinforcements now on their way to join the German armies in France, and those in readiness to go, amount to 200,000 men.

Writes for the election of members of the North German Parliament, will be issued during the current month.

A London dispatch says, that the European Conference of the great Powers will meet in London on the 17th inst., to consider the Black Sea question, and probably discuss continental politics generally.

A scheme for a direct cable from London and Liverpool to New York, has been brought out by Chadwick, Adamson & Co. of London. The capital is to be \$2,250,000, of which \$2,437,500 has been subscribed in London. It is estimated that the balance should be subscribed in the United States, in which case the cable may be laid the present year.

By an explosion in the Remshaw colliery, near Sheffield, twenty-six persons were killed and nine injured, and by another near New Castle, in Staffordshire, twenty persons were killed and injured.

The weather has been tempestuous, and serious damage has been done to shipping on the British coasts.

London, 1st mo. 16th. Consols, 97. U. S. 5-20's 1862, 90; of 1865, 89; ten forties, 88.

Liverpool.—Middling uplands cotton, *8d.*; Orleans, *8d.*; California wheat, *11s.*; red western, No. 1, 16s. 8d.; No. 2, 16s. 2d. per cent.

Versailles dispatches state that the recent battle near Le Mans was a decisive victory for the Prussians, and a crushing defeat for the French. The Prussians took 20,000 prisoners in that and the previous engagements with General Chanzy's forces.

General Chanzy has had a narrow escape from death. He was returning from a visit to the south-western batteries, when a shell burst close to his carriage, covering him and his aides-de-camp with mud, ice, and frozen dirt.

The protest of the Paris government to the foreign Powers against the bombardment of Paris, that it is proceeding wantonly upon hospitals, ambulances and churches, and is killing many innocent women and children. The usual notice to remove non-combatants was not given by the Germans. It protests against this useless barbarism, and declares that the inhabitants of Paris are unoffending.

Shells reach the hospitals of Val de Grace, and Trochu has informed Molke that the German wounded have been placed there.

Jules Favre declines attending the London Conference, and says that any settlement of questions in the conference which France would be bound, and adds that he is unable to attend, as there, being the Prussians are on flags of truce. The American Minister, Washburne, has been authorized to give him a pass through the German lines, but while the bombardment continues his departure is impossible.

Count Bismarck, in a note just issued to the North German representatives abroad, says the French authorities do not wish for peace, but gag the press, prevent the convocation of the national assembly, and force the people to continue the war.

UNITED STATES.—The late census gives the population of some of the principal cities as follows: New York, 928,000; New Orleans, 79,880; Milwaukee, 71,400; St. Louis, 310,864; Chicago, 298,985; Baltimore, 207,354; Boston, 250,526; Cincinnati, 216,230; New Orleans, 191,322; San Francisco, 149,482; Buffalo, 117,176; Washington, 109,204; Newark, 105,078; Louisville, 100,754; Cleveland, 92,946; Pittsburgh, 80,255; New York, 81,437; Detroit, 79,880; Milwaukee, 71,400. In 1850 the aggregate of the ten largest cities was 708,987, in 1870 the same cities show a population of 3,649,660, an increase of 34.7 per cent.

Philadelphia.—Mortality last week 296. Of consumption, 51; inflammation of the lungs, 28; old age, 8; cholera, 1. A bill has passed the House, and the Congress authorizing and encouraging a great national exposition of industry in Philadelphia in the year 1876. The resolution for appointing Commissioners to visit

the Dominion republic on a mission of enquiry investigation, passed both Houses with an amendment that the appointment of the Commissioners shall commit Congress for or against annexation. The resolution is of President White, of Col. University, ex-Senator B. F. Wade, of Ohio, and S. G. Howe, of Boston. The Secretary of the Commission is A. A. Buxton, of Kentucky.

The cotton crop of Mississippi is estimated at 725 bales.

The 133 savings banks in New York State have set amounting to \$229,000,000.

The second colored member of the National H. of Representatives, was admitted to his seat on the 1st inst. He is from the State of Georgia, and was congratulated by several of the leading republican members.

The Markets, &c.—The following were the quotations on the 16th inst. *New York*—American gold, U. S. sixes, 1881, 110; ditto, 5-20's, 1868, 108; 10-40 five per cents, 107. Superfine flour, \$5.86; fine, 5.65; extra, 5.45; white Michigan, \$1.60; No. 1 amber State, \$1.53; a \$1.54; No. 1 Chicago spring, \$1.20; 2 Milwaukee, \$1.49. Oats, 61 a 62 cts. We. Mixed corn, 80 a 83 cts.; yellow, 83 a 84 cts. Car. 73 a 74 cts. *Philadelphia*—Cotton, 15 1/2 for uplands and New Orleans. Superfine flour, \$4.17; fine, 3.98; extra, 3.79; white Michigan, \$1.58; a \$1.57; Penna. do., \$1.49; a \$1.45; amber, \$1.58; a \$1.57; Rye, 95 cts. Yellow corn, 73 a 74 cts. Oats, 57 cts. Clover seed, 11 cts. Timothy, \$5.50 a \$6 bushel. The arrivals and sales of beef cattle at the Avenue Drive-yard, reached about 1,750 head. 1 sold at 8 a 8 1/2 cts.; fair to good, 6 1/2 a 7 1/2 cts. 5 a 6, 4 a 6 cts. per lb. gross. Sales of 13,000 sals 5 a 6 cts. per lb. gross. Hogs sold at 89 a 97 100 lb. net for corn fed. *Cincinnati*—Family, \$5.75 a \$6. Wheat, \$1.20 a \$1.22. Corn, 50 a 51 Rye, 95 cts. No. 2 oats, 41 a 43 cts. Barley, 90 cts. 1st. Lard, 12 a 12 1/2 cts. *Baltimore*—Choice western flour brands, \$5 a 5 1/2 cts. Choice red, \$1.70 a \$1.80; fair to good, \$1.40 a \$1.50 common, \$1.30 a \$1.35. White corn, 82 cts.; yd. 78 cts. Oats, 46 cts. Hams, 17 a 18 cts. Lard, 1 Milwaukee.—Extra spring flour, \$5.37 a \$5.50; spring wheat, \$1.20; No. 2, do. 115c. No. 2 44 cts. No. 2 corn, 62 1/2 cts. Dressed hogs, 78.

RECEIPTS.

Received from Friends of Providence, Fayette Pa., per Jesse Cope, \$38, for the Freedmen.

AN APPEAL TO THE BENEVOLENT.

The “Germanian Employment Society” employs poor women, in making clothing, has on to sell, and give away, fair to prizes \$1.45, for which they are anxious to dispose of at less price. Application may be made to SARAH ANN MTLACK, Shoemakers Lane, LOUISA T. ANDERSON, 5216 Main St., German 1st mo. 16th, 1871.

FRIENDS' BOARDING SCHOOL FOR INDIAN CHILDREN, TENNESSEE, NEW YORK

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached with it. Application may be made to Ebenezer Wistar, Marshalltown, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, 1010 Chestnut St., Philadelphia Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE

Near Frankford, (Twenty-third Ward), Philadelphia, Physician and Superintendent—JOSHUA H. W. NOTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, on the 12th inst., at Friends' Meeting, Germantown, Penna., JOHN E. CARTER to ANNA, daughter of Alfred Cope.

WILLIAM H. PILE, PRINTER.

No. 42 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLIV.

SEVENTH-DAY, FIRST MONTH 28, 1871.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

For "The Friend."

Excerpts from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 17.)

3d mo. 1st, 1863. Being poorly, I did not go to meeting to-day; which has been the frequently of late. Spiritual poverty has been much my portion, and is cause of my secret inquiry. The language of my last seasons is to our merciful Father.—Blessed to keep my eye single unto Thee; thus I may not go before, neither lag behind Thy guidance; and that I may, through goodness and mercy, be prepared for the close of this life: which, the nearer it approaches, the more solemn it often feels to me. I am now in the 93d year of my age." A near relative, she thus writes:

"3d mo. 10th, 1863. "

My dear —, on thinking over the words we spoke of when thou wast here, (a sister of business,) I feel best satisfied to express a few words in regard to it. Thou art very careful to ask advice of friends, and to judge of them as thou valuest no doubt, which is commendable. But as it is only individual counsel that will entitle us to the favor of God who seeth not as man seeth, I would commend Thy consulting the witness for Thy own mind, and to follow its voice which is the alone path of safety. I believe it is sometimes in the ordering of Thy wisdom that we are required to take the cross to that which is seen in the light, and to have too much place in the mind, and another might feel at liberty to do. I pray for Thy consideration and encouragement, feeling desirous that thou shouldst not give up to serve our Heavenly Father in this, but that thou may be enabled to yield up Thy requirements. When this comes to be Thy will, I surely believe, feel strengthened from time to time equal to the day; Thy peace of mind at seasons far transcend worldly enjoyment. That this may be more and more Thy happy experience is the earnest breathing of my spirit. With desires for preservation, with that of my own, and the need, even at this advanced age, of turning unto prayer, I conclude.

H. G."

"3d mo. 16th. I was favored to get to meeting yesterday, and also last Fifth-day. Each of these seasons seemed to me much like toiling all night and catching nothing. Gracious Father! wilt thou be pleased to keep me in the patience, waiting on thee for a change of dispensation; being renewedly sensible that it is from Thee alone that good cometh.

"22d. This morning my mind was clothed with a degree of solemnity; under which covering I went to meeting, where I had not sat long before the state of the Apostle Paul near the close of his life, was brought to my remembrance, viz., "I am now ready to be offered, and the time of my departure is at hand," &c. This so impressed my mind with desires that we might individually strive to know the day's work going on with the day; that it seemed best for me to endeavor to express something of my exercise, that we might so improve the time while it is mercifully afforded, as that none when the solemn summons comes, might have to utter the lamentable language, "The harvest is over, the summer is ended and I am not saved;" but that through humble obedience to the will of our Heavenly Father, we might be prepared to receive the welcome salutation of, "Well done, good and faithful servant, enter thou into the joy of thy Lord"; which should be more desirable to us than anything we could possibly attain to, relating to the present life.

"In the afternoon my mind was favored with quiet.

"4th mo. 19th. I was favored to get to meeting though in much feebleness of body. It seemed to me a time of labor, watching against intruding thoughts. I was renewedly made sensible that when we are favored with a little of the dear Master's presence, it is indeed heavenly treasure in these earthly vessels. Several of our Friends have gone to attend the Yearly Meeting.

"23d, and Fifth of the week I also got to meeting, and it felt to me there was early a solemnity spread over the few who gathered.—Friends not having returned from the Yearly Meeting. After a time of waiting, the promise to those who hunger and thirst after righteousness was impressed on my mind: "Blessed are they who hunger and thirst after righteousness, for they shall be filled." It seemed as though it was best for me to mention it, for the encouragement of some whose eyes might be ready to fail with looking upwards, and the tongue to cleave to the roof of the mouth. Though I felt no condemnation on account of the little offering, yet it was a time of searching of heart, and that part of the prayer of Jabez, "Keep me from evil, that it may not grieve me," was impressed on my mind. Gracious Father be pleased to keep me from dishonoring Thy precious cause of truth and righteousness, poor and unworthy as I am.

"26th. I think I am often made sensible of

the need we have of the baptismal influence of the Lord's Holy Spirit, in order that that which is offensive in His sight may be consumed, and the strong will of man made to bow as at His footstool. Upon going to meeting with my mind clothed with desires for preservation, after a time the query of our Divine Master to Simon Peter, impressed my mind with so much weight, that it seemed best for me to endeavor to mention it: Simon, Simon, lovest thou me? Yea, Lord, thou knowest that I love thee; and again, lovest thou me more than these? Yea, Lord, thou knowest all things. Thou knowest that I love thee. Upon which the command was, Feed my lambs. It seemed with me to endeavor to encourage us not only to love the Lord, but to manifest our love by obedience to His commandments. After which my mind was solemnly impressed with the spirit of supplication; and being enabled to bend the knee in awfulness and fear, my mind became much relieved of its burden; and a little strength was experienced to journey forward in the tribulated path. Gracious Father! be pleased, I pray Thee, to keep me as in the hollow of Thy holy hand, from the by-ways and crooked paths which the enemy of our soul's peace is frequently presenting.

"5th mo. 7th. Yesterday the remains of our valued friend Charles Downing, and our cousin Richard Oakford, were laid in the silent grave; also two of our citizens, viz: J. T. and C. K. It was a day of mourning, and of doubts and fears respecting my own standing in the sight of Him who seeth not as man seeth, but looketh at the heart. But on waking this morning my mind was mercifully favored with more comfortable feelings; and the language seemed impressively and encouragingly spoken, "I will be with thee." Gracious Father! wilt thou be pleased to preserve me from doubting again, and keep me humble and watchful, and under Thy holy guidance.

"I was enabled to get to meeting to-day; which was a confirming season in silence. May I be favored sufficiently to praise Thy holy Name.

"24th. On looking over my past life, I impressively feel that many baptisms and close-proving seasons have been my portion, wherein faith and patience have been ready to fail; and I have had to say with David, "Are his mercies clean gone forever?" Notwithstanding this, the Lord, in His own time, hath been pleased to afford a renewal of strength to journey forward in fear and trembling. I was enabled this day in our meeting, to bend the knee in solemn supplication, that the great I Am might be pleased to give us to see with undoubted clearness, the things that belong to His honor and our soul's peace; and furnish with strength to do them. That we might be enabled from time to time to say, thanks be to Thee who hath given us the victory through our Lord Jesus Christ. The youth were also suppli-

ated for, that they might be given to see the beauty there is in holiness, and the excellence of a possession in the unchangeable truth. That by yielding obedience to the cross of Christ, testimony-bearers to His excellent name might be continued. My mind is now favored with peaceful quiet; may I be sufficiently thankful. Our friend M. A. L. was at meeting and appeared in testimony.

"27th. I was enabled to get to our Monthly Meeting. The first part of it was a time of silent exercise, my mind being impressed with a prospect of getting into the men's meeting for discipline. After an excellent Epistle was read among us from our Yearly Meeting, the desire to sit a little time with our brethren was so impressed upon me, that I mentioned it; and the concern being united with, our friends E. S. and S. S. accompanied me. I was favored to express what arose; being more especially impressed with desire that the minds of those, whose age subjected them to the draft for war purposes, might be strengthened to uphold our Society's peaceable christian testimonies. Remembering that the gospel dispensation, under which we live, was ushered in with, 'glory to God in the highest; peace on earth, and good will to men.' After this little sacrifice, I was renewedly strengthened to trust in the Lord, and hope in His mercy."

(To be continued.)

From the "American Naturalist."

The Chinese in San Francisco.

The Chinese form from a seventh to a fifth part of the entire population of San Francisco, and are seen in considerable numbers in all parts of California. They mingle with no other race; they learn or profess to know enough and only enough of the English tongue to transact their necessary business with their employers; and in San Francisco they live almost wholly in their own crowded quarters, which constitute in all respects a city by itself.

In the street they are the cleanest and neatest of people. Every man and boy has his *queue* of hair, as long as himself, nicely wrapped in silk braid, and generally rolled round the head. Their principal garment is a dark blue, close-fitting frock. Their shoes are of silk or cloth, with felt soles.

Their houses are dirty beyond description. Scores and even hundreds of them are sometimes huddled together in the same building, with blankets for their only beds, and almost their only furniture. In these houses their simple cooking is performed in the long halls into which their apartments open, over furnaces, with no legitimate outlet for the coal-smoke, which leaves its black and greasy deposit half an inch thick on the ceiling and walls. I went into several of their fashionable restaurants, and found them hardly less filthy than their lodgings, yet with a marvellous variety of complicated and indescribable delicacies, which a year's income of the establishment might have tempted me to touch, but certainly not to taste.

Their provision-shops contain little except pork, and that, seldom in a form in which it would be recognized by an unpractised eye. Every part of the swine, even the coagulated blood, is utilized; and the modes in which the various portions of the beast are chopped, minced, wrapped in intestines, dried almost to petrification, commingled with mauseous

seasonings, pique the curiosity as much as they offend the nostrils of the American observer.

Their theatres offer an amazing spectacle. Their performances commence early in the forenoon, and last till midnight. Their plays are said to be historical, and they are often continued for several days. The scenery is simple, cheap, and gaudy, and is never changed. The costumes are splendid, with a vast amount of gilding and of costly materials, but inexpressibly grotesque, and many of the actors wear hideous masks. The orchestra consists of a *tom-tom* (which sounds as if a huge brass kettle were lustily beaten by iron drumsticks), and several of the shrillest of wind-instruments. The noise they make may be music to a Chinese ear, but it consists wholly of the harshest discords, and each performer seems to be playing on his own account, and to be intent on making all the noise he can. This noise is uninterrupted, and the actors who are all men (men playing the female parts in costume), shout their parts above the din in a falsetto recitative, monotonous till toward the close of a speech, but uniformly winding up with a long-drawn, many-quavered whine or howl. The performance is for the most part literally acting. A crowned king or queen is commonly on the stage, and almost always comes to grief. Parties of armed men meet on the stage, hold sham-fights, kick each other over, and force the sovereign into the melée. Then a rebel subject plants both his feet in the monarch's stomach, knocks him down, and himself falls backward in the very act. Thus the fight goes on, and gathers fury as its ranks are thinned, till at length the whole stage is covered with prostrate forms, while lie for a little while in the semblance of death, then pick themselves up, and scud off behind the scenes. The actors live in the theatre, though they might seem to have no living-room. I went into the principal theatre one morning, before the actors, who had been performing until a late hour, had arisen; and I found them lying in one of the passage-ways in several tiers of holes, so nearly of the size of the human body that they could only have wormed themselves in feet first.

Gambling is one of their passions. There are numerous gambling-houses where the playing goes on through the whole day and night, with an orchestra like that of the theatre, enriched by a single female singer, whose song seems a loud, shrill, ear-piercing monotone, so horrible as almost to compel the belief that the Chinese ear must have as unique a structure as if it belonged to a different species from ours.

The Chinese exercise, with marvellous skill, all the mechanical arts and trades, and have as large a variety of shops as the Americans, with wonderfully rich assortments of goods, including works in wood-carving, ivory and filigree, which can nowhere be surpassed in delicacy and beauty.

Their temples or josh-houses, are small upper rooms, with hideously grinning idols, overlaid with tinsel, and covered with tawdry ornaments, on an elevated platform at the extremity of the apartment. Before these idols a dim lamp is always burning, and a table is spread for votive offerings, which are generally cups of tea or fruits. These apartments are in the buildings maintained by the Chinese Emigrant Aid Societies as reception-houses

and hospitals,—vile dens as we should deem them, but it is said, fully level with a Chinaman's notion of repose and comfort.

These people are by no means unmettling. It is said that there are none of them who cannot read, write, and cast accounts; there are among them some men of high education, polished manners, large business, friendly, yet never intimate relations with their brother-merchants.

There is a mission-house, with a school a chapel; but the missionary, an intelligent man and an indefatigable worker (by the way my guide and mentor among the theatres gambling-houses, in which he seemed very much at home, on the principle of becoming all things to all men), told me that he gained a firm hold on very few; that he found it almost impossible to keep a small congregation together through a very short service, though many came in to listen for a little while; and that the slightest disturbance the street, even the passing of a hand-organ, would instantly empty his chapel.

These Chinamen are generally without families. The men come to this country for the purpose of remaining but a few years; and if they die, their bodies are embalmed and sent home for burial, Chinese or sometimes forming a vessel's entire freight.

The Chinese question I cannot undertake to discuss here. Suffice it to say that, in opinion, all that can be hoped from the Chinese is the supply of cheap labor which is necessary for the rapid development of a new country. As to making these people citizens who even prize their rights, still more exert them judiciously, or changing their older to them satisfying type of civilization into Anglo-Saxon Christian type,—this is still beyond probability or hope. If the Chinese are to be Christianized, it must be on their own soil, and with no invasion of their central habits, except the engraving upon them of the morality of the New Testament.—A. P. Peabody.

For "The Friend."

Just by Imputation.

The attention of the readers of "The Friend" is called to the following extract wherein the writer distinctly grants justification by Faith *first* as a gift of love, does not say that sanctification follows justification, but on the contrary expressly sanctification a "making man just by that who was *before* just by imputation." He says of the believer, "he that was accounted just not having sin imputed, through repentance and faith in the love of God declared in by Christ, is *now inwardly made* more just &c., &c. The italics, which are mine, do alter the meaning.

It may not be amiss now that these doctrines, surely in accordance with the Divine will, the subject of renewed thoughtful consideration among us, thus to revive some of the statements of the first Friends.

But far be it from me to encourage the position to build our faith upon our forefathers of two hundred years ago. If we can only, "The early Friends were sound, agree with the early Friends, therefore we sound;" we have need to examine anxiously to see if we are not slipping insensibly from the one true Foundation. Surely generation must for itself apply to the ever-flowing infinite Fountain of Truth,

foundations of true Church unity are laid out broad, where this is done in sincerity mutual condensation.

J. W.

* "Though we grant (as before at large) issue of sins not to be the effect or purchase of inward righteousness or holiness, for impossible; but the free love and mercy of God; yet without the holy, sanctifying or meriting work of God in the heart, by operation of His eternal Spirit, whereby He wills of God as it is in Heaven, it is possible to have access into God's Tabernacle and holy Hill, much less to be justified Him. And indeed, as true repentance, which is the beginning of the work of sanctification, opens the way for the remission of that are past, which I call the first part of justification; so is regeneration or sanctification throughout in body, soul and spirit, as the completing of justification as sanctification—consequently it is the second part of justification; because it is a making man by nature, who was before just by imputation; that is, he that was accounted just by having sin imputed, through repentance faith in the love of God declared in and Christ, is now inwardly made more just as made "Holy, as God is holy." (Lev. 7.) "Perfect, as his Heavenly Father is." (Matt. v. 48.) "Righteous, even as is righteous," (1 Jho. iii. 7.) through the actual working of the Holy Ghost.

WILLIAM PENN."

I know not from which part of William's works the above extract is taken, but undoubtedly sets forth the faith ever held by Friends on the points mentioned. Where terms sanctification and justification are in their full signification, the former as *being holy*, and the latter as *making just*, we see that it is a matter of importance which is employed to express the condition in, or to be attained. Friends have not "that sanctification follows justification" in this sense; but where a distinction is made in terms, that justification in the sense of being made just by nature, or his becoming "partaker of the Divine nature," follows justification, or keeps pace with it. See the Philadelphia Yearly Meeting of months last, page 6.

There is another sense in which the term is used, denoting remission of past through the forbearance of God, purchased by the atoning sacrifice of Jesus Christ. (Ibid page 5. What Wm. Penn means by it by imputation) is in this sense, and he more fully sets forth his own views, and the views of Friends on this point, viz:

Fourthly. We cannot believe that Christ's death and sufferings so satisfy God, or justify us, as that they are thereby accepted of; that they are, indeed, thereby put into a state capable of being accepted of God, and that, *through the obedience of faith, and sanctification of the Spirit*, are in a state of acceptance: for an ever living man *justified before God*, is self-condemned; or that any man can be in Christ who is not a *new creature*; or that God looks upon men *otherwise* than they are.

We think it a state of presumption, and of salvation, to call Jesus Lord, and not the work of the Holy Ghost: Master, and not yet master of their affections: Saviour, yet not saved by him from their sins: Redeemer, and yet they not redeemed by him

from their passion, pride, covetousness, wantonness, vanity, vain honors, friendships, and glory of this world: which were to deceive themselves; for 'God will not be mocked, such as men sow, such they must reap.' And though Christ did die for us, yet we must, by the assistance of his grace, 'work out our own salvation with fear and trembling;' as he died for sin, so we must die to sin, or we cannot be said to be saved by the death and sufferings of Christ, or thoroughly justified and accepted with God.

"In short, justification consists of two parts, or hath a twofold consideration, viz, justification from the guilt of sin, and justification from the power and pollution of sin, and in this sense justification gives a man a full and clear acceptance before God. For want of this latter part it is, that so many souls, religiously inclined, are often under doubts, scruples, and despondencies, notwithstanding all that their teachers tell them of the extent and efficacy of the first part of justification. And it is too general an unhappiness among the professors of christianity, that they are too apt to cloak their own active and passive disobedience with the active and passive obedience of Christ. The first part of justification, we do reverently and humbly acknowledge, is only for the sake of the death and sufferings of Christ: nothing we can do, though by the operation of the Holy Spirit, being able to cancel old debts, or wipe out old scores. It is the power and efficacy of that propitiatory offering, upon *faith and repentance*, that justifies us from the sins that are past; and it is the power of Christ's Spirit in our hearts, that purifies and makes us acceptable before God." For till the heart of man is purged from sin, God will never accept of it. He reproves, rebukes, and condemns those that entertain sin there, and therefore such cannot be said to be in a justified state; condemnation and justification being contraries: so that they that hold themselves in a justified state by the active and passive obedience of Christ, while they are not actively and passively obedient to the Spirit of Christ Jesus, are under a strong and dangerous delusion; and for crying out against this singular imagination, not to say doctrine, we are staged and reproached as deniers and despisers of the death and sufferings of our Lord Jesus Christ. But be it known to such, they add to Christ's sufferings, and crucify to themselves afresh the Son of God, and trample the blood of the covenant under their feet, that walk unholily under a profession of justification; 'for God will not acquit the guilty,' nor justify the disobedient and unfaithful."

Primitive Christianity Revived, chap. viii.

The truths of the gospel are the same in all generations. As our early Friends were sound in their understanding and application of them, so those in the present generation who maintain them in the same understanding and application, are sound in christian faith, and are true Friends. They must indeed come to the Fountain of living waters to do so. Friends run into confusion and danger so soon as they deviate from the well-marked footsteps of that band of Christ's companions who labored to gather and establish our religious Society.

It appears to have been for this same purpose that the Philadelphia Yearly Meeting issued its last epistle.—*Errors.*

Selected.

On Blessings.

How varied is the estimation we place upon our blessings! How different the aspects in which we view them! Health is often spoken of as among our greatest blessings, and does really deserve a place among them. But to how many of us has sickness proved even a greater! That which most tends to purify the heart, and draw it unto God—the Fountain and Source of all good, must surely be the greatest. But of all the gifts bestowed by the bountiful Giver there is none for which my heart has so often poured forth the tribute of thanksgiving and praise, as for that gift of gifts, a grain of living faith; that faith which looks up to the great Disposer of events with calm, confiding trust. This to me has been the richest of all gifts, the sweetest of all consolations. How often have I said in the secret of my soul, "take what Thou wilt, only grant me this." Health, home, or friends are nought compared with it, since, though surrounded by all these enjoyments we are miserable without it. How precious is its influence in times of trial or danger! How cheering in seasons of affliction! And how like an anchor to the soul when tossed as with a tempest and not comforted! Happy is he who is enabled so to walk in that pure and perfect way, as to preserve this child-like confidence unbroken. A consciousness of doing well gives life and sweetness to all our enjoyments, and when this consciousness is wanting, terrestrial things can afford no comfort. How beautiful are those lines of Cowper:

"From Thee is all that soothes the life of man,
His hind endeavor, and his glad success,
His strength to suffer, and his will to serve.
But, Oh! Thou bounteous Giver of all good
Thou art of all thy gifts, Thyself the crown
Give what Thou canst, without Thee we are poor,
And with Thee rich, take what Thou wilt away!"

Animals that Chew the Cud.—Ruminating animals gather their food rapidly, give it a few cuts with the teeth and swallow it. It goes to an interior receptacle, where it is moistened; this is very essential if it be dry hay. When the animal has filled himself, he masticates the food thus stowed away in his stomach, raising it cud by cud. When a portion is completely masticated, it passes to another receptacle, and the progress of digestion goes on. Thus an ox, if left to himself, will raise and masticate all his food thus stowed away in his stomach. If he be pushed and worked hard, and does not have time to masticate, he falls off in flesh, his health is poor, his digestion incomplete.

The horse, on the contrary, however much in a hurry he may be, must masticate each mouthful before he swallows it. A hungry ox, let into a meadow, will fill himself in twenty minutes, while a horse would want at least an hour and twenty minutes to take the same amount of grass. The ox, deer, sheep, goat, chamois and rabbit, being the natural prey of ferocious beasts, are endowed with the extra stomach in which hastily to stow away the food without mastication. This may, perhaps, be regarded as a wise provision of Nature, enabling them to sally forth where the food is plenty, and in a short time fill themselves and retire to a place of safety to ruminate their food at their leisure.—*Late Paper.*

Selected.

THE FLOWERS OF THE FIELD.

Sweet nurslings of the vernal skies,
 Bathed in soft airs and fed with dew,
 What more than music in you lies,
 To fill the heart's fond view!
 In childhood's sports, companions gay,
 In sorrow, on life's downward way,
 How soothing! in our last decay
 Memorials prompt and true.

Relies ye are of Eden's bowers,
 As pure, as fragrant, and as fair,
 As when ye crown'd the sunshine hours
 Of happy wanderers there.
 Fall'n all beside—the world of life,
 How is it staid'd with fear and strife!
 In reason's world what storms are rife,
 What passions range and glare.

But cheerful and unchanged the while
 Your first and perfect form ye show,
 The same that won Eve's matron smile
 In the world's opening glow.
 The stars of heaven a course are taught,
 Too high above the human thought;
 Ye may be found if ye are sought,
 And as we gaze we know.

Ye dwell beside our paths and homes,
 The paths of sin, our homes of sorrow,
 And guilty man—the world of woes,
 Your innocent mirth may borrow.
 The birds of air before us fleet,
 Cannot brook our shame to meet—
 But we may taste your solace sweet
 And come again to sorrow.

Ye fearless in your nests abide—
 Nor may we scorn, too proudly wise,
 Your silent lessons, unmedic'd
 By all but lowly eyes:
 For ye could draw the alarming gaze
 Of Him who worlds and hearts surveys;
 Your order wild, your fragrant maze
 He taught us how to prize.

Ye felt your Maker's smile that hour,
 As when he paus'd and o'erd' you good;
 His blessing on earth's primal bower,
 Ye felt it all renewed.
 What care ye now, if winter's storm
 Sweep ruthless o'er each siltken form,
 Christ's blessing on your heart is warm,
 Ye fear no vexing mood.

Ah! of thousand bosoms kind,
 That daily dart you and your cares,
 How few the happy secret find
 Of your calm loveliness!
 "Live for to-day! to-morrow's light
 To-morrow's cares shall bring to sight,
 Go sleep like closing flowers at night,
 And heaven thy mourn will bless."

The Sargasso Sea.

(Concluded from page 170.)

Wherever there are large accumulations of seaweed, it necessarily follows that there should be a population of some kind supported by them. Speaking of the kelp (*Macrocystis purifera*), which, though rooted to the bottom, extends perhaps 60 fathoms from its anchorage, Darwin says: "The number of living creatures of all orders, whose existence intimately depends on the kelp, is wonderful. I can only compare these great aquatic forests of the southern hemisphere with the terrestrial ones in the intertropical regions. Yet if in any country a forest were destroyed, I do not believe nearly so many species of animals would perish, as would here from the destruction of the kelp." And intelligent navigators have remarked the same of the gulf-weed. Capt. Grey, in his voyage from Australia, remarks: "In lat. 29° north, we entered a portion of the sea covered with patches of seaweed, around which swarmed numerous eel-like fish, crabs, shrimps, and little blue-fish. These last swarm under those floating islands,

sometimes leaving them for a little distance—but they always returned, or swam to another. The crabs crawled in and out among the seaweed, and other fish of a large size came to these spots to deposit their spawn; so that we were in an archipelago of floating islands, teeming with busy inhabitants and animal enjoyment." These masses of floating weed, indeed, serve as the retreat of an innumerable host of marine animals, of which some live in the midst of their inextricable labyrinths, and others, having been once entangled in them, cannot escape, and are forced to abandon themselves to the current of these immense sea forests, in the midst of which they are enclosed.

On returning from China in 1867, it was my fortune to cross the Sargasso Sea early in July; and moreover, having several days of calm weather, I spent some time upon the chains, armed with a grapnel, by means of which I, from time to time, was able to raise bunches of sea-weed upon deck, for examination. Nearly every bunch of weed, so obtained, was found to be peopled with similar creatures, Polyzoa, Polyps, Annelids, Crustacea, Molluscs, and Fish. Though not absolutely connected with the weed, yet as occurring side by side with it in the same latitude, I may mention magnificent specimens of Physalia, or Portuguese man-of-war, which sailed by in the beautiful calms of that region—their blue-tinted bladders were eight inches long, and nearly three inches above the water—their long threads trailing beneath, and giving shelter to a number of little banded fishes, which seemed to find protection in this equivoical position.

An interesting Crustacean is the *Neptunus pelagicus* or *Lupea pelagica*, so called from his splendid swimming capabilities, which render him, like Neptune, the master of the sea. I had been told of a large crab seen swimming by the ship in the open ocean, and shortly afterwards had its existence verified, by taking the above-named crab in a towing net in this region. This species swims with great ease and quickness, usually near the surface, and can rest not only upon the drifting seaweed, but even upon the top of the water, remaining suspended motionless at pleasure. Its form is well adapted for speed, the carapace being remarkably flattened and extremely wide, terminating on either side in a long spine, and having its anterior margin strongly serrated. Its anterior legs are robust and armed with spines, and the claws are furnished with long sharp pinners, of a singularly trenchant character. It is a very shark among crustacea, swift, certain, and deadly; graceful and tiger-like in its movements, never tiring, or needing the rest which most other swimming animals seem to require. Swimming to a patch of Sargasso, it would seem to prey upon its numerous inhabitants, and then swim to another, which in turn it depopulates—a very scourge of these floating colonies.

It is a circumstance well worthy of remark, that all the animals I found harboring in the Sargasso weed were of the same general tint as the weed itself, assimilating themselves so closely, indeed, in color, that it was often difficult, at once, to distinguish them. The gulf-weed is usually (as has been observed) of a rich lightish brown color, with certain parts, as the stems, of a darker brown. The most numerous animals, the Scyllæes, were also of a general light brown tint, and the crabs, al-

though prettily marked, were all a light bro- so that when they got into a mass of weed, it was no easy matter to find them again. Various little shrimps were also the same color, and the Antennarius, although exquisitely marked and mottled, blended tint beautifully with the weed in which it sided. Even the *Neptunus pelagicus*, though usually described as grayish-green, with low spots, was here of a clouded reddish-bronze tint, little differing from that of the Sarg. The object of such assimilation one can imagine to be otherwise than protection; although the enemy was equally protected, its prey received the benefit of concealment from it, as it did in its turn from larger enemies, to which it was doubtless animal while in its relation to the small creatures which it fed, its size and activity would be sufficient to counterbalance any advantage they would lose from the concealing color of their enemy.

I met with a curious instance of prevail tint also in the Indian Ocean, where the had an intensely deep blue color, of which every animal captured partook. Not one were the Janthinas of their character violet color, but there were small violet erich blue Physalæe with violet threads; a beautiful crystalline Crustacea (*Phyllosoma Scylleriopsis*, &c.) almost transparent, but all more or less tinged with violet. As it was impossible to see these animals in the sea from above, doubtless, their color must be a great concealment from their enemies, in an ocean where this color prevails.

There can be no doubt that the presence of the Sargasso Sea, by affording harbor and pasture for these animals, even the least of them, owing to their abundance, must be an important influence upon the Fauna of Atlantic Ocean. For so inextricably are fortunes and lives of races of animals bound up with one another in the struggle for existence, that this vast feeding-ground must be a great supplies of food to predaceous fish which do not need the protection it affords. We are informed that the pilchards have the Cornish bays, where they formerly abounded, on account of the sea-weed being cut off the rocks for manuring purposes,—thus destroying the small Crustacea, which form the intermediate feeders between the weeds and the fish. And so we may imagine that in the event of any change in the elements of the Gulf Stream which should materially diminish or alter the position of Sargasso Sea, the effects would be felt through the great fish population of the Atlantic in widening circles, which would probably not leave unscathed the vast banks of cod, herring which so largely supply our markets with wholesome food.

When an unavailing anxiety has possessed my mind, about the situation of things among us, and the wilderness state of the church have been led to conclude that it is not consistent with the Divine will, that we should ever impatiently inquiring, "What wilt thou do for thy great Name?" but that we should rather centre deep in our own minds, and signedly and faithfully co-operate with the work on the earth; feeling our minds so directed as only to pray for that which is the mind of the Spirit, even if it requires the petition, "feed thy people with thy rod."—S.

For "The Friend."

Although considerable time has elapsed since the dates of the following letters, we think our readers will be interested in their perusal. It is not often that such an excursion into the "wild west" is made by our female Friends.

Seneca, Mo., 8th mo. 16th, 1870.

TO THE FRIENDS:

Perhaps a letter from this wild, uninhabited country, might interest some of the readers of "The Friend." On the 13th, a party left Ashland on a little exploring tour. We were on the train at 8 1/2 A. M., passing through one of the most wild, picturesque country I ever saw. "This said this was once a vast prairie, lying even to the Rocky Mountains; but some parts of it are densely wooded with tall timber, and is bid fair to be valuable some day. Pearce city is 90 miles from Marshfield, which is the present terminus of the South-Western Railroad, and is a town of only four thousand inhabitants and over one thousand inhabitants. A man there informed us, that months ago there had never been a nail on in that place. They now have a bank, wool, several stores, and it is quite a trading place. Here our hack, sent from Seneca, arrived us, and we were soon on the road, driving our way through dense forests, and extensive prairies, apparently as boundless as the ocean. Our driver was a good natured, gentlemanly person, and allowed the ladies to take turns in driving. There was no monotony to make us dull, but everything was new and beautiful, and called forth continued exclamations of pleasure, till our list of objectives were nearly exhausted, when an accident changed the scene. One of the girls was driving, had just given up the lines as the driver, when the hind wheel struck a stump and shattered it, and we got out, I do not know, for we were well packed in. The first thing I knew, some one had me by the arm, trying to pull me out at the side of the hack, while the driver was holding or trying to hold the spirited animals. Fortunately, the men came along just in time to help me up the broken limbs of the vehicle, and started off to walk to a town three miles away; leaving the men of our party to get out with the wreck. Soon a man with a horse overtook us, and asked us to ride, saying, "You black cloud will bring a storm." We packed in, and soon the rain did pour. The first house we saw we bid adieu to our friend and took shelter. There was no shelter in the shanty, and we had it to ourselves a little time. The rain abating, a woman made her appearance and offered us clothing that might dry our own, which we did as soon as possible, wishing to be ready to join the party when they came along. The driver went to go to the nearest town to get another horse, in which we were soon seated and drove to Neosho, the county seat of Newton county. The principal hotel was kept by a German, and as we were informed, he could not have no accommodation for ladies. As we never stopped, had our horses fed, &c., and were ready to start again at 10 p. m. The driver was very dark and threatening, but had to go. There was a ride of 21 miles to Pearce city; but we were all brave and ready to do almost anything. After we were comfortably seated in our no-top, trying to nerve ourselves for the rout, a man on the porch said,

"What will you do if three or four wolves come down from the bluffs to you to-night?" But all this did not alarm us; we had heard much of western life, and this was knowing it. We were soon on the road, and the rain descended in torrents. I had one umbrella, and we had borrowed the only one in Neosho (beautiful water) and we must do the best we could with them; but the best was bad enough. Five hours brought us to Seneca, and not only were we thoroughly drenched but our baggage also. One other and myself had to empty the contents of our valises into a tub of water, and this morning is favorable to dry them. We are now at Seneca and two of our party have taken a ride on horse back, and the rest footed our way over the beautiful bluffs to watch the Indians come into town. To-morrow we start for ten days tour through the territory and Kansas. We take provisions along and tent out.

Sulphur Springs, 8th mo. 18th, 1870.

Well here we are in the land of the Aborigines. Our company consisted of eleven, six females and five males. The American caravan left Seneca at 8 A. M., winding its way among the beautiful wilds of mountain and prairie, until we reached the Indian council-house. Here all the chiefs of the many tribes meet to transact business for the nation. This council-house is to the Indians, what our capitol at Washington is to us, but not like it in architecture. It is a frame house with a door in one end, propped up with a stick of wood; is neither lathed nor plastered; has no chimney, only three openings in the top of the roof for the smoke to escape. The furniture consists of a row of benches, formed by the sills, and three copper boilers, in which they prepare the food for these grand occasions. This is the season for the green corn dance. They cut the corn from the cob, put it in these copper boilers and make a kind of soup which they serve around. After which they decorate themselves with false faces, ingeniously made of corn husks and pieces of gay ribbon and flannel. The ankle decorations consist of strips of bells (as they term them) which are pieces of leather, two inches wide, thickly set with deer's hoofs, that are fastened on by strings run first through the hoof, and then through the leather. A strap goes twice around the ankle, above the moccasin. The head chiefs wear neck and shoulder ornaments made of cloth and beads. Paint and feathers complete their costume. The women wear, on these occasions, dresses trimmed with yellow and red, and a red silk handkerchief on their heads. The dance is merely a hop around, and thanking the "Great Spirit" for the plentiful crops with which He blessed them.

Another dance is the dog dance. The Indians and all others who wish to attend, go up to the capitol, taking with them a white dog, which they decorate with many colored ribbons, for a sacrifice. They then hang the dog and dance round, chanting and making strange noises to the "Great Spirit," after which they cut it down and burn it. The ashes they place in an urn and bury, chanting praises all the time to the "Great Spirit." Except on these occasions, and when under the influence of liquor, the Indians are a quiet people. We found them very kind and glad to entertain strangers. Their houses are mostly log and daubed with mud, with dirt floors,

like their capitol. There are several tribes that meet at this capitol—Delawares, Pools, Senecas, &c. They can all speak our language, though each tribe has a language of its own. These tribes are only half civilized; some of them have married whites, which is the only means by which the whites can gain a permanent residence in the territory. Any white man marrying an Indian woman is entitled to 160 acres of land, and each successive one the same. If he has six wives he gets 960 acres. Some of the Indian women are very beautiful. All pure Indians have long, heavy, straight black hair.

Four o'clock, p. m. found us at Sulphur Springs on the Grand river. There is no hotel at these Springs. Persons come with tents and camp out, so as to enjoy the medicinal properties of the water. There were a dozen or more families of invalids here when we arrived. We pitched our tents on the banks of the Grand river, some two or three hundred yards from the others, and here we were, in the midst of wolves and deer; but the great camp fires kept them at a distance, and we had one that illuminated the whole surroundings. Here we took our meals and slept. The men of our party fished, hunted and shot game. We all enjoyed ourselves in various ways. The Indians presented us with melons, &c., also let us have the use of their canoe. There is only one house at the Springs; that is occupied by an Indian family. The Grand river is rightly named. Its palisades are nearly equal to those of the Hudson. The strata are beautifully blended and shaded. We very much enjoyed the echo. It repeated every word we said perfectly. But I must leave you for the present, toorrow we start for the 20 mile prairie.

Marshfield, 16th mo. 6th, 1870.

If not too late, I would like to tell the readers of "The Friend," something more about our tour through the Territory. The illness of one of our party, and my own sickness has prevented my writing sooner. The hour arrived when we must bid adieu to the Grand river and its surroundings. Yes, lovely scenes, we have enjoyed your quiet beauty; and will now leave you to the protection of Him who formed you.

On leaving the Springs we entered the twenty mile prairie, an extent of land, the prospect over which is bounded only by heaven's blue expanse. How we luxuriated in this labyrinth of ocean-like grandeur. O, the beautiful clouds that wound themselves about the shoulders of the distant hills! How lazily they floated along! But 'tis mockery to attempt description. Only think of traveling twenty miles without seeing a house, tree or drop of water, except the dew grains. But few travelers tent out on these prairies, on account of the scarcity of water. The grass is high; on some parts, it measures four or five feet. The Indians burn these prairies every winter, which drives the wild game into the forest, where they hunt them. On ascending one of these proud looking elevations, a flock of wild turkeys called forth the energies of the men, and we were left alone to guide the caravan. We very much enjoyed their eagerness to get game. Miles and miles did they stealthily creep through the tall grass—sometimes with little success; then again they would come richly rewarded. The dogs seemed to be weary of "well-doing,"

and refused to do their master's bidding. The consequence was, they were badly stung with powder, which reminded them of their duty. We drove on till we reached about the middle of the prairie, and whilst waiting for the gunners, a wagon and several travelers stopped and inquired, "Where are you going and where are you from? Do those men yonder belong to these wagons?" I answered "yes, all this train belongs together;" to which one of them said, "Are you going to Texas?" I replied, "no, we are traveling to see the country and learn something of the habits of the Indians. They did not seem to be in a hurry, but questioned us extensively till the gunners of our party turned their steps towards us; then they moved on, as doubting our truthfulness. The sun is very hot on the prairies, yet the air was pure and we could see the distant hills rise before us like mountains capped with snow clouds. Arrived at the Neosho river, which is a beautiful stream uniting with Spring river and emptying into the Grand. Here we pitched our tents and enjoyed the scenery till time to journey on towards Seneca. Every thing seemed to welcome us now. We had our trials in the beginning. Our trip home was fraught with many pleasantries. We had a stage ride with an Indian editor, who gave us much information about the tribes at Tallaqua; their manners of living, their school, &c., &c. We parted at Marshfield, our starting part, highly delighted with the trip.

H. H. B.

For "The Friend."

Amid the trials which during the present day are permitted to overtake the Society, it is somewhat encouraging to observe, that our various and peculiar testimonies are gradually obtaining the notice and serious attention of the reflecting part of the community, let them belong to what religious denomination they may, or to none. The writer's attention was recently arrested by an article on the subject of "Civil Oaths," the arguments in which are so in accordance with the views ever held by Friends on the subject, although written by a person of another denomination, that it was thought it might be interesting to the readers of the Friend.

That all of the various testimonies which distinguish the Society of Friends from other religious professors, and which undoubtedly have their foundation in the everlasting Truth, will yet prevail, and will cover the earth as the waters cover the sea, there can be no doubt; and seeing that these things are so, and that instead of losing ground, they are steadily increasing in importance and value, why should any be discouraged, give up the warfare, and cast away the shield of faith, as though it had never been anointed, but let us rather "gird up the loins of our mind, and hope to the end."

W. P. T.

The Theory of the Civil Oath.

Dr. Webster defines an oath to be "a solemn affirmation or declaration made with an appeal to God for the truth of what is affirmed." To this he adds the following explanatory observations: "The appeal to God in an oath implies that the person imprecates his vengeance and renounces his favor, if the declaration is false; or, if the declaration is a promise, the person invokes the vengeance of God if he should fail to keep it." John Mil-

ton, in his "Christian Doctrine," says: "An oath is that whereby we call God to witness the truth of what we say, with a curse upon ourselves, either implied or expressed, should it prove false."

Such a definition at once raises the question in every thoughtful mind whether any man can, without the greatest presumption, take an oath, and especially whether the State has any right to compel him to do so. If it be a mere form, having no mental reality, as is often the case, then it is an act of sacrilegious trifling with God—indeed, a species of religious hypocrisy. Upon this supposition the man who professes to swear, does not in reality swear at all. He simply goes through the form prescribed by law.

If, however, the oath be mentally real, then the person who takes it asks God to curse him upon an hypothesis which is not only possible, but considering the infirmities of human nature, more or less probable, and in too many instances a fact. Where, then, is his authority for invoking the penal curse of God upon himself on any supposition—for asking God to become a judicial party to the case, armed with the thunderbolt of his wrath, and beseeching him to hurl it upon him in the event of his not being absolutely truthful? Where is the man who, in the character of a witness sworn to speak the truth, or in that of a public officer sworn to discharge the duties of his office to the best of his ability, can so guarantee to himself his own integrity as to justify him in imprecating upon himself the divine vengeance in the event of failure? It would seem to be much more sensible to ask God to forgive him, should he fail to speak the truth or keep his promise. If the oath be a mere form, then it is not only an act of sacrilege, but has no power to dispose one to the utterance of truth. If it be mentally real, then it involves a very questionable presumption, while it makes a most unnatural prayer. In either aspect of the question the omission of the oath would seem to be better than the practice. Clearly the State has no right to compel one, by swearing, to imprecate the curse of God upon himself against his own consent. It would be an absurdity and an outrage to make an oath compulsory.

The ordinary plea for swearing men is that of *practical utility*. We are told that it increases the certainty that witnesses will speak the truth, and that public officers will faithfully perform their duties; and hence that, as means to this end, it is both allowable and proper. This is a question of fact; and the fact is that we have the result, in multitudes of cases, perjured witnesses, and in a much larger number of cases, perjured officers of law. As a preventive of falsehood the civil oath is a failure; and it may well be doubted whether it has ever added any considerable influence in favor of truth. If one has no fear of God before his eyes, swearing him that he will speak the truth or discharge his official duties is not likely to increase the certainty that he will do so. The oath is not a process of reformation, but an appeal to moral sentiments already existing; and if these sentiments are not present, then the oath has no power to secure the utterance of truth. If, on the other hand, one be a man of habitual veracity, he will speak the truth, and discharge his official duties, whether sworn or not. Either then the oath is *useless*, and for this reason it may well be omitted; or it is

unnecessary, and for this reason we should come to the same conclusion. Those we need to be sworn in order to make truthful will not be made so thereby; those who are already truthful do not need to be sworn. Sworn witnesses or sworn officers are not regarded as any more credible reliable than those who simply affirm, but cline on conscientious grounds to take an oath.

The manner in which, and the men whom the civil oath is usually administered add very little, if anything, to the solemnity and solemnity of truth. There is nothing in the usual form of swearing to impress the mind or awaken in it any special sense of responsibility to God. If it be anything but empty and meaningless form, it is an immensely solemn thing; and yet the ordinary process of administration is so stereotyped, much a mere matter of routine and usage, that probably not one person in a hundred has any increased sense of the presence of God, or the sanctions of truth as arising from his government and attributes. Those who administer the oath are not necessarily religious men; they may be, religiously considered very bad men; and the same may be true of those who take the oath. The mockery of the amazing solemnities involved in the ceremony of swearing men, if there be anything in it beyond the mere form, is enough to stand one who thinks soberly upon the subject. The idea and the practice are so antagonistic, and the results are so little in accordance with the idea, that one may well hesitate to the expediency of the oath at all. The farce of the form is in painful contrast with the assumed solemnity of the theory. It makes sacred things so commonplace, handles them with such unthinking carelessness, that they really cease to be sacred. The administrator swears the witness or officer with about as much solemnity as would have in eating his breakfast or writing his name on a piece of paper; and the witness is in about the same predicament, so far as the religious sanction is concerned. Either the oath ought to be abandoned altogether, or we ought to have an entirely new dispensation for its administration.

We believe, moreover, that the civil oath so far as it makes any impression, has a tendency to make a false impression on men's minds. It proceeds upon the supposition that one who is under oath is in some way the subject of an *increased* obligation to speak the truth beyond what he would have if he were not thus sworn. If this be not the idea, then there is no use in swearing anybody, and if it be the idea, then it is manifestly false one, since no one can increase the obligation of veracity by any act on his own part. To imply a distinction in the obligation to lie under ordinary circumstances, and to lie under oath, is virtually to lower general obligation of veracity, and so to pair the law of truth in the consciences of men as to educate them to swear falsely. To believe that the civil oath in this respect defeats its own end, by implying a false distinction; and that, on the whole, it rationalizes the sense of truth than promotes it. Those who are under special obligations to be truth-tellers only upon extra occasions are in danger of regarding themselves as licensed to lie at other times, and forming habits of falsehood, from a diminished sense of obligation, as will impair their scrupulousness.

lying when under oath. The way to men to lie is to have two standards of honesty—the one particularly solemn, and used occasionally, and the other not so solemn, in constant use. Educate men under the one as a sort of *lower* law, and they will be to think common lying comparatively small offense, and thereby learn how to violate uncomon lying, so far as the religious sanctions of an oath have any power to them. The man most likely to speak truth is just the man whose sense of the violation of truth is not, and cannot be induced by the oath. So also the person least liable under oath is the very one most addicted to lying at ordinary times. It is the *oath* previously established, and not the created by the swearing process, which rimes this question of credibility.

For these reasons we think that it would enter for the State to dispense with the oath altogether, and require witnesses or jurors of law simply to affirm, making falsehood a penal offense and official unfaithfulness a ground of impeachment. This is right for the State, without attempting to insist a religious rite. Let it punish testimony as a crime against the State, impeach unfaithful officers; and it will do the only motive which it can successfully wield in favor of truth. This we regard as simple and proper. It is just the sanction which falls within the province of the State. The fact that the State permits others to affirm without being sworn is a natural admission that they need not be sworn to. The exceptional case provided for had rather be the general rule. Society would in our judgment, lose anything by sustaining a usage which answers no good end, to which there are certainly very serious objections.

It is the opinion of some religious sects that oath is expressly forbidden by the teaching of the New Testament; and this opinion is inclined to regard as correct. Jesus said, "Again, ye have heard that it hath said by them of old time, Thou shalt not swear thyself, but shalt perform unto the Lord thine oaths. But I say unto you swear at all; neither by Heaven, for it is God's throne; nor by the earth, for it is his footstool; neither by Jerusalem, for it is the city of the great King. Neither shall thou swear by thy head, because thou canst not make one white or black. But let your communication be Yea, yes, Nay, nay; for whatsoever more than these cometh of evil." James says: "But above all things, my brethren, swear not, neither by Heaven, nor by the earth, neither by any other oath; but let your yea, yea, and your nay, nay, be lest you fall into condemnation." These seem to be very exclusive as well as emphatic prohibitions of all forms of swearing accompanied by the direction that we should confine ourselves to simple affirmation or negation, and are no other passages in the New Testament which restrict their application, and do not allow the civil oath an exception. The argument against swearing in private conversation is just as good against swearing in official forms. The practice is as useless in one case as in the other; and the same limitations are equally applicable in both.

Many of the Christian fathers understood the Saviour's word as condemning all oaths, but with exception. Tertullian says: "I say

nothing of perjury, since *swearing itself* is unlawful to Christians." Chrysostom says: "Do not say to me, I swear for a just purpose; it is no longer lawful for thee to swear, either justly or unjustly." This is the view of the Quakers—a set of religionists who decline to be sworn, and than whom no class of men is better attested for truth and veracity. If Quakers need not be sworn, then why swear any one? If we swear any, then why not swear all? If the oath in the hands of the State be a lawful power to make more certain the utterance of truth, then why not use it in private life? What authority has the State to use it which the individual does not equally possess? There can be no pretence that the State is required to impose the civil oath by any law of God; and, so far as we can see, it has no exclusive right to use it which would not be common to itself and all other parties. We object to the use altogether, believing it to be morally unlawful for any man to take an oath; and, hence, equally so for any earthly power to impose it.—*N. Y. Independent.*

Reptiles in England.—The number of reptiles is so small, that there is no temptation for a boy to begin a collection in that department, or for a man to devote himself to the study. Therefore, while Great Britain has produced many botanists, conchologists, and ornithologists, she has never produced a single herpetologist. But the state of things is different in Australia, which is the very paradise of snake collectors. From six to ten specimens, belonging to different species, were captured some years ago, under a single stone, not many miles from Sydney; and to go snake hunting has been for years a pastime with the boys, and the collecting-bag often forms a part of the outfit of the hunters, who have not forgotten the tastes of their boyhood. What adds zest to the pursuit is the fact that two-thirds of the species and fully nine-tenths of the individuals are venomous. About 80 species are described and figured in a work on Australian snakes, by M. Krefft, curator of the Australian Museum.

Motion in the Leaves of Rhus toxicodendron.—Botanical writers tell us that sections of a leaf of *Schinus molle*, thrown in water, have a peculiar jerking motion. Under the name of "Austral Myrtle," I have received seeds from California, which prove to be this plant. The leaves have the motions described. I thought perhaps our own representatives of this order (*Anacardiaceae*) might present the same phenomenon. I find that this is the case with *Rhus toxicodendron*. Small sections of a leaf leap about in water, but not with the same force as do those of the *Schinus*. *Rhus aromatica* though so nearly allied, presents, to me, no motion. I have tried *Rhus glabra*, *R. copallina* and *R. typhina*, but find no motion in any but in the one before named—the common "poisoning." A friend to whom I have suggested it, however, tells me that his gardener finds that at "some hour in the day" these also will leap about. The *Schinus* and *Rhus toxicodendron* with me exhibit their saltatorial feats at any and at all times.—*Thos. Meehan.*

In some men the most important parts, the prime faculties, are never subdued; and, even while persons talk of faith in God and christianity and religion, there are those unsubdued

faculties that have all the essence of the spirit of the world.

THE FRIEND.

FIRST MONTH 28, 1871.

The pleasures and benefits of social and religious society must be greatly prized by every one capable of estimating how much we are individually dependent, one on another, for the means of self-gratification and improvement. It is, however, important to our welfare to be, in one sense, our own master; that is to be so brought under the government of what we know to be the Truth, as not to be unduly influenced by the opinions or example of others, or rest satisfied merely because we are in accord with those around us. Thus, though we cannot be independent, we may be free, for true freedom has its source within. If this is desirable in the more momentous concerns of external life, it is indispensable in the all important work of salvation. In this solemn engagement there can be no partnership, no release from personal accountability, no division of labor, or lessening the necessity, for its thorough accomplishment by co-operative association; no escape from the terms laid down by our alseeing Judge by pleading the example of others; but every one must work out his own soul's salvation with fear and trembling, under an humbling sense that God is working in him to will and to do of his own good pleasure.

There are few things in business, in science or literature, that cannot be communicated by one mind to another; but true religion must spring forth in every individual soul, it cannot be imparted by human means; and however much we may be versed in the *recorded* truths of the *gospel*, unless the newness of life required by it is experimentally known, our talk about them is empty sound; the true knowledge of heavenly things cannot be conveyed through an un-sanctified medium. Thus the work of regeneration must be begun and carried on between each individual soul and its Redeemer and Sanctifier. In the warfare against evil in all its forms, every one awakened by that measure of Divine Grace which alone can bring salvation, finds that his greatest enemies are those of his own household, and that the contest against the foe abroad will not be effectual, until the traitorous enemy within is in good measure brought into subjection. Where Satan's seat is there must the battle be carried on, in order that his strongholds may be pulled down, before the kingdom of Christ can be set up, and the peace and joy attained that accompany his government. However others may speak or act, each one must know for him or herself the strong man who has kept the heart to be bound, to be cast out, and his goods spoiled, by the stronger than he, the Holy Spirit, working in secret there, before Christ will take up his abode with the soul and permit it to eat and drink with Him.

We have our individual characteristics. Every one does not inherit the same propensities in equal force, nor does every one find pleasure in the same indulgences. It is therefore in our own hearts only, unconnected with others, that we can become duly sensible of our sinfulness, through the illumination of the Light of Christ, shining there as in a dark

place. By this, however our sins may be even concealed from others, or from our own unaided vision, they are searched out, and the conviction raised that they must be abandoned. As it is in the heart we must combat with the lusts and infirmities of the flesh, so it is from it the effectual fervent prayer: must arise to Him who is Omnipotent and yet touched with a feeling of our infirmities, to grant us his aid to strive against the wicked one, and there it is we must know our petitions answered.

In proportion as we are thus shown our sinfulness, we become conscious of our helplessness, the impossibility of our atoning for past sins, and our inability to contend against the strong propensities of our fallen nature, or to guard ourselves from the stratagems of Satan. We feel that the indispensable but mysterious work of a new birth, cannot be effected by any power we naturally possess, but that the Author of all good alone, can create us anew in Christ Jesus, by his quickening Spirit. A literal belief alone of the propitiation made by Christ on Calvary, we find will not avail, but that we must know the blood of sprinkling to be applied in our own hearts, through that faith in the Lamb of God, which is the operation of the Holy Spirit.

Thus the whole work of salvation, from conviction and conversion to sanctification and perfect redemption, if experienced at all, must be wrought out in each individual soul, regardless of the conflicting opinions of men, or the cries of lo here! or lo there! is Christ. A solemn consideration! which in this day of much talk and dispute about the way and work of religion, it behoves every one often and seriously to ponder.

SUMMARY OF EVENTS.

FOREIGN.—The London Conference of the European Powers, to consider the Black Sea and other questions, met on the 17th inst. and adjourned on the 24th, at which time it was hoped Jules Favre, the representative of France, might be present. The Germans have consented to his leaving Paris for that purpose. In regard to the rumors of peace propositions being made at the conference, the Prussian Minister, Count Bernstorff, is under strict orders from his government to oppose any introduction of the subject, or to withdraw from the Convention unless the overtures proceed directly from France.

Earl Granville has accepted the indemnity offered by the Prussians for English vessels sunk in the Seine.

French agents in Ireland are purchasing all the available serviceable horses that are for sale.

According to an English Parliamentary report, thirty-one slaves were captured in 1859, on the eastern coast of Africa, by British vessels, and 1,102 slaves sent to liberty.

Parliament has been prorogued until the 9th of next month.

O'way, under secretary for foreign affairs, in an address to his constituents expresses the belief that the dispute with the United States would be settled by the new American Minister. England, he said, was averse to a quarrel, and any ministerial policy would be conversant with the view to renew negotiations looking to a peaceful settlement.

The contest in France continues without material change in its general features. The French army of the north, under General Faidherbe, having been recruited and reorganized, made another attempt to move to the relief of Paris. His march was unopposed from Lille to the northern frontier, to St. Quentin, but at this place he was met by a German army. After a severe and sanguinary battle the French were defeated and compelled to retreat to Cambrai.

The French army of the east, commanded by General Bourbaki, made a strong effort to raise the siege of Belfort, but in this unsuccessful engagement took place south of Belfort, in which the French were defeated with a loss of 7,800 men killed and wounded. The German loss was 4,200. No guns were captured by the

Germans, and but few prisoners. The French retreated southward.

The position of the recently defeated army of the Loire, under General Chanzé is not definitely stated. At the date of the last dispatch the Duke of Mecklenburg was moving in the west from Mayence towards Rennes, as was supposed with a view of flanking the French army. On the retreat the Germans took 2,000 more prisoners. Tours has been occupied by the Germans.

On the 19th inst. King William, of Prussia, was proclaimed Emperor of Germany, at Versailles, in presence of all the German Princes and representatives of regiments of the army.

The Prussian Governor of Alsace has issued an order excluding all the members of the Province from the city. The bombardment of Paris continues. Many houses have been destroyed, but the loss of life is said to be comparatively small; the deaths from this cause average only about eighteen daily. The greater portion of Paris is not reached by the German batteries.

All the members of the diplomatic corps remaining in Paris, with the exception of the U. S. Minister, have applied for permission to withdraw, but their request has been refused. Bismarck in a letter replying to the foreign ministers in Paris, denies the reasonableness of their demand that their compatriots might be allowed to leave the city. Neutrals, he says, had abundant notice before the siege, and the only outlet for them is capitulation.

The Parisians claim that they have provisions to last until the middle of the Third month, but such facts as transpire show that the crisis was approaching. A dispatch of the 13th, to the *New York Herald*, says, that bread in Paris is made of a faith in quantity of flour mixed with rice and other ingredients. The troops are supplied with biscuits in order to save bread for the inhabitants. There was enough horse feed to last thirty days longer. Horse meat sold at 10 francs per pound; dog flesh 8 francs; a rabbit 35 francs; a chicken 55 francs, and eggs 2 francs each. The conservatory of the city, which cost 600,000 francs, has been destroyed by the bombardment, with its rare specimens of exotic plants.

On the 19th, the French made a sortie in great force from Mont Valerien, on the west side of Paris. The result was not fully developed on that day, as the French retired from the walls, and would probably reappear at the attack next day.

Later dispatches report that the sortie of the 19th was made with a force of 100,000 men, and desperate efforts were made to break the Prussian lines. General Trochu, in his report says, "The day which commenced the sortie, the 19th, was one of our best, and we wished. The enemy were at first surprised, but subsequently concentrated great masses of artillery and infantry, and at three o'clock in the afternoon our left retreated. We recommenced at night-fall the offensive movement, but were unable to hold the height we had taken. The struggle was sanguinary. We have asked for an armistice." Other dispatches state that the French lost heavily in killed and wounded. The armistice asked for was not granted.

Advices of the 21st say that great dissatisfaction and despondency prevailed in Paris in consequence of General Trochu's failure in the last effort to break through the Prussian lines. At a meeting of the Council held on the 20th, General Trochu announced the opinion that if the hope of assistance from outside should be disappointed, it would be his duty to surrender before the Germans destroyed the public buildings and fired the centre of the city. The civil members of the Council disagreed with Gen. Trochu and he resigned, but afterwards consented to continue in command.

A London dispatch of the 23d says, that Jules Favre will not be permitted to attend the Conference as was expected. Bismarck in a note says, "It is now impossible to give Favre a safe conduct, because of his declaration of his unwillingness to take cognizance of the conference would be a recognition of the Republic."

A Brussels dispatch of the 23d says, "The details which are to hand of the defeat of Faidherbe, show that the French army of the north suffered a terrible blow which it will find hardly recover. The entry of the retreating army into Cambrai was a sad scene of disorder, the troops shoeless and in rags, and the army fragmentary to a great degree."

A dispatch from the German Emperor to Berlin, states that the Germans have again occupied Cambrai. The army of the north, unopposed, captured at St. Quentin is 9,000, besides 2,000 prisoners and 100 guns. The total loss of the French is 15,000.

The French Minister, Gambetta, was at Lille on the 22d, and in reply to the popular call made a speech,

the substance of which was that France prefers to yield to the surrender of any territory.

The Bavarian Chambers have sanctioned the Fed treaty by a vote of 118 against 10.

London, 1st mo. 23d. Consols, 97. U. S. 5 of 1862, 90; of 1865, 93; ten forties, 88.

Liverpool.—Uplands cotton, 7 1/2; Orleans, California white wheat, 12s. per 100 lbs. Red

wheat, 2d. No. 2 red western, 10s. 10d.

At a meeting of the House of Representatives in Congress to vote on territorial government for the District of Columbia. A governor is to be appointed by the President with the advice and consent of the Senate, and shall hold his office for four years, with a concurrent members and house of representatives of two members, with a delegate in Congress. The 10th of the next session of the assembly are to be subject to re-organization or modification by Congress.

The House has passed an amendment to the Legislative appropriation bill, increasing the appropriation of the Board of Education from \$14,500 to \$26,500, salaries of the Justices of the Supreme Court have increased to \$8,900 and \$8,600.

The Senate have agreed to the bill abolishing grades of Admiral and Vice-Admiral in the navy; the deaths of the present incumbents. The army appropriation bill, as reported, amounts to \$29,475,000. *Philadelphia*.—Mortality last week 325. Consumption, 47; inflammation of the lungs, 42; old age, 15; cancer, 11; fevers, 24. The funded debt of the city on the first inst. was \$4,654,229. The indebtedness was \$48,264,325.

The Exports from the United States for the ten months ending 10th mo. 31st, 1857, consisted of merchandise valued at \$260,464,625, and bullion \$60,359,211. The Imports for the same period amounted to \$405,794.

The Markets, &c.—The following were the quotations on the 23d inst. *New York*.—American gold, 110 1/2. U. S. sixes, 188 1/2; ditto, 5-20s, 1868, 110 1/2. U. S. 10s, 1880, 110 1/2. Peruvian, 50. S. G. brands, \$6.50 a \$10. Illinois, white Genesee wheat, \$1.15 white Michigan, \$1.67 a \$1.70; amber State, \$1.15-1.57; No. 2 Chicago spring, \$1.50 a \$1.52. W. Canada barley, \$1.06. Oats, 62 cts. State rye, \$1.50 Western mixed corn, 81 cts.; yellow, 85 cts. Middling cotton, 15 1/2 cts. Orleans, 10 1/2. *Philadelphia*.—Wool, fine, 100 lbs., \$5.50; finer brands, \$5.25 a \$6.00. Indian wheat, \$1.55 a \$1.58; Penna. do., \$1.45 a \$1.50; W. do., \$1.75 a \$1.85. Rye, 95 a 98 cts. Yellow corn, 77c. Oats, 58 a 60 cts. Clover seed, 11 a 11 1/2 cts. Timm 50 a 62.5. Beef cattle, 8 a 8 1/2 cts. for extra, a choice at 9 cts.; fair to good, 6 1/2 a 7 1/2 cts., and common at 5 1/2 cts. per lb. gross. About 13,000 sheep sold at 6 cts. per lb. gross, and 4,300 hogs at \$9 a \$9.75 100 lb. net for corn fed. *Chicago*.—Spring extra 1 50 a \$6.75. No. 3 wheat, \$1.26 1/2. No. 2 corn, 50c. No. 2, oats, 44 cts. No. 2 barley, 85 1/2 cts. Lard, 10 1/2.

RECIPTS.

Received from Friends of Raceons Prepar Meeting, per Samuel Williams, \$20, for the Freed

AN APPEAL TO THE BENEVOLENT.

The "Germantown Employment Society," w employs poor women, in making clothing, has on file to sell, garments suitable for Indians and Freed who are anxious to dispose of at less than price. Application for more information, send to SARAH ANN M'ALACK, Shoemakers Lane; or LOUISA T. ANDERSON, 5216 Main St., Germantown, Mo. 16th, 1871.

FRIENDS' BOARDING SCHOOL FOR IND CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge the school. The gross amount of the school connected with it. Application may be made to Ebenezer Worth, Marshallton, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia, Samuel Morris, Olney P. O., do. Joseph Scattergood, 418 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward.) *Philadelphia* Physician and Superintendent—JUSTICE H. W. WATSON, M. D.

Applications for the Admission of Patients made to the Superintendent, or to any of the Board Managers.

WILLIAM H. PAILE, PRINTER. No. 422 WALNUT STREET.

NO. 24.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

at No. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend,"

The British Museum.

The following items in regard to this interesting Institution, are gleaned from a recent work entitled "Lives of the Founders of the British Museum," &c.

As an organized establishment the British Museum is but little more than a century old, the history of its component parts extends over three centuries. In a degree of which there is elsewhere no example, the British Museum has been gradually built up by the unification of open-handed collectors, rather than by the public means of the nation, as administered by Parliament, or by the governments of the day. Every part and almost every age of the world have contributed something; and that something includes the most characteristic productions and choicest specimens of every part.

At the outset the Museum was divided into two departments only: manuscripts, printed books and natural history. In 1870 the entire Museum is divided into twelve departments, comprising three several groups of four nations each; the natural history group being comprised of zoology; paleontology; botany; mineralogy; the literary group comprising printed books; manuscripts; prints and drawings; maps, charts, plans, and topographical drawings; and the department of antiquities, comprising the following subdivisions, viz: Greek and Roman antiquities; Oriental antiquities; British and Mediaeval antiquities and numismatics; and coins and medals.

In the great national museums on the continent of Europe had their origin generally in the liberality and wise foresight of a sovereign of a prime minister. In Great Britain the public collection of literature and science due to the public spirit of private persons among the gifts of private individuals which formed the nucleus around which other collections accumulated, was that of the museum of Sir Hans Sloane, bequeathed by him in 1753. To this are added other things, 32,000 coins and medals, 2,635 other objects of antiquity; 5,822 specimens of minerals and fossils; 500 botanical specimens, and large collections in various departments of natural history, numbering in all, it was said, 200,000 different articles.

In the old Royal Library, acquired by the British Museum about the same period, was the famous manuscript copy of the Holy Scriptures, known as the Codex Alexandrinus, which, with that in the Vatican Library at Rome, and the lately discovered Sinaitic manuscript in the possession of Russia, occupy the first place in the estimation of biblical students as authoritative standards. It is justly regarded as one of the most valuable possessions of the Museum.

Other additions which together formed the foundation of the present museum, were the Cottonian manuscripts, coins, medals and other antiquities, and the Arundelian and Harleian manuscript, which, originally collected and increased by private individuals at great expense, were obtained previous to the year 1762. By bequest and purchase, other cabinets and libraries were added to its multitudinous possessions before the end of the century, by which time it had become of national interest, and was fostered with great liberality. Many of the voyages of discovery made throughout a long course of years, enriched its stores by the specimens brought home of the productions of foreign countries.

The large grants which are now annually made by Parliament, have enabled the Museum to increase its collections with great rapidity of late years. In mammals, birds, and shells, the British Museum, in 1855, had placed itself in the first rank. Only in reptiles, fish and crustacea could Paris claim superiority. In insects the museum collection vies with that of Paris, and excels it in point of arrangement. Not less conspicuous has been the growth of the several departments of antiquities, which has sufficed to double within the last twenty-five years its previous scientific and literary value to the public, including among others the deeply interesting series of monuments from ancient Assyria.

Among the multifarious objects of interest in these great collections, the objects of natural history appear to be the most popular. From statistics taken during fifteen days about the middle of the year 1869, it appears that at a given hour in the day 2,557 persons were in the galleries of antiquities, 1,056 in the king's library and manuscript rooms, and 3,378 in the natural history galleries. The total number of general visitors to the museum in 1856, was 361,714. In 1866 it was 408,279. The largest number of visitors ever recorded in any one day was on the 'boxing day' of the Londoners, 26th of 12th mo. 1858, when more than 42,000 persons were admitted.

The care which is taken to maintain its high reputation as a national institution, is illustrated in the following notice of the efforts which have been made to increase the collection in but one department—that of printed books.

In the year 1837, Thomas Watts, one of the under librarians of the Museum, and a

man remarkably qualified by his extensive knowledge of the languages, began making a systematic examination of the deficiencies of the collection of foreign books, with a view of supplying what appeared to be valuable by judicious purchases. Charged with the duty of examining the Museum catalogues, and of obtaining from all parts of Europe and Asia, and from many parts of America other catalogues of a similar kind, he began with making lists of Russian books that were *desiderata* in the Museum library; then of Hungarian; then of Dutch; then of French, Italian, Spanish and Portuguese; then of Chinese; then of Welsh; then of the rapidly growing but previously (at the Museum) much neglected literature of the Americas and the Indies. Between the years 1850-69, inclusive, it is believed that this single enthusiastic bibliographer marked for purchase not less than 150,000 foreign works; and in order to select these, must have examined almost a million of book titles in at least eighteen different languages. The object in view, as expressed in a report on the subject in 1861, was "to bring together from all quarters, the useful, the elegant, and the curious literature of every language; to unite with the best English library in England, or the world, the best Russian library out of Russia, the best German out of Germany, the best Spanish out of Spain, and so with every language from Italian to Icelandic, from Polish to Portuguese." During the fifteen years from 1836 to 1851, the collection of books increased at the average rate of 16,000 volumes a year. In the year 1847, owing to the bequest of the Granville library, the additions reached the enormous amount of 55,000 volumes. Since 1851 this vast accumulation of books has grown at the rate of 31,000 volumes annually, and now numbers not less than one million six thousand printed volumes. A copy of every book published in the kingdom is required by law to be deposited in this library.

From the "Public Ledger,"

Home Nursing.

A paragraph in a recent number of the *Public Ledger* is suggestive. An invalid lady, writing from the South, speaks of the sad inconveniences, and worse than inconveniences to which invalids are exposed who go among strangers in search of health, or of a more congenial climate. Following up the subject, it may be added that attention would be much better given to producing or inventing the desired amenities of condition here at home. Where an invalid can go to an establishment expressly prepared for such cases; and where the attention given is, if not entirely unmercenary, at least accompanied by the existence of sympathy and generous attention; or where friends accompany the person whose health is in question, keeping up the atmosphere of home, removals may be beneficial. But the cases we have supposed are exceptional. Re-

moval almost always involves separation from those whose presence is one of the very best curative agencies. The sufferer, no matter how well cared for, has to support in addition to the trials of pain and disease, that of anxiety for the absent. Homesickness, dignified with the scientific name of *nostalgia*, is itself a disease which, more than most others, baffles the efforts of physicians. And even if change of climate were a universal cure, there are thousands upon thousands who cannot avail themselves of it.

As an evidence that the amelioration of condition to which we have referred is not a mere chimera, facts may be presented. If we do not mention names in the relation, it is only that we do not care to invite or answer the questions of patentees and rival dealers. A large degree of the comfort of our houses in the winter season is due to the experiments of a gentleman prominent during his life in the literary world. With him science was a private and cherished pursuit, and the radiation and control of heat was a special study. His attention was directed to the subject of heating and ventilation by the ill-health of his wife. He devised a stove which gave to her room the benefits of a tropical clime, without its disadvantages, being under such perfect control that he could increase or reduce the heat at pleasure, without any violent or sudden transitions. Most if not all of the peculiarities of our many excellent parlor stoves were found in this—heat at the base, radiation, a moist atmosphere in the apartment, and long retention of the fire. With this apparatus under his command, he brought into his wife's apartments the Florida climate which she would not seek without him, and to which he could not leave an important position to attend her. The whole community is to-day enjoying the benefits of his experiments. Before he died he had the pleasure to hear that the hospice of St. Bernard was presented with one of his stoves by a grateful guest.

With ordinary care, and with a due attention to the principles of heat and ventilation—principles which may be learned by any body—our Northern winters may be made tolerable to any person whose pocket can command the necessary expense. And as to that, the remaining at home has vastly the advantage in economy. Moderate means will secure for the sick at home advantages which the wealthy may seek in vain abroad. The whole subject of home comfort and health is worthy of much more attention and enlightened attention than it receives. The old theory that the races most exposed are the longest lived is exploded. The Highland chieftain who kicked a pillow of snow from under the head of one of his sleeping clan, because he would permit no such inefficiency, is no guide for the present day in hygiene or therapeutics. The fact is demonstrated that the more comfortable people live, the longer they can live, and the more they can accomplish.

To return to the subject of "Home Nursing," what is most needed will be found in sensible medical advice, and in rigid attention to the rules which experience shows should govern the management, not only of the sick room, but of invalids before they are compelled to confess themselves unable to go abroad. The laws of health should receive the careful study of all persons for themselves, and of householders for the families for whose health they

are responsible. Fashion, the search of amusement, the unremitting pursuit of business, and the habit of negligence, all lead to practices which are more fatal to health than any single epidemic. The means of reform are in the reach of any person who is disposed to seek them.

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 175.)

The following letter to —, is thus subscribed by our friend: "Copy of a letter which I thought for a time I might be excused from sending, but the impression reviving, it was sent.

H. G."

"West Chester, 6th mo. 1863.

"Dear young relative,—It may be unexpected to thee to receive a letter from me, but my mind having been unexpectedly drawn towards thee, the short time thou wast with us a few months ago, in tender solicitude for thy preservation, and a like desire having frequently impressed my mind since, I feel inclined to express something of it to thee. In doing this, while I wish not to be an intruder, nor forgetting that thou has worthy, religious parents, qualified to counsel thee aright, I have nevertheless not felt my mind relieved from the desire that thou may 'Remember now thy Creator in the days of thy youth, while the evil days come not, nor the years draw nigh, when thou shalt say, I have no pleasure in them.' when thou canst no longer find pleasure in those outward pursuits which the youthful mind oftentimes pursues with earnestness, notwithstanding they often find in them disappointment and trouble. In this world, and the things of it, we do often meet with sorrows and disquietudes, but in obedience to the teachings of the Lord's holy Spirit in the secret of the heart, there is peace. That thou may so yield to the visitations of heavenly love which I have no doubt thou hast felt, as to experience more and more of this peace, which the world can neither give nor take away from the humble obedient mind, is what I crave for thee. I well remember in my youthful days when some small sacrifices seemed required of me, it was suggested to my mind, that if I gave up to be religious, the way was so narrow that I should see no more pleasure! If thoughts of this kind are presented to thy mind, believe most assuredly they come from him, who is the onemy of our soul's happiness, and who was a liar from the beginning; and who will, if possible, frustrate every good word and work, yea even every good desire; and whereby also the poor mind is brought into much secret conflict. In this situation, if it ever be thine, it is well for us steadily to endeavor to keep our eye single to our Heavenly Father, 'who knoweth our frame, and remembereth that we are dust;' and who graciously condescends to be with those who love Him and fear to offend Him. He alone can enable us to overcome the temptations of the evil one, and afford that peace which far exceeds any worldly enjoyment. We live in a day of peculiar trials. A warlike spirit is so prevailing that—truly grievous—brother is engaged in hostile feelings against brother, too much forgetting the injunction of our blessed Saviour, 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them

that despitefully use you and persecute you; that ye may be the children of your Father which is in heaven,' &c. Friends, as a religious Society, profess peaceable principles; and feel earnest and tender desires, according to my ability, that our beloved young men, as well as those who are older, may in this time of excitement and trial, be enabled, through holy help, to maintain our Christian testimonies against all wars and fightings. We have great need both older and younger, to attend to the injunction of our Saviour to disciples formerly, 'Watch and pray that ye enter not into temptation.' He also said 'Without me ye can do nothing.' But let's remember, dear —, that with His holy help we can, if faithful, do all things He is pleased to require of us. Then may thou be enabled to take up the good resolution that Joshua old did, 'As for me and my house we will serve the Lord.' Remember we are accountable beings, and where much is given much will be required. Thou hast had a religious guarded education; hast had parents who would have no greater joy than to see the children walk in Truth. These are favors and opportunities surpassing many, yea, we many others; and those thus favored are believe more looked for for example, than those who have not had equal privilege. Thus may'st thou, dear youth, be encouraged and increasingly willing to take up thy cross, and follow thy Heavenly Father in the way of His leadings. Thereby thou wilt an example to thy contemporaries, and enable to hold forth the encouraging language them: 'Come, let us go up to the mounts of the Lord, and to the house of the God Jacob, and He will teach us of His ways, a we will walk in His paths.'

"I feel my mind clothed with desires; thy encouragement in the way that leads peace; and remain thy affectionate aunt,

HANNAH GIBBONS."

The Diary continues: "8th mo. 7th, 18. After a season of close exercise, which seem almost too weighty for me, in the prospect paying a visit to the soldiers who were camped not far from us, the liberty of Select members of our Monthly Meeting was obtained. I went, according to appointment with James Emlen, W. K. and my daughter J., to-day, and saw such of them as were willing and at liberty to gather round us. Although sadness covered my spirit in beholding thee, yet I was favored to get through the weighty service to my humbling admiration. May the praise be given to Him to whom alone belongs.

"8th mo. 19th. Feeling my mind exercised and tried with doubts and fears, lest I might through inadvertency have cast a stumbling block in the way of any, the secret breathings of my spirit is that more carefulness, watchfulness, even unto prayer, may be maintained; that so more purity of heart may be experienced. Mayest Thou, O Father, who art in Heaven! condescend to be a light to my feet, and a lump to my path, and enable to lead Thee whithersoever Thou art pleased to follow; and cast me not off in the time of age, nor forsake me when my strength fails. The foregoing was written in my chamber, having been indisposed for more than a week.

"9th mo. 17th. Fifth-day. Went to morning in poverty of spirit, which is much a portion. I had not sat long before a few words weightily impressed my mind, and

ing us to faithfulness; believing that those ho are so, would be enabled to say, from time to time, "Thanks be to God who giveth the victory through our Lord Jesus Christ," after expressing what arose, my beloved sung relative S. E. appeared in solemn supplication. It felt to me a time of renewed favor, and cause for thankfulness to the Author of all our blessings.

"20th. My mind being exercised in meeting to-day with the apprehension that there were some present who were endeavoring to understand spiritual things in their own will and wisdom, I became impressed with the language of the Most High through his prophet: "My people have committed two evils; they have forsaken me, the fountain of living waters, and hewed them out cisterns, broken cisterns, that can hold no water." After expressing the foregoing with the desire which accompanied, that there might not be a looking outward, but looking inward, as spiritual things were only spiritually known, &c., my mind was favored with a comfortable degree of quiet trust."

Perhaps there never was a time, when such an exercise as the above of our dear friend, could seem to be more called for, or when there was more danger of our religion resting in the rational powers, rather than seated in the heart; where, it may be first but as a little avert, but still that which, as it is allowed to operate, leaves the whole character; bringing it into willing and sweet subjection to the Lord our righteousness. In the parable, it is as not in the wise and knowing head that is the good seed of the kingdom or "word of God" was sown and brought forth fruit, but in an honest and good heart." Neither in another New Testament record, though their hearts burned within them, could the disciples be crucified and risen Master understand the things concerning the kingdom; nay, their eyes were holden that they should not know the Lord of life and glory Himself, until *opened* *of Him*. As it is written, "Then opened he their understanding, that they might understand the Scriptures;" and "expounded unto them in all the Scriptures the things concerning himself." How true it is, that the understanding may be informed, while the heart remains unenlightened and unchanged. For the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Hence it is "Not by might nor by power; but by my Spirit, saith the Lord of hosts," that what is one can be done to any purpose.

"9th mo. 27th. To be able to assemble with my friends in order to perform Divine worship, is a privilege of no small value. Feeling my mind drawn into sympathy with some who might feel poor and needy, and ready to say with David, "Are his mercies clean gone over?" a few words were spoken by way of encouragement to such; for which I felt no condemnation.

"30th. I was favored to get to our Monthly Meeting. Our friends H. W., and P. W. R. attended. They both appeared in testimony, and the latter in supplication in the first meeting. It felt to me a time of renewed favor and cause for thankfulness. In that for Discipline, there were two cases which gave rather more cause for exercise than usual; after meeting my mind became low and discouraged, faith being at a low ebb. In the

evening, as I sat musing, with my mind turned towards the Lord, I was renewedly and unexpectedly favored with strength to believe, that if I was faithful to His guidance, He would condescend to be with me the few remaining days of my pilgrimage: which was cause of rejoicing, and the renewal of trust and hope in Him who never said to the wrestling seed of Jacob, "Seek ye my face in vain."

"10th mo. 4th. This day it felt to me our meeting was favored with a comfortable degree of solemnity in silence.

"Having at different times through the day felt thoughtful, and I believe I may say exercised respecting sending some tracts on religious subjects to a public-house, where there may probably be more company than usual to-morrow, this evening I feel my mind much relieved from it, lest it may be said, "Who hath required this at thy hand?"

Hannah Gibbons often quotes the aphorism of her dear Saviour and Lawgiver, "Without me ye can do nothing." It is very observable that though she had been so long acquainted with the voice of the good Shepherd, yet with what scrupulousness and care she waits His bidding, when, and as He is pleased to manifest Himself, lest even in what are accounted little things, she should gradually slide from watchfulness unto prayer; lest she should in any wise turn from His holy will inwardly revealed; lest she should compass a mountain in the wilderness, or should bring upon herself the fearful interrogation and rebuke, "Who hath required this at thy hand?"

(To be continued.)

For "The Friend."

Opium and the Opium Appetite, by A. Calkins, M. D., is the leading subject of a work which has recently issued from the press. The book is evidently not designed for professional readers exclusively, and it is therefore the more to be regretted that its usefulness should be curtailed by the excessive use of unusual words and forms of expression, which sometimes involve the subject in a degree of obscurity. Yet the effort at fine writing, and the display of erudition, which offend the taste of the reader, should not blind us to the lessons taught by some of the facts and statistics which the author has collected.

One of the most remarkable points is the vast increase in the consumption of opium by the Chinese during the present century. The main supply has been derived from those parts of Hindustan which are under English rule. The importations into China from India, between the years 1800 and 1810, averaged about 330,000 lbs., in 1867 they had grown to the enormous amount of 10,000,000 lbs., and making a moderate allowance for the quantities smuggled, and that raised on the soil of China itself, the whole consumption probably reached to 14,750,000 lbs. per annum! Even so far back as 1854, when the quantity used was probably one-fourth less than at present, the Chinese paid the British East India Company for opium alone, a sum exceeding in valuation the total export of their teas and silks together. There is a saying current among the people of China, that "During the opium-war the English gave their Chinese acquaintance cannon-balls of iron, and after the war, cannon-balls of opium; so that our people had the desperate privilege of choice as between being shot to death and poisoned to death."

In China, opium is principally used by smoking. In the bowl of the pipe is a chink for transmitting the smoke into the stem. The smoker assumes a recumbent position, and with the pipe in one hand, and a small lamp for flame in the other, makes one full inspiration.

The brain, stomach and liver are all injuriously affected by the continued use of this powerful substance, and sad indeed are the descriptions given of the condition of some who have become slaves to the habit of taking it. The moral effects are even worse than the physical. In extreme cases it seems almost impossible to arouse the mind to any vigorous effort to throw off the chains that bind it; the sympathies become strangely blunted to the sufferings of others, even of those most nearly related and dependent; and the worst propensities of the man show themselves with less power of restraint. "The days of the opium-eater," says one writer, "pass along divided between sloth and remorse, and when night with its pall shuts in the day, again he falls, palsied and unresisting, into the trail of the sorceress that mocks with her finger as she beckons him on." An indifference to truth, and an apparent absence of conscientiousness as to the statements uttered, is mentioned as one of the results. The Medical Mission at Pekin assert, that "opium smoking is the great barrier to all progress, spiritual as well as temporal, among the Chinese."

The increasing use of this drug is not confined to the East. The statistics show a very marked advance in the imports of it into the United States. Here it is principally used in the form of pills or extracts, but its evil effects when long indulged in, are substantially the same as those experienced by the devotees of the opium-pipe—and the same deterioration of the moral character is observable. It is greatly to be hoped that the numerous cases cited by our author, and the fearful results which he details, may have the effect of arousing public attention to the need of caution in the use of this insidious and dangerous article; and may stimulate some, who are in danger of becoming enslaved, to a timely, earnest, and successful effort to throw off the rigid chains of habit ere it is too late.

The Civilized Indians.—At the recent meeting of the Indian Council at Ocmulgee, Indian Territory, the Committee on Education reported the following interesting statistics: The Choctaws are between 16,000 and 17,000 in number, and have an annual school fund of \$20,000, supporting forty-eight public schools, at which 1460 children attend. Twenty youths are at high schools in the neighboring States. Two boarding schools, one for males and the other for females, are to be established. The Cherokees number 17,000, and have an annual school fund of \$50,000, supporting forty-eight public schools, at which 1925 children attend. Of the above schools three are for colored children exclusively. In this tribe there are several private schools, and one mission school under the charge of the Moravians. The orphans of the Cherokee Nation are boarded and clothed out of the interest of an orphan fund. The Creeks number 13,000 and have an annual school fund of \$25,000, supporting twenty-two public schools, at which 700 pupils attend. Six of the public schools are for colored children. Nine additional schools are to be opened. One boarding school, ac-

commodating eighty pupils, is now in operation, and a second school of the same size is nearly completed. The salaries of the superintendents of these schools are paid by the Methodist and the Presbyterian missions, and the other expenses by the Creek Nation. The Chickasaws number 5400, and have an annual school fund of \$50,000, supporting eleven public schools, at which 440 pupils attend. Fifty children are attending boarding schools in the neighboring States, at an annual expense to the nation of \$650 each. The Osages number between 3000 and 4000, and have an annual school fund of \$3000, supporting fifty pupils at the Catholic mission schools. The Seminoles number 2500, and have an annual school fund of \$2500, supporting a few public schools, at which 225 pupils attend. A new mission school accommodating fifty pupils will soon be opened. The Peorias number 170, and have an annual school fund of \$3000, supporting one school with twenty-five pupils. The Ottawas have one school with fifty-two pupils.

Selected.

Nothing ornaments and ennobles you, like walking in purity and humility before the Lord. No enjoyment is worthy of comparison with the incomes of Divine peace, as the reward of well doing, and nothing else can give true happiness. The spirit and example of young christians powerfully attract others to the love of virtue; and if they hold on in the path of dedication to their Saviour, they become established in his service, and will flourish in the house of our God; and when the solemn close comes, their Saviour will confess them in the presence of his Father and all the holy angels.

Habits of the Red-headed Woodpecker.—In the spring of 1869 some *Melanerpes erythrocephalus*, began pecking a hole for a nesting place, at about sixty-eight feet from the ground, in the steeple of one of the churches that is situated in our village. One of our citizens, J. C. Gibson, in order to put a stop to their operations and prevent the farther disfiguration of the edifice, undertook to kill all the birds he saw engaged in pecking at the hole thus commenced; he kept up his deadly assaults upon them until this spring, when his absence from home stopped his attacks upon them; he informs me that he killed in all twenty-two or twenty-three birds that had been engaged in the work; during his absence a pair took possession of the unfinished work, completed the nest, and are now engaged in rearing a brood in it. Is not such persistency of purpose worthy of admiration, notwithstanding it is exhibited by a harmful bird?—*American Naturalist.*

Plasticity of Rocks.—The old cobble-stone pavement in Waverly Place, between Broadway and Mercer street, being now in process of removal, my attention has been drawn to the forms of the stones, especially the harder ones, quartzites, &c. The coarser granulated paving stones have generally crumbled, but the compact stones have been modified—convex surfaces in one case fitting into concave in another; none of them retaining a normal form. Now, although the crown of these stones has been worn by the attrition of constant and heavy travel, no such wear can have taken place on their perpendicular surfaces,

and I am therefore convinced that they have been moulded into one another by pressure only. On conversing with the workmen, they all concurred as to the fact, and the foreman stated that his attention had been called to it before. Very probably I am myself only repeating what is already well known to others.—*American Naturalist.*

KINDNESS.

Selected.

The blessings which the weak and poor can scatter
Have their own season. 'Tis a little thing
To give a cup of water; yet its draught
Of cool refreshment, drained by fevered lips,
May give a shock of pleasure to the frame
More exquisite than when nectarean juices
Renews the life of joy in happiest hours.
It is a little thing to speak a phrase
Of common comfort which by daily use
Has almost lost its sense; yet on the ear
Of him who thought to die unmourning 'twill fall
Like choicest music; fill the glazing eye
With gentle tears; relax the knotted hand
To know the bonds of fellowship again;
And shed on the departing soul a sense
More precious than the benison of friends
Above the honored death-bed of the rich,
To him who else were lonely, that another
Of the great family is near and feels.

Tofourd.

Selected for "The Friend."

BE KIND TO THE POOR.

"Blessed is he that considereth the poor: the Lord will deliver him in time of trouble."—Psalms of David.

O thou, who art blest with plenty
Of the goods of earth in store,
Know thou, 'tis thy bounden duty
To be kind unto the poor.

There are thousands who are toiling,—
Toiling for their daily bread,
Who are oft in secret mourning,
Thinly clad and poorly fed.

Canst thou not assist that spirit,
Which may sorrow on its way;
God has caused thee to inherit,
That for which thou didst not pay.

That for which thou'lt have to tender
An account unto thy Lord;
And of time and talents render
A true reckoning to thy God.

Let thy left hand be a stranger,
To the act thy right may do;
Be a steward for thy Master;
Use thy wealth as 'twere his too.

Clothe the bare and feed the needy,
By so doing thou shalt know,
Living bread to be returned thee
In thy pilgrimage below.

Thou shalt know the promised blessing
To be unto thee and thine,
Like a halcyon spirit resting
On the troubled wave of Time.

And, when gathered to thy kindred,—
To the just of every age;
And with those who here had hungered,
And whose grief thou didst assuage.

Such shall stand and be thy witness
When thy Lord shall speak with thee,
And when they say: "Thy acts of kindness
Done to them, were done to me."*

Eider Ducks and Eider Down in Iceland.

The greatest favorites and the most valuable of all the feathered tribes in Iceland are the eider ducks. Their down is the lightest and softest of animal coverings, probably the worst conductor of heat, and therefore the warmest clothing that is known. The eider down has

long been one of the most important products of Iceland. The increased products, the various manufactures, and the widely-extended commerce of the world have brought into other materials more conducive to comfort and health than the eider down; and as the consequence has been, the price has greatly fallen so that now the poor peasant can sleep down.

The eider duck (*Somateria mollissima*) is large and fine-looking bird. The male is over two feet in length, and weighs six or seven pounds. Its back, breast and neck are white inclining to a pale blue; the sides white; the lower part of the wings, the tail, and the top of the head, black. On the water he is graceful as a swan. The female is much smaller than the male, and differently colored. The female is pale yellowish brown, mottled with both white and black. The tips of the wings are white, the tail a brownish color. But a poor idea is given, however, of the looks of these birds by an enumeration of the colors. The down is a sort of brown or moucolour.

These singular birds have both the character of wild and domestic fowls. In winter they are so wild that it is difficult to come near them; but in the breeding season—the month of June—they are tamer than barn-door fowls. On the islands all round Iceland, and on parts of the main shore, they cover the land with their nests. When left to themselves the brood of the eider duck does not exceed four; but remove the egg daily, and she will continue to lay for weeks.

They build not far from the water, making the nest of sea-weed and fine grass, and lining it with the exquisite soft down which the female plucks from her breast. If you approach the nest—which is always near the water—the drake will give a hostile look, you, then plunge into the sea with great violence; but the female stands her ground, in a gentle humor, and used to seeing company, she will let you stroke her back with your hand, and even take eggs and down from under her. Sometimes she will fight at a strike with her sharp beak, and she gives blow in earnest. On finding down gone from her nest, she plucks off more; and when this supply fails, the drake assists in furnishing.

We have been told if their nests are robbed of the down more than twice, they abandon the place and will not return there the following season. Half a pound is the usual quantity taken from a nest, and this seems a great deal for the domestic goose, at a single picking rarely yields more than a quarter of a pound of feathers. A greater quantity of down is gathered in wet seasons than in dry. In immense quantities of these birds come around Reykjavik and spend the breeding season, particularly on the island of Engey and Vithe in the harbor. Around the houses, and frequently all over the roofs, their nests are thick that you can scarcely walk without treading on them. The inhabitants get egg enough to half supply them with food.

The eggs are the size and about the color of hen's eggs, though not quite so white, rather inclining to a yellow. They are nearly equal in quality to those of barn fowls. After the young are hatched their education commences immediately. They graduate after two lessons. The old duck takes them on her back swims out into the ocean, then suddenly dives leaving the little mariners afloat. The fies

* See Matt. xxv. 40.

ese birds is excellent, better than any sea-fowl.
 Iceland their value is so great for their and down that there is a law against them. For the first offense a man and a dollar, and for the next he forfeits us. They are greatly alarmed at guns, often fired among, they quit the coast. With kind treatment, they give a good rest but treat them unkindly, and they will turn at all.—*Late Paper.*

For "The Friend."

A following weighty document is recommended to the serious consideration of the readers of "The Friend." In it are pointed out causes of weakness which still exist in the Society, and, in many places, are lamentable evidences that their smiting, blinding effects have not ceased to appear, by their presence. The names appended to it will call to mind, in many, men who are deeply versed in things pertaining to the church of Christ, and whose devotedness has given evidence that, under the use of the exercise with which they were clothed in preparing it, it was then the language of the Spirit to the churches, and we appreciate it remains to be so in our day.

TO THE YEARLY MEETING.—The Committee last year to visit the Quarterly Meetings, report: That we have at times met and conferred together, part of our number has visited all those

ings. With much concern the weak state of the Society in most places, we have felt a need there is of more inward dwelling with the Light of Christ, by the members, more generally, would be likened to a just sense of their own state, of the meetings they belong to, and the will of the Lord concerning them.

A want of keeping more closely to the principle of our religious profession, the spirit and love of the world, in its delusive presentations, have gained ascendancy; so that the love and unity which characterize the followers of Christ are, in many places, but little felt, and in some places are entirely laid waste; hence a religious and concern for the guarded education of youth, and in keeping them to plain dress and simplicity of manners, are wanting among us; for it may with safety be acknowledged, that if parents and heads of families were themselves living in the daily cross, the weight of their example and influence of their example would be made to rest upon their children. A powerful invitation: "Come, taste, and see that the Lord is good." But when they have that the primary desire and bent of their minds of those advanced in years are of an inferior and debasing nature; their precepts, if at all extended to subvert religious obligation, not being enlivened by the humbling operation of the Spirit upon their own minds, are the effects of formality or imitation, they are restrained and turned away from the restraints and duties of true religion; and, usually prepared to disregard the tenor of visitations of the love of God to their hearts, and through the various allurements of the world, frequently become involved in the same. Hence outgoing in every age is frequent in most parts; and the

ready acceptance of papers of acknowledgment, soon after the accomplishment of this object, seems to strengthen the parties in their transgression, and set them down at ease as members of this Society, when, in reality, they have not experienced that conversion manifested by a consistency of life and conduct which unites the sincere members of the church in the bond of true Christian fellowship.

The discipline set up in divine wisdom and designed as a hedge about us, is often managed under the influence of the mere reason and wisdom of man. Some who are active in political affairs, and who are frequently associated with various popular assemblies in their designs and plans on subjects relating to civil government, being at times engaged or employed in our meetings for discipline, it introduces a degree of the same spirit and disposition among us; and from this and other causes weakness and faltering in the maintenance of our religious testimonies take place, and a palliation for wrong things and practices becomes, in many instances, common among us. If those who are active in meetings for discipline are not sincerely engaged to wait upon the Shepherd of Israel, renewedly to qualify and put them forth for service in this weighty work, but with unclean hands and unsanctified spirits are forward in attempting to put these wholesome rules in practice against offenders, it is a natural consequence that the restoring spirit of gospel love will not accompany such; a veil is drawn over the discipline, and true judgment is thereby turned backward.

In answering the queries, there is generally too much looking out for a form of words that will in some way serve as an answer to the proposed question, instead of deep, inward retirement of spirit, waiting upon the Lord, in order to be favored with a sense of our respective conditions as in his sight, that thence an explicit and true communication might be made to superior meetings, and the body be fully acquainted with the situation of its subordinate branches. Flatness and deadness is often the consequence; and the answers, when weightily pondered, do not accord with the painful feelings of exercised minds, nor do they convey a just description of the real state of society.

Several in different parts, for want of keeping within the bounds of moderation in their trade or business which they have been educated in, or have been fully acquainted with, and which with honest industry would, with contentment and frugality, have afforded a comfortable subsistence, have let out their minds after the accumulation of wealth; and through the temptations with which our country has abounded, have been drawn into speculative schemes of various kinds, which in numerous instances having failed, they have thereby become greatly embarrassed, violated their engagements, involved their families in distress, and brought trouble and exercise on their friends. And when some such cases have been before the Monthly Meetings, many of the members, for want of keeping in a humble, watchful guard over their own spirits, and against the influence of selfish attachments, have been betrayed into disputations, heats, and parties, which have unfitted them for maintaining that authority and dignity that ought to preside in all our solemn assemblies.

In other places cases of a similar nature have been extenuated or slightly passed over, and thus those instances of swerving from a conscientious fulfilment of promises and contracts, whereby the reputation of our religious Society has been much affected, have frequently terminated without weightily descending into a search of the original cause, and laboring to bring the individuals to see and feel the spot or place whence they departed from the safe and salutary guidance of the blessed truth.

Notwithstanding the affecting sense and feeling we have had of the state of religious society within our Yearly Meeting, there are, in most places, through the mercy and goodness of the Lord, a remnant who are preserved and secretly pained under a serious consideration of the prevalence of wrong things. And the view of some of the subjects which have exercised our minds, and which are now exhibited, is not with a design improperly to lay open the deficiencies and backslidings of any, but from a desire to discharge, impartially, the trust reposed in us, and that the living members of the body may, from a feeling of our present situation, get to the alone sure foundation, and with a holy fervor, under the direction and all-sufficient help of the blessed Head of the church, labor for the removal of the great deviations and blemishes existing among us, that, being purged from every defilement, Zion may indeed arise and shine, conspicuously clothed with her beautiful garments of righteousness and truth.

Printed Extracts Philadelphia Yearly Meeting.

Egyptian Mummies.—The most curious of the arts of Egypt was that by which they disposed of their dead. It was the will of the Egyptians to have their bodies, or the principal portions of them, preserved as long as possible from decay; and this was effected so successfully, that the sight of to-day may examine the corpses of men and women over whom thousands upon thousands of years have rolled, without bringing them to corruption, or depriving them of the human form. Indeed, we know of no limit to the endurance of the mummy if left in Egypt, the climate for which it was prepared. The processes, (for there were three processes,) of embalming required from two to three months to complete them. The body was never embalmed whole. Some portions were always removed, and not always, there is reason to suppose, preserved; but commonly the separated portions were preserved by themselves and placed in jars. The exterior body was then filled with myrrh, cassia, and other gums, and after that saturated with natron. Then there was a marvellous swathing of the embalmed form, so artistically executed, that professional bandagers of the present day are lost in admiration of its excellence. According to Dr. Granville, "there is not a single form of bandage known to modern surgery of which examples are not seen in the swathing of the Egyptian mummies. The strips of linen have been found extending to 1000 yards in length. Rosellina gives a similar testimony to the wonderful variety and skill with

which the bandages have been applied and interlaced." The exclusion of the air from the surface of the body was the object of this patient labor, and every proper expedient was resorted to to make the cerements fit tightly. Not the large limbs only, but the fingers and toes, have been separately bandaged in the more elaborate mummies. The body was generally labeled, having its card, so to speak, placed within the linen folds, and generally on the breast. The identification was usually a plate of metal engraved, but sometimes it was a small image of a god or an animal, with the name of the mummy on it, and this has been found sometimes within the body. Beads, ear-rings, and necklaces are frequently turned out from among the wrappings. The bandaging effected, the next thing was to fit the mummy's *sarcophagus*, which was made of cloth, pasted or glued together till they formed a pasteboard. Before it could be called a board, however—that is to say, while it was yet moist and pliable—it was placed about the wearer, whose shape it was made to take accurately. As soon as the artist was satisfied with the fit, the garment was sewn up at the back and then allowed to harden. A mask representing the features of deceased, was put over the head, and continued some way over the shoulders. Male mummies wore a reddish brown, and females a yellowish green mask, as a rule; but the faces of some mummies, and sometimes their whole surfaces, were gilded over. Commonly the pasteboard case was painted in bright colors, whose brilliancy was as lasting as the mummy itself. Hieroglyphs were emblazoned on it, and it was in some instances stuck over with beads and spangles. The legend would describe the departed, or include a prayer or invocation. The mummy was thus complete; but it was boxed up afterward in three coffins, made to follow its shape as nearly as could be.—*Blackwood's Magazine*.

Ninth Annual Report of the Women's Aid Association.

Many doubtless have supposed that the time had arrived when the Freedmen might be left to take care of themselves; but owing to the excessive drought shortening their crops, the scarcity of labor and general poverty of the country, they are now in many localities in a very suffering condition, poorly clothed, poorly housed and often nearly destitute of food and fuel.

The main object of this Association has been to provide clothing for children, to enable them to attend school, but during the present season it has been found very important that others beside the children should be cared for. Goods and money have been sent to Beaufort, S. C., Goldsboro, Lincolnton, Charlotte, Salisbury and Lexington, N. C., and to Danville, Clarksville, Christiansburg and Richmond, Va.

In nearly all of these localities, Industrial Schools have been organized by the teachers, in which clothing is cut out and made up by the scholars, and afterwards sold or donated to them.

During the year more than three hundred garments were made in this city, and sent to responsible individuals in the South for distribution; the amount of comfort afforded by those few articles is wonderful.

Probably many of our Subscribers have

heard of the two crippled boys that were furnished with artificial limbs by our Association. Since that time they have been educated at the expense of the Society at Hampton Normal school in Virginia. One has given good satisfaction by his studious habits and desire for advancement; he is now engaged teaching at the South. As the other does not appear to possess the necessary qualifications for a teacher, it has been deemed advisable that he should turn his attention to some other means of livelihood.

The Orphans' House at Richmond is still continued, and is now partially sustained by the city, and is assisted in clothing by this Association.

We have abundant evidence that the aid we have been enabled to extend has, by Divine blessing, been seasonably and suitably bestowed.

SARAH LEWIS, *Secretary*.

National Duels and their Remedy.

Sumner was quite right when, in his Boston lecture on the Franco-Prussian war, he declared war to be a duel between nations, more terrible than private duels, because it involves larger numbers in the conflict, and produces vastly greater evils. It arrays two or more nations against each other for the purpose of mutual destruction. While it sets aside all the common rules of morality, and embodies in its means the direst form of violence, it settles nothing except the mere question of brute force. The nation that can fight best wins the victory; and the same is true between two pugilists who pound each other in a ring, or two duelists who stand up and shoot at each other on a question of honor. If war has its code, which the public sentiment of civilized nations enforces, so also private duels and the pugilistic art have their codes of fair fighting. There is no essential difference between the two in either the principles involved or the means employed. The only difference is one of degree; and this surely forms an overwhelming argument against war as a method of settling disputes among nations.

It is a singular fact that, while modern civilization, borrowing its best inspirations from the benign principles of Christianity, has to a large extent superseded the ancient barbarous custom of individual combat, and substituted therefor the peaceful process of redress by law, nations as such still defy their influence, and keep up the practice of still resorting to the sword. They rush into the conflict of arms about as readily as they did a thousand years ago. Even those nations most enlightened, and most advanced in all the arts and refinements of life, conduct their intercourse with each other with an implied menace of war, if either party shall be dissatisfied. They make their demands, and negotiate their treaties, with the mutual understanding that they are fully prepared to fight at their own option. The nations of Europe, even in time of peace, have about four millions of men in their standing armies, taken from the productive industries of life, and requiring an annual tax of more than a billion of dollars to support

them. They look at each other with in hand, and upon the slightest provocation and often with no provocation, march armies into the field to try the quest skill and strength in killing war. I have thus been kept in a state of chronic for centuries, fighting a part of the time always prepared to resume the fight, even the condition of apparent peace. The perors, kings, and cabinet of Europe are responsible to God and the public sentiment the world for this attitude of barbarous ligency, so long maintained, and so frequent resulting in actual hostilities.

The great struggle now going on between Prussia and France, so exhaustive andrible to both nations, and withal so unjustifiable in its causes, leads to i whether there be no remedy for these nations? Is there no way to prevent it? Is there no other method by which we whether republics or monarchies, can be persuaded to settle their differences? Must be the final judge in its own case, and mine every unsettled international dispute the barbarous trial of strength? Hun civilization, and Christianity have long answered these questions by suggesting, of arbitration among nations, in which ent nations shall be represented, and to shall be referred for final decision all disputes that may arise among them. Such a would be occupied only with interim questions; and, if sustained by the publication of those that are parties to it, no duels would either become entirely ob or greatly decrease in number, and in case the interests of humanity would belong to the gainer. The appeal would then be to reason and conscience and public opinion and not to brute strength. The tendency such a court, even if it did not wholly prevail, would be to lessen its frequency largely dispense with the necessity for fighting armies.

The common objection, that this is but impracticable idea, because nations not consent to its adoption, is a terrible ment against their public character. refusal to adopt the idea would be a confession of their barbarism. We believe in the ability of so educating the general conscience of the civilized world that it will den court of arbitration for the settlement of international disputes; and, if it should century to accomplish the result, it would abundantly compensate for the labor. The idea is practicable; and, as believe, will ultimately so far prevail as come a great pacificator among nations must prevail at last, or Christian civilization and biblical prophecy will prove a failure.

If, under the progressive influence of i light, the barbarism of private combat as a means of redress, has given place peaceful forms of judicial trial, why m the more awful barbarism of national duels compelled to yield to the same influence believe in the final triumph of moral especially in its Christian form, however may be the steps to victory; and, if this has already reduced the number of war mitigated their severity, by changing sentiment of Christian nations, it may further, and at length inaugurate the when these nations shall substitute arbitration for fighting in the adjustment of questions that arise between them, and

annot themselves adjust. Let the puld the press of Christendom plant them-broadly and squarely upon this ground, ngs and cabinets will be compelled to t utterance. The day would not be stant when nations would by express stipulation provide for a reference of air international disputes to a court of ation, as a permanent substitute for war. *Y. Independent.*

For "The Friend."

idents in the life of Edward Wright.

is the title of a book recently issued the English Press, giving an outline of e of a degraded and brutal London thief, y the power of Divine Grace, was turn darkness to light, and from the power n into God. It contains many inter- details, and furnishes evidence of a true of grace, in which all who love the glo- use of truth and righteousness can re- Yet the usefulness of the work would en greater, if the writer had more fully at to view the necessity of that contin- uence to the monitions of the Holy without which the benefit of all former ences will be lost, and the unfaithful ll be in danger of sliding back into that of pollution from which he had been out. The manner in which some per- peak of salvation as a finished work, accomplished by believing in the atoning e of the Saviour of men, is either erro- r liable to be misinterpreted. For o our salvation is altogether of the free of God in Christ Jesus, and the true n would not desire it to be otherwise, e language of our Redeemer remains to e, that he that will be His disciple, must ip his daily cross and follow him; and is not every one who saith Lord, Lord, all enter the kingdom of heaven, but doeth the will of "my Father, who is n." And again "He that endureth n end shall be saved."

father was a journeyman barge builder, e and honest, and his mother was a e table woman. As a child, Edward was for insensibility to danger, and soon a propensity for fighting. From fight- advanced to other feats of juvenile dar- d craving money, he leagued with other o rob the till of a small shop. This was one winter's evening, and the stolen e was spent in baked potatoes, fried fish wed cuts. He thus acquired a taste iring, and his success encouraged him e a second venture. It was in vain his watched over him, and endeavored to m in better ways. His disposition to increased. He was reprimanded for nduct, and ultimately expelled from school into which he entered. His fac- eeded in getting him into the Blue n in Southwark; but before he had been ng enough to entitle him to the quaint e of the school, he decamped, stealing e of the bright badges the boys then pon the breasts of their coats, and sel- for old brass. He was then sent to ol connected with York Road Congre- d chapel; but at the beginning of the quarter, instead of taking the fees to ster, as requested, he spent them with nupans upon curds and whey, and

father finding employment in Batter-

sea, the family removed thither; and the young pilferer found many opportunities, in passing some plots of garden ground on his way to and from school, to steal the produce grown by the labouring men. So incorrigible and hardened was he, that the schoolmaster found it impossible to keep him any longer, and once again he was expelled. His father thereupon resolved to find him a little employment at home, and send him to a night-school. Accordingly, an old barge was bought, broken up, and carted home, and Ned was left to chop it up, and dispose of it in penny and twopenny lots. The sight of the money proved too great a temptation, and he fell a victim to it. Again he was punished; but, undeterred, he continued his evil practices, until he was recognized by the neighbors as 'a pest of a boy.'

"He only required a little stimulus to make him a skilful and habitual thief, and this he found one evening at a theatre in the south of London. It was his first visit to a theatre. 'I was not a little startled at the glaring gas and scenery,' says Ned; 'and as I watched the performance, I well remember how often I fancied I could have got over the top of the walls of that house as well as Jack Sheppard did, and I am sure I was taught that night a way to thief, and escape without being caught, that I was not acquainted with before.' He did not leave the theatre until twelve o'clock, and it was not until one in the morning that he reached home, where he found his mother sorrowfully watching for him. Not being able to muster sufficient courage to meet his father at the breakfast-table on the following morning, he did not go to work all day; but before tea, and while suf- fering from hunger, he fell in with some lads who were known as 'shore wreckers,' and they invited him to go with them. He did so, and was appointed by the gang of five to act as sentry outside the door of a sweetstuff-shop, and to watch how cleverly the money was abstracted from the till. This was done without observation, and the amount, which was only twenty farthings, was divided among the five thieves. The money was soon spent, and half an hour afterwards Ned was called upon to become the hero of the next adventure of a similar kind. Although trembling for fear of detection, he succeeded in his purpose, and not only abstracted from a till the sum of five shillings, but also stole a box of sweetmeats. Losing his situation through in- attention to his duties, he ran from home, and spent three weeks in robbing summer-houses of spades and shovels and similar implements, and living upon the money realized by his sale. His anxious mother, who had indeed sought him sorrowing, was greatly rejoiced at finding and persuading him to return to the paternal roof. His father had concluded that he had gone to sea, and so had let his bed to a single young man, with whom it was now arranged that he should sleep. A fortnight, however, had scarcely elapsed before Ned sought his opportunity to effect a petty pilfer. This time he robbed his bed-fellow of a shilling, with which he bought an egg chest, which he rendered water-tight, and covering it with pitch, he put his extemporized boat into the river at the back of the garden, and found her capable of holding two and a half hundredweight. When the boat was finished, and it became dusk, the young voyager pro- ceeded with it along the river, to some or-

chards, where he obtained a large quantity of apples and pears, and other fruit, part of which he ate, and the remainder sold to a green- grocer, who afterwards engaged the adven- turer in his shop: this arrangement was soon broken in consequence of his thieving propen- sities. Again he ran from home, sustaining himself as before by committing petty thefts."

(To be continued.)

The City of Books.—Leipzig, though always an important citadel of the book trade, did not enjoy its present metropolitan dignity till the year 1765, when Nicolai and a few other booksellers agreed, on account of certain vexatious restrictions at Frankfort, to remove the central mart from that place. At the same time they laid the basis of a bookseller's association at Leipzig, which not successful for a time, was afterwards, in 1825, consolidated and extended, and now numbers about 1,000 members. The handsome building called the Booksellers' Exchange, opened in 1836, is the financial head-quarters of this association. Here, at the time of the great fairs, especially of the Easter Fair, a lively spectacle may be witnessed. Hundreds of booksellers throng the great hall discussing and disseminating literary intelligence, while in the lesser hall, counters are laid out displaying specimens of new works in German and foreign literature. The strictly financial business, which used to be the chief motive for the reunion, is now managed through the medium of the "commissioners," and the principals themselves thereby obtain more time for the cultivation of social and other amusements on the occasion of their periodical visits than in former days. The "commissioners," in the Leipzig book trade are an institution of great importance. They are the general agents for distant firms. At the Great Eastern Fair the commissioner receives or disburses the requisite sums on behalf of his employers. It is stated that in 1867, as many as 130,000 cwt. of books were dispatched from Leipzig, and probably as many came in. Since then the number has considerably increased.

As to the amount of actual publishing work done in Leipzig, we learn, from the German statistical account before us, that it amounts to about one-sixth of that done in all Germany, including Prussia and Austria. Thus, in 1868, 12,000 works were published in Germany (4,300 was the number for England in the same year); of these, about 2,900 would be the number emanating from Leipzig. Berlin stands next to Leipzig in publishing importance, and claims about one-eighth of the annual contributions to German literature. In the number of newspapers and journals published, Berlin exceeds Leipzig; this is natural considering the political importance of the former as the Prussian capital.

All the branches of industry auxiliary to the making of books flourish in Leipzig. Forty-seven printing establishments now exist in Leipzig and its suburbs, employing 1,000 journeymen, 300 apprentices, and 450 women. Within the last ten years, too, there has been a great improvement in the book binding trade.

Leipzig is the principal centre for musical publications, not only in Germany, but throughout the musical world. There are twenty-nine publishers in this department. The second-hand or "antiquarian" business is very important. There are six leading second-

hand firms, well known far beyond the limits of Germany, to each of which appertain immense warehouses, sheltering something like a million volumes. The classical catalogues issued by these six firms form a feature of great interest in the literary world.

Leipzig counts at the present time about 258 bookselling firms, having connection with 3,500 houses out of Leipzig. The personal staff they employ amounts to from 800 to 900 persons.

There are two other institutions connected with the trade which deserves mention, and which are localized in the precincts of this Booksellers' Exchange. These are—1, the school for booksellers' apprentices, which was attended by seventy-nine scholars last year. It is designed to give scientific and technical training appropriate to the objects of the trade. 2. The business post office of the Leipzig book trade; a *chef d'œuvre* of practical organization and unremitting activity.—*Late Paper.*

Life of American Vessels.—At the meeting of the American Association, at Salem, Professor E. B. Elliott, of Washington, gave a Life Table of American sea-going sailing vessels, derived from the career of 26,737 vessels, of which 4,165 were known to be extant. The table shows that out of 1,000 vessels 584.4 survive 10 years, 219.5 20 years, 82.2 30 years, 11.1 40 years, and none 50 years. The average duration of ships is 18.8 years; of those which have been built 10 years, 9.3 years longer; built 20 years; 7.2; 30 years, 6.2; 40 years, 2.7.—*Annual of Scientific Discovery.*

THE FRIEND.

SECOND MONTH 4, 1871.

SUMMARY OF EVENTS.

FOREIGN.—The London Conference reassembled on the 24th ult., but adjourned till the 21st, in consequence of the continued absence of a representative from France, one of the parties to the original treaty which it is now proposed to revise.

A letter from Guizot to Gladstone, argues at length the question of proper conditions for peace between Germany and France. He urges England, at least, to protest in favor of peace, and expresses the belief that such action on her part would not be in vain.

Sir Roderick Murchison has received a letter from Africa, giving positive intelligence of the safety of Dr. Livingston, the African explorer.

Froua Vienna it is stated that there is reason to believe a willingness will soon be shown by France or Prussia, or both, to admit the interposition of the neutral Powers in the interest of peace. While the Austrian government appreciates the duty to strive to restore peace, it is still deemed advisable to await a favorable opportunity.

The ambassadors of Austria and the North German Confederation, in compliance with instructions received from their respective governments, have inquired of Cardinal Antonelli what guarantees the pope would regard as sufficient, on the part of the Italian government, to remove the distrust at present existing between the civil and religious authorities. The reply, by order of the pope, intimated that the court of Rome wished no guarantees other than pure and simple restoration of the territories of the church from the German frontiers to the Po, and would accept of no arrangement not based on those conditions.

The early surrender of Paris became inevitable after the disastrous failure of the sortie of the 19th ult., and the decisive defeats suffered by the great armies to which the Parisians looked for success. Jules Favre and his colleagues accordingly opened negotiations with the besiegers at Versailles, the result of which is briefly stated in the following dispatch of the German Emperor

to the Empress at Berlin: "Versailles, Jan. 29, 2 p. m.—Last night an armistice for three weeks was signed. The regulars and Mollies are to remain in Paris as prisoners. The National Guard will undertake the maintenance of order. We occupy all the forts. Paris remains invested, but will be allowed to revictual as soon as the arms are surrendered. The National Assembly is to be summoned to meet at Bordeaux in a fortnight. All the armies in the field will remain in their positions; the ground between our positions and the Rhine to be neutral. This is the reward of patriotism and great sacrifices. Thank God for this fresh mercy. May peace soon follow.

Another Versailles dispatch announces that the German troops occupied the forts around Paris at ten a. m. on the 29th. The entire garrison of Paris, except the National Guard, surrendered their arms.

A special dispatch to the New York *World* says, that strong influence is at work favoring the restoration of the Imperial family, under a regency composed of the Empress, Trochu, and Favre. The Emperor of Germany will not enter Paris, but will return to Berlin immediately, leaving the Crown Prince in command. Provisions for Paris are being forwarded via Dieppe. Great numbers of cattle had been collected by the Germans at Rouen and other places, to be driven into Paris on the capitulation taking place. It does not appear that the capitulation and armistice settled the conditions of peace—they must be determined by the National Assembly. The Germans, it is believed, will demand indemnity for the expenses of the war, and the cession of some French territory along the Rhine, perhaps the whole of Alsace and Lorraine, which, but for their conquest by Louis 14th, belonged to Germany.

The deaths in Paris for the week ending 1st mo. 20th, were 4,465, in the previous week 4,078.

The number of French prisoners in Germany at the commencement of the year was 11,160 officers, and 533,285 privates.

The French harbor of Cherbourg is crowded with captured German ships.

An official dispatch from Versailles of the 24th, says the French loss in the sorties of the 19th was 6,000 killed, wounded and missing, while the German loss was only 655.

Conroy, a strongly fortified town and citadel of France on the Belgian frontier, surrendered recently after a long siege. Four thousand prisoners and two hundred guns fell into the hands of the Germans.

A line of ten million francs has been imposed upon the citizens of Nancy and the surrounding district on account of the destruction of the railroad bridge near Tonl by franc-tireurs. In the event of its non-payment, the military authorities will adopt the most stringent measures of punishment and confiscation.

The small pox is gradually increasing in London. The deaths from this disease in the first week of last month were 79, in the third week they had increased to 184.

There is no prospect now that Favre will come to London, and no other person has been accredited to represent France in the Conference. It will probably be postponed for a time.

The bill removing the capital of the kingdom of Italy to Rome, has passed the Italian Senate by a vote of 94 to 39.

A revolt has broken out among the Tartars in China, and at last accounts it had reached alarming proportions. The rebels had seized many points of importance.

The latest Cuban advices represent the insurrection in that island to be confined within very narrow limits, and practically at an end as a revolutionary agency.

Dispatches of the 30th have the following additional information from Paris. The occupation of the Paris forts was unattended by any incidence of interest. A total of fifty-three millions of francs is imposed upon Paris by the articles of capitulation. A cordon is drawn around the city, and no person allowed to enter or leave without a permit from the German authorities. The revictualing of Paris will proceed under German supervision. The German troops are chagrined at being prohibited from entering the city, and are angry in consequence, the people generally receiving the intelligence of the surrender with mournful joy.

The London *Times* strongly endorses the proposal of the Lord Mayor to send supplies to the Parisians at once.

An official dispatch to the Baden Ministry states that General Bourbaki has entered Switzerland. Many of his troops have also taken refuge in that country. London, 1st mo. 30th. Consols, 92½. U. S. 5-20's of 1862, 90½; ten forties, 89½.

Liverpool.—Uplands cotton, 81-16 a 84d.; O 8½c. California white wheat, 12s. 2d. Red W.

UNITED STATES.—Miscellaneous.—The U. S. by a vote of 26 to 25, passed a bill for the total of the income tax, but the House of Representatives desired the bill to be returned to the Senate with interest on the ground that the Senate has no constitutional power to originate a measure relating to the Treasury when the Treasury opposes the repeal of an income tax.

The mortality in Philadelphia last week was 2; consumption, 50; inflammation of the lungs, 3 age, 18.

The New Jersey Legislature has re-elected Frederick Freyhaughen to the U. S. Senate for another six years.

The census of Utah shows a total population territory of 66,786, of whom 11,782 live in Salt City. About one half the inhabitants are foreign born. The total number of passengers that arrived in United States during the year 1870 was 413, which 354,169 were immigrants. The net immi in 1869 was 387,287, the decrease in 1870 being bably caused by the war in Europe.

The shipments of gold and silver from California, were \$82,983,140, against \$37,777,417 the year before. The receipts of wool aggregated 18,410,986 lbs. and the exports were 17,578,311 pounds. The value of floor last year were 243,336 barrels, and of 421,560,900 lbs. or over seven millions of bushels.

On the night of the 28th ult., the steamer Arthur, on her passage from New Orleans to New York, exploded her wood accretions at 170 miles from shore. The boat subsequently took fire, and 87 passengers were burnt or scalded to death.

The U. S. Senate Committee on Territories reported in favor of an enabling act for the admitted States of New Mexico and Colorado. The late figures of the former a population of 86,122, and 39,678.

The valuation of real estate in Virginia for comparison with that of 1856, shows, the Richmond says, "a very great decrease in the value of real estate in the large slave-holding counties; while valley counties have a marked increase."

The Markets, &c.—The following were the quotations on the 30th ult. New York—American gold U. S. sixes, 1881, 113; ditto, 5-20's, 1868, 105 10-40, 5 per cent, 100½; Superfine flour, 56.10 finer brands, 56.75 a 510.45. No. 1 Chicago wheat, \$1.60; No. 2 do., \$1.50 a 1.58—yellow, 100 2/3. Age, when paid quarterly in advance, five cents.

For "The Friend."

TO THE EDITORS:—I send the following copy, taken from a manuscript in my possession; and also some account prepared of its history.

Letter from Richard Smith to a Priest of the Church of England, written about the year 660.

Friend;—I being willing to hear thee teach congregation that was assembled at the fall of W. S., it hath been much upon me to signify to thee how I do approve of thy teaching, and how I through the movings of the eternal Spirit of God, through the love of the Father could dearly desire, that not only thou, but all that hear thee might come to witness the resurrection of Jesus in their mortalities, so that you all might be freed from the second death,—(for blessed and happy are they that have part in this resurrection—on the second death hath no power),—if it stand with the will of my God. And also how thee what it is in thy worship I dislike, so that if thou be able by plain Scripture arguments to uphold them; or if thou have immediate command from the Lord for to do and practise them, well; if not, search and upon sight of this whether the Light of Lord Jesus in thy conscience, which I now leads thee to the performance of many things acceptable in the sight of God, bear witness with me for God, that thou oughtest likewise to disown them.

And so for the scripture thou didst choose to speak from, being the 13th and 14th verses of the first of Thessalonians,—it was very material and fitting for such an occasion, and thy words and observations thereupon very many seem dearly to be owned in their places, as they came from thee; inasmuch that I, when sent from place to place after the ministry ran, could even have had great desire, love and affection to such a teacher: but now, see the Lord in his endless love hath gathered from under the ministry of man and man's thing, so that I can truly say in the presence of the Lord, without boasting, I have received the anointing, and need not that any man should teach me, but as the anointing that is in me, which is truth and no lie, I apprehend, so here I say that thou mayest

learn to be such a teacher as brings people to my Teacher, whose teachings are such as do not keep people ever learning, and never able to come to the knowledge of the truth; but doth bring to the way wherein the way-fairing man, though a fool, cannot err; because that thereby, and therein, [is fulfilled] the Covenant and Promise of God spoken of in Jeremiah xxxi. 33, and Hebrews x. 16, which is the second and New Covenant made with man, wherein no man shall need to teach another, saying, "Know the Lord!" because all shall know him from the least to the greatest, who enter into this covenant with him. So I say unto thee, that thou mayest be a teacher to bring people hither, thou must come to know Jesus, and the power of his resurrection, and the fellowship of his sufferings, and be made conformable to his death, and all by the power of the Spirit in thee; for he that hath not the Spirit of Christ is none of his; and the time is come Christ spoke of in the scripture, that neither at Jerusalem nor any other mount must the Father be worshipped, but by them that worship in spirit and in truth.

So if thou comest here, thou comest to Christ the way; here if thou enter in, thou enterest by Christ the door; here if thou walk, thou walkest by Christ the light, and there is no occasion of stumbling in thee. But if thou be not here, and if thy followers and hearers be not here,—if the Lord have occasion to say unto thee and thy hearers as he said by his servant David in the Psalms: "But unto the wicked saith the Lord, 'what hast thou to do to declare my statutes, or that thou shouldst take my covenant into thy mouth, seeing thou hastest instruction and castest proof behind thee?'—then good texts of scripture, and good words in any other form or way, (will fit as little either thee or them, as they did me and many of my brethren and sisters in the Truth of God, whilst our minds were unconverted and our inward man returned, or not brought to believe in the light which shines in every conscience, which is Christ the Light of the world, which enlightens every one that cometh into the world; though where the light shines in the darkness, the darkness comprehends it not.

So to the light, the measure of God in thee, I leave thee, and to the true rule or line of measuring by scripture, to search and try my spirit, whether from a true measure of the Spirit of the living God, whose badge or mark is love; and in that love, whether or no, I have written this to thee, to signify to thee of how large extent the love of God which is shed abroad in my heart through his free grace, is to thee and thy followers, which is not only to you, but also to my greatest enemies. Yea also! search the scriptures and see, examine them and try whether this worship I speak of, to wit, the worship in spirit and no other, be left unto Christians; whether any other way but Christ the way, who said of himself, "I am the light of the world, that

doth enlighten every one that cometh into the world;" and whether any that are saying, "Lo! here is Christ;" or "Lo! there is Christ," in this form or that form, bring themselves or their hearers to be partakers of this blessed Covenant I have here mentioned.

And now what I dislike in thy worship, which I was an eye-witness of, was: 1st, That thou didst not preach from the spirit of prophecy, to the best of my understanding; but hadst what thou didst deliver written to look at, and seemed to be able to deliver little without looking thereon: so that I did not judge that thou preachedst what God had done for thee according to the order of the holy men of God, as David said: "Come and I will show thee what God hath done for my soul;" or as Paul exhorted the Corinthians, bidding them to desire spiritual gifts, but rather that they might prophecy; and that they might all prophecy, one by one, that all might hear and all might be edified. And the spirits of the prophets were to be subject to the prophets, which is also the order of the truly spiritual worshippers, which is largely treated of in the 14th of the 1st of Corinthians. Yea! and the scripture notes a cloud of witnesses who all witness to the Spirit's teaching, and were taught by its movings. So that where I find any to teach what they study and write down from the letter of the scriptures, or from other books, their teaching can in no wise be a rule for me to walk by, nor their worship for me to join withal, who can receive no other teaching but that which flows from Jesus, the life of men, and the light of the world, and from the Spirit of Truth, the true Teacher of every one that cometh to the Father. Nor can any worship the Father in any other way than in the Spirit of the Son, and in the movings and order of the Spirit's ministrations.

2dly,—In that thou choicest a part of a Psalm, saying to this purpose, "Let us sing to the praise of God;" such a part of such a Psalm; and so read it in metre, and thyself and most or all the others with thee, sung it. In that worship I cannot join with you, and this is my reason: If I should undertake to sing David's conditions, as his watchings, fastings, prayers, tears, confessions of his failings, his overcomings, or the condition in which he said he was not puffed in mind, nor had scornful eyes; or that in which he cried for judgment on his enemies, or his roarings wherein he said he was like a pelican in the wilderness, or as an owl in the desert, with all such like his conditions, not being in the same spirit and condition that he was in; instead of singing to the praise and glory of God, I should sing lies in his name to his great dishonor. And this was my condition many a day, mourning many a day before I did leave it, or could be brought to disown it; but in his own due time the Lord brought me to see that I was not to sing to his praise and glory any other Psalms but by the Spirit, and by a good understanding, according to that of Paul:

"Sing with the spirit, and sing with the understanding;" so that singing in rhyme and metre according to Hopkins, Sternhold, and others, which giving sound only to the outward ear proved a burthen too heavy for me to bear, and David's spirit in me was thereby wounded, so that I could not then sing David's psalms with David's spirit; the good spirit of God, which guided David in singing, being grieved.

I could speak of some other things in which I disliked thy worship at that time, but shall at this time forbear; and, as I said, if thou canst by plain Scripture testimony prove thy worship to be the true worship God doth require of thee—well; if not, and I have reached something in these which thou canst not silence or keep quiet, and if my testimony against these points of thy worship be answered by the witness for God in thy conscience, be not found fighting against God, but submit to the Light and it follow, and thou shalt be brought into the Lamb's innocent nature, in which thy worship shall be built upon the Rock of Ages, which the gates of hell shall never prevail against; and to be a teacher that shall turn many from darkness to light, and from the power of Satan unto God; and God will make thee shine as a fixed star in his firmament. So, in love to thy soul, I have written this unto thee, leaving the effect thereof unto my God; because a tender love is begotten in me toward thee, and several other of thy adherents, particularly that old man who is fled unto you, being persecuted for conscience sake, as also to all the rest of your family.

R. S.

(To be continued.)

For "The Friend."

Improved Ventilation.

I propose to point out for the benefit of the readers of "The Friend," an important error in an article on the subject of ventilation, recently published in that Journal; and also to endeavour to set forth the true theory of ventilation, and prove its correctness by citing a few facts.

This writer says, "The best way to ventilate is to introduce warm air on one side of the room, near the floor, and ventilate by an opening on the opposite side near the ceiling." If this plan is adopted, and the ventilating flue is of sufficient power and capacity, the room will neither be ventilated nor warmed in a reasonable time. This can be proved by introducing sufficient smoke into the air-chamber of a furnace to make the current of warm air visible as it passes through the room. It will be found that as air when heated becomes lighter, it will rise rapidly toward the ceiling and pass out through the ventilating flue, without spreading much over the room, leaving the air in the corners and near the floor but little disturbed, and consequently that the heating and ventilating will both be but poorly accomplished.

The most scientific and effectual mode is to have the heating and ventilating flues both near the floor, and on the same side of the room. They may either be placed side by side; or the heating register in the front of the fireplace and the openings to the ventilator on each side of the chimney. The proper place for building a chimney for the purpose, is to start from the cellar and run it up as high as can conveniently be done, above the top of the house; having in it one or more

flues, according to the number of rooms to be accommodated. To make them complete, the inside of these flues should be made circular, and plastered smooth. In the centre of this large flue place an iron, or terra-cotta—iron is better—pipe of sufficient capacity to carry off all the smoke and gases arising from the consumption of the fuel. Leave an opening in this brick flue near the heating register, or on the side of the chimney, as directed above, being very careful to place it near the floor.

We will now examine, by the well known laws which govern the motion of hot and cold air, the effect of such an arrangement. Upon lighting a fire in the furnace, the smoke first passes up the pipe, warming and rarefying the air in the brick flue, causing it to rise and escape from the top of the chimney. The vacancy thus created in the flue will necessarily be replenished with air from the room; thus drawing out the foul air from the room. As soon as the air-chamber becomes heated, the pure warm air rises and escapes through the register into the room, and being light it immediately ascends to the ceiling, and being thrown against the cool walls it descends, as it cools, carrying with it the impure air and all foul smells to the floor; where it is both forced and drawn into the ventilating flue, and escapes at the top of the chimney. To prove the correctness of this theory I will cite a few cases, showing the practical operation, and some of the important results from this plan.

At the Philadelphia Hospital, Blockley, ventilation from near the floor was first introduced by a Friend about ten years ago. To trace its history and recount a few of the effects upon the inmates of this Institution, may prove useful and interesting. Before its adoption all the wards had ventilators near the ceiling, and when cholera, ship and spotted fever, and other infectious diseases were introduced, they generally spread more or less through the wards, and affected, not only other patients, but many of the nurses sickened and some died. When gangrene, erysipelas or pyemia were either introduced or propagated in the surgical wards, many of the inmates were affected and some died of the disease. Even infants and their nurses in the nursery, to the number of twenty or thirty at one time, were inoculated with ophthalmia, brought in by a single patient.

One of the women's large medical wards has a chimney in the middle, with walls extending a short distance on either side, only partly dividing the room; yet leaving more than one-third open between this chimney and each of the side walls. On one side of this chimney an opening for ventilation was made near the floor; on the other side about four feet above the floor. On the latter side a patient in bed, was attacked with cholera, and other patients lying in bed were soon affected with the disease; but it was observed, no patient on the other side of the chimney—although in the same room—nor any of the nurses or others walking about this apartment, were affected. This high ventilator was brought down to the floor, and the disease immediately ceased spreading. The spread of these diseases was prevented or arrested in every ward when the ventilation was removed to the floor; although they continued their ravages while the ventilator remained near the ceiling. After the opening in the children's nursery was brought to the floor, ophthalmia

entirely disappeared; but after a time it broke out severely again, and on examination it was found the flue had been obstructed with rubbish from alterations made in the room above. This was removed and the disease disappeared and has not returned.

From the foregoing it is evident a full supply of fresh and pure air is vitally important to life and health—especially in hospitals. A large amount of warm and wholesome air can be obtained from a well constructed furnace in the cellar, provided it is never overheated has sufficient evaporation of water in the chamber, and there are good ventilators near the floor, in each of the rooms intended to be warmed. Although the "low down grate" makes a cheerful and pleasant fire, and as a ventilator, yet the upper part of the opening is so high it is not equal to one drawn air from near the floor only. It also has, some extent, the same objection as the old-fashioned, large, open fire-place, viz: it does not remove the cold and impure air which always near the floor; and while you suffer from heat in the face, you suffer from cold at the back. Open fire-places always require a large supply of air from some source; and unless supplied in some other way, it is necessarily drawn through the cracks and chinks around the doors and windows, creating cold unhealthy draft on the back and shoulders. But if a room is heated by the introduction of a sufficient supply of warm air there is but little pressure of cold from without.

By experiment it has been found a room can be warmed by heated air, sooner—especially near the floor—with a well constructed ventilator open, than when it is shut.

J. C. A.

Incidents in the Life of Edward Wright.

(Continued from page 191.)

"In all this he was not happy. Fear times seized his buoyant spirits, and as heard of the imprisonment for twenty-odd days of a companion, he trembled lest such fate might happen to him. Hungry and weak he repented of his unfeeling conduct toward the parents who had made numberless efforts for his reformation. Without food the whole of one day he was glad to pick up a meal of old nails from the shore to obtain one penny, with which to purchase dry bread. The baker filled his cap with pieces of bread, some of which were quite mouldy; and sitting down upon a doorstep, he ate with tears, but not with relish, the dry bread he had purchased. He resolved to wander to some place where, in the dull light of the evening, his mother would be sure to pass; and when the poor women met her ragged and deplorable son, she burst into tears of deepest grief. Daring to take him home, she arranged for staying all night at a neighbor's house; and in a few days his father prevailed upon a pilot to get his unruly son into a ship in the trade."

After his return from this voyage he fell into bad company, "the restrictions of home became increasingly irksome: his father's admonitions and prayers made him wretched and he longed to get away from those who sought so earnestly and persistently to restrain him in his evil courses. His mother's heart continually vibrated between hope and fear; at one time she was buoyed up with

pe that prayer would be answered; at an-
ter, she sank into despondency and sorrow.
Then did she creep out of her bed-room in
small hours of the morning to let her pro-
gen son in at the window, when his father
locked him out; and hour after hour, in
soloneliness of her grief, would she lie awake,
listening for the sound of the footstep she
saw so well, and had yearned to hear so long.
When he was out, she feared he would be
locked up, and if he did not return during the
night, she would make inquiries early in the
morning at the police-station, in order that if
he had got into mischief, she might be present
at the court, should a fine be inflicted, to save
the humiliation of gaol-life."

Having failed in an attempt at burglary,
stole a coil of rope, but was detected and
sentenced to twenty-one days imprisonment,
and course from this time onward was gener-
ally in the broad road that leadeth down to
the chambers of death. Burglary, robbery
and imprisonment, varied with prize fight-
ing, and occasional intervals of honest labor,
marked his experience. He enlisted in the
navy, but was flogged for general carelessness
and inattention to his duties. The kindness
of his parents, though grossly abused, never
came entirely exhausted, and often relieved
him when brought to the lowest depths of
anger and distress. He married a respect-
able woman, but his wife was often brutally
beaten. Sometimes he would resolve to lead
a better life, but the influence of bad com-
panions, his own wicked propensities, and
especially the love of strong drink, to the use
of which he was greatly addicted, soon led
him into his former evil courses. One inci-
dent, which is related of him, illustrates in a
striking manner the effect which intemper-
ance often exerts on its victims.

He was standing on the steamboat pier,
the River Thames, when he heard the cry,
"A boy overboard." Hastening to the spot,
and looking carefully into the water, he ob-
served bubbles; "and in a moment the thought
entered into him that these bubbles were prob-
ably caused by the last breathings of the
drowning lad. Instantly, with the quickness
of an apparition, he plunged into the river,
and, beneath the surface, and while the crowd
at the shore and pier were awaiting in breath-
less suspense his reappearance, he dived to
the bottom, and there lay the body, as if dead.
Issuing one arm under the lad, and with the
other raising himself and his burden to the
surface, Ned was seen with his prize above
water, and was greeted with a simultane-
ous shout from the spectators. A boat was
enwhiled sent to his assistance, the boy put
on board, and conveyed to a public-house, and Ned,
amid such plaudits as nearly bewildered him,
ran safely to the pier.

"As he was going away, the captain of one
of the steamboats cried out, 'Hold on! we
are going to make a collection for you.' 'All
right,' was Ned's response; 'while you are
doing so, I'll just run up and see how the lad
is getting on.' The boy had been so long
under water that he appeared as one dead;
and although stimulants were freely given,
and every appliance obtained for restoring
animation, it was feared for some time that
his case was hopeless. The means were at
last successful, and the frantic mother, whose
loud shrieks of sorrow had been heard from
outside, pushed her way into the room, clasped
her child fondly to her bosom, and having re-

lieved herself by a flood of tears, inquired,
'Where is the man who saved my child?' The
brave rescuer was pointed out, and falling at
his feet she thanked him repeatedly, asking
what she could do to reward him for his
bravery. Ned laid his hand on her head, and
said, 'All right, mother; I've a little one of
my own.'

"Returning to the pier, he found that the
collection had been made by the captains of
the two steamers and the man in charge of
the pier, and his jacket pockets were filled
with coppers, and his trousers pockets with
small silver. Of course, he could not resist
the temptation to drink too much rum, and
the consequence was that he spent all he had
that night in the public-house, going home
drunk and penniless! He could expose his
life to danger, to rescue a drowning child; but
he could not be brave enough to resist the
temptations of drink. He could sympathise
with a mother's sorrow and a child's suffering;
but in the midst of these allurements to drink
he could forget his young and hungry wife,
and neglect the wants of his infant child."

He is described at this period of his life as
"running foot and boat races, and getting
drunk on the proceeds, fighting with friends
and foes, ill-treating his wife, and starving his
children, and committing thefts either of a
petty character or on a large scale." Certain-
ly this was a most unpromising character,
and nothing short of the power of Divine
Grace could effect the

"Transformation of apostate man,
From fool to wise; from earthly to divine."

Disappointed in his other efforts at obtain-
ing money, he accepted a challenge to partic-
ipate in a prize-fight, which he hoped would
relieve his wants. He put himself in train-
ing for the combat, and fearing lest some of
his companions might call and persuade him
to drink, which would interfere with his pro-
spects of success, he one evening asked his
wife to take a walk with him, that he might
get out of the way of temptation. Finding a
place open for religious worship, and being
invited to go in with the assurance "All seats
free and no collections," they went in to pass
the time. The sermon had but little effect
upon him, and being rather weary by it, he
thought of leaving the building, but his atten-
tion was arrested by an earnest prayer which
followed. He says of it: "Whilst praying for
all runaway children, I could not help believ-
ing that he meant me; and here came an ur-
gent appeal that God would save the young
men who were sending their father and moth-
er's gray hairs with sorrow to the grave;
after this prayer, he cried with a loud voice,
'Young man, where will you spend eternity?'
This he repeated six times, causing an interval
of solemn quiet to pervade the meeting be-
tween each cry of 'Eternity.'

"During these awful moments all my past
history rose up before my mind, even from my
boyhood. Then came the thought as to whether
I was prepared to die, and I remember what
the preacher had been saying, 'The wicked
shall be turned into hell, with all the nations
that forget God.' This all tended to harrow
my feelings, until at last I swooned."

Whilst in this partly unconscious state, the
intellectual faculties were still awake, and to
his strongly excited feelings the realities of
the day of judgment seemed actually present.
His conscience being greatly stirred, he felt

himself standing as a wretched sinner before
the great Judge, without anything to say in
his own defence. In this awful condition,
feeling his guilt, and with broken heart seek-
ing for pardon and forgiveness, he was im-
pressed with the conviction that there was
hope for him through the mercy of God in
Christ Jesus. When he was restored to con-
sciousness, he found himself sitting on a back
seat, the perspiration streaming from his brow,
and tears channelling his cheeks.

His wife also was deeply impressed on the
same occasion, and they returned home fully
determined to walk hand in hand on the
heavenly journey.

The next morning brought with it a test of
the sincerity of his newly formed resolutions.
He felt that he could not fulfil his engagement
to take part in the prize fight. So, the first
thing after breakfast he went to the friend by
whom the matter had been arranged, and an-
nounced his intention. Of course he was met
with many bitter reproaches: called a cur,
and a fool; and one remarked, "Poor Ned,
he's gone off his chump (*i. e.* mind) at last."
Ned overheard the free criticism and observed,
"No, I was never in my right mind before;
but I am now, thanks be to God."

He spent some time in seeking employment,
and at last obtained a situation as a light-
erman. "Unfortunately, however, a man who
had long known him as a rogue, informed his
employer, and although Ned had been by that
time, through sobriety, ability, and general
good conduct, promoted to the post of fore-
man lighterman, he was thrown once more
upon the world. It was a hard trial, but Ned
felt called upon to bear it cheerfully. By
doing odd jobs he succeeded in gaining bread
for himself and family; and in the evening he
and his wife went to a night school. Mean-
while, he sought constant employment, but
was discouraged by frequent refusal. One
person whom he asked, shouted out, "No, you
vagabond, certainly not; but if you're not out
of that gate in double-quick time, I'll have
you locked up; for we know now who it was
that stole our bales of indigo and barrels of
tobacco."

Poor Ned ran away as quickly as possible,
conscious that he had been guilty of the ro-
bery, crying out as he went along, with his
heart full of grief, "Guilty, Ned, guilty." Yet
he did not murmur. After so dishonest a
career he did not expect better treatment.

For 'The Friend.'

Tennessee Freedmen's Schools.

Some account is maturing for publication,
of what has been done, and remains to be
done in respect to a few of these schools. It
is thought best not to delay the following
notice; as any one looking this way, would
want time to weigh the matter, and obtain
statements beyond what may appear in the
account above referred to.

Being desirous of returning to my family,
and not willing to leave unimproved so good
an opportunity of serving the cause of hu-
manity in behalf of the downtrodden race of
Africa, the opening is proposed to the con-
sideration of such Friends as feel religiously
drawn to the work of education among the
Freedmen. Full information will be given to
those who may communicate with the sub-
scriber; but, after the consideration of duty,
the main question for one, thinking of the

work, would be "what has he done" in the line of teaching? grading schools? managing mixed schools? and especially in forwarding pupils in the practical, essential and elementary branches?

Y. WARNER,
Maryville, Tenn.

First mo. 25, 1871.

THE FALLEN LEAVES.

We stand among the fallen leaves,
Young children at our play,
And laugh to see the yellow things
Go rustling in their way;
Right merrily we hunt them down,
The autumn winds and we,
Nor pause to gaze where snow-drifts lie,
Or sunbeams gild the tree;
With dancing feet we leap along
Where withered hedges are strown;
Nor past nor future checks our song—
The present is our own.

We stand among the fallen leaves
In youth's enchanted spring—
When hope (who wearies at the last)
First spreads her eagle wing,
We tread with steps of conscious strength
Beneath the leafless trees,
And the color kindles in our cheek
As blows the winter breeze,
While gazing towards the cold gray sky,
Clouded with snow and rain,
We wish the old year all past by,
And the young spring come again.

We stand among the fallen leaves
In manhood's naughty prime—
When first our pausing hearts begin
To love "the olden time";
And, as we gaze, we sigh to think
How many a year hath passed
Since neath those cold and faded trees
Our footsteps wandered last;
And old companions—now perchance
Estranged, forgot, or dead—
Come round us, as those autumn leaves
Are crush'd beneath our tread.

We stand among the fallen leaves
In our own autumn day—
And tottering on with feeble steps,
Pursue our childless way,
We look not back—too long ago
Hath all we loved been lost;
Nor forward—for we may not live
To see our new hope cross'd;
But on we go—the sun's faint beam
A feeble warmth imparts—
Childhood without its joy returns—
The present fills our hearts!

For "The Friend."

Selections from the Diary of Hannah Gibbons; a Minister deceased.

(Continued from page 187.)

To her friend and relative Hannah Rhoads,
she writes,

"10th mo. 7th, 1863.

"My dear friend and cousin.—I have often thought of replying to thine of Sixth month last, but frequent indisposition of body and poverty of spirit have been so much my portion that I seemed to have no ability for it; and now may not have anything to communicate worth thy notice; but may say in reading thy very acceptable letter, I was comforted in finding that I was so kindly remembered by those who love the Lord Jesus, often feeling low and discouraged, and not forgetting the language of David, 'Surely I am a worm and no man.' These humiliating feelings are not agreeable to our nature, but no doubt are designed for the furtherance of the Gospel, and to make us feel the verity of the dear Master's declaration, 'Without me ye can do nothing;' and surely we cannot without His

aid do anything that will promote the blessed cause of truth and righteousness, or our own soul's peace. Thy expression of feeling me as a mother seems as though it does not belong to me, often feeling myself far behind many of those who are younger in years, thyself being one of that number. I am frequently humbled under a sense of my own shortcomings. The mention of thy own exercises was so far from burthening me, that it seemed like face answering face in a glass. I have often felt very tender sympathy with thee and thine, when about leaving your former home and since; having experienced a similar trial. I now remember afresh how it was with me when sitting by the remains of my dear departed one in solemn silence, the earnest petition of my heart was to the Father of mercies for myself and dear children, that as He had been pleased to remove from us our outward stay and counselor, that He would be pleased to condescend to be with us, be our guide and leader, and that we might through His help be enabled to follow Him. And I may say, that although many trials, besetments, and discouragements have been my experience, only known to Him who appointed or permitted them, yet He has been pleased in matchless mercy, from season to season, to bear up my head above the billows that seemed almost ready to overwhelm; and I trust I may add to be 'as the shadow of a great rock in a weary land,' sustaining the weary traveller also as with a brook by the way. Thus we have cause to say with the Psalmist, 'Thy rod and thy staff they comfort me;' and to trust in the name of the Lord, who I verily believe, regards the poor of the flock with tender compassion, and continues to be a Father of the fatherless, and a Judge of the widow in his holy habitation.

"I was comforted in hearing that our late Yearly Meeting was a time of renewed favor; a time wherein more of the cementing influence of heavenly love was experienced than for some years before it. Such seasons are cause of humble gratitude to the Author of all our blessings, and times, I doubt not, of renewing the faith of those who have none to look to for help but the Lord alone. 'I will also leave in the midst of thee an afflicted and poor people, and they shall trust in the name of the Lord;' and now, poor and unworthy as I often feel myself to be, yet the encouraging language of our Divine Master flows towards thee, my precious cousin, 'Fear thou not, for I am with thee; be not dismayed, for I am thy God. I will strengthen thee, yea I will help thee, yea I will uphold thee with the right hand of my righteousness.' It was affecting to learn that thy dear brother William's sight continues declining. Himself and dear children are oftentimes remembered in tender sympathy.

"Please give my love affectionately to thy dear daughters; we should be pleased to see thyself or any of them here. In a measure of that love which I trust waxeth not old, I bid thee affectionately farewell. Thy cousin,

HANNAH GIBBONS."

"10th mo. 15th, 1863. I went to meeting in rather more infirmity of body than usual, and much exercise of mind. I had not sat long, before the spirit of supplication was, I believe, experienced for myself and those assembled; and after our friend M. A. L. from Philadelphia, had appeared in testimony, I ventured to bend the knee, and to intercede

with the Father of mercies, that he would be pleased to enable us to keep our eye single unto Him in this day of calamity and such trial. But not feeling my mind as much relieved and peaceful as at some other time the language arose: 'Ye have need of patience that after ye have done the will of God, may receive the promise.'

"16th. This morning before I arose it was to me the offering of yesterday was an acceptable one, and a degree of peaceful quiet afforded. May I be thankful for every crumb that falls from the Master's table.

"21st. Feeling much proved and tried, I think I can adopt the language of Jane Peeson in the first stanza of a poem she composed, which I think is recorded in the account of her life,* and is as follows:

'In age, assist me, dearest Lord,
In faith my spirit stay.

And if I've err'd through slavish fear,
Forgive me, Lord, I pray.

No other foes assail me now,
Nor prey upon my peace.

But false alarms and slavish fears:
Oh! cause those fears to cease.'

"I crave right direction, and that Thy Father of mercies, may be pleased to keep in a safe path, free from all the wiles of unwearied enemy.

"11th mo. 8th. I was favored to sit with Friends in our meeting. My mind was excited in desire for myself and those gathered that our spiritual eye might be kept single our Holy Head. After expressing what arose and bending the knee in supplication, I felt little strengthened to trust and hope in the Lord's mercy.

"12th. As I lay in bed, I trust I may say humble intercession to our Almighty Father for right direction, the situation of Abraham when about to offer his son Isaac, came impressively before me, which afforded such relief to my mind, that I believed it was of Divine nature. Holy Father, wilt thou be pleased to preserve me from doubting against the enemy prevail against me. Keep I beseech Thee, as in the hollow of Thy hand, that neither heights nor depths may be able to separate me from Thy love in Christ Jesus our Lord.

"26th. During our sitting together in meeting my mind was sorrowfully impressed with fears, lest a dividing spirit might be suffered to creep in among us; and desires were, and vocally expressed for our preservative. The language of our Divine Master arose: 'He that is not with me is against me, and he that gathereth not with me scattereth abroad.' I felt renewedly concerned that I might each one, by looking inward, be enabled to build over against our own house, favored to see eye to eye, and to walk by the same rule, and mind the same thing. Behold solemnly impressed with the spirit of supplication, it was yielded to, whereupon my mind was favored with a degree of sweetness which was precious to feel.

"12th mo. 8th. Having been poorly body, and often low in mind, I was encouraged this morning by reading the memorandum of my dear friend Jane Bettle; with whom was acquainted in early life. Her pious example, with, as she expressed, the need we have of watching unto prayer daily against the assaults of our soul's enemy, is indeed worthy of our close attention. Dearest Father

* See Friends' Library, vol. 4, p. 460.

ceased, I beseech Thee, to enable me to near Thee in faith and hope; lest they prevail against me. For Thou alone art able to preserve.

3d. Before I arose this morning, my being turned inward to the Lord, being able it is only through His help that we are enabled to make straight steps to our desires were raised that I might be freed from bringing dishonor on the blessed God, and enabled to fight the good fight of life; for 'Without faith, it is impossible to be God.'

(To be continued.)

Plants absorb Moisture through their roots?—Two French botanists, Prillieux and Duchartre, have recently turned their attention to this question, and their experiments led to the conclusion that it must be answered, contrary to the belief of all the older botanists, in the negative. Duchartre's experiments were made for the most part on potatoes, plants having no direct communication with the soil, and which are yet found to contain potash, soda, alumina, and other elements which plants whose roots grow in rain derive from that source. If these plants derive their sustenance from the moisture by which they are surrounded, it is difficult to understand how they can procure their nutriment. But if they absorb not aqueous nutriment, but water itself, we can at once account for the possession of these inorganic materials. To ascertain how far this account is just, Duchartre placed several of these epiphytes, detached from their aerial roots, in closed vessels filled with moist vapor; the result was to confirm the observation of Prillieux, that under these circumstances the plants lost weight. If, however, from any cause the plants came in contact with liquid water, it was absorbed readily, and the plants increased in weight. When leaves, flaccid from undue evaporation, are suspended in moist air, they recover their freshness, though they do not increase in weight; hence the inference is drawn that the renewed vitality of the leaves is due to the absorption of vapor, but to the absence of fluid from one branch to another. When leaves, however, are actually immersed in liquid water for a considerable time, they do absorb it in considerable quantity.

A good account of these experiments is found in the *Gardener's Chronicle* for the 17th.—*Living Age.*

The Borrowing of Jewels.—When the Orientals go to their sacred festivals they always wear their best jewels. Not to appear before the gods in such a way they consider would be disgraceful to themselves and displeasing to the deities. A person whose clothes and ornaments are indifferent will borrow of his richer neighbors; and nothing is more common than to see poor people standing before the temple engaged in sacred ceremonies, well adorned with jewels. The poorest pauper or bridegroom at a marriage may often be decked with gems of the most costly kind, which have been borrowed for the occasion. It fully accords, therefore, with the idea that is due at a sacred or social festival to the adornment in their best attire. Under these circumstances it would be perfectly easy to borrow of the Egyptians their jewels, as they themselves in their festivals would doubtless wear the same things. It is also recorded

that "the Lord gave them favor in the sight of the Egyptians." It does not appear to have been fully known to the Hebrews that they were going finally to leave Egypt; they might have expected to return; and it is almost certain that if their oppressors had known that they were not to return they would not have lent them their jewels.—*Roberts.*

For "The Friend."

The Late Earthquake in Northeastern America.

The last number of Silliman's Journal contains an article by A. C. Twining of New Haven, respecting the earthquake of Tenth mo. 20, 1870; and inasmuch as this disturbance of the earth's crust was the most considerable both in extent and amount, that has in our time visited this part of America, we propose to make copious extracts from the interesting article referred to:

"Notices of this earthquake collected from the newspapers, and received from other sources, display an area of disturbance extending from New Brunswick in the East, to the State of Iowa in the West, and from the Lakes and the River St. Lawrence in the North, to Cincinnati and Richmond, Va., in the opposite direction. No doubt the actual area of disturbance was far more extended, especially in the East and North; for the manifestations were at least as strong in degree at the utmost bounds of our information in these last directions, as in those parts with which we are most immediately familiar. The same conclusion is confirmed by the circumstance that, even where the motions were most fully developed, they were not obvious to persons not favorably situated for receiving impressions from them. It is easy to believe that they escaped public attention over large regions where they took place sensibly, although but feebly.

At this place—New Haven, Connecticut—the movements, both in the precise time of their occurrence and in the attendant circumstances, were immediately and critically investigated by the writer, from the testimony of many intelligent citizens. Independently, and in their various situations and positions, the witnesses agreed in describing an oscillatory movement, to and fro, in the general direction of N.N.E. to S.S.W.,—not level but rocking. This last sensation is plainly indicative quite as much of a vertical displacement, combining irregularly and oppositely with the horizontal, as of any alternations of inclination in the earth's surface, after the manner of a wave, and a consequent vibratory condition of persons and objects. Still, that the latter did take place is a conclusion that seems to be made inevitable, by the invariable fact that the oscillations were by far the most perceptible in lofty situations,—for example, in the ascent progressively from the lower floors of edifices to the upper stories. In the latter, at least, objects were both felt and seen to be in motion; and suspended objects, as lamps and pictures, were set into vibration with a range of three or four inches and, when free, in the direction already specified. There were two distinct shocks. In estimating the duration of these and of the interval between them, and also in estimating their component oscillations, these durations and intervals were in no case recorded from mere verbal statements, but means were employed to ascertain the informant's mental impressions and recollections, applying to them my

own measurement, as to time. These impressions and recollections would often give durations more than double, in some instances, of the like in other instances. Taking, however, the most trustworthy, and allowing to the others a weight proportioned to their value, under the circumstances, the first shock was found to have continued through about nine seconds, the second through about eleven seconds, and the interval about five—making, altogether, twenty-six seconds. The time of each double vibration—that is both to and fro—was concluded to approximate to a second and one-third,—although so far as mere numbers were concerned, the witnesses more generally approved not more than one second, or even less. The precise time of day will be referred to farther on. It is remarkable that motions which were not even noticed, ordinarily, by persons in basement stories or in the streets, should have produced in most of those who felt them nausea or dizziness or other affections, according to the temperament of the individual.

A careful comparison of the various newspaper paragraphs which have come to hand—nearly forty in number—makes it clear that the general phenomena were everywhere the same. Every-where there were two shocks experienced of a few seconds each, and a brief interval. These are about as variously stated in duration by the newspapers as the same were stated by different observers at New Haven. On the whole, the entire duration—26 seconds—at New Haven, is confirmed as having been about the duration in all other places observed—a uniformity probable in itself.

Respecting the relative amount of disturbance at different places, the sensations experienced by individuals would be but a fallacious test, because so much influenced by temperament, as well as by situations and positions. Persons sitting, for example, were far more sensitive than persons standing. Again, while operatives in upper rooms often rushed down—as here at New Haven—in a panic, persons standing or walking in the immediate vicinity below did not even perceive the phenomenon. The same remark applies to the reported swaying of walls and buildings ten inches to a foot, which is no doubt exaggerated in amount. But a vague conclusion may be derived from specific occurrences such as the displacement of objects, the cracking of window panes or of ceilings, and the falling of chimneys, as well as from the degree of public notice which the event excited. All that in the present instance, can be rationally deduced from such indications would seem to be that the amount of disturbance at New York, at Cleveland, at Milwaukee and Detroit was about the same as at New Haven; that it was greater at Boston, at Brunswick, at Montreal and at Quebec; that it was less at Cincinnati, at Chicago, and at Dubuque, and was but just distinctly perceptible at Richmond, Va. In other words, the movement was more remarkable in the East and North, and less in the West and particularly in the South. It is also believed that no like occurrence comparable in the aggregate with this one has been experienced in New England during the present century, nor since November 18, 1755—supposing the newspaper quotation, relative to that event, made by a Boston correspondent, from 'a book published in 1786' to be correct and authentic.

It only remains to compare the times noted at the various places concerning which our information is sufficiently authentic. At this place there were two among the observers who separately noted the time by reference to standard time-pieces. By each the same time of beginning was given, within a few seconds;—that is, 11h 19m 46s. The average of three other observations by time-pieces whose errors could not be ascertained except on the day after, proved to be very nearly the same. The same conclusion was farther confirmed, with sufficient exactness, by the average of three clocks which had stopped, as observed upon their dials."

From observations of the time of the commencement of the shock made with some aim at correctness, at twenty-two places, the author has constructed a table showing the gradual progress of the disturbance from the East toward the West. The places referred to were (commencing with the easternmost and taking them in the order of their longitude) St. John's, New Brunswick, Bangor, Me., Lewiston, Me., Boston, Mass., Harvard College Observatory, Quebec, L. C. Province, R. I., Norwich, Conn., Montpelier, Vt., Hartford, Conn., New Haven, Conn., Montreal, L. C., Dudley Observatory, N. Y., Hudson, N. Y., Schenectady, N. Y., New York City, Warsaw, N. Y., Toronto, U. C., Owen Sound, U. C., Cleveland, O., Cincinnati, O., and Chicago, Ill. No account is taken in the table of observations, which do not purport in the notices themselves to be near approximations, or which are adopted from the railroad time-pieces without supplying the proper correction, or which are found by comparison with the mass of observations to be grossly in error. To one or the other of these categories belong the notices from Brunswick and Portland, Me., Burlington, Vt., Warrensburg, Saratoga, Cooperstown, Cornell University, and Auburn, N. Y., Scranton and Titusville, Pa.

An inspection of this table discloses no considerable north-and-south movement. A nearly east-and-west progress is that which appears most consistent with the aggregate of times. Indeed it presents itself as the only one at all consistent with a uniform and regular progress. Nor is there discovered in the table any decisive indication of a change of direction as between the east and the west of the Alleghenies; but the various accounts, so far as they go, indicate the very reverse.

The best approximate result appears to be that the earthquake made progress from about E. 6° N. to about W. 6° S., at the rate of one hundred and sixty miles a minute, being six minutes and a half from St. John to Chicago; while surprisingly, the ordinary direction of the subordinate undulation was about N. by E. But there was not absolute regularity of rate in any single direction.

It appears by observations of Prof. Hough at Dudley observatory, obligingly furnished me by him, that the principal shock was observed at 11h 15m, being a few seconds in duration, but that a tremor continued for at least a minute. No doubt there exist, at various localities not heard from, many observations recorded or distinctly remembered. It is desirable yet to have them communicated to this place, or to some elsewhere, by whom they will be made available.

In fact while this article is in press, I am furnished through the favor of H. Paton, Esq.,

of the Montreal Telegraph Co. at Quebec, with the following important statements by Robert McCord, the operator who made inquiries immediately after the cessation of the earthquake at that office, and received replies from Montreal. His condensed statements are: 'All perceptible motion was over here by the time I had finished telegraphing to Montreal—do you feel earthquake. It would take about eight seconds to telegraph the words used. The operator's immediate reply was—no. About fifteen seconds after, he said—here it is. The gentleman at Montreal afterward explained that, although he said no, he did experience a slight movement at the time, but was not aware that it was caused by an earthquake. He telegraphed—here it is—on the instant that the shock became sensibly evident. He cannot say how long the vibration lasted after that period, accurately, but is of opinion it continued for nine or ten seconds. The following further particulars may be of interest. The shock passed over this district from a northerly direction,—a rumbling sound accompanied the shock, resembling that produced by ponderous machinery,—noise and motion increased steadily for some seconds, and gradually passed away. Buildings were violently shaken. Our office being in the upper part of a high brick building, the trembling was powerfully felt—the clock in the office was stopped by it at 11:25, but am not certain if the time by it previous to the shock was correct. Some observers say the shock was first felt here a few seconds before 11:24, and lasted forty seconds—others state fifty or sixty seconds. I am of opinion it lasted sixty seconds. No two opinions agree as to the commencement and duration.'

'At Bay St. Paul and Les Eboulements—places about ninety or one hundred miles northeast of Quebec—the ground opened in several places, and water was thrown up. Slight elevations of land in some places were produced. The country in the vicinity of St. Paul's Bay is of volcanic formation, and slight shocks are of frequent occurrence. A gentleman from that vicinity informs me that they had twenty or thirty slight shocks within the past two weeks. The shock on the 20th, here, did not appear to have an undulating, upheaving motion, but to partake of a tremulous nature.'

'The operator at Richmond, a place ninety miles southwest of here, says the shock was just passing away there at the period when I made the inquiry of Montreal.'

R. McCord does not refer to specific authority for the convulsive effects at Bay St. Paul and Les Eboulements, some 55 to 62 miles in a direct line from Quebec; but they are in general conformity to what has long been known to British geologists respecting the volcanic character of the region specified. In that region, very probably, lay the initial spot of the disturbance. The subject in this view of it, merits a more extended investigation, and it is hoped, that the statement here brought out will induce new communications relative to the facts.

The interpretation of R. McCord's interesting statements relative to the telegraphic communications, seems to be as follows: He occupied the last eight seconds of the motion at Quebec with a question put to Montreal. That question, together with the answer 'no,' I find by careful trial at the American Tele-

graph office, require not less than eight seconds for transmission and reception. There are estimated fifteen seconds of fall. Then there was the second reply—less than eight seconds; then there were ten seconds to the end of the vibra. In other words, there transpired not less forty-two seconds between the end of message and of the tremors at Quebec the end of the same at Montreal, ninety miles distant in longitude, and one hundred and fifty-nine in a line N. 51° E., and in the table above had been and still recorded with the empirical interval of thirteen seconds,—showing a near accuracy between these and the other facts, an miles per minute of east-and-west progress.

Again, the Montreal 'no' was given just as the tremors there began, and after—says the end of the shock at Quebec that is to say, the beginning traversed city to city in some six seconds more than the duration of the shock. Consequently latter, in consistency with the above, have continued about thirty-six seconds place of the twenty-six seconds ascertained at New Haven. Still again, the shock Montreal began with the 'no,' which have occupied four seconds. Then there fifteen seconds of interval; then eight reply; then nine to ten of estimated course; in all thirty-six or thirty-seven seconds for the duration of the shock. The prim movement at Montreal did not come till fifteen seconds after the beginning the testimony of the Richmond operator shows that the violence of the shock had passed, while the tremors at Quebec still in faint continuance."

Thou for You.

For "The Pri

William Penn on nonconformity to the respecting our simple and plain speech, for You, concludes his essay with the following exhortation to the reader.

"The eternal God, who is great as his power is known, 'will root up every that his right hand hath not planted.' W fore let me beseech thee, reader, to con the foregoing reasons, which were m given me from the Lord, in that time, y my condescension to these fashions w have been purchased at almost any rat the certain sense I had of their contrarie the meek and self-denying life of holy J required of me my disuse of them, and a ful testimony against them. I speak truth in Christ; I lie not; I would not brought myself under censure and disad them, could I, with peace of conscience, keep my belief under a worldly behaviour was extremely irksome to me, to decline expose myself; but having an assured repeated sense of the original of these customs, that they rise from pride, self and flattery, I dared not gratify that mi myself or others. And for this reason that I am earnest with my readers to be tious how they approve us on this occa and do once more entreat them, that would seriously weigh in themselves, wh it be the spirit of the world, or of the Fa that is so angry with, (or disposed to away from) our honest, plain, and har Thou and Thee; that so every plant God, our heavenly Father, hath not pl

sons and daughters of man, may be
 up."—No Cross no Crown.

interesting account of the scenery and
 of this lonely peninsula, and of North
 Siberia, is given by George Kennan
 recently published volume, entitled "Tent
 in Siberia," &c. This work, like that of
 Dall on Alaska, is a production of one
 of small band of earnest and intelligent
 who in the employment of the Russian
 Telegraph Company, in the years
 7, traversed the almost unknown coun-
 through which the proposed line of tele-
 was to pass; and in the course of two
 explored nearly six thousand miles of
 open wilderness, extending from Van-
 der's Island on the American coast to
 ng's Straits; and from Behring's Straits
 Chinese frontier in Asia.

on the ultimate success of the Atlantic
 project of erecting a line of telegraph
 this overland or western route had fin-
 to be abandoned. The surveys and ex-
 cisions which were made are not however
 at their value, irrespective of the object
 which they were originally designed, while
 enterprise and energy under great hard-
 with which they were performed, adds
 additional interest to this narrative of the
 cution of a remarkable undertaking.

the peninsula of Kamchatka, through
 we were about to travel, is a long tri-
 tongue of land lying east of the Okhotsk
 between the fifty-first and sixty-second
 es of North latitude, and measuring in
 length about seven hundred miles,
 almost entirely of volcanic formation,
 the great range of rugged mountains by
 it is longitudinally divided, comprises
 now five or six volcanoes in a state of
 uninterrupted activity. This immense
 of mountains, which has never been
 named, stretches from the fifty-first to
 xth degree of latitude in one almost
 nous ridge, and at last breaks off ab-
 into the Okhotsk Sea, leaving to the
 ward a high level steppe called the 'dole-
 sert,' which is the wandering ground of
 einder Koraks. The central and south-
 parts of the peninsula are broken up by
 ours and foothills of the great mountain
 into deep sequestered valleys of the
 st and most picturesque character, and
 scenery which, for majestic and varied
 y, is not surpassed in all Northern Asia.
 climate everywhere, except in the ex-
 north, is comparatively mild and equan-
 and the vegetation has an almost tropi-
 calness and luxuriance totally at variance
 all one's ideas of Kamchatka. The popu-
 of the peninsula I estimate from careful
 vation at about 5,000, and it is made up
 ree distinct classes—the Russians, the
 hadals or settled natives, and the Wan-
 g Koraks. The Kamchadals, who com-
 the most numerous class, are settled in
 log villages throughout the peninsula,
 the mouths of small rivers which rise in
 entral range of mountains, and fall into
 khotsk Sea and the Pacific. Their prin-
 occupations are fishing, fur trapping,
 the cultivation of rye, turnips, cabbages,
 potatoes, which grow thriftily as far north
 as 58°. Their largest settlements are in
 fertile valley of the Kamchatka River,

between Petropavlovski and Klache. The
 Russians, who are comparatively few in
 number, are scattered here and there among
 the Kamchadal villages, and are generally
 engaged in trading for furs with the Kamchadals
 and the nomadic tribes to the northward. The
 Wandering Koraks, who are the wildest, most
 powerful, and most independent natives in
 the peninsula, seldom come south of the 58th
 parallel of latitude, except for the purpose of
 trade. Their chosen haunts are the great
 desolate steppes lying east of Penjinsk Gulf,
 where they wander constantly from place to
 place in solitary bands, living in large fur tents
 and depending for subsistence upon their vast
 herds of tamed and domesticated reindeer.
 The government under which all the inhabi-
 tants of Kamchatka nominally live is ad-
 ministered by a Russian officer called an
 'Ispravnik' or local governor, who is sup-
 posed to settle all questions of law which may
 arise between individuals or tribes, and to
 collect the annual 'yassak' or tax of furs,
 which is levied upon every male inhabitant
 in his province. He resides in Petropavlovski,
 and owing to the extent of country over
 which he has jurisdiction and the imperfect
 facilities which it affords for getting about,
 he is seldom seen outside of the village where
 he has his head-quarters. The only means of
 transportation between the widely separated
 settlements of the Kamchadals are pack-
 horses, canoes, and dog-sledges, and there is
 not such a thing as a road in the whole penin-
 sula."

The following extract describes the au-
 thor's first impressions of the wild scenery of
 this mountainous region on a clear day in
 early autumn:

"Day was just breaking in the east when
 I awoke. The mist, which for a week had
 hung in gray clouds around the mountains,
 had now vanished, and the first object which
 met my eyes through the open door of the
 tent was the great white cone of Viloo-chin-
 ski gleaming spectrally through the grayness
 of the dawn. As the red flush in the east deep-
 ened, all nature seemed to awake. Ducks and
 geese quacked from every bunch of reeds along
 the shore; the strange wailing cries of sea-
 gulls could be heard from the neighboring
 coast; and from the clear, blue sky came down
 the melodious trumpeting of wild swans, as
 they flew inland to their feeding-places. I
 washed my face in the clear, cold water of the
 river, and waked Dodd to see the mountains.
 Directly behind our tent, in one unbroken
 sheet of snow, rose the colossal peak of
 Korat-skoï, ten thousand five hundred feet in
 height, its sharp white summit already crim-
 soning with the rays of the rising sun, while
 the morning star yet throbbled faintly over
 the cool purple of its eastern slope. A little
 to the right was the huge volcano of Avatcha,
 with a long banner of golden smoke hung out
 from its broken summit, and the Rosel-skoï
 volcano puffing out dark vapor from three
 craters. Far down the coast, thirty miles
 away, stood the sharp peak of Viloochinski,
 with the watch-fires of morning already burn-
 ing upon its summit, and beyond it the hazy
 blue outlines of the coast range. Shreds
 of fleecy mist here and there floated up the
 mountain sides, and vanished like the spirits
 of the night-dews rising from earth to heaven
 in bright resurrection. Steadily the warm,
 rosy-flush of sunrise crept down the snowy
 slopes of the mountains, until at last, with a

quick sudden burst, it poured a flood of light
 into the valley, tinging our little white tent
 with a delicate pink, like that of a wild rose-
 leaf, turning every pendent dew-drop into a
 twinkling brilliant, and lighting up the still
 water of the river, until it became a quiver-
 ing, flashing mass of liquid silver.

(To be continued.)

What to Pray for.—No man knows what to
 pray for, that prays not by the aid of God's
 spirit; and therefore, without that Spirit no
 man can truly pray. This the apostle puts
 beyond dispute; "We know not," says he,
 "what we should pray for as we ought, but
 the Spirit helpeth our infirmities." Men un-
 acquainted with the work and power of the
 Holy Spirit, are ignorant of the mind of God;
 and those, certainly, can never please him
 with their prayers. It is not enough to know
 we are in want; but we should learn, whether
 it be not sent us as a blessing; disappoint-
 ments to the proud, losses to the covetous,
 and to the negligent stripes; to remove these,
 were to secure the destruction, not help the
 salvation of the soul.—*Wm. Penn.*

Fire in a Coal Mine.—One of the most curi-
 ous phenomena in connection with coal mining
 is exhibited at the Bank colliery, near Rother-
 ham. This pit caught fire one hundred years
